Neither the provisions of this catalog nor the publication thereof constitute an offer for a contract which may be accepted by students through registration and enrollment in the university. The university reserves the right to change any provision, offering or requirement at any time during the student's period of study at NJIT.

About the University

New Jersey Institute of Technology

NJIT's history spans the Industrial Revolution to the Information Age. Newark was a factory town when the tuition-free evening school was founded in 1881 to support local industries. The first 90 students - including machinists, draftsmen, carpenters, printers, electricians and clerks - studied algebra, geometry, trigonometry, chemistry, physics and drawing. The range of courses offered is testimony to the fact that, from the beginning, NJIT's programs have provided a broad-based foundation to prepare students for success in the workplace. From those early days, science and technology have been the engines fueling the university's development.

Over time, the university both anticipated and responded to change by expanding its curriculum and mission. Most notably, in 1919 the university established baccalaureate programs in three engineering fields. By 1975, NJIT offered a broad range of undergraduate and graduate degrees including architecture, engineering, computer science, management and other science-oriented programs. All of these programs included significant research and public service components with the goal of providing an academic environment that fostered intellectual depth and breadth, as well as social responsibility.

Today, continuing a fourfold mission of instruction, research, economic development and public service, NJIT is among the leading comprehensive technological universities in the nation. With well over 8,000 students, NJIT is the largest technological university in the New York metropolitan region. The university has state-of-the-art facilities with more than 2 million square feet located on a 45-acre campus in Newark, and a solar observatory in Big Bear, California. With robust extension and distance education programs, NJIT's degree and non-degree programs are available throughout the state and world.

NJIT Mission Statement

NJIT is a **public, urban, research university** committed to the **pursuit of excellence** in:

- Undergraduate, graduate and continuing professional **education**, preparing students for productive careers and amplifying their potential for lifelong personal and professional growth.
- The conduct of **research** in such multidisciplinary areas as environmental engineering, materials science, manufacturing, productivity enhancement, infrastructure systems, communications technologies, and an array of biorelated sciences and technologies.
- Service to both local communities and the broader society of the state and nation by conducting public policy studies, making educational opportunities widely available and initiating community-building projects.
- Contributing to the state's **economic development** through partnerships and joint ventures with the business community and through the development of intellectual property.

NJIT **prepares its graduates** for positions of leadership as professionals and as citizens; **provides educational opportunities** for a broadly diverse student body; responds to needs of large and small businesses, state and local governmental agencies and civic organizations; and **advances the uses of technology** as a means of improving the quality of life.

NJIT offers a **comprehensive array of programs** in engineering and engineering technology, computer science, architecture, applied sciences, mathematics, management, policy studies, and related disciplines throughout New Jersey and the nation.

NJIT's Six Colleges

NJIT's roots are in engineering education. For more than eight decades, **Newark College of Engineering (NCE)** has been preparing engineering students to use science, mathematics, technology and problem-solving skills to design, construct, test and maintain products, services and information systems. NCE alumni lead major corporations, hold senior public positions, own their own businesses and teach at universities.

NJIT's **New Jersey School of Architecture**, established in 1974, is one of the largest architecture schools in the nation and is nationally recognized for the innovative integration of computer technology into the design curriculum.

The **College of Science and Liberal Arts (CSLA)**, established in 1982, is moving into the forefront of many national research activities from solar astronomy to mathematical modeling. CSLA provides students with the skill sets for the professional marketplace, including literacy in the mathematical, physical and biological sciences, as well as traditional liberal arts disciplines.

The **School of Management**, established in 1988, combines the best of traditional business disciplines (e.g., finance, marketing, accounting, e-commerce) with the power of information and technology management to develop professionals who can manage and communicate effectively.

The **Albert Dorman Honors College**, established in 1993, offers one of the nation's leading technologically oriented honors programs for students who are prepared to undertake a rigorous and individualized course of study.

The **College of Computing Sciences**, established in 2001, has one of the largest educational programs in the nation, with approximately 2,000 students in 13 degree programs.

A Public Research University

NJIT is designated as a "Research Intensive" University by the Carnegie Foundation and ranks among the "best national universities" by U.S. News and World Report. The university expends more than \$75 million in a panoply of research and development partnerships with industry, government and other universities. NJIT researchers are making important advances in a wide range of areas, including the biosciences, manufacturing, microelectronics, multimedia, transportation, computer science, solar astrophysics, environmental engineering and science, and architecture and building science.

As a public research university, NJIT is educating leaders for a technology-driven economy. The university is constantly updating educational programs to emphasize marketplace skills, and redesigning its methods of delivering education. Indeed, computing and information technology underpin every facet of the NJIT mission.

Computing-Intensive Campus

As one of America's most computing-intensive universities, NJIT is nationally recognized as a pioneer in the use of information technologies from developing complex algorithms to reducing simulation times on large-scale parallel computers, to advancing the frontiers of visualization technology in computer-aided design, to patenting optics-based sensors, to developing computer-based infrastructure management systems, to developing advanced computer-mediated communications systems.

NJIT's Information Services and Technology (IST) division provides members of the university community with universal access to a wealth of resources and services available over the NJIT network and the advantages of a highly computing-intensive environment.. EDUCAUSE recently recognized the university for streamlining student processes "with creativity, efficiency, and effectiveness worthy of emulation."

At NJIT, the latest advances in telecommunications and multimedia technologies are used to enhance the delivery of courses and the overall educational experience, allowing students to experience many aspects of a "virtual university" in a traditional campus setting. Computers and information technology play an important role in virtually every task performed on campus, from cutting-edge research to applying for on-campus student employment. Computers assist in teaching and independent study, campus communication, library research, engineering and architectural designs. Students register for classes, check the status of financial aid, run degree audits, ask questions of academic advisors, and pay their bill – all online. Students can access the tools they need to design new buildings, develop complex solutions to engineering problems or compile detailed management analyses – all by logging on to the NJIT network. With connectivity to Internet2, students have the opportunity to work closely with faculty and researchers as new families of advanced applications are developed for an increasingly networked and information-based society.

NJIT's multi-gigabit network connects more than 6,500 nodes in classrooms, laboratories, residence halls, faculty and staff offices, the library, student organization offices and others. The campus wireless network blankets the university's public, classroom and outdoor areas. Both networks provide access to a wealth of shared information services. Included among these are high-performance, multi-processor servers used for simulation and computational research; disk arrays for storage of large data sets; communication servers for computer conferencing and e-learning, and a digital library with access to over 19,000 online journals. A virtual private network combined with Internet access extends access to network services to faculty, staff and students at home, work, any of the university's extension sites or throughout the world.

Students, faculty, staff, and alumni receive a single university computing ID (UCID) that authenticates them as members of the NJIT

community and authorizes them to role-based campus services. Highlander Pipeline, the NJIT portal, is the starting point for most online services. Students have access to hundreds of computer workstations in public-access computer labs across the campus, supplemented by special-purpose departmental facilities. A healthy mix of Windows, Mac, Linux, and other Unix operating environments support the diverse needs of a technological research university. Campus-wide software licenses provide NJIT faculty and students with the latest versions of the most popular Microsoft products, as well as software tools for virus-protection, statistical analysis, mathematical programming, computer-aided design and visualization, and much more. Advanced software libraries support the computational research needs of faculty and students in mathematics, engineering, and the sciences.

The Van Houten Library's Information Commons provides a convenient and relaxed atmosphere to check e-mail, search the Web, view digital archives of lectures, or retrieve scholarly publications from the university's digital library collections. Over 19,000 of the library's databases and subscriptions are available on-line allowing remote access from anywhere in the world with an Internet connection. Reference librarians are available on-line and in-person to help students and researchers sort through the vast amounts of information resources available and access what they need.

The Office of Instructional Technology and Media services provides several facilities used for live and recorded broadcast of e-courses as well as satellite downlinks for a wide variety of video conferences and other educational and public service satellite broadcasts. Several interactive television studio classrooms provide distance learning facilities. Multi-media capability is now being deployed to all areas on campus via network based video technologies.

In addition to these extensive resources, several departments have special facilities for the support of individual academic programs, including the New Jersey School of Architecture's award winning Imaging Laboratory that provides students an opportunity to explore new media and images that alter the way buildings are visualized, interpreted and created.

NJIT is one of the founding members and administrative home to NJEDge.Net, New Jersey's higher education network. NJEDge.Net provides collaborative resources and networked information services to its members and affiliates in support of education; research and development; outreach and public service; as well as economic development throughout the state of New Jersey. With 53 connected institutions including all of New Jersey's research universities, NJEDge.Net leverages economies of scale and supports new and emerging technology-enabled forms of inter-institutional collaboration among members and affiliates.

Library Services

The University Library is composed of two modern library facilities in Newark and extensive online resources which may be accessed on campus or remotely at www.library.njit.edu. The main library, the Van Houten Library, is located in the Central Avenue Building, erected in 1992 provides a modern facility for individual and group study, research and browsing. The Barbara and Leonard Littman Architecture Library, redesigned and relocated in 1998, is found on the fourth floor of Weston Hall, part of the Architecture and Building Sciences Complex.

The collections include more than 150,000 volumes of print and electronic books plus microforms, maps, images, theses and dissertations, an historical archive, and some videotapes, CDs/DVDs. The Libraries have over 19,000 subscriptions to journals, databases, and other serials, the majority of which are available online. These focus on NJIT's curriculum and research areas of engineering, science and technology, management, computer science, and liberal arts. In addition to books, journals and specialty databases, the Architecture library includes a large collection of slides and online images, maps, product catalogs, videotapes, CDs, models, portfolios and theses. These cover architectural history, theory, design and practice, landscape architecture, urban planning, as well as computer-aided design and manufacturing.

Library staff acquire and organize books and other materials, in print and electronic format and make them accessible to the NJIT community. Though the library and online collections form the backbone of research support at the university, NJIT librarians consider the world their resource and help faculty and students obtain materials from other libraries or online sources whenever necessary through the Library's Inter-Library Loan and Document Delivery services.

Through collaborative agreements, NJIT students and faculty have access and borrowing privileges, with some limitations, at several other nearby academic libraries. These include Rutgers-Newark's Dana Library, UMDNJ's Smith Library, and Newark Public Library. Students may also borrow from the libraries of Jersey City University, Kean University, Ramapo College, Rowan University, Stockton State College, William Paterson University, College of New Jersey, and Montclair State University. Arrangements can be made for special privileges at other institutions in the New York area when appropriate through an NJIT Reference Librarian.

The libraries are truly academic centers. They are popular places to study with comfortable chairs, tables, study carrels, study rooms for group study, quiet study areas, and a computer lab called the *Information Commons*. The *Information Commons* at the Van Houten Library consists of 120 brand-new computer workstations designed to satisfy student computing and online research needs. Both libraries are wireless to facilitate the collaboration so characteristic of the NJIT community.

A team of highly trained reference and instructional librarians bridge the gaps between research resources and users. They provide ad hoc assistance in person via the Research Helpdesk (973-596-3210) at the Van Houten Library, or by phone, email, and instant messaging. The online library is available 24/7 as is the chat helpline at www.QandANJ.org, a New Jersey librarians' collaborative providing research assistance round the clock.

Reference Librarians are subject specialists and work closely with departmental faculty in all of NJIT's curriculum and research areas to ensure that the right information resources are accessible to the right people at the right time. They teach research techniques and resources in the classroom in conjunction with course content, in small groups, and hold individual in-depth consultation sessions. Contact information for departmental liaisons can be found on the library website.

More information about the library can be found at www.library.njit.edu or by calling (973) 596-3210.

Consortium with Rutgers-Newark and UMDNJ

NJIT, Rutgers-Newark and UMDNJ, New Jersey's university of the health sciences, offer 10 joint master's or doctoral degree programs, placing them as leaders in development of programs to prepare individuals for a world increasingly multidisciplinary and technological in nature.

The three institutions are partners in University Heights Science Park, designed as a mixed-use, multi-sponsor science and technology park. University Heights Science Park is a partnership among academia, the community, private industry, and local, state and federal governments, which provide opportunities to transfer university-based research and technology to public uses. The 50-acre University Heights Science Park is adjacent to the NJIT campus. Each year, thousands of students from NJIT, Rutgers-Newark and UMDNJ take courses at the institutions. NJIT and Rutgers-Newark cosponsor common seasons of theatrical productions, as well as "World Week," and a variety of other cultural and social activities.

NJIT Campus

Located in the University Heights section of Newark, NJIT's 45-acre campus is adjacent to the campuses of Rutgers-Newark and Essex County College and a short distance from UMDNJ. The campus is reached easily via interstate highways and public transportation. New Jersey Transit's City Subway stops on campus, the Pennsylvania Railroad Station is 5 minutes from campus and Newark International Airport is within 5 miles of NJIT.

The expansion and improvement of NJIT's campus facilities have been vigorous, proceeding pursuant to a carefully drawn long-range plan, providing an environment conducive to accomplishment of the university's mission. A new student center is under construction.

NJIT's campus is home to some 20 R&D centers supported with industry, state, federal, foundation and university funding. NJIT's three-story Otto H. York Center for Environmental Engineering and Science houses a number of state and federally funded research centers.

The 187,000-square-foot William S. Guttenberg Information Technologies Center houses the Center for Manufacturing Systems and the Multi-lifecycle Engineering Research Center. The building is the site of the College of Computing Sciences and industrial and manufacturing engineering instruction and research facilities.

The Campus Center houses the food court, dining room and a more informal eating facility, The Highlander Cafe. In addition, there is a campus theater in which student productions are staged, an athletic field, tennis courts, and indoor recreational facilities, including a swimming pool, racquetball courts, weight rooms, track, aerobics room and more. The residence halls provide dormitory and apartment-style coed living.

Academic Policy and Procedures

The academic calendar lists the dates classes begin and end, dates on which the university is closed for holidays, deadline dates for registration and withdrawal and other dates of interest to the academic community. It may also be accessed at <http://www.njit.edu/Calendar/Academic.html>.

Registration for Courses at NJIT

Registration is required each semester. The Registrar's office is located in the Student Mall, on the ground floor of the parking deck. The office is open when classes are in session, Monday through Thursday, from 8:30 a.m. to 6 p.m., and Friday 8:30 a.m. to 4:30 p.m. Registration procedures for each category of student are listed below.

NJIT has an advance self-registration system that obligates all students currently enrolled in graduate degree programs to register in advance for their courses. An approved registration guarantees class seats until the first class meeting. Students who do not attend the first class meeting may lose their place in class.

All admitted students register online via the registrar's Web site at www.njit.edu/Registrar.

Currently Enrolled Students Currently enrolled students are informed of registration procedures for the fall and spring semesters by the Office of the Registrar during April and October respectively, and must then register during the advance registration period. Students who fail to comply with these instructions are charged a late fee. Instructions for the summer session are provided separately and mailed to students. Currently enrolled extension and distance-learning students are informed of registration procedures for fall, spring and summer semesters by the Division of Continuing Professional Education.

New and Readmitted Students The Office of University Admissions informs prospective and readmitted students of registration procedures.

International Students

New international students are only permitted to register after attending the required international student orientation program and must register in person. International students who register appropriately for full-time study will be reported in the Student and Exchange Visitor Information System (SEVIS) administered by the U.S. Immigration and Customs Enforcement Agency.

Non-Matriculated Students Non-matriculated students should contact the Office of University Admissions for details of admission and registration procedures at least one month before the date of intended enrollment. Extension and distance-learning students should contact the Division of Continuing and Professional Education.

Approval of Initial Registration

NJIT degree programs are purposely flexible to meet a variety of career and personal objectives within minimum requirements. Students are required to arrange a conference with their graduate advisor as soon as possible after notification of admission to formulate a course of study that meets the requirements of the particular degree program and reflects the interests and aspirations of the individual student. New students are required to obtain advisor approval for initial course registration. Advisors are available for international students during the international student orientation program.

Auditing a Course

Students who wish to audit a course must state their intention to do so at the time of registration. Change in auditing status is not permitted once a semester has begun. Students who audit are required to pay full tuition and fees for the course. Financial awards are not applicable to audited courses. Audited courses are not counted in determining full-time status. Students on probation are not permitted to audit. Students who wish to attend a course must have an authorized reason for attendance and a registration in that course (regular or audit) and cannot merely "sit in" at their own discretion.

Undergraduate Registration in Graduate Courses

Undergraduate students who wish to take 500- or 600-level courses must obtain the written approval of the graduate advisor for the program that offers the course, their undergraduate advisor and submit an **"Approval for Undergraduates Taking Graduate Courses" form**. If undergraduates wish to take 600-level courses, they must also obtain written approval from the chairperson of the department offering the course. Undergraduates are not permitted to take 700-level courses.

Undergraduate students who enroll in graduate courses for undergraduate credit pay tuition at the undergraduate rate. Grades will follow the graduate grading system.

The undergraduate and academic advisor will review the student's academic record prior to approval. Approval can be granted only to students who have completed the appropriate prerequisites for the course and are in satisfactory academic standing. The approval will be noted on an **"Approval for Undergraduates Taking Graduate Courses" form** that requires appropriate signatures and reports the student's cumulative undergraduate GPA. Students shall have a cumulative undergraduate GPA of 2.5 to be approved for registration in 500-level courses (500G for Architecture) and 2.8 for registration in 600-level courses.

Students whose undergraduate GPA is below the 2.5 or 2.8 minima, are considering courses out of the student's current major, are lacking appropriate prerequisites, have completed any prior graduate courses with a grade below a B, or have already completed 9 or more credits at the 500 level and above (15 credits for those in the B.S./M.S. program), or have an excessive number of credits for the undergraduate degree will also require review by the dean of graduate studies and the program advisors.

Undergraduate students should be aware that need-based financial aid may not be sustainable for registration in graduate courses.

Graduate Registration in Undergraduate Courses

Graduate students may be asked to register in undergraduate courses as conditions of admission, as bridge courses or by direction of the graduate advisor for their current program. Enrollment in other undergraduate courses requires the approval of the dean of graduate studies or the graduate advisor, and the undergraduate department offering the course. Tuition for these courses is assessed at the graduate rate. Grades will follow the undergraduate grading system.

Multiple Registration

A student generally cannot be matriculated in more than one graduate degree program at a time. Special circumstances may require the approval of the dean of graduate studies and the director of graduate admissions. This also applies to programs run cooperatively with Rutgers-Newark and UMDNJ. Currently enrolled graduate students who wish to enroll in a subsequent graduate degree program should NOT file an application for admission to the new program until they are in the final semester of their initial program. In addition, students may not be enrolled in both a degree and a non-degree graduate program or as an undergraduate and graduate student simultaneously.

Students should consult the Office of University Admissions when contemplating a change in program enrollment. Students should refer to "Change of Major" under Admissions in this catalog.

Course Additions and Schedule Changes

Students who add a course to their program will be charged the full tuition and fee for the course added; however, the flat rate (12--19 credits) may still apply. Students who add a course to their program will be charged the full tuition and fee for the course added. All schedule changes are completed via **Highlander Pipeline** and a schedule change fee will be assessed during late registration as determined by the Registrar.

Courses cannot be added after the fifth day of the semester. Students cannot receive credit for courses if they are not registered. Attendance in a class without proper registration for that class is not permitted.

Withdrawal from Course(s)

Students who wish to withdraw from one or more courses should first determine if the withdrawal would have an impact on full-time status, financial support, or academic standing and progress. They should consult their advisor or the Office of Graduate Studies in advance. International students must consult with the Office of International Students and Faculty because of the possible impact of federal reporting of status in SEVIS. Withdrawals are done by completing and submitting a Schedule Change Form to the Registrar's Office by the end of the ninth week of the semester. This form requires the signature of the instructor(s). It is available from the Registrar's Office. Failure to submit this form to the registrar by the deadline will result in a final grade other than W.

Discontinued attendance or verbal approval alone to withdraw will not result in a W and most likely will instead result in an undesirable final grade, generally an F or U.

Project, Thesis and Dissertation

Students may not register for project, thesis or dissertation credits until they arrange for a department- or program-approved faculty advisor to supervise the work. Continued registration for additional thesis, project or dissertation credits within the overall time limits for completion will be allowed as long as the advisor grades the work to show that there is satisfactory progress. Credits for which a U (unsatisfactory) grade is given are not counted as degree credits toward completion of the thesis, project or dissertation.

Master's project, master's thesis, or doctoral dissertation registration must be at least 3 credits during a semester. Summer session registration, if needed to allow completion for the August 31st degree date, must be at least 3 credits.

All students must have the program advisor's approval and section appropriate identification each time they register for project, thesis, dissertation, pre-doctoral research, co-op, or independent study. Students must register within the deadlines established by the registrar.

Maximum credit registration each semester is 12 credits for the doctoral dissertation, 6 credits for the master's thesis and 3 credits for the master's project. Additional credit registrations, beyond 12, for doctoral dissertations, will require approval of the dean of graduate studies. It is highly recommended that the masters thesis registration be only 3 credits in a semester unless a single semester completion is anticipated.

Once a student has begun a master's project, master's thesis or doctoral dissertation, the student must register for these courses each semester until the project, thesis or dissertation is completed. Unapproved interruptions in project, thesis or dissertation may be subject to billing for omitted credits.

Students must be registered in project, thesis or dissertation in any semester or summer session in which completion is expected. The advisor for thesis or dissertation assigns the final grade of P when the Office of Graduate Studies confirms it has received all documents in final and approved form and all related bills have been paid.

Approval by the graduate program advisor and the Office of Graduate Studies must be obtained if the student wishes to interrupt the thesis, project or dissertation for a semester or more. Students may neither maintain registration, nor fail to register without notifying and getting approval from the graduate program advisor and the Office of Graduate Studies. If a master's project is not completed after two semesters' registration, a final grade of F is given. Failure to complete a master's project by students who received financial support to do the project may result in dismissal. The university complies with all state and federal laws related to military service.

No more than four semesters and two summers of registration for a master's thesis are permitted. Failure to complete a master's thesis within this period will result in a final grade of U, and may result in dismissal.

No more than six years of registration for doctoral dissertation is permitted. Failure to complete a doctoral dissertation in this period will result in a final grade of U, and dismissal from the program.

Students who require additional time to complete a project, thesis or dissertation should appeal for an extension, in writing, to the graduate program advisor, the academic department, and the Office of Graduate Studies.

Continuous Registration Requirement, Programs

Once admitted to a degree program, students must be continuously registered for credit each semester until they complete degree requirements, unless they have been approved for a leave of absence by the Office of Graduate Studies.

Continuous Registration Requirement, Project/Thesis/Dissertation

Once a project, thesis, or dissertation has begun, students must register in these each semester until completion. MR (maintaining registration) is not permitted in place of a credit registration for project, thesis, or dissertation. The grade of I is not permitted for project, thesis, or dissertation.

Students who complete work for projects, theses or dissertations over several semesters receive a grade in the semester in which the work is completed and the final document is approved and received in proper format.

Discontinuance

Domestic students enrolled in graduate programs who find it necessary to temporarily discontinue their studies may either maintain registration, request a leave of absence, or voluntarily discontinue. A discontinuance form must be filed with the Office of Graduate Studies. International students may not discontinue studies without approval, but should seek approval for a leave of absence at which time maintaining registration may be authorized. Students who have discontinued must follow procedures defined by the offices of University Admissions and Graduate Studies to resume their studies.

Leave of Absence

Students who anticipate a protracted absence from the university may request a leave of absence from the Office of Graduate Studies. Students requesting a leave of absence for medical reasons will be required to consult with the Office of Health Services first. Leaves are granted for up to one year and may be extended for a second year. Leaves of absence are not counted toward the seven-year period in which the degree must be completed, but rules regarding expiration of credit do apply for course work, projects, thesis and dissertation research. Students returning, on-time, from an approved leave of absence are generally not required to apply for readmission but are required to inform the Office of Graduate Studies and the Office of University Admissions on their return. International students may be required to apply for readmission and file new financial documents. They also are required to consult with their graduate advisor. The university complies with all state and federal laws related to military service.

Readmission After Voluntary Discontinuance

Students who have voluntarily discontinued their studies without receiving a leave of absence, and who have not been dismissed from the NJIT graduate program must apply for readmission to the Office of University Admissions by the application deadline. A non-refundable application fee of \$60 must accompany applications. Applicants are subject to all probationary and unmet conditions in force at the time they discontinued their studies. Program requirements at the time of readmission will apply in addition to satisfaction of any prior unmet conditions. Application deadlines are:

For the Fall semester June 5

For the Spring semester October 15

Maintenance of Registration

Students enrolled in a degree program who find it necessary to temporarily discontinue their studies are permitted to maintain registration with approvals as note above, for a fee of \$60 for each semester they do not register and for a maximum of two consecutive semesters. Students working on project, thesis or dissertation are generally not permitted to register for maintaining registration. International students on F-1 and J-1 visa status may not maintain registration unless they have obtained prior written permission from the Office of International Students and Faculty.

Students who maintain registration are mailed registration notices for the following semester and are not required to reapply for admission. To maintain registration, students must register for "Maintaining Registration" on the registration Web site.

Each semester in which registration is maintained is counted in the total time period allotted to complete degree requirements except for students with an approved leave of absence. The Graduate Studies Office and the academic department will generally place registration holds on students who maintain registration for two semesters or more.

Responsibility for Registration

NJIT emails notices in advance, but cannot guarantee postal delivery. Regardless, students are expected to obtain all necessary information and comply with all registration procedures on time. Students who receive financial support must be in attendance at NJIT and will not be permitted to have other persons register for them.

Scheduling of Classes

Graduate courses at NJIT and at Extension Sites are, in general, scheduled for late afternoon and evening hours and Saturdays for the convenience of those employed full-time. Evening courses normally begin at 6 p.m. and end at 9 p.m. Some laboratory sessions begin at 6 p.m. and end at 9:50 p.m.

Courses in heavy demand may be scheduled for additional sections if adequate enrollment can be assured. Day and evening classes during the summer months are possible under the same conditions. Special programs such as the Executive Management program and those offered by Distance Learning have their own schedules.

Course Cancellations

The university does not guarantee offering all or any of the courses listed in this catalog. When there is inadequate registration, a course may be cancelled without notice. The registrar will attempt to notify all students of course cancellations before the first meeting of the semester.

Room Changes

Room and laboratory changes are in the online schedule maintained by the Registrar via **Highlander Pipeline**.

Courses Taken at Other Colleges

Cross-Registration Procedures

Students may take courses at UMDNJ and Rutgers-Newark College of Arts and Sciences provided that the:

- Course is used toward a degree.
- Course is not offered at NJIT, or, because of a conflict in schedule, cannot be taken at NJIT.
- Approval is obtained, in advance, from the student's advisor.
- Approved cross-registration form is submitted by the student to the host school. The course must also be included on the NJIT registration form.

Students in joint programs should register at the school that admitted them to their current degree program. Students from Rutgers-Newark and UMDNJ must be matriculated in graduate programs at their home institution to cross-register for NJIT courses. Students from Rutgers-Newark and UMDNJ who cross-register into NJIT are considered NJIT non-matriculated students and are therefore limited to 9 credits maximum. In order to take more than 9 credits, these students would have to apply and be admitted as matriculated students for an NJIT graduate degree program.

Summer course registration procedures, and inclusion of courses on NJIT transcripts for students wishing to take courses at Rutgers-Newark and UMDNJ, are determined by the registrar. In general, cross-registration cannot occur for summer sessions.

Registration at Another College

To take graduate courses at colleges other than those in the cross-registration program, students must obtain prior approval from their advisor and the dean of graduate studies. Students should review the section on "Transfer of Credit" if they wish to transfer these courses to an NJIT program.

Tuition remission from NJIT is not available for courses taken at educational institutions not participating in NJIT's cross-registration program.

Transfer Credits

Transfer credits are calculated by NJIT according to the total number of instructional minutes earned at the other institution. The equivalent instructional minutes of a maximum of 9 credits of graduate work, taken within seven years, from accredited US educational institutions may be transferred and applied to degree requirements at NJIT. Credits from educational institutions outside the United States (except Canada) cannot be transferred as individual courses. On a case by case basis, up to 9 transfer credits may be considered for non-collegiate-based instruction after evaluation by the dean of graduate studies. The university does not grant transfer credit for work experience or other non-instructional activities.

Groups of courses may sometimes be accepted as a block of credits toward some types of programs. An appropriate prior Master's degree is often accepted as a block equivalent to 30 credits toward a PhD program at NJIT. Subject to specific MBA program conditions, an equivalent block of 12 credits can be accepted from a graduate degree previously awarded by a US AACSB accredited management program or internationally from a program accredited by AACSB or an AACSB-affiliated accrediting agency. For the MBA program, the proposed block must be based on courses with grades of B or better and on courses with equivalent credit values of 3 or more credits.

Credits are transferred only if the courses were taken for full academic credit, were never applied to any other degree, and a final grade of at least B (3.0 GPA equivalent) was attained. In addition, the student's graduate advisor and the Office of Graduate Studies must agree that such courses directly relate to the student's program of study before they can be transferred.

Requests for transfer credit must be submitted on a form available from the Office of Graduate Studies, accompanied by course descriptions from the other educational institution. Students must also arrange for the other institution to send an official transcript to the Office of Graduate Studies at NJIT. Requests may be submitted and approved at any time but are not added to a student's record until matriculation is granted and one semester completed. Grades that are transferred will not be calculated in cumulative GPAs.

Transfer of Credits Within NJIT

A student may transfer credits from one program to another program within NJIT under certain circumstances. This type of transfer requires consultation with The Office of Graduate Studies but does not require completion of a transfer credit form or submittal of NJIT transcripts. All graduate credits taken at NJIT, regardless of the major, appear on a general transcript.

Academic Standing

Enrollment Status

Full-time Students and Full-time Certification Students registered for 9 credits or more throughout an entire semester are considered full-time. International students must be in full-time status every semester. The Office of International Students and Faculty will report, in SEVIS, international students who meet the full-time definition under F-1 regulation 8CFR 214(f)(6). Any international students unsure of their status should contact the office at 973-596-2451 or e-mail to international.students@njit.edu Students who are not registered for 9 credits and do not meet the conditions for full-time certification are considered part-time.

Full-time Certification

The Office of Graduate Studies may certify students as full-time even if they are not registered for 9 credits, under any of the following circumstances:

- If a master's thesis registration is included in a prior semester, an additional semester for a maximum of two with only a master's thesis registration is acceptable
- Students have fewer than 9 credits remaining for completion of all degree requirements and are registered for all credits needed to complete the degree. This certification can only be given for one semester.
- Doctoral candidates who completed all required course work, and accumulated the required dissertation credits but have yet to complete the dissertation and defense, are registered in Dissertation Research (and seminar if required) for at least 3 credits each semester.
- Students originally registered for 9 credits but have substantial extenuating circumstances that require a reduction in course load. Normally this certification applies only in cases of medical or similar emergencies that incapacitate a student for a significant part of a semester. Improper course registration, failure to seek proper advisement, inadequate academic progress, or risk of earning a weak or failing grade are not extenuating circumstances. Inability of an international student who had earlier filed a financial attestation to pay tuition and fees, is also not an extenuating circumstance.
- Students on a full-time cooperative education assignment are registered in a graduate co-op work experience or equivalent course. The Office of Graduate Studies should be consulted for limits on cooperative education because cooperative education has an influence on full-time certification and allowable time to complete the degree.
- Audited courses and withdrawn courses do not count toward full-time status; ESL (English as a Second Language) courses do count as one course each.

Half-time Students

For federal, financial aid, and other reporting purposes, half-time graduate student status may be defined for students registered for 6 credits or fewer during a semester. Contact the Office of Graduate Studies for more information.

Grades

The following grades are used for graduate courses:

GRADE	GPA	SIGNIFICANCE
A	4.0	Excellent
B+	3.5	Good
B	3.0	Acceptable
C+	2.5	Marginal Performance
C	2.0	Minimum Performance
F	0.0	Failure
I		Incomplete
W		Approved Withdrawal
AUD		Audited (no academic credit)
S or U		Satisfactory or Unsatisfactory
P		Passing for Master's Thesis or Doctoral Dissertation

(Unlike undergraduate courses, there is no D grade for graduate courses. Assigned grades must be consistent with the level of the course and not the matriculation level of the student in the course. Grades used in GPA calculations (A, B+, B, C+, C, and F) are not to be used as grades for dissertation research (790), pre-doctoral research (792), master's thesis, 0, 1/2, and 1 credit seminars, co-op, teaching methods, and ESL courses. Incompletes are not assignable for these courses with the exception of co-op as described later.)

Project, Thesis and Dissertation Grades

Grades for these are S or U until completion. Students who do not complete a thesis, project or dissertation in a semester, regardless of accumulated credits, must register again for at least 3 credits of thesis, project or dissertation in the following semester. Grades of S or U cannot be changed after a semester is over to show retroactive completion and to avoid additional registrations that are required.

Final Grades in Project, Thesis and Dissertation

Letter grades bearing on the GPA are given for satisfactory completion of a project. The final grade for a completed and approved thesis or dissertation is P. Theses and dissertations require a successful defense before the thesis or dissertation committee after which the P is assigned. Theses and dissertations are submitted to the Office of Graduate Studies. Projects are submitted to the project graduate advisor.

Semester and cumulative GPA calculations by the registrar only include courses for which a letter grade is given. For the purpose of the GPA, the registrar only calculates the grades for credits earned in the semester in which the project, thesis or dissertation is completed. Letter grades cannot be given for an unfinished project or thesis, nor for work not submitted. Receipt of two U grades for project, thesis, dissertation, or pre-doctoral research can result in dismissal from the program.

Special Topics

Regular letter grades are assigned for special topics courses.

Independent Study

Regular letter grades are assigned for independent study courses.

Incomplete

A grade of I (Incomplete) is given when courses cannot be completed because of special circumstances. Students on academic probation are not permitted a grade of incomplete without permission from the Office of Graduate Studies. Required course work may be finished at the discretion of the instructor, no later than the end of the subsequent semester. Receipt of an I does not require or suggest attendance in the courses in a following semester. A letter grade must be assigned by then or a grade of F will be automatically assigned. Students nominated for financial awards must have I grades resolved by the fourth week of the subsequent semester to allow a determination of their eligibility for the award. The new grade cannot be changed.

A grade of I cannot be given for thesis, project, dissertation, seminar, pre-doctoral research, co-op or English as a Second Language (ESL) courses. Students in joint programs or cross-registered from or with Rutgers-Newark should note that NJIT has a different and much earlier deadline for resolution of I's before they automatically become F's. Some departments may assign an initial I for co-op courses, which may be changed to an S or U based on submittal of a report by the student to the co-op advisor. Students continuing for a second consecutive registration period in co-op with the same employer will have an I assigned as a grade for the first registration. This will be changed to S or U, based on co-op performance and evaluation by the co-advisor at the end of the second registration period.

Satisfactory and Unsatisfactory

The grades S or U report progress in project, thesis, dissertation, and pre-doctoral research courses. These also can be final grades in seminar, co-op, teaching methods and ESL courses. The grade of S is given for satisfactory progress and U is given for unsatisfactory progress. Students who fail to meet with their advisors or do not satisfy relevant attendance requirements will receive a U grade. Credits for courses in which U is received cannot count toward a degree.

Grade Reports

The registrar no longer issues grade reports. Grades may be viewed using a confidential password and identification number at <http://www.njit.edu/Registrar>, the registrar's home page.

Grade Changes

Grade change requests will not be accepted after the end of the subsequent semester. Students should carefully monitor their records and contact the Registrar or the Office of Graduate Studies about any missing or incorrect grades no later than the end of the following semester.

Grade Disputes

Students are expected to resolve disputes about grades with their instructors. If they cannot reach a satisfactory settlement with their instructor, students are permitted to request the intervention of the chairperson of the department and the dean of the school or college. Most schools and colleges have defined procedures for grade disputes coordinated by the dean of the school or college. The dean of graduate studies may be consulted.

In all cases, final authority to award grades rests with the instructor.

Special Circumstances

Students should bring to the attention of the dean of graduate studies any special circumstances that may adversely affect academic standing. This action must be taken as soon as such circumstances develop.

Course Repetition

Graduate students may request approval to repeat a course using a form available from the Office of Graduate Studies. The grade received in a repeated course is calculated in the cumulative GPA, but the first grade still appears on the transcript. A maximum of two courses may be repeated in matriculated graduate study. Students may not repeat a course without prior approval from the department and the Office of Graduate Study. Non-matriculated students, including certificate students, may repeat a maximum of one course. Students who receive an F in a course will be required to repeat that course. The dean of graduate studies should be consulted if the course is no longer offered or not applicable to the student's current program or other extenuating circumstances are believed to exist.

Transcript of Grades

Students who wish to obtain a transcript issued on their behalf must submit a request in writing to the registrar. A fee for each copy must accompany written transcript requests. Allow 10 days to process the request. Transcripts will not be issued to or on behalf of a student with outstanding financial obligations to the university. Official transcripts bearing the university's raised seal will be issued only to other educational institutions, government agencies, or employers. Under no circumstances will official transcripts be issued to students.

Progress Toward Degree

Academic Performance and Satisfactory Progress Policy

New Jersey Institute of Technology requires that students maintain satisfactory progress in working toward a degree. Federal and state regulations governing financial aid and awards require that students receiving aid from government agencies must meet academic performance and progress requirements defined by the university and approved by the appropriate government agencies. Students are responsible for checking regularly with the office of the department of major study or the Office of Graduate Studies to determine if they are fulfilling degree requirements.

The Office of Graduate Studies, along with academic departments, reviews academic standing of all graduate students at the end of each semester. To have satisfactory academic standing, students must have a cumulative GPA of 3.0 or above, meet all university requirements and be making satisfactory progress toward a degree. Students who do not have satisfactory academic standing are subject to academic warning, academic probation or academic dismissal.

Academic Warning

Students who have completed at least one full-time semester (or its equivalent of 9 credits) and do not have satisfactory academic standing may be asked by the Office of Graduate Studies to visit in-person to review their academic record and also to meet with their graduate advisor. This is not noted on the permanent academic record.

Academic Probation

Students who have completed two or more semesters, or more than 9 credits, and do not achieve satisfactory academic standing may be placed on academic probation or be subject to dismissal. Conditions for continuing graduate study at NJIT are sent, in writing, to students on academic probation. The Office of Graduate Studies will work with students to determine approaches toward successful program completion. Course repetition or the taking of up to 6 additional credits are typical recommendations for students whose GPA is below 3.0 and have the ability to raise the GPA to 3.0 with appropriate grades.

Students on academic probation may not maintain registration without the approval of the Office of Graduate Studies. Academic probation may be noted on the permanent academic record.

Dismissal

Students may be dismissed from Graduate Studies for cause at any time. Cause shall include, but is not limited to:

- Failing to meet the conditions of admission.
- Failing to maintain a cumulative GPA of at least 3.0 after completing one semester or attempting at least 9 credits.
- Failing to make satisfactory progress toward a degree.
- Failing to meet the requirements for graduation.
- Failing a required or repeated course more than once.
- Failing to satisfy requirements for project, thesis, or dissertation within the required time limits.

- Failing doctoral qualifying and similar examinations required for continuing studies in the program, or failing to take examinations within prescribed time limits.
- Professional conduct offenses as defined in the NJIT Code of Professional Conduct.
- Making a false representation relating to admission, registration, or the awarding of financial support.
- Failure to pay all tuition, fees and other charges within the required time limits.

Dismissal is noted on the permanent academic record.

Appeals

Decisions relating to a graduate student's academic status are made in accordance with regulations approved by the faculty and its standing committees. Committees include, but are not limited to, the Graduate Council and the Committee on Academic Affairs.

Students who disagree with a decision should attempt to resolve the matter with those immediately responsible. When a matter cannot be resolved at this level, students should appeal to the chairperson of the department and then to the dean of the school or college. At any time, the student may request that the dean of graduate studies be consulted.

A graduate student who remains dissatisfied may appeal the decision to the Committee on Graduate Appeals through the Office of Graduate Studies. The committee's decision, made in writing, is final. Student requests for review or appeal must be in writing and state accurately and completely the decision being appealed, when it was made, by whom, and the reason for the request. Requests should be sent to the dean of graduate studies. A copy of the request together with information that defines the student's record are distributed to the committee members for their consideration.

Readmission if Dismissed

Students dismissed from NJIT for academic reasons may apply for readmission to another degree program after at least one calendar year.

Dismissed students who seek readmission should apply to the Office of University Admissions at least two months before the date of intended readmission. These students must complete, in full, the application for admission and provide all requested documentation, regardless of previous applications. Readmission is treated as a new application. Readmits compete against all other applicants for admission that semester. The circumstances and conditions of the dismissal will be considered in the readmission process.

Students dismissed for professional conduct offenses or for making false representation will not be readmitted to NJIT.

Students who reapply should also include supportive material to justify readmission. Such material may include, but not be limited to, scores obtained in the GRE or GMAT, grades obtained in graduate level work at other institutions, letters of recommendation, and a statement by the applicant. A non-refundable fee of \$60 must accompany applications.

General Graduate Degree Requirements

Graduate degree candidates must achieve a cumulative GPA of at least 3.0 in all graduate-level courses (500 level and above) and satisfy other academic and non-academic requirements. These include financial obligations to the university. Until the Office of Graduate Studies verifies that all tuition bills and fees have been paid, and that any required master's thesis or doctoral dissertation has been completed in the appropriate format, degrees will not be certified. Students whose programs require a thesis or dissertation must complete these within time limits, format, and policy prescribed by the Office of Graduate Studies. Master's theses and doctoral dissertations must be submitted for final approval to the Office of Graduate Studies. Master's projects need to be submitted only to the advisor or program office. At least three program approval signatures are required for master's theses; at least five are required for doctoral dissertations. Fees that must be paid include, but are not limited to, the binding fee, publishing fee, copyright fee, and graduation fee.

Grade Point Average Calculation

GPA's are calculated for each semester and cumulatively for the entire graduate record. In order to obtain a graduate degree, candidates must have a cumulative GPA of at least 3.0 in all graduate-level courses, exclusive of grades in master's project, master's thesis or doctoral dissertation. All 500-level or higher courses are included in the cumulative GPA, regardless of applicability to a specific degree. Only the initial grades for graduate courses that have been repeated (with a maximum of two allowed) are excluded from GPA calculations. Undergraduate credits taken by graduate students are not counted. Some programs also may require a 3.0 GPA in designated core course requirements.

In addition, the cumulative GPA for all courses counted for the degree, exclusive of master's project, master's thesis or doctoral dissertation, must be 3.0 or better. Grades for master's project must be a B or better. Successful completion of the master's thesis and the defense or the doctoral dissertation and the defense will be assigned a grade of P for passing. The P grade is for the thesis

or dissertation credits taken in the student's final semester.

Theses and Dissertations

Theses and dissertations submitted for graduate degrees must follow a prescribed university format. The approved format is based on the Estrin/Roche manual: Guidelines for Scientific and Professional Theses. The Office of Graduate Studies provides seminars, guidance documents and continuing assistance for students. The office or its web site should be consulted for more information.

Degrees cannot be certified until the Graduate Studies Office receives and approves the final thesis or dissertation documents with all related requirements completed. The Graduate Studies Office will notify the advisor and the registrar that these documents have been approved before a final grade of P can be assigned. The NJIT Library handles the scanning of completed theses and dissertations into the NJIT website and works with the external bindery. Students are notified by the Library about availability of completed and bound theses and dissertations, typically several months after degree completion. The Graduate Studies Office can make arrangements, for a specified period, for sequestering a completed thesis or dissertation for proprietary or patent reasons, if requested by the student or the advisor.

Special Topics

Special Topics courses are occasionally offered by departments to present new areas of study or of high demand where rapid developments in the field have not allowed time for formal approval of specifically named courses in advance of the offering. These are announced by the departments in time for registration and are typically well-enrolled. They may be at the master's or doctoral level. There is no university limitation on the number of special topics courses that may be taken.

Independent Study

Some programs permit up to three independent study courses (a total of 9 credits) to be taken by graduate students. Independent study is for students who want highly specialized study with a specific faculty member in areas in which specifically titled courses are not normally available. Most departments offer independent study at both the master's and doctoral level. Students should see their advisors regarding independent study options. For students in doctoral programs, a maximum of two independent study courses may be used to partially satisfy the 700-level course requirements. Enrollment in independent study may be as low as one student under a faculty section number.

Expiration of Credit

For all degrees, credits expire seven years after completion of the semester in which they are earned. Expired courses cannot be used to fulfill degree requirements and must be replaced by current credits.

Degree requirements must be completed within seven consecutive years of original admission. Approved leaves of absence do not count against the seven-year limit for completion of the degree although the validity of individual courses may still expire during this time. Requests for waivers of the seven-year limit for extenuating circumstances, other than mere failure to register, are made to the dean of graduate studies. The technical content and remaining currency of courses is considered in evaluating these requests. The majority of courses in rapidly changing fields (such as computer science) are not likely to be accepted after seven years.

Awarding of Degrees

Degrees are awarded three times each academic year: August, January and May. The university conducts its commencement ceremony once per year, normally in May. Candidates for graduation must file an Application for Candidacy with the registrar. The application must be consistent with the student's program of admission and current record. Forms are available at www.njit.edu/Registrar. Applications received after the specified deadline are accepted for the requested degree date at the discretion of the registrar and are subject to a late fee. Unsuccessful applications will be automatically added to the next commencement list and students will be billed for the appropriate fees. This will be done a maximum of three times.

Deadline Waiver

Applicants for the August, January or May degree dates whose master's thesis or doctoral dissertation is substantially complete, but who are unable to submit it in final form by the specified date, may request a deadline waiver from the Office of Graduate Studies before it is due. Students granted a waiver may be permitted until a date specified by the Office of Graduate Studies to submit the final copy of the work to the office. Such students may then apply for the next scheduled graduation without having to pay for additional thesis or doctoral dissertation credits. Contact the Office of Graduate Studies for further information.

Students who do not meet the deadline waiver will be required to register for master's thesis or doctoral dissertation in the subsequent enrollment period to allow formal completion.

Master's Degree Requirements

NJIT offers master's (Master of Architecture, Master of Arts, Master of Business Administration, Master of Infrastructure Planning, Master of Public Health, Master of Science) degrees in a variety of disciplines. In general, these degrees require at least 30 credits. Typically, at least 18 credits are in an area of specialization and 12 credits of electives. In general, all credits must be numbered 600 or above, although some programs allow up to 6 credits of courses numbered 500-599. Some programs may also require a master's thesis or project.

Bridge Program

Students who seek a master's degree in an academic discipline different from that of the bachelor's degree may be admitted to a master's degree program but may be required to complete appropriate undergraduate and/or graduate prerequisites in addition to the normal graduate degree requirements of the program. The program of courses will be individually designed in consultation with their graduate advisor. Bridge courses must be completed before 9 credits of graduate degree courses are earned. Bridge courses are not counted as degree credits but do count in graduate GPA calculations if the course is numbered 500 (500G for Architecture) or higher.

Master's Thesis Advisor, Committee, and Defense

A master's thesis committee should be formed at the start of the second semester of thesis registration (or at the start of the first semester if a single semester completion seems certain). The committee must have at least three members. All members of the committee must hold faculty rank.

The chair of the thesis committee and at least one other member must be a tenured or tenure track faculty member or a research professor in the academic department or program offering the degree. Approval of the committee is made by the program director and reported to the Graduate Studies Office on a standardized thesis committee appointment form.

The thesis must be defended in a publicly announced oral defense. Each program has its own policies on scheduling and submitting thesis drafts to members of the committee. Students are responsible for following their program's policies. Successful defense of the thesis is determined by vote of the thesis committee. The chair of the thesis committee, one other person who is a tenured or tenure-track faculty or a research professor, and third member of the committee must be present to hear the defense. Every member of the thesis committee must sign and date the approval page of the final thesis document. A report on passage, conditional passage, or failure of the defense is completed by the thesis committee chair, signed by the thesis committee members, and sent to the Graduate Studies Office on a standardized form.

Specific Requirements

Detailed descriptions of the degree requirements for specific degrees or degree/discipline combinations may be found in the Degree Programs section of this catalog.

Doctor of Philosophy Degree Requirements

The number of credits required for completion of doctor of philosophy degrees varies with the program and the level of entry into the program. Students holding a prior master's degree generally require a minimum of 60 graduate credits beyond the master's degree (which is assumed to have included at least 30 graduate credits beyond the bachelor's degree). Students entering the doctoral program with a bachelor's degree and who do not wish to complete a master's degree while pursuing the doctoral degree will be required to complete a minimum of 84 graduate credits beyond the bachelor's degree for programs offered by the Newark College of Engineering and 78 graduate credits beyond the bachelor's degree for programs offered by the College of Science and Liberal Arts.

Students who enter an NJIT doctoral program with two or more master's degrees already completed or a large number of appropriate prior graduate credits may be considered for a reduction in the credits required at NJIT. The evaluation of the requirements will be made by the program advisor in consultation with the dean of Graduate Studies. The minimum credit requirement at NJIT for the doctoral degree at NJIT is 36 dissertation research credits, regardless of any other requirement waiver.

Doctoral program credit requirements for joint programs for which the names of multiple universities appear on the diploma, are to follow the requirements of the program as approved by the universities, generally a minimum of 72 credits beyond the bachelor's degree.

In addition to overall credit requirements, each program includes the following minimal requirements:

- For those entering the program with master's degrees, 24 credits of course work beyond the master's degree of which at least 12 credits must be at the 700 level and none at the 500 level or lower.
- For both entry levels; baccalaureate or master's start-point, at least 12 credits of course work at the 700 level; no more than two independent study courses may be used to satisfy this requirement. Master's project or thesis cannot be used to satisfy this requirement.

- 36 credits minimum of doctoral dissertation research for programs offered jointly with other universities.
- 30 credits minimum of doctoral dissertation research for the programs offered by the College of Computing Sciences.
- Dissertation research credits in accordance with the program approval documents for programs offered jointly with other universities
- Seminar attendance each semester or as required by the program. Nominal credit values, if any, for registration in seminar do not count toward fulfillment of overall credit requirements.

Students who wish to complete a master's degree while pursuing a doctorate in the same field must be approved for this by the doctoral department, the dean of graduate studies, and the director of graduate admissions, and satisfy all requirements for the master's degree, including any thesis or project requirement. In general, such permission is given only after passage of the research proposal exam or if the student is near completion of the doctorate. Students in doctoral programs initially, who terminate their studies at the master's level, will lose further eligibility for support.

Qualifying Examination

Students must pass a qualifying examination within two years of being admitted into doctoral programs. Exceptional students, only having bachelor's degrees, who are admitted into doctoral programs must take the qualifying examination within one and one-half years of admission and must pass it within two years. Students are only permitted to take the examination twice. The passage of qualifying examinations is reported to the Office of Graduate Studies. Each department determines its own policies with regard to format, confidentiality, grading, and review of examinations by faculty and students. Students are, at their request, permitted to view their examination papers in the presence of a designated faculty member and to see correct examination answers.

Dissertation and Pre-Doctoral Research Credits

Students may register for doctoral dissertation credits (course number 790) only after passage of the qualifying examination. They may register for a maximum of 6 credits of pre-doctoral research (course number 792) prior to passage of the qualifying exam. These credits may count toward the required number of dissertation credits for the degree. Dissertation and pre-doctoral dissertation credits are graded as S or U except that P is assigned to the last registration for doctoral dissertation upon completion of the degree.

Dissertation Advisor, Dissertation Committee and Research Proposal

Doctoral students are required to have a dissertation advisor selected, a dissertation committee formed, and research proposal approved within one year of passage of the qualifying examination.

Department chairpersons or doctoral program directors are responsible for approving formation of dissertation committees. The committee consists of a minimum of five members, one of whom is external to the program or to NJIT. The majority of the committee members are tenured or tenure-track faculty from the student's program or department having research experience or developing research interests related to the dissertation research. The dissertation committee chairperson typically is the doctoral candidate's dissertation advisor, but other faculty may be selected, provided they are from the student's program or department. The dissertation committee chair must be a tenured or tenure-track faculty member in the program. Two committee members, including an external member, may serve as co-advisors. The advisor or at least one of the co-advisors must be a tenured or tenure-track faculty member from the program.

The other members of the dissertation committee, except for an external member from outside the university, must have faculty rank at the level of Assistant Professor, Associate Professor, Professor, Distinguished Professor, or Research Professor. Former students of any committee member, who are less than four years beyond doctoral completion, are specifically excluded from membership. Post-doctoral Associates, Instructors, Special Lecturers, Research and Teaching Assistants, or any other student category, are specifically excluded from membership. The external members should either have appropriate faculty rank elsewhere or have sufficient research expertise to warrant inclusion on the dissertation committee.

Part-time doctoral students pursuing the doctorate with industry collaboration should have at least one dissertation committee member from the participating industrial partner whose research credentials would otherwise be appropriate for a member of the university faculty. Committees for joint doctoral programs with other universities shall either follow these policies or the specific policies for the joint program consistent with the program approval and related documents.

Each doctoral program has specific requirements for preparing, presenting and accepting proposals. Research is expected to investigate or develop a unique contribution to science and technology. Research may be experimental, analytical, applied, or theoretical, provided it satisfies this criteria and is approved by the dissertation committee. It should be of a quality to warrant scholarly presentation or paper submission to reputable journals in accordance with program practice.

Residency

Doctoral candidates must spend at least one academic year in full-time residence. This requirement is sometimes waived with the approval of the dissertation committee and the dean of graduate studies. Such waivers are granted when a candidate's dissertation

research requires use of research facilities at an approved off-campus site. A typical example for residency requirement waiver would apply in the case of students in the collaborative doctorate option.

Doctoral Candidacy

Doctoral candidates are doctoral students who have completed all other requirements for the degree except for completion of the dissertation and the defense. This includes, as a minimum, passage of the doctoral qualifying examination, approval of the research proposal and completion of all course work. Status as a doctoral candidate does not imply candidacy for the degree. A degree candidate will be both near degree completion and have made a formal degree application for a particular graduation date.

Dissertation and Defense

The dissertation should be a scholarly publication of the quality to warrant conference presentation or paper submission to reputable journals. The dissertation must be defended in a publicly announced oral defense. Successful defense of the dissertation is determined by vote of the dissertation committee. All members of the committee must be present to hear the defense.

Each program has its own policies on scheduling and submitting dissertation drafts to members of the dissertation committee. Students are responsible for following their program's dissertation policies. In regard to format, the standard reference is the latest edition of the Estrin/Roche manual: Guidelines for Scientific and Professional Theses. Office of Graduate Studies policies on number of copies, deadlines, fee payments, information documents, and grade submission for acceptance of the final dissertation and for doctoral degree certification are to be followed. The Office of Graduate Studies provides guidance and assistance to students working on the final details of the dissertation. Students should contact the office for appointments early in the final semester. The review of format should proceed well in advance of final document approval and dissertation defense.

Every member of the dissertation committee must sign and date the approval page of the final dissertation document.

Graduate Certificate Requirements

Certificates require completion of 12 specified credits with a GPA of 3.0 or better. Only one course repetition is permitted for certificate students to improve the GPA. The cumulative GPA of the entire graduate record at NJIT also must be 3.0. Graduate certificate credits may be applied to a following master's degree. Dual use of credits from a completed first master's degree to a second and following certificate is not permitted.

Students in certificates programs are usually considered to be non-matriculated students for the duration of the certificate program. Graduate certificate programs are generally completed before students are admitted to a following matriculated graduate program. Students who did not apply for admission to a certificate program initially and instead complete the certificate requirements as part of a completed graduate degree program may be permitted to receive a certificate also with approval of the graduate program director.

Rights and Responsibilities

Code of Professional Conduct

New Jersey Institute of Technology requires students to conduct themselves with decorum and to adhere to standards of ethical and professional behavior. NJIT has adopted, and requires all students to comply with, a Code of Professional Conduct. The policies and procedures governing this code are contained in a separate publication, the Student Handbook, and are deemed incorporated into this catalog. The student handbook, maintained by the Dean of Students Office, is available online at: www.njit.edu/handbook/

Identification Card

All students must carry an NJIT identification card while on campus. An ID card must be presented at the request of a university administrator, faculty member or public safety officer. Facilities, parking, building access, and services of the university require presentation of a valid university ID.

Students should obtain an ID card as soon as possible after registration is completed. Photographs for ID cards are taken throughout the semester in the Department of Public Safety, located in the parking facility. Dates and times to obtain an ID are posted at the Campus Center Information Desk. Proof of registration in the form of a tuition receipt or registrar's receipt is required to obtain an ID card. These receipts also will be accepted as NJIT identification until the ID card is issued. ID validation stickers are issued each semester and are available at the Department of Public Safety or the Campus Center Information Desk.

Lost or stolen IDs should be reported as soon as possible to the Department of Public Safety. A replacement for a lost card is obtained by paying a \$25 charge at the Bursar's Office cashier's window in the Student Services Mall and presenting the receipt at the Department of Public Safety where the card will be re-issued.

NJIT cards are not transferable. Cards are not to be loaned to anyone for any reason. ID cards are the property of NJIT and must be

returned upon request.

Family Educational Rights and Privacy Act

The Federal Family Educational Rights and Privacy Act of 1974 gives students the right to inspect any educational records about them maintained by NJIT. Students have the right to a hearing to challenge the contents of these records, and also have the right to add to their records an explanation of information they challenge. Unless specifically exempted by the public law, NJIT is mandated to keep student records strictly confidential.

The university registrar is responsible for student records. Educational records are defined as transcripts, admission files and registration forms. To review their files, students must contact the registrar, in writing, to specify the items they want to see. Student health records are maintained by the Director of Health Services and may only be examined by a health professional chosen by the student.

Educational records defined by the public law must be made available within 45 days after a student requests to see them. A catalog of educational records kept by NJIT is available from the registrar. Exceptions to the right of inspection include financial aid records and records of institutional, supervisory, and administrative personnel, and ancillary educational personnel.

For a nominal service fee, copies of these records may be made for students.

Only those at NJIT acting in the student's interest are allowed access to student files, including personnel in the registrar's, admissions, student services, and finance offices; and academic personnel within the limitations of their need to know.

With the exceptions stated in the law, no one outside NJIT shall have access to a particular student's educational record without the written consent of the student, except in extraordinary circumstances such as emergencies. Accrediting agencies carrying out their accrediting function and certain state and federal officials are permitted access. A record of, and reasons for, granting access will be kept by the university and will be available to the student.

The university, at its discretion, may provide directory information, in accordance with the provisions of the law including a student's name, address, telephone listing, date and place of birth, major field of study, participation in officially recognized activities and sports, weight and height of members of athletic teams, dates of attendance, degrees and awards received, and the most recent previous educational agency or institution attended by the student. Students who desire directory information to be withheld should notify the registrar in writing within the first two weeks of initial registration.

Request for non-disclosure will be honored by the university for ONLY ONE ACADEMIC YEAR AT A TIME. Authorization to withhold directory information must be filed annually in the Office of the Registrar.

Students who disagree with an entry may challenge its accuracy with the Office of the Registrar. If this remedy fails, either NJIT or the student may request a formal appeal hearing. The law mandates that such hearings be held within 30 days of requests, and be conducted by a university official or other person with no direct interest in the outcome. Students will be given a full and fair opportunity to present relevant evidence and be represented by their own counsel.

Students may include a written statement in their file explaining a disputed entry following an unfavorable determination of an appeal. A written decision will be rendered within 15 working days after the hearing of an appeal.

Students who believe that they are treated unfairly or improperly and contrary to the provisions of the law may request, in writing, assistance from the provost of the university or the provost's designee. Students who believe that their rights have been abridged may file complaints with the appropriate federal agency.

Anti-Discrimination Policy

New Jersey Institute of Technology reaffirms its commitment to a policy of non-discrimination on the basis of race, sex, sexual orientation, age, religion, ethnic origin, handicap or veterans' status in its employment policies, educational programs and activities under university control.

Assuring a climate of equal opportunity is the direct responsibility of all levels of management. Administrative and supervisory personnel are required to comply with applicable government regulations and the affirmative action goals of the university. Among these are Executive Orders 11246 and 11375 (Affirmative action); the Civil Rights Act of 1964, as amended; Title IX of the Education Amendments of 1972 (Sex Discrimination); Section 504 of the Rehabilitation Act of 1973; Americans with Disabilities Act (Non-discrimination on the Basis of Handicap); The New Jersey Law Against Discrimination, Title 10, Chapter 5, 10:5-1 to 10:5-28, NJ Revised Statutes, as amended; and the New Jersey Governor's Code of Fair Practices, Executive Order No. 21 (1965), as amended.

and Executive Order No. 39 (1991), "Prohibition in State Government of Discrimination Based on Sexual Orientation."

Any reported act of discriminatory behavior will be investigated through the Office of the Dean of Student Services, the Office of Compliance and Training, or the Office of General Counsel and Employment Policy Relations.

Sexual Harassment Policy

It is the continuing objective of the university to offer a work and study environment to its employees and students that rewards career and educational goals based upon relevant factors such as ability and work performance. Sexual harassment of employees and students is unacceptable. It is a barrier to educational and professional development and contrary to law and university policy.

In accordance with the NJIT Sexual Harassment Policy and Procedures, persons found to have violated university policy will face investigation, managerial review and possible disciplinary action up to and including employment termination and or dismissal from the university (for students). For a full copy of the university's policy prohibiting sexual harassment, please contact the Office of General Counsel and/or the Office of Compliance and Training.

Copyright Ownership

NJIT believes its role as an educational institution is best served by disclosing to the public all academic research, projects, theses and dissertations developed by students during the course of their studies or employment at the university.

Projects, theses and dissertations created by students shall be governed by the following provisions as outlined in NJIT's copyright policy under "Ownership and Disposition of Copyrightable Materials":

A. Copyright ownership of projects, theses and dissertations generated by research that is performed in whole or in part by the student with financial support in the form of wages, salaries, stipend, or grant from funds administered by the University shall be determined in accordance with the terms of the support agreement, or in the absence of such terms, shall become the property of the University.

B. Copyright ownership of projects, theses and dissertations generated by research performed in whole or in part utilizing equipment or facilities provided to the University under conditions that impose copyright restriction shall be determined in accordance with such restrictions.

C. Copyright in projects, theses and dissertations not within the provisions of Categories A and B of this policy shall be the property of the author. However, the student must, as a condition of a degree award, grant royalty-free permission to the University to reproduce and publicly distribute copies of the project, thesis or dissertation.

Requests for permission to publish Category A and B should be addressed to the Office of Intellectual Property.

For further information, call the Office of Intellectual Property, (973) 596-5825.

Ownership of Intellectual Property

In accordance with university policy, NJIT retains all right, title and interest to any and all intellectual property (i.e., inventions, discoveries, creative works, trade secrets and know-how) developed by NJIT students during the course of their studies or employment at the university or while using university facilities.

To protect against premature disclosure of an invention and/or publication of anything that may be of a proprietary nature, students must immediately report their intent to do so to the Office of Technology Development (see <http://www.njit.edu/research/officetech/>). Students must neither publish nor discuss proprietary information with anyone other than the Office of Technology Development or members of the University's Intellectual Property Committee. When a project, thesis or dissertation covers material that is potentially proprietary, both the student and the advisor must report the existence of such material to the Office of Graduate Studies and the Office of Technology Development; so that the University may expedite its review of such material and determine whether or not it is proprietary and should be protected under the University's guidelines for protecting its Intellectual Property. If necessary, the Office of Graduate Studies and the Office of Technology Development will take steps to sequester patentable material in archival documents such as theses and dissertations. If the University applies for a patent, the student will sign an appropriate assignment agreement. All income derived from such intellectual property will be shared between NJIT and the student in accordance with the University's published policy (see <http://www.njit.edu/research/officetech/inventors/inventors.php>).

For further information, call the Office of Intellectual Property, (973) 596-5825.

Property Loss and Damage

NJIT is not responsible for loss of property by fire or theft in its buildings or grounds. NJIT is not responsible for property damaged as the result of vandalism in its buildings or grounds.

Drug Abuse Prevention Program

New Jersey Institute of Technology prohibits the use of illegal drugs on its premises. University policy concerning possession and consumption of alcoholic beverages on campus subscribes to strict enforcement of the laws of the State of New Jersey, the County of Essex and the City of Newark. In addition, the policy stipulates that any consumption must occur within a responsible social framework wherein beverages are not the focus of the event.

Students with drug and alcohol abuse problems should be aware that they can receive information, counseling and referral assistance from the Office of the Dean of Student Services, the Counseling Center, the Health Services Office, or the Stop-In Center. The professional staff of the Counseling Center can provide substance abuse counseling and assessment in some situations and will refer more serious problems to off-campus facilities and services.

In addition, the university, through the Division of Student Services, offers a series of educational programs focused on the areas of drug and alcohol information and substance abuse prevention.

Drug-Free Workplace Policy

Student employees are subject to university policies regarding employment. New Jersey Institute of Technology is committed to maintaining a drug-free workplace in compliance with applicable laws. The university is further committed both to rigorous enforcement of applicable laws and policies and to support for those trying to cope with drug-related problems. The unlawful possession, use, distribution, dispensation, sale, or manufacture of controlled substances is prohibited on university premises. Any NJIT employee determined to have violated this policy or engaged in drug-related problems that have an impact upon the workplace may be subject to disciplinary action up to and including termination. At the discretion of the university, any employee convicted of a drug offense involving the workplace shall be subject to employee discipline (up to and including termination) and/or required to satisfactorily complete a drug rehabilitation program as a condition of continued employment.

The illegal use of controlled substances can seriously injure the health of employees, adversely affect the performance of their responsibilities, and endanger the safety and well-being of fellow employees, students, and members of the general public. Therefore, the university urges employees engaged in the illegal use of controlled substances to seek professional advice and treatment. Anyone who is employed at NJIT who has a drug problem is encouraged to contact the Director of the Employee Assistance Program (EAP), who will assist in obtaining available treatment. Employees engaged in contracts with the U.S. Department of Defense are additionally subject to Department of Defense requirements and may be required to submit to tests for the illegal use of controlled substances.

As a condition of employment, an employee of NJIT will notify his/her supervisor if he or she is convicted of a criminal drug offense involving the workplace within five days of the conviction. In the event any such conviction involves an employee working on a federal contract or grant, the university will notify the granting or contracting federal agency within 10 days of receiving notice of a conviction. A copy of this statement shall be given to all employees.

This statement and its requirements are promulgated in accordance with the requirements of the Drug-Free Workplace Act of 1988 enacted by the United States Congress. The university will continue its efforts to maintain a drug-free environment by adhering to the above policy and by providing through the EAP and the offices of Human Resources, and Compliance and Training, ongoing drug awareness programs.

Accreditation

NJIT is accredited by the Middle States Association of Colleges and Schools (MSACS) Commission on Higher Education.

All of NJIT's eligible professional programs, both graduate and undergraduate, are accredited by the respective accrediting agency for their field. Addresses and telephone numbers for all of these accrediting agencies are listed below.

Admissions

Every application for admission is processed through the Office of University Admissions and is reviewed by the Graduate Admissions Committee. Candidates are notified of their admission status by mail. Admission decisions cannot be communicated by telephone, e-mail, fax, in-person, or to third parties. For admissions information contact:

Office of University Admissions

New Jersey Institute of Technology

University Heights

Newark, NJ 07102-1982

(973) 596-3300, fax (973) 596-3461, e-mail: admissions@njit.edu

For an online application for admission go to? www.njit.edu/admissions/graduate/apply_online.php

Test Requirements

Graduate Record Examinations (GRE) The GRE (general test) is required of all applicants to doctoral programs, all applicants seeking financial support, and all applicants whose most recent degree was awarded from an institution outside of the United States.

Specific master's programs: applied physics, architecture, biology, infrastructure planning, and materials science require all applicants to submit official GRE scores.

The GRE can be used to fulfill test requirements for the master's programs in information systems and in public health. The GRE is highly recommended for all other programs.

For further information about taking the GRE, contact: Educational Testing Service, P.O. Box 6000, Princeton, NJ, 08541; phone (609) 771-7670, 8 a.m. to 8:45 p.m.; www.gre.org

Graduate Management Admission Test (GMAT) The GMAT is required for all applicants for the MBA in Management of Technology and the MS in Management programs. Students with significant business experience who are seeking admission into the MS in Management program may apply for a GMAT waiver. For additional information, contact the graduate admissions office at (973) 596-6378. The GMAT also can be used to fulfill test requirements for the master's programs in information systems and in public health.

For further information about taking the GMAT, contact: Educational Testing Service, P.O. Box 592, Princeton, NJ, 08541; phone (609) 771-7330, 8 a.m. to 8:45 p.m.; or www.gmac.org

Law School Admission Test (LSAT) The LSAT can be used to fulfill test requirements for the master's program in public health.

For further information about taking the LSAT, contact: Law School Admission Council, (215) 968-1001 or www.lsac.org

Medical College Admission Test (MCAT) The MCAT can be used to fulfill test requirements for the master's programs in information systems and in public health.

For further information about taking the MCAT, contact: Association of American Medical Colleges, (202) 828-0600 or www.aamc.org/stuapps/admiss/mcat/start.htm. For registration materials, contact: MCAT Program Office, P.O. Box 4056, Iowa City, Iowa, 52243; or phone (319) 337-1357.

Test of English as a Foreign Language (TOEFL) All international applicants must show a TOEFL score of at least 550 (paper-

based)/213 (computer-based). Admissions scores for the new Internet-based TOEFEL are under evaluation.

For further information about taking the TOEFL, contact: TOEFL/TSE Services, P.O. Box 6151, Princeton, NJ 08541; phone (609) 771-7100 Monday--Friday, between 8 a.m. and 9:45 p.m. and Saturday, between 9 a.m. and 4:45 p.m. New York time, for recorded information or personal assistance; or see www.toefl.org.

Master's Degree Programs

Master's degree programs provide advanced education needed by professionals in an era of rapidly expanding technology and normally require more specialization in the academic discipline of the student's bachelor's degree.

Applicants for admission to graduate study must have completed an undergraduate program accredited in the United States or its equivalent and demonstrate superior academic achievement in an appropriate discipline. Students are expected to have placed in the top half of their graduating class and program and to have achieved a cumulative GPA no lower than 2.8 on a 4.0 scale. Individual departments may impose requirements that are more stringent. Applicants with undergraduate degrees in engineering technology must have ranked in the top quarter of their class and have a cumulative GPA of at least 3.0.

All applicants should submit supplementary evidence of their potential for successful graduate work. Letters of recommendation, GRE or GMAT scores, a publications record, prior research experience, a record of exceptional career development, a statement of the applicant's objectives, interests and professional experience are examples of appropriate supplementary evidence.

Bridge Program

Students who seek a master's degree in an academic discipline different from that of the bachelor's degree may be admitted to a master's degree program but may be required to complete appropriate undergraduate and/or graduate prerequisites in addition to the normal graduate degree requirements of the program. The program of courses will be individually designed in consultation with their graduate advisor. Bridge courses must be completed before 9 credits of graduate degree courses are earned. Bridge courses are not counted as degree credits but do count in graduate GPA calculations if the course is numbered 500 (500G for Architecture) or higher.

Admissions Procedures for Master's Study

An Application for Admission to Graduate Study form may be obtained from the Office of University Admissions or submitted via online at www.njit.edu/admissions/graduate/apply-online.php. A non-refundable fee of \$60 must accompany the application. Applications may be deferred for one semester for a delay in admission without incurring another \$60 fee. Official transcripts from all colleges and universities previously attended are required. To be accepted as official, transcripts must be sent directly to the Office of University Admissions by the institutions concerned. Applications for fall (September) admission must be received by June 1; for spring (January) admission by November 1. Applications for financial support for fall (September) must be received by January 15. Applications for financial support for spring (January) must be received by October 15. Supporting documents must also reach the Office of University Admissions by the above dates. Incomplete applications or applications received after these dates will normally be processed for the following semester.

Program Transfers

Students who wish to transfer from one master's degree program at NJIT to another at NJIT must complete an application for admission to the new program and provide appropriate supporting materials. Courses taken in one program are not necessarily transferable to another, nor may credits be applied to more than one degree, except as provided by the M.S./M.S. program. Students admitted to one degree program are normally required to be in the original program for one full year before admission and enrollment in another degree program.

Joint Master's Degrees with Other Universities

The university cooperates with Rutgers-Newark and with UMDNJ in unique offerings of joint master's programs. Specific information about application and admission requirements for each is provided in the degree program descriptions located in the Degree Program section of this catalog. Programs that lead to joint master's degrees are applied physics, biology, computational biology, environmental science, and history with Rutgers-Newark and public health with Rutgers-Newark and UMDNJ. There is also a dual degree program in which a student may simultaneously earn a masters degree in Infrastructure Planning from NJIT and in City and Regional Planning from Rutgers-New Brunswick.

Doctoral Programs

New Jersey Institute of Technology offers doctoral programs to fill society's need for creative research scientists and engineers.

Admissions Requirements for Doctoral Study

Applicants are required to have an appropriate academic background as described by the individual degree programs, which are located in the Degree Programs section of this catalog, and a GPA of at least 3.5 on a 4.0 scale in prior study. GRE scores are required for admission to all doctoral programs. Individual programs may establish additional or more stringent requirements.

An applicant who wishes to pursue a doctoral degree in a field different from that of previous study, and who is otherwise qualified, may establish eligibility by satisfactorily completing a program of study recommended by the department in which they seek admission.

Applicants who wish to complete a master's degree while pursuing a doctorate must apply for admission to the master's program. This requires the approval of the doctoral program and dean of graduate studies, and where permitted, generally occurs only at or near the completion of the doctoral program.

Mid-career scientists and engineers interested in part-time study may wish to consider the collaborative doctorate option described in the Graduate Studies section of this catalog.

Admissions Procedures for Doctoral Study

Admissions procedures are the same as for a master's degree. In addition, three letters of recommendation are required from individuals who can best judge the applicant's ability to pursue independent research and complete a doctoral program.

Joint Doctoral Degrees with Other Universities

NJIT cooperates with other universities in Newark in operating and developing doctoral programs of mutual interest.

The university participates in unique offerings of joint doctoral programs with Rutgers-Newark and UMDNJ. Students may apply and be admitted through either university. Programs that lead to joint degrees are applied physics, biology, environmental science and mathematical sciences with Rutgers-Newark, biomedical engineering with UMDNJ and urban systems with both Rutgers-Newark and UMDNJ.

NJIT faculty participate in the doctoral program in management offered by Rutgers-Newark. NJIT faculty supervise Rutgers doctoral students in this program. Admissions to the doctoral program in management is handled by Rutgers-Newark.

Admission Classifications

DEGREE (MATRICULATED STUDENTS)

Regular Admission

Applicants who meet NJIT standards and have an appropriate undergraduate academic background for the degree program to which they are seeking admission will be offered regular admission as degree-seeking (matriculated) students.

Conditional Admission

NJIT expects applicants to have a superior academic record, but recognizes that interest, creativity, maturity, and motivation are also important. Conditional admission to the university may be granted to applicants who do not have the appropriate academic background required for a particular degree program, but who have an academic record that meets NJIT's scholastic standards.

Once granted conditional admission, students must complete conditional or bridge courses specified by the university within their first two semesters. Such courses may be at either the undergraduate or graduate level and are NOT counted as degree credits although all courses numbered 500 (500G for Architecture) or higher are calculated in the cumulative GPA. Students must attain grades specified by the university and are not permitted to take more than 9 credits that count as graduate degree credits at NJIT before meeting the terms of conditional admission. Failure to meet these conditions may result in dismissal from the university.

Contingent Admission

Students who apply for admission to graduate programs before completing their bachelor's degree, and whose records demonstrate superior academic achievement, may be offered admission to NJIT contingent on their showing proof of receiving a bachelor's degree appropriate for the degree program for which they are seeking admission. Such students must show proof of graduation before being permitted to enroll in a graduate program.

Change of Major

Students are admitted to one graduate degree program and not to the university as a whole. Students who wish to change major on arrival at NJIT must file an application for the new program and must generally remain in the original program for one full year before the application is approved. There is no guarantee or requirement that the new application will be successful. Those on support are liable to loss of support from the original department and cancellation of a current award.

Change of Level

Students who wish to change current degree level must file an application for admission to the new degree level. There is no requirement or guarantee that the application will be successful. Students who wish to drop down to a master's program from a doctoral program should be aware of the impact of this action on current and future financial support. Students who wish to raise their level from a master's to a doctoral program should be aware of any impact on incomplete master's theses or projects.

NON-DEGREE (NON-MATRICULATED) STUDENTS

Students who wish to take graduate courses without seeking a degree (non-matriculated status) should contact the Office of University Admissions for a Non-Degree Application Form.

Non-matriculated students may be permitted to take a maximum of 9 graduate-level credits accumulated over three registration periods, except students seeking a graduate certificate. These students may take a maximum of 12 graduate-level credits accumulated over four registration periods. Students wishing to take credits beyond these limits must apply and be accepted to a degree program as a matriculated student.

Academically qualified students who do not desire to enter degree programs may enroll in certain individual graduate courses. Such students must present transcripts of previous academic work or other appropriate evidence at each registration in order to indicate adequate preparation for the course work involved. If approved by the Office of University Admissions, registration will be permitted if space is available. Permission to enroll as a non-matriculated student does not imply eventual admission to a degree program.

Graduate Certificate Programs

NJIT offers designated courses in concentrated areas for students wishing to obtain a graduate certificate in specific areas. These require completion of 12 NJIT credits at the graduate level. Students in these programs are generally non-matriculated students for the duration of the certificate program. Graduate certificate programs may also be completed during a matriculated graduate program by making use of degree credits. Students in a matriculated degree program are not permitted to receive a certificate until completion of the degree program. Only one certificate can be earned within the credits applied toward a master's degree.

Students Matriculated at Other Universities

Graduate degree students at other colleges or universities may take courses for credit at NJIT for transfer back to their home institution. In addition to satisfying the course prerequisites, students must furnish a letter of approval from an appropriate administrative officer of their home institution.

NJIT Undergraduates

NJIT undergraduates may register for graduate courses, 500- or 600-level, with written approval from both their undergraduate advisor and from the graduate advisor in the department in which the course is taught. NJIT students in the BS/MS program are required to take 6 graduate-level credits while undergraduates to satisfy BS/MS program requirements.

Rejected Applicants

Students whose application for admission to a degree program is unsuccessful are not permitted to register as non-matriculated students.

International Students

International students on F-1 and J-1 visas are not permitted to register as non-matriculated students. Students on other visas should consult the Office of University Admissions regarding non-matriculated status.

Auditors

Students who wish to attend courses for which they are qualified, but who do not wish to be graded in the course, may be permitted to enroll as auditors. Registration will be approved only after a review of credentials by the Office of University Admissions and only if space is available. A notation signifying that the course was audited will be made on the student's record, but no credit will be granted for the course. Students who wish to audit a course must state their intention at the time of registration. A change to, or from, auditor status is not permitted once a semester has begun. Students who audit a course are required to pay full tuition and fees. There is no tuition remission allowable for audited courses. Audited courses cannot be counted in determining full-time status.

TRANSFER STUDENTS

Students enrolled in graduate programs at other institutions may apply for transfer to NJIT by completing the normal admission procedure. Transfer students may apply for credit for courses taken at other U.S. educational institutions by following procedures outlined in "Transfer of Credits from Outside NJIT" in the Academic Policies and Procedures section of this catalog. In addition, international students wishing to transfer from other educational institutions in the United States must:

- Demonstrate a cumulative GPA of at least 3.0 in graduate courses taken at other U.S. educational institutions;
- Complete the required immigration procedures for transfer; and
- Be eligible for admission to the NJIT program of their choice.

To transfer to NJIT from an other institution in the U.S., international students must already have been placed into SEVIS, The Student and Exchange Visitor Information System. NJIT will ask the "leaving institution" to verify the student's current standing in F-1 or J-1 status under immigration regulations. All financial and academic requirements must be completed before admission will be granted and the I-20 or DS-2019 issued.

INTERNATIONAL STUDENTS AND TOEFL

New Jersey Institute of Technology welcomes applications from international students with records of superior academic achievement. In addition to the procedures stated below, international students are required to provide evidence of English language proficiency by submitting Test of English as a Foreign Language (TOEFL) scores.

For further information about taking the TOEFL, contact: TOEFL/TSE Services, P.O. Box 6151, Princeton, NJ 08541; (609) 771-7100 Monday-Friday, between 8 a.m. and 8:00 p.m. New York time, for recorded information or personal assistance; or see www.toefl.org.

Students with TOEFL scores of 550(Paper-based)/213(Computer-based) or better are not required to take an ESL course but are encouraged to improve their English-language skills by doing so voluntarily.

All ESL courses are graded on an S/U (Satisfactory/Unsatisfactory) basis. The course credits count towards the 9 credits required for full-time status; however, the credits do not count toward degree credits.

International Students Who Seek Financial Support

Those seeking financial support from NJIT at the time of admission will be required to achieve a TOEFL score of at least 550 (Paper-based) /213 (Computer-based). Students who may be offered Teaching Assistant or similar positions are required to be tested for spoken English proficiency in advance of classroom or laboratory placement. The test is offered at NJIT after admission. New international students offered TA or similar awards must also participate in the teaching assistant training program offered by ESL staff in advance of the first semester (usually in August.) All new TAs must register for ENG 599 in their first TA assigned semester.

INTERNATIONAL STUDENT FINANCIAL STATEMENT

In accordance with Department of Homeland Security, Bureau of Citizenship and Immigration Services requirements, international students must also submit to the Office of University Admissions an International Student Financial Statement to demonstrate financial resources sufficient to meet the academic and living costs of their anticipated stay at the university. International students should note that they will be required to pay non-resident tuition rates. Immigration papers (e.g., I-20, DS-2019) will NOT be issued until the International Student Financial Statement is on file with the Office of University Admissions.

Academic Credential Equivalents for International Students

Undergraduate degrees must be equivalent to the typical four-year program in the United States. NJIT is working with a number of countries and universities to provide a transition from two- and three-year degree programs to baccalaureate and later graduate study. To be eligible for admission to graduate study at NJIT, international students must have the following minimum academic qualifications.

Argentina	Licenciatura
Bahamas	Honors bachelor's degree
Barbados	Honors bachelor's degree
Bolivia	Licenciatura
Brazil	Bacharel or Licenciado
Canada	Honors bachelor's degree or equivalent
Chile	Bachillarto, Licenciatura? or Titulo of at least four-year duration

People's Republic of China	Bachelor's degree
Colombia	Licenciatura or Titulo
Dominican Republic	Licenciatura of at least four-year duration
Ecuador	Licenciatura or Titulo
Egypt	Bachelor's degree
El Salvador	Licenciatura
France	Maitrise or equivalent
Germany	Ptychion
Guatemala	Licenciatura
Haiti	Diplome d"EtudesSuperieures or Licence of at least four-year duration
Honduras	Licenciatura of at least four-year duration
Hong Kong	Honors bachelor's degree
India	Bachelor's degree(first class) in Engineering or Architecture, master's degree in other?
Indonesia	Sarjana or Insinyur
Iraq	Bachelor's degree
Isreal	Bachelor's degree
Italy	Laurea
Jamaica	Honors bachelor's degree
Japan	Bachelor's degree
Jordan	Bachelor's degree
Korea	Bachelor's degree (Taehak Taehakkyo)
Kuwait	Bachelor's degree
Lebanon	Bachelor's degree, Licence of at least four-year duration, or Maitrise
Libya	Bachelor's degree
Malaysia	Bachelor's degree
Mexico	Licenciatura of at least four-year duration
Morocco	Licence or Ingenieur d'Etat
Netherlands	Doctorandus, Ingenieur or Meester
Nicaragua	Licenciatura
Nigeria	Honors bachelor's degree
Norway	Cand. Mag
Pakistan	Bachelor's degree in engineering or other four-year bachelor's degree or master's degree
Panama	Licenciatura
Paraguay	Licenciatura? of at least four-year duration
Peru	Bachillerato, Licenciatura or Professor from four-year university program
Philippines	Bachelor's degree
Saudi Arabia	Bachelor's degree
Singapore	Honors bachelor's degree
Sweden	Filosofie Kandidatexamen or Ekonoexamen
Switzerland	Licence or Diplom of at least a four-year duration
Syria	Lisentiate or bachelor's degree
Rep. of China	Bachelor's degree
Thailand	Bachelor's degree
Trinidad and Tobago	Honors bachelor's degree
Turkey	Lisans or Bachelor's degree
United Kingdom	Honors bachelor's degree
Uruguay	Licenciatura of at least four-year duration
Venezuela	Licenciatura or equivalent

2007-2008

Students from countries whose universities do not provide transcripts, or who experience exceptional difficulty in obtaining transcripts, should contact the Office of University Admissions for special instructions. Students whose credentials cannot be evaluated by the Graduate Admissions Committee will be required to submit a Credential Evaluation Report from an approved agency. For further information, contact World Education Service, Inc., Old Chelsea Station, P.O. Box 745, New York, NY 10113-0745, (212) 966-6311; e-mail: info@wes.org

2007-2008

Alumni Relations

Alumni Career Services

Alumni of NJIT graduate or undergraduate programs have access to a variety of career assistance services and programs provided by the Division of Career Development Services. Whether interested in changing careers or currently out of work, NJIT connections are valuable and offer a good place to begin a personal career search. Alumni can take advantage of these services: individual career counseling, the Career Resource Center, full- and part-time employment listings, support groups, a computerized bulletin board listing experienced-level job openings, direct access to job postings on the Internet, alumni mentors offering career advice and employment leads, and career-related workshops such as resume writing, interviewing skills, networking and job search strategies.

Alumni Association

The Alumni Association of NJIT is a not-for-profit organization that works in partnership with the university family to promote and support NJIT. The association maintains a relationship with alumni to provide them with a voice and a means of fellowship and growth.

The association offers numerous programs and services: free and lifetime use of the university's computer network and e-mail service, including the association's home page on the NJIT Web site; seminars and business forums; a variety of annual award programs to recognize the accomplishments of NJIT's constituency, students and faculty members; the annual Financial Aid Scholarship Program that provides needed aid for aspiring NJIT students; grants that provide financial support and recognition to NJIT organizations and departments; development and support of US and international association chapters; free subscription to the association newsletter; free miniature copy of the student's diploma upon graduation; access to the Robert W. Van Houten Library, and the gymnasium facilities, pool and tennis courts.

The Alumni Association works closely with the Division of Career Development Services to assist alumni faced with unemployment, early retirement, and second careers.

The Foundation at NJIT

The foundation is a privately incorporated resource development organization that supports excellence in teaching, research and public service programs at NJIT. The NJIT Board of Overseers has leadership and fiduciary responsibility for the foundation. The foundation's mission includes fund-raising and, through the Board of Overseers, soliciting private philanthropy on behalf of the university.

2007-2008

Continuing Professional Education/Online Learning

NJIT's Division of Continuing Professional Education provides enriching career-long learning opportunities through extension programs, Online Learning, graduate certificates, and through its non-credit technical programs, professional development training and corporate customized training.

Twelve-credit certificates related to high-demand, high-tech occupations, which are also applicable to NJIT master's degrees, are available to those seeking a career upgrade and change. Certificates can be acquired in one calendar year by attending classes on campus, at extension sites, via online learning or customized for employees of specific organizations.

Professional development programs include short courses, certificates and license reviews, with some leading to the award of continuing education units (CEUs). The CEU is used nationally to document the type, quality and duration of study. In general, one CEU is defined as being equal to ten classroom hours. Taught throughout the year, individual classes typically last one to five days. Certificates and license review programs can entail a significant number of hours of instruction spanning several months.

NJIT's Division of Continuing Professional Education's non-credit training programs are available via both classroom and instructor-led online learning. Typical topics include computer and technology; and safety and environment.

All professional development courses can be adapted to meet a particular organization's needs and conducted as a custom-designed training program at a company site. For more than 50 years, NJIT has been designing and conducting non-credit courses that meet technology-based organizations' needs for high-quality, lifelong workforce education. During the last 15 years, NJIT has trained over 54,000 professionals at over 500 New Jersey companies.

For further information contact the Division of Continuing Professional Education, at (800) 624-9850 or adultlearner.njit.edu.

Online Learning

Online Learning offers three graduate degrees (MS in Engineering Management, MS in Information Systems and MS in Professional and Technical Communication), three undergraduate degrees (BS and BA in Information Systems and BS in Information Technology), select Graduate Certificates, and courses in many disciplines including the physical sciences, computer science, mathematics, engineering and management. Online Learning offerings are listed in the Continuing Professional Education (CPE) catalog, available upon request from the Division of Continuing Professional Education and via <http://adultlearner.njit.edu>.

Online Learning provides students the opportunity to earn college credit through enrollment in online electronic-based courses. These courses are virtual learning communities with instructor-led online classrooms that utilize various technologies such as WebCT and WebBoard for presenting course material, online quizzes, asynchronous and synchronous communication. Online courses are flexible and rigorous educational experiences suited to motivated students.

The program's reach is worldwide. Course material is transmitted through the Internet, cablecast, wireless cable, compressed digital teleconferencing, CD ROM and VHS tape distribution.

Online Learning furnishes a convenient alternative to distance learners and campus-based students who have scheduling conflicts.

For more information, contact the Division of Continuing Professional Education at (800) 624-9850.

Course Code Explanation

NJIT Courses

The courses listed here have been approved in accordance with the policies of NJIT. Department or university needs may necessitate changes in this list, and courses may be cancelled because of insufficient registration. A list of scheduled courses will be issued by the registrar before each semester begins. Information found in the Degree Programs section of this catalog serves as a guide for program planning in consultation with departmental or program advisors.

ALPHABETICAL CODE

Code	Department
Acct	Accounting
Arch	Architecture
BINF	Biomedical Informatics
BME	Biomedical Engineering

Extension Programs

Students may take courses and earn degrees throughout the state at NJIT's extension sites listed below. Admissions requirements and the quality of instruction are the same for on-campus and extension programs. Registration, advisement and support services are available at each site.

Atlantic County @ Atlantic Cape May Community College - courses leading to MS in Computer Science and Information Systems.

Camden County @ Blackwood Campus of Camden County College - courses leading to BS in Information Systems.

Camden County @ Cherry Hill Campus of Camden County College - courses leading to MS in Computer Science, Information Systems, and Engineering Management.

Gloucester County @ Gloucester County College - courses leading to BS in Engineering Technology.

Mercer County at the Department of Transportation: courses leading to the completion of a Master of Science in Transportation.

Mercer County @ Department of Environmental Protection - courses leading to MS in Environmental Science and Environmental Policy Studies. Graduate certificate in Sustainable Architecture.

Mercer County @ Department of Transportation - courses leading to MS in Transportation. Graduate certificate in Project Management.

Morris County @ Drew University - courses leading to MBA and MS in Management, Information Systems, and Engineering Management.

NJIT also has a presence in Ocean County @ NJ Coastal Communiversitry in Wall Township - online courses leading to BSIT and graduate certificates and master's degrees

NJIT Extension Programs also offers specialized undergraduate and graduate certificates and degree programs on teh premises of corporate partners. These programs are open only to the corporation's employees.

Faculty Research

NJIT's Division of Continuing Professional Education provides enriching career-long learning opportunities through extension programs, Online Learning, graduate certificates, and through its non-credit technical programs, professional development training and corporate customized training.

Twelve-credit undergraduate certificates related to information technology, which are also applicable to NJIT master's and bachelors degrees, are available to those seeking a career upgrade and change. Certificates can be acquired in one calendar year by attending classes on campus, at extension sites or via online learning.

Professional development programs include short courses, certificates and license reviews, with some leading to the award of continuing education units (CEUs). The CEU is used nationally to document the type, quality and duration of study. In general, one CEU is defined as being equal to classroom hours. Taught throughout the year, individual classes typically last one to five days. Certificates and license review programs can entail a significant number of hours of instruction spanning several months.

NJIT's Division of Continuing Professional Education's non-credit training programs are available via both classroom and instructor-led eLearning virtual classrooms. Typical topics include computer and technology; and safety and environment.

All professional development courses can be adapted to meet a particular organization's needs and conducted as a custom-designed training program at a company site. For more than 50 years, NJIT has been designing and conducting non-credit courses that meet technology-based organizations' needs for high-quality, lifelong workforce education. More than 375 courses are available in 13 subject areas.

For further information contact the Division of Continuing Professional Education, at (800) 624-9850 or cpe.njit.edu.

Online Learning

Online Learning offers three graduate degrees (MS in Engineering Management, MS in Information Systems and MS in Professional and Technical Communication), four undergraduate degrees (BS and BA in Information Systems, BS in Computer Science and BS in Information Technology), select Graduate Certificates, and courses in many disciplines including the physical sciences, computer science, mathematics, engineering and management. Online Learning offerings are listed in the Continuing Professional Education (CPE) catalog, available upon request from the Division of Continuing Professional Education and via <http://adultlearner.njit.edu>.

Online Learning provides students the opportunity to earn college credit through enrollment in online electronic-based courses. These courses are virtual learning communities with instructor-led online classrooms that utilize various technologies such as WebCT, WebBoard, and Lotus Learning Space for presenting course material, online quizzes, asynchronous and synchronous communication. Online courses are flexible and rigorous educational experiences suited to motivated students.

The program's reach is worldwide. Course material is transmitted through the Internet, cablecast, wireless cable, compressed digital teleconferencing, CD ROM and VHS tape distribution.

Online Learning furnishes a convenient alternative to distance learners and students who have scheduling conflicts. In addition, any NJIT student needing course review can use Online Learning course material. Several campus workstations in the Van Houten Library are set up for viewing.

For more information, contact the Division of Continuing Professional Education at (800) 624-9850.

Financial Support

Financial Support and Graduate Awards

Various financial support and graduate award options are available to NJIT graduate students. Financial support comes from either NJIT internal funds or from external sources. Information on need-based support is detailed on the office of [Financial Aid Services Web site](#). Eligibility and selection criteria are summarized in the following table for both need-based and merit-based support. Funds for these are not guaranteed.

Type of Support	Contact	Who is Eligible
Federal Loans	Financial Aid 973-596-3479	U.S. citizens, permanent residents; students enrolled at least half time, based on financial need; must file the Free Application for Federal Student Aid.
Industry Co-op	Career Development Services 973-596-3100	Full-time students, based on position availability; master's students; doctoral students only by exception with approval by the dean of graduate studies
Work-study	Financial Aid 973-596-3479	US citizens, permanent residents, international students, full-time students, based on position availability.
Scholarships, Fellowships, Grants	Graduate Studies 973-596-3462	Based on funding source, full-time students, often supporting under-represented groups.
Assistantships	Graduate Studies 973-596-3462	Full-time, based on academic merit or priorities and on funds available.

NJIT AWARDS

Close to 400 teaching, research and graduate assistantships, based on academic merit, are awarded to qualified full-time students.

Prospective students can apply for financial support by using the Application for Admission to Graduate Study. Prospective students seeking financial support are urged to apply no later than January 15th for the fall semester of the following academic year and October 15th for the spring semester of the current academic year. Applications received after these dates may be placed on a waiting list.

Prospective students seeking financial support should indicate their interest on the admissions application form. Continuing students seeking need-based support should contact the Office of Financial Aid. Continuing students seeking merit-based financial support should contact the Office of Graduate Studies. GRE and GMAT scores as required for admission to graduate study at NJIT are acceptable for consideration of applications for merit-based support. It is noted that Master's students whose last degree was from an institution within the United States are not required to supply GRE or GMAT scores as a general university requirement for admission and need not additionally supply these for financial support consideration unless specifically requested by the program or funding source. However, specific Master's programs within NJIT may require GRE or GMAT scores for admission consideration to the specific program. All Master's program applicants whose last degree was from an institution outside of the United States and all PhD program applicants are required to provide GRE or GMAT scores as a requirement of the admissions process.

Competition for financial support is strong and only successful applicants are notified. Teaching, research, and graduate assistantship offers may include full or partial tuition, a stipend or both. Additional funds for the summer may be awarded.

Assistantships

Each year there are more than 400 teaching and research assistantships in academic and research departments, which are funded internally or externally. Teaching assistants conduct recitation, discussion, laboratory, or other sections of elementary or intermediate undergraduate-level courses, under supervision of permanent faculty. These duties are considered part-time work and typically

include six to nine class contact hours per week. Research assistants conduct research under the supervision of NJIT faculty. Non-academic departments also sometimes employ students as graduate assistants. Duties range from academic support to day-to-day operation of administrative offices.

Presidential Fellows

A limited number of fellowships, with stipends beginning at \$17,760, are offered to outstanding doctoral students. Residence, research and summer support can supplement the stipend. Full tuition and fee support is provided.

Provost Fellows

A Provost Fellowship provides a \$2,000 tuition award each semester to qualified students at the time of admission to full-time study toward a Master's degree; students who are already admitted are not eligible. To be considered for a fellowship, applicants must meet the following criteria: completion of an earned baccalaureate degree from an accredited college or university; achievement of an undergraduate cumulative GPA of at least 3.0 (or its equivalent); and submission of official GRE or GMAT results.

A Provost Fellowship is sustainable for a maximum of three consecutive semesters of full-time study (four semesters for students enrolled in the MBA program; six semesters for students enrolled in the Master of Architecture program) in a student's initial Master's program at NJIT. Students receiving a fellowship must maintain a cumulative graduate GPA of 3.25 or better, and make satisfactory progress toward the Master's degree during enrollment at NJIT. Academic records will be reviewed at the conclusion of each semester to determine a student's eligibility for the subsequent semester. Students who wish to pursue a second master's degree at NJIT and applicants for doctoral study are not eligible for this award.

The Office of Graduate Admissions will review all admitted students who satisfy the criteria and make recommendations to the Office of Graduate Studies. Recipients will be notified in writing. No special application is required.

Grader

A grader is appointed for part-time service and grades course work under the direction and supervision of a faculty member. Graders may either be hired on an hourly basis through the Office of Student Employment, or through the Office of Graduate Studies. Compensation is based on hourly rates established for this position.

Special Awards

Special awards for service may be established each year. Students should contact the Office of Graduate Studies for further information.

Non-Service Fellowships or Scholarships

Private, state, federal or foundation awards that do not require service to NJIT may supplement service-based awards.

Unemployed or Displaced Workers

Students receiving tuition support because of an unemployed or displaced worker's program are alerted to potential loss of this form of support because of any salary or stipend that may be received for any form of on-campus or off-campus employment.

Stipend Support Levels

Teaching/Research Assistant (not supported by grants):

Master's students	\$ 8,100	9 months at \$900/month
Doctoral students	\$ 15,660	9 months at \$1740/month

Stipend support levels are re-evaluated each year and the levels reported above are minimum values for 20 hours per week of service for 9 months over the fall and spring semesters.

Research Assistants (on external funds from grants)

Doctoral Students	\$22,880 (12 months)
-------------------	----------------------

Graduate Assistant: non-academic based positions requiring advanced educational skills, \$6,750 for 9 months; and positions not requiring advanced educational skills, \$6,075 for 9 months. Students seeking non-academic positions may instead wish to consider

hourly employment instead of graduate assistant positions.

Partial awards are possible for all categories of awards. Stipends are paid every other week. Award periods are scheduled for two consecutive 4 1/2-month periods for 9 month awards and a following 3 month summer period for 12 month awards.

Maximum Annual Support

While NJIT does allow multiple sources of support for individual students, there is an annual limit established each year for the maximum amount of support that an individual student may receive from all sources. The limit is established at a reasonably high and competitive level in comparison to reported maxima provided by a number of federal support programs. Students who are receiving support from outside NJIT must report this to their graduate program advisor and to the Graduate Studies Office to assure their not exceeding NJIT limits. Total support that would be in excess of the NJIT limit may require an adjustment in the support provided by NJIT sources. Excess support can also negatively impact need-based support arrangements.

Summer Support

Depending on availability of funds, students may be eligible for stipends and tuition support for June, July and August. NJIT has two summer award periods, the first covering late May and June, the second covering July and most of August. The split of summer award periods is based on the combination of the semester-based academic calendar used at NJIT and the changeover to a new fiscal year on July 1. Interested students should consult their faculty advisors in March or April.

International Students

Private loans are available through the Office of Financial Aid. These loans require a cosigner who is a U.S. citizen or permanent resident alien.

International students may not receive NJIT support or be employed on-campus during periods of practical training. International students must be in status with the Bureau of Citizenship and Immigration Services (BCIS). International students are eligible only for merit-based NJIT financial support and not for need-based state or federal funds.

BCIS regulations require that international students attest to having funds sufficient to cover the expense of the entire course of study before they will grant a visa. Students are expected to demonstrate the availability of funds for the duration of studies at NJIT as a requirement for admission to the university.

GOVERNMENT-FUNDED SUPPORT FOR GRADUATE STUDIES

Minority Academic Career Program (MAC)

The MAC program supports doctoral students interested in faculty positions in New Jersey. Contact the Office of Graduate Studies for information on this and other state programs.

NSF and NRC Programs

The National Science Foundation (NSF) and the National Research Council (NRC) support doctoral stipends and tuition. Application deadlines for these programs are one year in advance of anticipated study, usually in early fall. Contact the Office of Graduate Studies for information on these and other federal programs. NJIT participates in regional consortia for the Bridges to the Doctorate and Alliance for Graduate Education for the Professorate supported by the NSF.

GEM

The National Consortium for Graduate Degrees for Minorities in Engineering and Science, Inc. supports graduate students within an industry and academe-based consortia. Contact the Office of Graduate Studies for information on this and other industry programs.

Federal Direct and Perkins Loans, and Work-Study Programs

U.S. citizens and permanent residents are eligible to apply for federal loans through the William D. Ford Federal Direct and Federal Perkins Loan programs and for federal work-study. Applicants for these programs must file the Free Application for Federal Student Aid (FAFSA) with the Federal Student Aid Programs Processing Center. The amount of graduate tuition remission a student receives is considered when determining eligibility for loans and work-study. Before loans are disbursed, students must sign a promissory note and first-time loan recipients must complete entrance counseling. The FAFSA is available from the Office of Financial Aid and will be mailed upon request. For further information, contact the **Office of Financial Aid**, (973) 596-3479.

TERMS AND CONDITIONS OF AWARD

Award Selection

All NJIT awards are merit-based and are offered only to academically superior students who meet all selection requirements. Many things are considered in evaluating applications and nominations for NJIT awards. Among these are GPAs, GRE and GMAT scores, undergraduate and graduate academic performance, educational preparation, TOEFL scores for international students, skill and talent required for available positions, institutional priorities, availability of funds, special skills, and prior experience.

Students must take the GRE or GMAT and arrange to have official score reports to be sent to NJIT before they may become eligible to receive awards. Although there is no minimum eligibility score for the GRE or GMAT, NJIT may establish them for certain awards. For instance, GRE mathematical scores between 700 and 800 are typical of NJIT award recipients.

Graduate students who have not already received awards or had not been offered an award on admission must attain a minimum GPA of 3.5 for first-time support from internal funds and 3.0 for first-time support from external funds. Any graduate or undergraduate course taken by a student in graduate studies at NJIT is counted in the GPA (as calculated by the Office of Graduate Studies) for evaluating selection criteria, including courses that were repeated or excluded. GPAs are checked at the beginning of each support period to verify that awards are warranted. GPAs only establish eligibility and neither guarantee nor entitle students to receive financial support.

The Office of Graduate Studies evaluates criteria for support from internal funds each year. The criteria reflect both average grade point performance levels and availability of funds. A student who has received support from NJIT funds for one degree cannot receive NJIT support for another degree of the same or lower level or type. Criteria and full details of terms and conditions of awards are available from the Office of Graduate Studies.

Need-based support programs administered by the Office of Financial Aid and by the Office of Student Employment have different criteria for selection. These offices should be consulted for further information. Funds distributed for hourly employment through the Office of Student Employment are not considered awards. The Provost Fellowship program for applicants to master's program is coordinated by the office of Graduate Admissions.

Service-Based Awards

A service-based award is one in which the student is required to perform a service in return for a stipend. The following awards are service-based: graduate assistants, teaching assistants, research assistants, presidential fellows, teaching fellows, graders, and others as noted.

Terms and Conditions

By accepting an award, students agree to comply with the following terms and conditions unless exceptions are indicated in their award offer letter:

- Students are required to work, up to a maximum of 20 hours per week, for Fall and Spring semester awards. Students are therefore required to work during semester breaks, either for their supervisor or, with the consent of the supervisor, on their own research.
- Students not receiving the maximum award for their award category and degree status are required to work a prorated number of hours (less than 20) based on a comparison of their award to the stipend level allowed for that award. A maximum of 35 hours per week, with appropriate increase in support level, may be permitted for service during the two summer award periods.
- Full-time registration in one of NJIT's graduate degree programs must be maintained at all times throughout the period of an award. Full-time status is accorded to those who complete at least 9 credits per semester, or to those who are certified by the Office of Graduate Studies or designated as full-time students. Students should review "Refunds for Withdrawal" and "Enrollment Status" in the Tuition and Fees section and the Academic Policies and Procedures section respectively in this catalog to be assured that they are following full-time certification requirements.
- Students who initially register for a full-time load but withdraw during a semester and thus become part-time cannot receive tuition remission for that semester and may have their tuition award terminated and stipend award curtailed.
- No other work for compensation, whether on- or off-campus, may be undertaken during the period of the award unless approved by the dean of graduate studies. Students who do not comply with this requirement may be prohibited from receiving future support and have their current award terminated.
- Unsatisfactory performance, inadequate academic progress, or violation of any of the terms and conditions shall constitute grounds for the immediate cancellation of an award.
- Award offers must be accepted in writing, on an appropriate form, and must be received by the date indicated in the award offer.
- Students who resign, or are dismissed from an appointment during a semester, must repay any tuition remitted for that semester.
- Students must report to their supervisor no later than the first day of each semester. Students who fail to do so will be deemed

to have resigned and will have their award cancelled.

- Appointments are made for the period specified in the award offer. Neither renewal nor summer support can be guaranteed.
- Support based on external grant, contract, scholarship or fellowship awards are subject to the limitations established by the external agency.
- Students may not receive an award from NJIT funds to pursue a second master's degree or second doctoral degree when the first degree has been earned at NJIT.
- Students who change to a master's degree program from a doctoral program will have the current award cancelled and no future awards will be permitted. Students who register in courses inappropriate to their program of record or unapproved by their advisor will have the award immediately terminated.
- All doctoral students and students on support are required each semester to attend the seminar course offered by their program unless a specific waiver for sound academic reasons has been granted by the dean of graduate studies. Waivers for doctoral students to allow off-campus employment through precompletion practical training authorization or to accept a cooperative education work assignment will generally not be approved.
- Teaching assistants are required to register for ENG 599: University Teaching Methods / Communication Skills in their first semester.

Tuition Remission Awards

Tuition support has no service condition associated with it. Students accepting this support must not leave the program for which the support is offered without the approval of the support sponsor and the dean of graduate studies. Approval will be granted only for sound academic or other compelling reasons. Departure to accept employment is not considered a valid reason. All tuition support provided will be re-billed to the student if this condition is violated.

Cancellation of Tuition Remission

NJIT reserves the right to cancel tuition remission awards when students do not meet requirements or violate the conditions of an award. NJIT also reserves the right to cancel tuition remission for ineligible courses or courses for which the grades of F, U, W, or I are received. Audited courses, courses outside the approved courses for the program, and excess courses not needed for program completion are ineligible for tuition remission. If tuition remission is cancelled, students are re-billed accordingly and are responsible for payment in full.

Sick Leave

Students receiving awards are entitled to a total of three paid days of sick leave during the academic year. Additional days of sick leave may result in the cancellation of an award or a reduction in a stipend.

Unsatisfactory Performance

A student's performance is considered unsatisfactory if it does not meet the criteria set by the award supervisor.

Criteria for Maintaining Award

Students must earn at least a 3.0 GPA each semester, as well as maintain a cumulative GPA of 3.0 to keep receiving their awards. A 3.0 GPA will also maintain awards that initially required higher GPAs to receive them. Any graduate or undergraduate course taken by a graduate student is counted in the GPA for evaluating maintenance of awards and even includes courses that were repeated or excluded. Except for the specified period of the award offer, these criteria neither guarantee nor entitle students to receive continued financial support. Departments may set higher but reasonable standards (typically 3.5 or above cumulative GPA) for continuation of awards.

Effect of Incomplete Grades and Grade Changes

Students whose transcripts show incomplete (I) grades in the semester before being selected or becoming eligible for an award must resolve them within the four weeks after grades are posted. This also applies to changes in grades that would affect eligibility.

Extension of the deadline to beyond the fourth week of the semester will be considered if the student and the instructor provide written justification. Otherwise, any award offer for that semester will be withdrawn and tuition remission cancelled. Students will be billed for tuition accordingly and will be responsible for payment in full.

Award Duration and Renewal

Student eligibility for awards is evaluated each semester, as is renewal of award offers. Each award has unique eligibility, funding, duration and renewal circumstances. Students are responsible for understanding and following the terms and conditions of the particular award offer made to them. The Office of Graduate Studies should be consulted to determine individual terms and conditions. Award duration is based on calendar time, not on whether awards are full or partial.

- Students enrolled in master of science or masters of arts programs may not receive NJIT-funded, full or partial, assistantship or fellowship support for more than one academic year except in the cases listed below for B.S./M.S. students, and for U.S.

nationals and permanent residents who are members of underrepresented groups. The academic year is defined as two semesters and one summer. The summer includes two award periods.

- Students enrolled in doctoral degree programs may not receive NJIT-funded, full or partial, assistantship or fellowship support for more than four academic years. This is defined as eight semesters and four summers.
- Students enrolled in the 97-credit Master of Architecture program may not receive NJIT-funded, full or partial assistantship or fellowship support for more than three academic years. Three academic years are defined as six semesters and three summers.
- Students enrolled in the Master in Infrastructure Planning program are considered as master of science students for award duration.
- Full-time master's students in the B.S./M.S. program are eligible to receive three semesters and one summer of financial support from internal funds.
- U.S. nationals and permanent residents enrolled in master of science programs who are members of underrepresented groups are eligible for three semesters and one summer of financial support from internal funds.
- Doctoral students who fail their qualifying examinations may not receive further awards from NJIT funds until they pass. Departments may request a review and continuation of their financial support status if they pass some but not all parts of qualifying examinations.
- When eligibility for NJIT-funded awards is completed, students may receive additional support from external sources. Check with the Office of Graduate Studies to obtain further details.
- Master's students are eligible to receive awards for a maximum of four semesters and two summers from all sources. This does not apply to students in the Master of Architecture program. Doctoral students are eligible to receive awards for a maximum of 10 semesters and 5 summers from all sources.
- No student may receive support for more than 12 semesters and 6 summers from any combination of sources or for any number of degrees.
- The university expects that students receiving NJIT-funded support move off that type of support to external source support no later than two years after the initiation of NJIT-funded support.

Resignations

Students who wish to resign from an award should inform their advisor and the dean of graduate studies at least one calendar month before the resignation is to take effect.

Students who resign during a semester will not be eligible for tuition remission for that semester. The semester in which the resignation is received is counted as a supported semester when determining award renewals.

Taxation of Stipends and Awards

The Internal Revenue Service requires that stipends and awards be taxed at the source, even if students are eligible for a tax refund. All students are exempt from Social Security taxes. Tuition and fee remissions are not subject to tax withholding.

Students should contact the Finance Office and the Office of Graduate Studies for tax information and information about exemption from Social Security taxes. International students should contact the Finance Office and the Office of International Students and Faculty for information on tax treaties.

TUTION REMISSION

Tuition Remission Processing

All students receive bills for tuition. The bill statements for students receiving tuition remission and fees, if applicable, are marked "Possible Tuition Remission." After expiration of the official withdrawal period, a credit for the tuition and fees should appear on the statement.

Students who pay tuition bills in full and then receive tuition remission can expect to receive a refund after expiration of the withdrawal period. Students receiving only partial tuition and fee awards are responsible for payment of the remaining tuition and fees and should pay these promptly. In particular, full-time students should ensure that they have continuous health insurance coverage by payment of appropriate fees.

Students who fail to pay their bills by the due date specified by the Bursar will have their registrations cancelled. Reinstatement is usually very difficult and often unlikely.

Credit Limitation

Awards do not cover tuition for courses that are not part of a student's degree program or courses not approved by their advisor. Students are responsible for payment for these courses.

Tuition remission is allowed for courses taken at other institutions in which there is a cross-registration agreement with NJIT. These courses must be part of the student's degree program and approved by the student's advisor.

A flat rate exists for a range of credits representative of full-time registration. Any credits over that range will not be included in tuition remission awards. Students will be billed for credits in excess of their awards.

GRADUATE COOPERATIVE EDUCATION

Graduate students have the opportunity to work off-campus while studying full-time through the cooperative education program administered by the Office of Career Development Services (CDS). Policies on eligibility, application for participation, procedures, and required regular and co-op course registrations are defined in a detailed statement developed by the Graduate Studies Office (GSO), CDS, and the Office of International Students and Faculty (ISO). This opportunity is especially valuable for international students, pursuing the Master's degree, and for some PhD students lacking other forms of support. CDS should be contacted by students interested in this option. Each year, a large number of international graduate students are involved in cooperative education under Curricular Practical Training. Students pursuing this option are required to be registered in specifically numbered graduate courses for co-op as defined in each program's course listing.

Graduate Certificates

Twelve-credit graduate certificates are offered in "fast track" professional fields externally-validated with expanding employment opportunities. The following list is the current selection of Graduate Certificates:

Applied Statistical Methods
Construction Management
Data Mining
Emergency Management
Enterprise Systems Architecture
Information Management for Managers
Information Systems Implementation
Management Essentials
Management of Technology
Pharmaceutical Management
Pharmaceutical Technology
Practice of Technical Communications
Project Management
Sustainable Architecture
User-Centered Design

Graduate Studies

NJIT offers advanced studies in numerous disciplines leading to master's degrees, doctoral degrees and graduate certificates. Programs are available to full-time students and to working professionals who are interested in part-time study. Some programs are offered jointly or in cooperation with Rutgers-Newark and with UMDNJ as part of continuing collaborations within The Graduate Center at Newark. Graduate programs at NJIT are overseen by the Office of Graduate Studies, East Building, Room 140, 973-596-3462.

Full-time students are involved in the university's extensive research activities through association with renowned faculty and research centers. Financial support is available through a variety of programs that permit students to become part of the teaching, administrative and research functions of the university. Other non-service-based support is also available.

Graduate Degrees

The doctoral and masters degree programs offered at NJIT are listed below. All doctoral programs lead to the Doctor of Philosophy (PhD) degree. Master's programs lead to either the Master of Arts (MA), Master of Arts in Teaching (MAT), Master of Architecture (M. Arch.), Master in Infrastructure Planning (MIP), Master of Public Health (MPH), Master of Science (MS), or the Master of Business Administration (MBA) degree, as indicated below. Dual degree offerings are available for MArch/MS in Civil Engineering, MArch/Master in Infrastructure Planning, the MIP/Master of City and Regional Planning and MArch/MS in Management. Other degree options include the BS/MS, the MS/MS, Executive MBA Program, and the Collaborative Doctorate.

Applied Mathematics (MS)	History (MA, MAT) joint with Rutgers-Newark
Applied Physics (MS, PhD) joint with Rutgers-Newark	Industrial Engineering (MS, PhD)
Applied Statistics (MS)	Information Systems (MS, PhD)
Architecture (M.Arch.)	Infrastructure Planning (MIP)
Architectural Studies (MS)	Internet Engineering (MS)
Biology (MS, PhD) joint with Rutgers-Newark	Management (MS)
Biomedical Engineering (MS)	Management of Technology (MBA)
Biomedical Engineering (PhD) joint with UMDNJ	Manufacturing Systems Engineering (MS)
Chemical Engineering (MS, PhD)	Materials Science and Engineering (MS, PhD)
Chemistry (MS, PhD)	Mathematical Sciences (PhD) joint with Rutgers-Newark
Computational Biology (MS) joint with Rutgers-Newark	Mechanical Engineering (MS, PhD)
Computer Engineering (MS, PhD)	Occupational Safety and Health Engineering (MS)
Computer Science (MS, PhD)	Pharmaceutical Engineering (MS)
Civil Engineering (MS, PhD)	Professional and Technical Communication (MS)
Electrical Engineering (MS, PhD)	Public Health (MPH) joint with Rutgers-Newark and UMDNJ
Engineering Management (MS)	Telecommunications (MS)
Engineering Science (MS)	Transportation (MS, PhD)

Environmental Engineering (MS, PhD) Urban Systems (PhD) with joint Rutgers-Newark and UMDNJ

Environmental Policy Studies (MS)

Environmental Science (MS, PhD)
joint with Rutgers-Newark

Special Programs

Cooperative Education

The Cooperative Education Program provides students with an experiential and applications approach to education. Through cooperative education, students gain academically integrated work experience that is related to their degree. Qualified graduate students gain salaried professional experience while they earn their degrees.

Co-op work experiences are concurrent or alternate with full- or part-time graduate study. During placement periods students are enrolled in the graduate co-op work experience course. Graduate co-op work experience periods are not limited to academic semesters. Students possessing US Work Authorization may begin work in the second semester of attendance at NJIT.

All co-op student participants must be able to produce US employment authorization. Bureau of Citizenship and Immigration Services (BCIS) regulations require students with F-1 visas to be in valid status for nine consecutive months before they can be placed in co-op employment. International students become eligible to apply during their second semester of study. They must secure employment authorization from the Office of International Students and Faculty before beginning a co-op work experience. There are additional restrictions on co-op employment for students on financial support or involved with research activity and thesis or dissertation work.

The NJIT Kauffman Academy for Entrepreneurial Education and Internships

This unique internship program provides opportunities for students interested in developing entrepreneurial skills and perhaps in the future owning their own business. Graduate students with a grade point average of 3.0 or better may apply. Completion of the Entrepreneurial Strategy course is a prerequisite or it must be taken concurrently with an internship. Kauffman Academy internships may be eligible for cooperative education academic credit.

Community and Public Service

NJIT is committed to fostering opportunities for students to share their skills, talents, and enthusiasm through community service and civic engagement. Through both volunteer and paid service opportunities, students assist the public and non-profit sector in meeting objectives to help improve the quality of life in our communities. Participants in these programs are a valuable resource of both technical and non-technical help for local and regional agencies. For more information about the programs described below, contact the Division of Career Development Services, Community and Public Service, (973) 596-3100 or view our website at www.njit.edu/CDS.

NJIT Community of Caring

NJIT "Community of Caring" Volunteers program is a concerted outreach to promote the good work of NJIT students. Annually, we challenge our campus members to provide at least 10,000 hours of service to the citizens, non-profit agencies, and schools in communities throughout New Jersey. Participants contribute service hours through the community connections volunteer referral service or through any of our other CDS civic engagement programs.

Community Service Work-Study Program

This program offers eligible students the option of working in community-based non-profit agencies, public schools, or governmental agencies to earn a work-study award. CSWS provides students the opportunity to earn part of the funds needed to cover educational cost and offers organizations an economical way to meet short-term staffing goals.

Wachovia/NJ DCA Housing Scholars Program

The Housing Scholars Program continues to engage students in affordable housing and community development projects in New Jersey. This innovative program offered a paid, ten week, full-time summer internship for students attending NJIT and other New Jersey universities or colleges. NJIT students majoring in Architecture, Civil Engineering, and Management are selected to serve as Housing Scholars.

George Garrison and Sandy Kirk Community Service Scholarship

The George Garrison and Sandy Kirk Community Service Scholarship program promotes civic engagement by recognizing the commitment and outstanding community service contributions of NJIT students each year. One \$1,000 scholarship and a \$750

scholarship are presented for meritorious community service. The scholarship celebrates the dedication of George Garrison and Sandy Kirk, former CDS staff members, whose work at NJIT furthered the development of quality civic engagement for students.

NJIT Literacy Corps

The NJIT Literacy Corps program is to engage students as tutors in local schools and after-schools sites. Our tutors help children in the greater Newark area to understand math concepts and to read well and independently by the end of the 3rd grade. NJIT students eligible for federal work-study and student volunteers provide one-on-one and group tutoring for children.

Service Learning Program

The Service Learning Program at NJIT facilitates experiential learning by helping students link academic theory with practical experience in a community service environment. Students participate in service learning internships related to their academic major and career goals. Successful involvement in community-based service experiences not only enhances career preparation but also provides students the opportunity to hone leadership skills in a service environment.

Athletes in Community Service

This program offers NJIT student-athletes the opportunity to provide community service and outreach through team-oriented projects. Team members serve as trainers and coaches for swimming and tennis camps, NJIT Celebrity Readers in our local schools, and coordinators to collect donated sports equipment for underprivileged youth.

Civic Engagement Computer Center @ NJIT

The Civic Engagement Computer Center @ NJIT is a student-supported resource of technical support through virtual volunteer projects for community agencies. The Center provides an avenue for NJIT students to hone their academic and technical skills through hands-on civic engagement experience. Our technology related majors volunteer or work to produce technical solutions for web design, data management, and basic computer training needs for community organizations and schools in the local and regional area.

NJIT – Newark Public Schools – F.I.R.S.T. Robotics Programs

CDS, in collaboration with Pre-College Programs at NJIT, recruits and supervises the work of Honors College and work-study students serving as Technical Mentors/Literacy Tutors in a Robotics program. Mentors/Tutors guide school children in building robots to compete in tournaments at NJIT and in New Jersey. NJIT mentors/tutors help middle school student teams prepare for competition in the Lego League Robotics level. NJIT students also serve as mentors/tutors for high school teams participating in the F.I.R.S.T. Robotics competition. They also help teams gain hands-on experience in engineering and computer programming principles.

The Collaborative Doctorate

This doctoral student option is designed to meet the workforce needs of the knowledge-dependent global economy of the 21st century recognizing the particular requirements of the practitioner. This option can meet the needs of engineers, managers, scientists, military personnel and educators who wish to pursue doctoral studies while employed full-time in the private, public and non-profit sectors.

Academic requirements are the same as for other NJIT doctoral programs but the collaborative nature of the program also allows participants to draw on the combined expertise and resources of the university and their employer. The program includes significant flexibility with opportunities for distance learning and independent study that are integrated with face-to-face classes.

To participate in this PhD program, students should first confer with their employer. Employees should seek a commitment from their employer that will facilitate participation and commitment to an area of research at an appropriate time. A senior researcher or manager may wish to serve on the student's dissertation committee.

Students must meet university requirements for admission to doctoral programs. Prior work, related research activity, publications and honors will be evaluated in addition to traditional academic criteria.

Doctoral students are expected to have been employed in their field for at least five years, and to have completed a related master's degree. They are expected to continue employment until they complete all degree requirements. Annual reviews of progress will be conducted. Students may perform dissertation research at their employer's facilities. Dissertation research can be derived from interests of the student and may be related to their professional activity.

Dissertation research must satisfy university policies. The student's dissertation committee defines residency requirements. It is expected that the employer will permit a concentrated effort on dissertation research. Seminar requirements are also defined by the dissertation committee and may allow presentations or attendance at professional society meetings in place of on-campus seminars. Credit requirements must meet university standards for the doctorate. Course selection is based on previous activities and the current state of knowledge of the student. Dissertation research is expected to investigate or develop an original contribution to

science, technology or management. Research may be experimental, analytical, applied or theoretical provided that it satisfies all criteria set by the dissertation committee.

Employers who have a proprietary interest in dissertation research including patent, copyright and technology transfer rights are expected to execute formal agreements with the university before research begins.

Graduate Student Association

The Graduate Student Association was founded in 1983 to promote the interests of graduate students, enhance program quality, foster student-faculty communication, and provide for the needs of advanced degree students. All students currently enrolled in NJIT graduate degree programs and paying the Graduate Student Association fee are members of GSA. A current graduate student and an alternate from each degree program are represented on the GSA Council. Students interested in serving on the GSA council or learning more about GSA should contact the GSA office (973) 596-2993 or the Office of Graduate Studies (973) 596-3462. The dean of graduate studies is the GSA advisor.

The Graduate Student Association sponsors a wide range of activities and supports many clubs as Tier 1 clubs and Tier 2 clubs. The Tier 1 clubs are generally culturally based and the Tier 2 clubs are generally professional interest based. Graduate students may belong to any or all of the clubs supported by GSA. Specific activities offered annually may be social, cultural, or professional. Some annual cultural festivals include the Chinese Moon festival, Indian Festival of Lights, international food fair, and others representative of the diverse culture of our full-time and part-time United States and international graduate students. There are also regular late afternoon coffee hours each week, typically on Wednesdays.

Trips with discounted cost to the New York City theater, the New Jersey Performing Arts Center, east coast cities such as Boston, Philadelphia, and Washington, countries such as Canada and Mexico, and other locations are often scheduled. These take full advantage of the unique location of Newark as transportation hub within the New York /New Jersey metropolitan region. Professional programs each semester include a thesis/dissertation workshop sponsored by GSA on behalf of the Graduate Studies Office. The GSA website gives a full schedule of activities. The NJIT GSA is also active in the National Association of Graduate and Professional Students and develops programs with them as well.

Graduate Honor and Professional Societies

Alpha Epsilon Lambda Honor Society

The Sigma Chapter of Alpha Epsilon Lambda, the National Honor Society for Graduate and Professional School Students, was established in 1995 at NJIT and is the first chapter in New Jersey. Membership is based on standards of scholarship, leadership and character, and is by invitation. Contact the Dean of Graduate Studies, (973) 596-3462, for more information.

Other Honor and Professional Societies

Each program offering graduate degrees at NJIT will have information about honor and professional societies open to graduate students in particular disciplines. Contact the dean of the appropriate school or college or the dean of graduate studies for further information. NJIT also has active chapters of Omicron Delta Kappa, a service-oriented society, and Sigma Xi, which focuses on research.

Residence Life

Over 1450 students live on campus in four co-ed residence halls. Approximately 50 graduate students live on campus. Rooms are fully furnished, air-conditioned and wired for networking to the University's main computer system and to the Internet. Each hall has common areas and facilities including lounges, study areas, kitchens and laundry rooms. Rooms are wired for phone and provided approximately 50 cable TV channels. Other services include: washers and dryers, snack and soda machines, recreational equipment (pool, ping-pong, large screen televisions, etc.) and mail service Monday-Friday. Graduate students are not required to have meal plans.

Graduate students usually live in Laurel or Oak halls.

Laurel Hall is a suite-style building with approximately 582 upper class students in single, double and triple rooms. Any combination of two types of rooms can make a suite. Suites have a shared bathroom and foyer.

Oak Hall has approximately 213 upper class and graduate students housed in both suite-style rooms and apartments. Each suite-style room has a kitchenette and shared bathroom. Each apartment has a kitchen, living room and bathroom. Suites are comprised of two doubles or a double and triple bedroom. Apartment can have: a single with a double bedroom, two doubles or a double with a triple bedroom.

NJIT students use electronic cards for access to a residence hall. Desk attendants are on duty 24 hours a day and provide security for the residence halls by monitoring hall entrances and swiping resident IDs. All guests must have a valid photo ID and must be signed into the residence hall by a resident host. Guests must be accompanied by their hosts at all times.

Residence Life has staff on-duty in each hall during non-business hours. In addition, NJIT's Public Safety Office has patrols by their force of police officers and public safety officers, 24 hours a day. Patrols are conducted on foot, in cars, motor scooters and bicycles. Rooftop surveillance cameras are mounted throughout campus and monitored around the clock.

Once you have been admitted to NJIT, you can complete the Housing Application and Contract located on our website: <https://mis3.njit.edu/housingapplication/login.aspx>. A \$50 non-refundable deposit is required and can be paid by credit card or check/money order payable to NJIT. Checks/money orders must be sent to the Residence Life Office, 180 Bleeker Street, Newark, NJ 07103-3514.

Applications for graduate students are assigned housing based on the distance you live from campus, need and date of application. We anticipate a wait list for the fall for all students. You may also be assigned to a triple room. We will send a confirmation letter three-four weeks after receiving your application.

While some graduate students choose to live on campus, many live off campus. Off-campus housing is available in a number of towns in close proximity to NJIT. Monthly rents typically begin at \$300 and increase depending on the specific living conditions. Most rental space will require one month's rent and one month's deposit before moving in. Have a sufficient amount of money available when you begin your apartment search. It is recommended that you arrive as early as possible to allow yourself time to search for suitable accommodations (temporary housing is available (http://oisf.njit.edu/new_students_prearrival.php). The Residence Life Office provides an "Off-Campus Housing" newsletter and a list of available rentals in the area (updated weekly). You can view the newsletter and the list of available rentals by visiting <http://www.njit.edu/v2/reslife/offcampus.php>. In addition, Residence Life staff will be available to assist you in finding housing upon your arrival. You can email the Off Campus Housing Coordinator in the Residence Life Office at offcampus.housing@njit.edu with any questions. For additional information please review our website <http://www.njit.edu/reslife>. For additional questions, contact us via email reslife@njit.edu or call 973.596.3039.

Housing and Meal Plan Fees Per Semester

Cypress Hall, Laurel Hall, Oak Hall Double Rooms \$ 3,165.00
Redwood Hall Double Room \$ 2,980.00

- The single room rate is \$3,695.00 per semester. Single rooms are available only to upper class students based on room selection criteria and processes.
- Twelve-month housing contracts are available. The charge is an additional \$1,000 per semester.

Meal Plans Per Semester

A - Plan \$1,335.00 -- 5 dinner meals per week, \$500 flex dollars, 15 guest dinners*

B - Plan \$1,335.00 -- 7 dinner meals per week, \$400 flex dollars

C - Plan \$1,535.00 -- 5 dinner meals per week, \$700 flex dollars, 15 guest dinners*

D - Plan \$1,535.00 -- 7 dinner meals per week, \$600 flex dollars

E - Plan \$1,330.00 -- 70 dinner meals per semester, \$450 flex dollars, 12 guest dinners**

F - Plan \$950.00 -- 3 dinner meals per semester, \$450 flex dollars, 5 guest dinners*** (**OAK RESIDENTS ONLY**)

G - Plan \$1,295.00 -- \$995 flex dollars (**UPPER CLASS STUDENTS ONLY**)

Guest dinners for the A and C Plans are allotted as follows: 5-Sept., 5-Oct., 3-Nov., 2-Dec., 2-Jan., 5-Feb., 2-Mar., 5-Apr., 1-May

Guest dinners on the E Plan can be used at "anytime" during the semester.

**Guest dinners for the F Plan are allotted as follows: 2-Sept., 1-Oct., 1-Nov., 1-Dec., Jan., 1-Feb., 1-Mar., 1-Apr., 1-May.*

- Dinners are all-you-can eat meals.
- Flex dollars can be used in the Dining Room (breakfast and lunch meals), the Highlander Club, the Sandwich Shoppe or Starbucks.

*Expect room and board rates for 2007-2008 to increase 4-7 percent.

Cancellation of Housing Contract Prior to Check-In

NEW STUDENTS ---- All new students are required to provide a \$50 non-refundable room reservation deposit. If a contract is cancelled prior to check-in, a \$450 (less the \$50 non-refundable room reservation deposit) cancellation fee will be assessed.

CONTINUING STUDENTS ---- All students must complete and sign a housing contract. If a contract is cancelled prior to check-in, a \$450 cancellation fee will be assessed.

Cancellation of Housing Contract After Check-In

No refunds of room charges will be made once a resident takes possession of a room. A resident has possession of a room once he/she signs the Check-in Form.

A resident may be released from the contract assignment without forfeiture of room charges or assessment of a cancellation fee, if the Residence Life Office is notified in writing, with supporting documentation, under the following circumstances only:

1. Withdrawal from NJIT
2. Marriage
3. Pregnancy
4. Transfer to another university
5. Graduation from NJIT
6. Loss of financial aid

In these circumstances only, students are billed until the end of the semester in which they cancel their contract or pro-rated to the date of check-out (if it falls prior to the end of the semester).

Meal Plan Refund Policy

If a student is released from their housing contract during a semester, they are charged until the date of checkout for meals and flex dollars

If a resident student places cash in their flex account, they are entitled to a refund anytime, or may carry the flex amounts over from one semester to the next.

Meal Plans for Commuter Students

Commuter students may elect to have a meal plan, the Commuter Meal Plan (\$500 for 550 flex dollars) or place money in their account. Students must pay for the option at the Bursar's Office and then take the receipt to the Gourmet Dining Service Office in the Campus Center.

Meal plan Refund Policy for Commuter Students

If students select a regular meal plan the refund policy and procedures are the same as for resident students.

If commuter students place cash in their flex account, they are entitled to a refund anytime, or may carry the flex amounts over from one semester to the next.

Parking

Every vehicle parked in NJIT lots must be registered with the Department of Security, Identification and Parking Systems, and must display a valid parking permit for the semester. Student parking registration must be completed on-line at www.njit.edu/parking and is available to NJIT students who have registered for classes. Upon registering for parking, a separate fee will be charged to your student bursar's account and a parking permit will be mailed to the address you choose on-line. Additional information is available on-line, or at the Department of Security, Identification and Parking Systems located on the second floor of the parking deck.

Photo ID

All new students at NJIT are required to report to the Photo ID office, located on the second level of the parking deck, to obtain a photo identification card. Each semester, this ID card must be validated at Public Safety, the Campus Center, or the Library. Identification cards must be carried at all times to be presented upon request as valid identification while on campus. The photo identification card will be programmed for access to and use of the residence halls, the parking facility, the library, the gymnasium and the cafeteria meal plan as needed by each individual student. Hours of operation for the Photo ID office vary each semester and will be posted. If you have any questions, please call (973) 642-7190 or visit us on line at www.njit.edu/parking.

Special Programs

B.S./ M.S Dual Degree Programs

This accelerated dual degree program permits undergraduates to earn credits toward a master's degree. Students take 6 credits of graduate course work in their senior year. These may be counted towards both a bachelor's degree and a following master's degree if enrollment as a graduate student in the master's degree program occurs within two years of completion of the bachelor's degree. After enrollment as a graduate student, those who wish to apply the 6 credits to the graduate degree program should contact the Office of Graduate Studies.

Graduate study may be completed full- or part-time.

Full-time undergraduate students become eligible to apply after they complete at least five courses in their major, and have maintained a GPA of 3.0 or better. Students must submit the application for admission to the B.S./M.S. program to the Office of Graduate Studies no later than one year prior to graduation. Applicants must fulfill all university requirements for admission to graduate programs. Some programs will require submittal of GRE or GMAT scores. For all others, these are highly recommended.

Information and applications can be obtained from the Office of Graduate Studies, (973) 596-3462.

Several other combinations of bachelor's and master's degrees exist or are under development. The number of dual-use credits for these combinations may exceed 6 credits in accordance with specific program requirements. An example is the B.Arch./M.S. in Management program, which allows 12 dual-use credits.

M.S./M.S. and Dual Master's Programs

The M.S./M.S. program allows students to pursue a second NJIT master of science degree on completion of the first and to count two courses (6 credits) from the first degree toward the second. The option must be exercised within two years of completion of the first degree. The approval of the advisors of the two programs is required. The Office of Graduate Studies will direct the registrar on transfer of the two dual-use courses to the second program. The M.S./M.S. program option is not intended for students who have left the doctoral programs without completion of the degree. Up to 6 credits may be transferred to the second master's degree from outside NJIT. Thesis, project, predoctoral research, independent research and similar courses may not be used.

Several other master's degree combinations involving the Master of Architecture, the Master in Infrastructure Planning and the M.S. in Management allow dual use of courses from the first degree to the second. The number of dual use credits for these combinations may exceed 6 credits in accordance with specific program arrangements.

The Executive Program: Master of Business Administration

The Executive Program, operated by the School of Management, is an accelerated 18-month MBA for rising executives, specifically designed to meet the needs of business professionals and the demands of corporate life. The EMBA is designed to prepare a new generation of technology savvy business leaders and entrepreneurs with the skills to succeed in an increasingly complex and competitive business environment. The curriculum prepares students to think strategically about business and technology.

The program begins with a five-day residential session. A second residential session involving an international study tour is held at the midpoint of the program. The remainder of the program is taught on campus. For more information, contact the Executive Program, (973) 596-6378.

Student Exchange/Study Abroad

2007-2008

NJIT offers a number of international exchange opportunities for undergraduate and graduate students in Europe and the Far East. Through established exchange agreements, participants are provided with opportunities to enhance their technological skills, expand their cultural horizons, and gain educational experience from an international perspective. Students gain firsthand knowledge of political, social and economic systems of a rapidly changing world.

Students may elect to study for one semester or for a full academic year. NJIT students pay tuition and fees at NJIT and room and board at the host institution. Financial support may be applied to these expenses.

With the prior written approval of the student's academic advisor, academic credit may be awarded for courses taken while participating in an international exchange program. Some programs may require proficiency in the language of the host country, especially if the language of instruction for course work is not English. For further information, contact the Office of International Students and Faculty, (973) 596-2451.

2007-2008

Student Life

NJIT offers a wide range of extracurricular programs from sports to professional societies. There is also an extensive intercollegiate sports program. Men's sports are baseball, basketball, cross-country, fencing, judo, soccer, swimming, tennis and volleyball. Currently, the NJIT teams compete in NCAA Division II with the exception of men's soccer which competes at Division I. Women's sports include basketball, cross-country, fencing, judo, soccer, swimming, tennis and volleyball. The intramural program includes all sports available at the intercollegiate team level plus track and field, racquetball, flag football, badminton, softball and archery.

There are 15 social fraternities, most with residential facilities, and 9 sororities, 10 honor societies and 27 professional recognition societies. The latter include Tau Alpha Phi, Phi Eta Sigma, Tau Beta Pi, Sigma Xi, Alpha Epsilon Lambda, the American Chemical Society, the American Institute of Aeronautics and Astronautics, the Society for Technology, the Society of Women Engineers, and the Society for Advancement of Management, to name a few. There is an active professional society for almost every major field of study offered by the university.

The Student Senate administers a wide range of programs through the Student Activities Council, various honor societies, and the Cabinet for Professional Societies and Cultural Organizations. Some of these activities include chess, lacrosse, the Vector newspaper, the Nucleus yearbook, ham radio, photography, and theater and radio broadcasting. Graduate students also enjoy participating in the NJIT chapter of Pugwash USA and Computer Club 2 (YACC2).

NJIT is within walking distance of the Newark downtown area and the campuses of neighboring universities which, along with NJIT, are located in Newark's University Heights section. Students may take advantage of Newark's nationally renowned museum, library, Symphony Hall, and New Jersey Performing Arts Center (NJPAC) and may enjoy the city's burgeoning art and jazz scene. In addition, students have easy access to the vast cultural resources of the New York/New Jersey metropolitan area. NJIT is only 20 minutes from midtown and downtown Manhattan, and the city is easy to reach by bus, train or car. A joint Rutgers/NJIT shuttle bus provides regular free commuting service to principal transportation centers.

Physical Education and Athletics

The Division of Physical Education and Athletics encourages students to develop individual physical skills that can be used throughout life, and provides a variety of programs that will meet the diverse needs and interests of the NJIT community. These include programs of skills instruction, intramural and intercollegiate competition, sports clubs and open recreation. The Estelle and Zoom Fleisher Athletic Center houses a swimming pool; locker rooms; Fleisher fitness center with a 1/16-mile indoor track; an athletic training room; dance, exercise and fencing areas; conference and audio/visual rooms; four racquet sport courts; and three gymnasias. Lubetkin Field is a multipurpose, lighted recreational area with a regulation soccer field, softball and baseball fields and a jogging area. There are four lighted tennis courts behind the athletic center. Recreational areas are open from 7 a.m. to 11 p.m. Monday through Friday, from 9 a.m. to 7 p.m. on Saturday, and from noon to 9 p.m. on Sunday. For information, contact the division office in the Physical Education Building. The phone number is (973) 596-3636.

The Campus Center

The final phase of NJIT's \$83 million campus construction program has taken shape. This centerpiece is a new four-story student center with an outdoor roof garden with seating, a two-story student lounge and an expanded woman's center. Additional features include a bookstore, a Starbucks and a six-lane bowling alley.

The Campus Center is a place for cultural, educational and social activities for the NJIT community. The Campus Center staff strives to provide students, faculty and staff with a relaxing environment where they can enjoy a meal, study, watch a film, play billiards or a variety of other games, participate in the many activities offered or just socialize with friends. The Offices of Student Activities, Greek Life, Women's Center and Miniversity are located within the building. The center also houses a wide variety of student clubs and organizations including the Student Senate, Graduate Student Association (GSA), Student Activities Council (SAC), university newspaper (Vector), yearbook (Nucleus) and radio station (WJTB). More than 50 student-run cultural, professional, special interest and social clubs and organizations have office space in the Campus Center.

On the lower level of the center is a recreation area with bowling, billiards, table tennis and video games. A variety of tournaments is offered each semester. The main level of the center houses the Food Court, Student Dining Room, Information Desk, Bookstore and

offices of the director of the Campus Center, assistant director for Greek Life and the reservation manager. The second floor of the center houses the offices of the Associate Director for student activities, the Women's Center, Miniversity (and for '05/'06, the Dean of Student Services), and several student organizations. The third floor of the center houses the Faculty/Staff Dining Room and the Highlander Club..

The Campus Center Information Desk personnel provide information about the campus, community events and public transportation. The Information Desk also has a university telephone directory, campus maps, discount tickets for Broadway shows, postage stamps and mail service. Two computers are provided for students to check class schedules, grades and registration information. The Campus Center Office also provides fax service for a nominal charge. The phone number for the Information Desk is (973) 596-3605.

Student Services

The dean of student services administers and coordinates the activities of the Student Services Division, including the Campus Center, the Counseling Center, Health Services, Residence Life, the University Learning Center and the University Research Experience. Special services for evening and disabled students are provided. The office also is the liaison for Food Services, The Highlander Cafe and the NJIT Bookstore.

The office is located on the second floor of the Campus Center. The phone number is (973) 596-3466/3470.

The Murray Center for Women in Technology

The Murray Center for Women in Technology provides a hospitable environment for all women at NJIT. Located on the second floor of the Campus Center, the women's center offers a wide range of resources, including a multimedia library, computer workstations and access to a World Wide Web database about women in technology. The center contains space for small group meetings, study, tutoring and research. It provides a forum for women to discuss matters of mutual concern, including issues related to the academic and social environment at NJIT. It sponsors programs and events especially designed to facilitate mentoring and career networking among women. The center also supports research about women and technology and fosters efforts to explore the continued integration of gender into the curriculum. The lounge/study area is open to all members of the NJIT community daily, Monday through Friday.

International Students

The Office of International Students and Faculty offers numerous services and programs to aid students in their adjustment to NJIT. Because immigration regulations frequently change, affecting the status of students, all international students holding non-immigrant visas (especially F and J visas) must attend a mandatory orientation program prior to the beginning of their first semester. F-1 and J-1 undergraduate students must maintain full-time registration (12 credits per semester), except for special cases as defined by immigration regulations. F-1 and J-1 full-time graduate students must maintain full-time registration (9 credits per semester), except for special cases as defined by immigration regulations. Students on dependent visas (such as F-2, J-2 and H-4) should consult with the Office of International Students and Faculty if change in status or full-time study is contemplated. The office is located in Fenster Hall, Room 140. The phone number is (973) 596-2451. Their web address is <http://oisf.njit.edu/>.

Students with Disabilities

The coordinator of Student Disability Services assists students with disabilities in the NJIT Counseling Center. Assistance services may include: providing general information; counseling; coordinating academic accommodations such as special testing arrangements or adaptive equipment; coordinating the provision of auxiliary services such as note takers, sign language interpreters, readers; and liaison with faculty, staff and other agencies. Services are provided to students with documented disabilities and require meeting with the coordinator, submitting documentation and completing appropriate forms. For further information or to discuss accommodations, please contact the coordinator of student disability services in the Counseling Center. The Counseling Center, located in Student Services, Campbell Hall, is open from 8 a.m. to 6 p.m. Monday through Thursday and 8 a.m. to 5 p.m. Friday during fall and spring semesters; from 8 a.m. to 5 p.m. Monday through Thursday and 8 a.m. to 4 p.m. The office is closed on Friday during summer sessions. The phone number is (973) 596-3414. Scheduling an appointment is important to ensure availability and make arrangements for appropriate accessibility.

Immunizations

The State of New Jersey and NJIT require all students to submit proof of having two doses of measles vaccine and one dose each of mumps and rubella vaccine. A tuberculin test (PPD) and entrance physical exam also are required. If documentation is unavailable then re-immunization is required. Contact the Office of Health Services for further information. Registration will not be allowed until all immunization records have been submitted.

Health Insurance

The State of New Jersey and NJIT require all students enrolled full-time and all international students to maintain health insurance coverage that provides basic hospital and medical benefits. Coverage must be maintained throughout the student's enrollment. Insurance may be provided by the student or may be purchased through the university. Students may waive participation in the NJIT

plan for the full academic year. To waive insurance, the student must complete a waiver form and submit it to Health Services within the 30-day enrollment period at the beginning of the semester. Waiver forms and insurance brochures are available in the Office of Health Services. International students with J-1 visa status must be covered by an insurance package at all times as specified by the U.S. Department of State, which generally exceeds NJIT's plan coverage. Further information about required coverage and/or enrollment can be obtained from the Office of International Students and Faculty. Part-time students also may purchase health insurance through NJIT within the 30-day enrollment period at the beginning of the semester. Insurance also may be purchased for dependents.

U.S. citizens and permanent residents who are full-time graduate students by virtue of their carrying 9 or more credits and all international students, carrying 3 or more credits are automatically billed for insurance in the NJIT plan. U.S. citizens and permanent residents carrying less than 9 credits and international students carrying less than 3 credits are not automatically billed for the NJIT plan. U.S. citizens and permanent residents who have been certified as full-time with less than 12 credits, even if on financial support, are not automatically billed and should take immediate steps to assure that they have continuous health insurance coverage either through the NJIT plan or through separate insurance. International students with less than 3 credits, whether certified full-time or not, should also take immediate steps to assure continuous health insurance coverage. Students on support should verify whether or not the support includes the cost of Health Insurance. Some support packages include this coverage and some do not particularly support packages that cannot support student fees

Health Services

To function well in a college setting, a student must be physically healthy. To ensure the good health of our students, the Office of Health Services provides primary health care to all enrolled students who have submitted a complete medical examination form. Services offered to eligible students include the assessment and treatment of health problems and injuries, laboratory tests, health counseling and education. Referrals are made to area hospitals, physicians and other resources when necessary. The office also coordinates mandatory immunization requirements, which apply to all students. Information on immunization requirements is available at the Office of Health Services. The office is open 8:30 a.m. to 4:30 p.m., Monday, Wednesday and Thursday, and 8:30 a.m. to 6 p.m. Tuesday and Friday during fall and spring semesters. Physicians are available for consultation in the Office of Health Services by appointment during the academic year. Summer hours are 9 a.m. to 4 p.m., Monday through Thursday. Health services staff may be reached at (973) 596-3621.

Child Care Center

The NJIT child care center, currently operated by Sarah Ward Nursery, is located on the first floor of NJIT's Enterprise Development Center II building, 105 Lock Street. The center is available to children of NJIT employees and students, employees of tenants in the university's incubator program and residents in the neighboring community. The center is licensed by the State of New Jersey.

The center is for children age 6 weeks to 5 years. Programs and activities are divided into levels for infant, young toddler, toddler, young preschooler and preschooler. Developmentally appropriate activities for each age group include hands-on pre-math, science, language and reading activities. An after-school program is also offered to children ages 5 through 13.

The center operates year-round, 6:30 a.m. to 6:30 p.m. Monday through Friday, excluding university holidays. For further information, call Sarah Ward Nursery at (973) 645-0442.

Counseling Center

The Counseling Center, staffed by experienced psychologists and professional counselors, provides services for students seeking psychological, academic and substance abuse counseling. In addition to the professional counseling staff, a psychiatrist is available for consultation as needed. The Counseling Center also offers workshops on different topics, maintains a library of career and graduate school information, coordinates services for students with disabilities and administers supportive testing. Students are welcome to come in and browse through the informational materials or call for an appointment with a counselor. Office hours are scheduled so that services are also accessible to adult evening students. The Counseling Center is open from 8 a.m. to 6 p.m. Monday through Thursday and 8 a.m. to 5 p.m. Friday during fall and spring semesters; from 8 a.m. to 5 p.m. Monday through Thursday and 8 a.m. to 4 p.m. The Counseling Center offers professional counseling to adult students facing stress from academic, personal, family or employment responsibilities. Counseling services are confidential, with limited exceptions. Call us at (973) 596-3414 for an appointment. The center is located in Student Services, Campbell Hall.

Stop-In Center

The Stop-In Center, staffed by trained student peers, provides on-the-spot information and assistance about all aspects of college life. Peer counselors are prepared to talk with fellow students about a wide range of questions or concerns - academic or personal - as well as provide relevant information. If they are unable to resolve a problem directly, they refer students to the person or office that can. No appointment is necessary and students are invited to stop by and become familiar with the staff and services available. The phone number is (973) 596-3422 and the Stop-In Center is open weekdays during the fall and spring semesters.

Evening Students

Office of the Dean of Student Services staff members are available until 5:45 p.m., Tuesday through Thursday, to provide advisement and needed information to evening students. The Counseling Center is open to evening students until 6 p.m., Monday through Thursday and until 5 p.m. Friday during fall and spring semesters, offering confidential professional counseling to adult students who face stress from academic, personal or employment responsibilities. Many other offices, including the Registrar's Office, remain open after regular hours to assist students taking evening courses. Students should contact individual offices to determine availability. The Campus Center features weekly films and activities in the evening. All forums are held in the evening to allow evening students' participation.

Division of Career Development Services

The Division of Career development Services (CDS) is responsible for planning and advising, cooperative education and internships, community and public services, and alumni career services. Students may utilize these services by calling CDS at (973) 596-3100, by emailing a career counselor responsible for your discipline (listed on www.njit.edu/cds under Contact Us) or by stopping by to set up an appointment.

CDS offers students a broad range of career planning services. Included are career advising, career development workshops led by staff and industry representatives, career fairs, access to the Career Resource Center (both in Campbell Hall, 4th floor and online at www.njit.edu/cds under Career Resource Center), career counseling, experiential education through cooperative education, on-campus recruitment by a wide range of prospective employers and access to job postings at www.njit.edu/cds under CDS online.

The office is open Mondays through Fridays, 8:30 a.m.- 4:30 p.m. during the school year, with a rotating schedule from 4:30 p.m.- 6:00 p.m. in the Student Center. (Summer hours are 8:30 a.m.-5:00 p.m. Mondays through Thursdays).

Community and Public Service

See the Academic Programs section in this catalog for more information.

Cooperative Education and Internships

See the Academic Programs section in this catalog for more information.

Career Planning and Placement

The Division of Career Development Services offers students a broad range of career investigation and preparation services. Included are career advising, career development workshops led by staff and industry representatives, job fairs, access to the Career Resource Center, career counseling, and on-campus recruitment by a wide range of prospective employers. Access to information is provided on site and remotely through the CDS Online Internet service. In addition, the office maintains full-time job listings. SIGI+, a computerized career assessment instrument, and company information are located in the Career Resource Center. The center is open Monday through Thursday, 8:30 a.m. to 6 p.m., and Fridays, 8:30 a.m. to 4:30 p.m.

For more information, contact the Division of Career Development Services, (973) 596-3100 or www.njit.edu/CDS.

Student Employment

The Office of Student Employment offers services and programs to help NJIT students earn money to finance college expenses and acquire practical work experiences through part-time and summer employment. Opportunities are provided for on-campus and off-campus employment for eligible students in all academic disciplines. Through the student employee training and development service, students are helped to succeed on the job. Students may participate in the following programs.

Federal Work Study (FWS)

Students who are U.S. citizens or permanent residents and have received a FWS allocation as a part of their Financial Aid award are eligible to participate. Students may earn up to the amount specified on the award letter from the Financial Aid Office. FWS jobs are available both on- and off-campus.

University Work Study (UWS)

UWS provides on-campus employment opportunities for NJIT students not eligible for the FWS program. Students must be enrolled full- or half-time, accepted into a degree-granting academic program and attending classes to apply for UWS jobs. Eligible international students must also have on-campus employment clearance from the Office of International Students and Faculty.

Grant/Contract Hourly Employment

NJIT's faculty and staff are often awarded grants or contracts from governmental agencies, foundations or private corporations to conduct research projects or special programs. Eligible NJIT students may be hired for on-campus jobs funded by these grants or contracts. Students should contact their academic departments and/or professors about available positions.

Job Location and Development Services (JLDS)

JLDS provides assistance for any NJIT student seeking part-time or summer employment off-campus. Private and public employers in the New Jersey/New York area send numerous job announcements daily to NJIT. Students may view job postings in the Career Resource Center or access the part-time job listings on the Internet via CDS Online. Also, a six-week Summer Job Search Club is offered each spring semester to help students find off-campus summer jobs related to their academic major.

For additional information, contact the Division of Career Development Services, (973) 596-6590.

Tuition and Fees

New Jersey Institute of Technology reserves the right to increase tuition and fees as required.

Students incur a legal obligation to pay tuition and fees when they register for classes. Unless the registrar receives written notice by the fifth day of the semester that a student will not be attending classes, the student will be billed for payment.

Liability for Charges

A student who registers for a course is liable for all tuition and fees. Receipt of a properly completed withdrawal notice by the Registrar's Office will affect the amount of refund, if any, to be issued.

Tuition and Fees 2006-2007 (in US dollars)

Effective July 20, 2006 the charges

TUITION

	New Jersey Resident	Non-Resident
Full-time	\$5,948 /semester	\$8,450 /semester
Part-time	\$648/credit	\$892/credit

NOTES: Part-time = 1--11 credits per semester. Full-time = 12 or more credits per semester. However, for any additional credits taken over 19, there is a per credit charge at the part-time rate in addition to the full-time charge.

FEES

Full-time (fees per semester)

Registration	\$80
Academic Facilities	325
Student Services	65
Graduate Student Association	35
Athletics	70
Health Services	22
Technology Infrastructure Fee	110
Total	\$707

Part-Time (per semester)

Registration	\$80
Health Services	\$22
Total	\$102

In addition to the above, Part-time students are also charged the following fees per credit:

Academic Facilities	\$34
Student Services	9
Graduate Student Association	3
Athletics	6
Technology Infrastructure Fee	14
Total	\$66

International Student Fee \$85 per semester

International students are charged tuition off the Non-Resident tuition rate.

Health Insurance \$244 per academic year

International Students (students on F1 and J-1 visas) are charged \$282 per academic year for taking 3 or more credits.

HEALTH INSURANCE

New Jersey statutes require all full-time students and all F-1 and J1 students (whether full- or part-time) to show evidence of existing health insurance, or they will be required to purchase coverage from the university for the rate of \$244/\$282 per academic year.

United States citizens and permanent residents, carrying less than 9 credits will not be automatically billed, and should immediately take steps to purchase insurance if they are not otherwise advised. Students with comparable coverage may waive the fee for this insurance by going to <http://www.njit.edu/insurancewaiver> and following the instructions. This must be done during the 30-day enrollment period at the beginning of the semester. F-1 and J1 students must be registered for at least 3 credits to be able to purchase insurance from the university. International students with less than 3 credits must contact the Office of Health Services for further information. Students with J-1 visas, see " **Health Insurance**" under "**Student Services**" in this catalog for further information.

Full and Part-time students and students interested in supplemental coverage for spouses and families should contact the Office of Health Services for more information.

APPLICATION AND SPECIAL FEES

Application Fees

A non-refundable fee of \$60 must accompany applications for admission. Students who wish to change their degree program must file a new application and pay an additional \$60 fee.

Late Payment Fee

Students are charged \$100 if they do not pay tuition and fees within the period stipulated in payment instructions.

Late Registration Fee

Registration is required each semester. A late registration fee of \$100 is required after the deadline specified in registration instructions.

Maintaining Registration Fee

Students admitted to degree programs and who find it necessary to temporarily discontinue their studies, may maintain their enrollment by paying \$50 for each semester they do not register for courses. The mechanism for maintaining registration is the notation MR on the registration form. International students on F-1 and J-1 status may not maintain registration unless they have obtained prior written permission from the Office of International Students and Faculty.

Doctoral students in the dissertation stage and master's students in the thesis or project stage of their programs are not permitted to maintain registration by this mechanism and must be enrolled in dissertation, thesis or project credits until completion of the dissertation, thesis or project. Additional tuition and fees may be imposed for failure to be enrolled in dissertation, thesis or project credits as required. Other limitations on MR exist for those in academic difficulty.

If international students must interrupt their studies temporarily, they are required to first consult with the Office of Graduate Studies as well as the Office of International Students and Faculty to obtain permission for a leave of absence.

Readmission Application Fee

A non-refundable fee of \$60 must accompany applications for readmission.

Transcript Request Fee

See [Registrar](#)

Schedule Change Fee

A fee of \$25 is charged for each schedule change requested after the deadline specified by the registrar.

Thesis and Dissertation Fees

A fee of \$75 is charged for university processing of the minimum required number (3) of master's theses; and \$100 for university processing of the minimum required number of doctoral dissertations (3). The original copy of the thesis or dissertation is scanned by the library and placed on the Web, except for any one that is to be sequestered for patent or proprietary reasons. Two copies are sent to an outside bindery by the library. Binding fees for additional copies are \$25 each for master's theses and \$33 each for doctoral dissertations. Arrangements and payment for full publishing and copyright services are handled through the Office of Graduate Studies and by arrangement with ProQuest.

Graduation Fee

A \$100 fee is charged each time students apply for graduation. If the degree requirements are not completed and a student is not certified for graduation, the student must reapply for graduation and pay the \$100 graduation fee again.

Parking Fee

NJIT students who have registered for classes may purchase a parking permit online at www.njit.edu/parking. Parking fees (per semester) are \$125 for full-time students (12 credits or more) and \$65 for part-time students (less than 12 credits). Adjustments to parking fees to reflect changes in full-time or part-time status will automatically be made on the fifth day of the semester only. Written requests for refunds will be granted by the Department of Public Safety only until the fifth day of each semester.

Additional Fees

From time to time, additional fees may be necessary, or current fees may need to be increased. Currently these include:

Distance Learning \$65 per semester

Reinstatement Fee

There is a \$200 fee for reinstatement of cancelled registration. Reinstatements are possible or permitted only for a limited time for those who had not initially paid their bills in a timely manner.

Continuing Professional Education (CPE) Tuition and Fees

In some cases, there is a differentiation in fees for CPE programs. See www.cpe.njit.edu/dl for a current listing of fee labels and fee amounts or call CPE at 1 (800) 624-9850.

Refunds for Withdrawal**Total Withdrawals During Fall or Spring Semesters**

When students withdraw from all courses voluntarily (a complete withdrawal) they may receive a refund of some part of the tuition provided they have properly completed a withdrawal on the Highlander website.

INSTITUTIONAL REFUND SCHEDULE

Students receive refunds of tuition for complete withdrawal according to the following schedule

Through the end of	% Refund
Week 1	100 (plus all fees)
Week 2	90
Week 3 and 4	50
Week 5,6 and 7	25
After Week 7	0

Partial Withdrawals During Fall or Spring Semesters

The percentage of tuition refunded for credit reductions short of complete withdrawal (a partial withdrawal) in a semester is:

Week 1	100% (plus all fees)
Week 2	90%
Week 3-15	0%

FEDERAL STUDENT FINANCIAL AID RECIPIENTS

See [Financial Aid](#)

For more information on policies and procedures for the treatment of financial aid due to withdrawal, go to www.njit.edu/finaid/withdr.php

After the last day of the second week of classes each semester, students who reduce credits but remain enrolled will not receive any refund of tuition or other charges. For federal and state financial aid purposes, enrollment status is determined on the 15th day of classes, no adjustment from full-time to part-time status is made after the end of the second week of classes.

Refund policy and procedures for summer sessions are published in summer session registration materials.

Emergency Withdrawal

When the Office of the Dean of Graduate Studies approves emergency withdrawals, those students shall receive a refund prorated according to the number of weeks the student attended in the term. Students may request emergency withdrawal for the following reasons: medical circumstances that prevent completing the term; call to military service that prevents completing the term; and mental conditions that prevent completing the term.

Unofficial Withdrawal

Financial aid recipients whose term record shows zero (0) earned credits because of F and/or W grades will be reviewed for class attendance. A withdrawal date will be assigned to any student whose attendance or participation in class cannot be documented, and any federal aid may be reduced or canceled.

Students are strongly encouraged to use the official withdrawal procedure through the Registrar's Office should it become necessary to cease attendance in all courses. Students should also contact the Office of Graduate Studies to complete a discontinuance form.

Payment

Payment for tuition and fees may be made using any of the following methods:

Checks and Money Orders

Checks or money orders must be made payable to NJIT. Write the NJIT ID number on the face of the check or money order. The university reserves the right to add missing ID numbers to checks for payment.

Cash

Cash payments can be made only in person at the Bursar's Office, which is located in the student mall area on the lower level of the Parking Deck.

Credit Cards

At this time, the university only accepts Visa, MasterCard and Discover. For your convenience we allow the use of credit card payment over the web. Go directly to <http://my.njit.edu> and sign on to Highlander Pipeline, then select view and pay your bill. You may also use the back portion of your invoice to authorize use of the above credit cards or you can opt to pay in person.

Deferred Payment

Students may use the NJIT deferred payment plan. In order to take advantage of this plan, the student must pay one-half of the bill plus a \$50 deferral fee. All prior debts must be paid on order to take advantage of the deferral plan.

Student Residency for Tuition Purposes

Residency status for the purpose of tuition assessment will be made by the university based upon N.J.S.A. 18:62-1 et seq. and New Jersey Administrative Code Title 9. These statutes set forth the standards for individuals to legally reside in the state for 12 months prior to enrollment to be eligible for in-state tuition rates. The procedures outlined below will govern the determination of residency status for the purpose of calculating tuition. All students who are not legal residents of New Jersey within the meaning of the statutes

will be assessed out-of-state tuition rates.

Initial Determination of Residency

When an application is submitted for admission to any graduate or undergraduate program the admissions office will determine the applicant's resident status for tuition assessment. This determination will be based upon information supplied by the applicant on the application for admission. Applicants who are not citizens of the United States must complete the non-resident portion of the application and supply documentation of their non-immigrant status.

The university reserves the right to correct any errors in resident status based upon incorrect or insufficient information supplied by the student which directly or by inference leads to an inaccurate tuition assessment. When an error has been identified and corrected, tuition will be recalculated for the terms affected, and the student will be held liable for any additional tuition.

Legal Determination of Residence

The following statement from the New Jersey Statutes Annotated defines residence for higher-education purposes: "Persons who have been domiciled within this State for a period of 12 months prior to initial enrollment in a public institution of higher education are presumed to be domiciled in this State for tuition purposes. Persons who have been domiciled within this State for less than 12 months prior to initial enrollment are presumed to be non-domiciliaries for tuition purposes."

The university reserves the right to request the student to have the Internal Revenue Service or the New Jersey Division of Taxation forward tax records to the appropriate university office for review or to request same directly from the student.

An individual who claims to have established a new domicile in New Jersey must show (1) a physical abandonment of the previous domicile, together with an intent not to return to it, and (2) actual presence in New Jersey with the intention of remaining permanently in the state for reasons other than attending school.

An individual from another state or country who has enrolled in any type of educational institution in New Jersey prior to applying to NJIT will be presumed to be in New Jersey primarily for educational purposes and will be presumed not to have established domicile in New Jersey. Although the student may present proof to overcome these presumptions, it must be noted that continued residence in New Jersey during vacation periods or occasional periods of interruption to the course of study does not of itself overcome the presumptions.

THE EFFECTS OF MARRIAGE ON RESIDENCY

A U.S. citizen or permanent resident who marries a bona fide New Jersey legal resident assumes the domicile of that spouse for tuition purposes in the term following marriage. The same test for residency will be applied to spouses when marriage is claimed as the basis for domicile.

No change in status will occur when a legal resident student marries a non-legal resident.

FOREIGN NATIONALS

International students studying under a non-immigrant status (such as F, J, and all others) may be eligible to pay resident tuition upon receipt of their permanent resident card. In addition to receipt of permanent resident status in the United States, students must comply with the definition of "Domicile" as described in that section of the catalog. Any other non-immigrant alien (H-1, E-1, etc., status) will be classified as a non-resident for the assessment of tuition.

Residency will be determined as of the first term following the admission date on the permanent resident card. Applications for residency will not be processed unless a photocopy of both sides of the permanent resident card is included with the application. A tuition refund will be issued if the admission date on the permanent resident card precedes the start date of the current term.

Residence established solely for the purpose of attending a particular college or university cannot be considered as fulfilling the definition of domicile.

Refugees Students attending NJIT as documented refugees may be eligible to pay resident tuition rates provided they are domiciled in New Jersey and maintain good academic standing. Their status will be reviewed each semester by the director of financial aid.

Political Asylum Students who have been granted political asylum are not permanent residents of the United States and are not eligible to pay resident tuition rates. Employment Authorization Visas issued by INS do not qualify students for NJ resident tuition status.

Request for a Change of Residency Status

Requests for a change in residency status must be submitted to the registrar no later than four weeks before the end of the term for which a change in status is sought. A Residency Analysis Form with all supporting affidavits, deemed appropriate by the registrar pursuant to N.J.A.C. 9A:5-1.1 et seq., must be filed at the time of application. Students who qualify for resident tuition assessment based on the information supplied with their request will have their status changed only for the current and subsequent terms. No adjustments in tuition assessments will be made for prior terms.

Residency Appeals

Appeals for a change in residency status will be made to the registrar and will be accepted no later than one month after the date of notification of any such determination. Unresolved appeals will be forwarded to the assistant vice president for academic affairs: enrollment planning. The assistant vice president will respond to the appeal within 30 working days of receipt of the appeal.

The decision of the assistant vice president for academic affairs: enrollment planning will be final.

Student Responsibilities

Students are responsible for providing relevant and accurate information upon which a residency determination can be made. The burden of proving residency status lies solely upon the student. Moreover, it is considered the obligation of the student to seek advice when in doubt regarding eligibility for in-state tuition assessment. If the student delays or neglects to question eligibility status beyond the period specified above, the student forfeits the right to a residency assessment to which he or she might have been deemed eligible had an appeal been filed at the appropriate time. Students who are classified as resident students but who become non-residents at any time by virtue of a change of legal residence are required to notify the registrar immediately. An independent student loses residency status for in-state tuition payment immediately upon abandonment of the New Jersey domicile. Assessment of non-resident tuition charges will take effect the term following the date of abandonment.

Penalties

If a student has obtained or seeks to obtain resident classification by deliberate concealment of facts or misrepresentation of facts or fails to come forward with notification upon becoming a non-resident, he or she is subject to disciplinary action before the university's professional conduct committee.

Factors Considered in Determining Residence for Tuition Assessment

CLASSIFICATION

Students residing in New Jersey for a period of 12 months before first enrolling at a public institution of higher education in the State of New Jersey are presumed to be state residents for tuition purposes.

Students who have been domiciled within this state for less than 12 months prior to the date of enrollment are presumed to be non-residents for the purpose of calculating tuition. Students who assert residency but whose resident status is challenged by the university, must prove their domicile according to the following regulations.

DOMICILE

"Domicile" means the place where a person has his or her true, fixed, permanent home and principal living establishment, and to which, whenever he or she is absent, he or she has the intention of returning.

Although actual presence is not necessary to preserve domicile once it has been acquired, a person, if absent from the state, must have the intention of returning to New Jersey in order to remain a legal resident.

In determining whether legal resident status has been shown, mere physical presence and the assertion of a declaration of intent to remain in the state may not be sufficient. To assist in determining whether a person is a New Jersey legal resident, the primary evidence of residency, although not dispositive, is a notarized affidavit setting forth domicile and a copy of New Jersey income tax return substantiating employment in New Jersey as the applicant's primary reason for residing in the state. In the case of dependent students, a copy of the parent's or legal guardian's New Jersey tax return will be required in addition to the affidavit. The following additional items may be considered: voter registration of the individual in New Jersey; a New Jersey driver's license and/or a registration or such other information as the university deems acceptable. In unusual circumstances, if primary evidence is not available, the institution may make a determination of New Jersey domicile based exclusively on supplementary evidence; however, supplementary evidence may not be deemed sufficient to justify a determination of legal resident status.

If a student resides with his or her parents or legal guardians for more than six consecutive weeks last or this year, or is dependent upon them for food, clothing, or shelter during the present or prior year, or is claimed, or will be claimed, as a dependent for income tax purposes for the last or current year, the student is deemed to be financially dependent. In such case, the domicile of the individual's parent or legal guardian for the year prior to the term of admission will determine the domicile of the dependent student.

Conversely, if a student has not lived, and will not live, with parents or legal guardians for more than six consecutive weeks during the present or prior year; and has not received and will not receive financial assistance from parents or legal guardians of more than \$750 in support of any kind including food, clothing and shelter last year and this year; and has not been claimed as an exemption on parents' or legal guardians' tax return last and this year; and has resources, which should be at least equal to the level of public assistance in the preceding calendar year, the individual is deemed to be financially independent and student's own domicile, for the year prior to the term for which New Jersey domiciliary status is sought, will determine his or her legal resident status.

PRESENCE IN NEW JERSEY DUE TO MILITARY SERVICE

As a general rule, in the absence of any intention to effect a change of domicile, the domicile of a person is not affected or changed by reason of his or her entry into the military service.

United States military personnel and their dependents who are living in New Jersey are regarded as residents of the state for tuition purposes.

*** Joint appointment with the Department of Information Systems

† Joint appointment with the Federated Department of Biological Sciences

‡ Joint appointment with the Department of Electrical and Computer Engineering

Degrees Offered:

- Master of Science in Applied Mathematics
- Master of Science in Applied Statistics
- Doctor of Philosophy in Mathematical Sciences

Master of Science in Applied Mathematics

This program is intended for students with a strong interest in Applied Mathematics. Applied Mathematics is the application of classical and modern mathematical techniques to the solution of practical problems in the physical and biological sciences and engineering. The applied mathematician develops and analyzes mathematical models of physical and biological phenomena and engineering systems, interprets solutions to mathematical problems and uses the results to identify relationships, patterns, and the effects of altering one or more variables or modeling assumptions. Many of the courses in the program illustrate how mathematics can be used to predict the behavior of physical, biological, and engineering systems.

The Master of Science in Applied Mathematics, with its areas of specialization in analysis, applied mathematics, computational methods, and mathematical biology is designed to serve the needs of students who may be interested in pursuing a doctoral degree in the mathematical, physical, or biological sciences. The program also strengthens the quantitative and analytical skills of students with a baccalaureate degree who are planning to work in industry, commerce, or education, as well as practicing engineers and others already employed in industry and commerce.

Admission Requirements:

It is expected that students applying for admission will have an undergraduate education in mathematics, the physical or biological sciences, or engineering. For additional information, see the Admissions section of this catalog. An undergraduate GPA of at least 3.0 on a 4.0 scale or equivalent is normally required. Submission of GRE scores is encouraged but not required. However, GRE scores are required for those students applying for financial support. Applications are considered on a case-by-case basis.

Bridge Program: Students with a baccalaureate degree in an area different from mathematics may be admitted and required by the department to take an individually-designed program of courses that may include undergraduate courses before proceeding to the graduate curriculum. Such courses do not count towards a graduate degree.

Degree Requirements:

The Master of Science in Applied Mathematics requires 30 credits: 15 credits in core courses, 15 credits in an area of specialization, of which six credits are required and nine credits are electives. Students must successfully complete at least 24 of these credits at the 600-level or higher, and no more than six credits at the 500-level will be counted towards the degree. Specific course requirements depend on the area of specialization. A master's thesis or a master's project is optional.

Seminar: In addition to the minimum 30 degree credits required, all students who receive departmental or research-based awards must enroll every semester in Math 791 Graduate Seminar.

Core:

15 credits:

		Math 613	Advanced Applied Mathematics I: Modeling (3 credits)
		Math 631	Linear Algebra (3 credits)
#		Math 645	Analysis I (3 credits)
		Math 656	Complex Variables I (3 credits)
		Math 689	Advanced Applied Mathematics II: Ordinary Differential Equations (3 credits)

Project, Thesis (optional):

		Math 700	Master's Project (3 credits)
		Math 701	Master's Thesis (6 credits)

Required Courses in Areas of Specialization:

6 credits:

Analysis:

	Math 745	Analysis II (3 credits)
	Math 756	Complex Variables II (3 credits)

Applied Mathematics:

	Math 614	Numerical Methods I (3 credits)
	Math 690	Advanced Applied Mathematics III: Partial Differential Equations (3 credits)

Computational Mathematics:

	Math 614	Numerical Methods I (3 credits)
	Math 712	Numerical Methods II (3 credits)

Mathematical Biology:

	Math 635	Analytical Computational Neuroscience (3 credits)
	Math 637	Foundations of Mathematical Biology (3 credits)

Elective:

9 credits selected with approval of graduate advisor.

Electives are chosen in consultation with a Departmental Graduate Advisor and consist of advanced courses in mathematics and advanced courses from biology, physics, computer science, and engineering, for example. Courses offered by appropriate departments at NJIT, UMDNJ, and Rutgers-Newark can be used as electives within the limits of the NJIT transfer policy. All elective courses must be approved by the graduate advisor.

Master of Science in Applied Statistics

The objective of the Master of Science in Applied Statistics is to prepare students for a wide range of professional activities as practicing statisticians in both academia and industry. A statistician develops and analyzes models of data-driven situations where uncertainty of the outcomes plays a major role, identifies statistical relationships among observable variables, forecasts probable future outcomes, and draws inferences about background parameters that impact the phenomenon of interest. Thus the program is designed to provide students with the comprehensive knowledge and technical skills that are needed for the planning, execution, and analysis of statistical studies. These statistical studies are increasingly used as advisory instruments for policy decisions in the corporate and other sectors of the economy.

The Master of Science in Applied Statistics program will serve the needs of students with a baccalaureate degree who are planning to work in industry, commerce, or education, as well as practicing engineers and others already employed in industry and commerce. The program also strengthens the analytical and quantitative skills of graduate students who may be interested in pursuing a doctoral degree in Applied Probability and Statistics, since it equips them with basic training in the foundations of statistics in preparation for further advanced studies and research.

Admission Requirements:

Applicants must have a degree from an accredited institution with at least 12 credits in mathematics, including calculus. Students who do not meet these requirements may be admitted if they satisfy the university's requirements for admission. An undergraduate GPA of at least 3.0 on a 4.0 scale or equivalent is normally required. Submission of GRE scores is encouraged but not required. However, GRE scores are required for those students applying for financial support. Applications are considered on a case-by-case basis.

Bridge Program: Students who do not satisfy the credit requirement in mathematics will be required to take a bridge program of six credits in appropriate mathematics courses. Such courses do not count towards a graduate degree.

Degree Requirements:

The Master of Science in Applied Statistics requires 30 credits: 21 credits in core courses and 9 credits of elective courses. Students must successfully complete at least 24 of these credits at the 600-level or higher, and no more than six credits at the 500-level will be counted towards the degree. A master's thesis or a master's project is optional.

Seminar: In addition to the minimum 30 degree credits required, all students who receive departmental or research-based awards must enroll every semester in Math 791 Graduate Seminar.

Core:

21 credits:

{	Math 611	Numerical Methods for Computation (3 credits) or
	Math 630	Linear Algebra and Applications (3 credits)
	Math 644	Regression Analysis Methods (3 credits)
	Math 661	Applied Statistics (3 credits)
	Math 662	Probability Distributions (3 credits)
	Math 664	Methods for Statistical Consulting (3 credits)
	Math 699	Design and Analysis of Experiments (3 credits)
	Math 762	Statistical Inference (3 credits)

Project, Thesis (optional):

	Math 700	Master's Project (3 credits)
	Math 701	Master's Thesis (6 credits)

Elective:

9 credits selected with approval of graduate advisor.

Electives are chosen in consultation with a departmental graduate advisor and consist of advanced courses in mathematics and statistics and advanced courses from engineering, computer science, and biology. Students are encouraged to choose courses in application areas. Courses offered by appropriate departments at NJIT, UMDNJ, and Rutgers University-Newark can be used as electives within the limits of the NJIT transfer policy. All elective courses must be approved by the graduate advisor.

Doctor of Philosophy in Mathematical Sciences

The Doctor of Philosophy in Mathematical Sciences is offered in collaboration with the Department of Mathematics and Computer Science at Rutgers University-Newark. The doctoral program in Mathematical Sciences is designed to prepare students for a wide range of professional activities in science and engineering. Prospective students must choose one of the following tracks:

- Applied Mathematics
- Applied Probability and Statistics
- Pure Mathematics

The doctoral program reflects the research interests of the faculty and is focused on the development and use of mathematical tools for solving modern scientific, technological and industrial problems, and advancing the research knowledge and methodology in various fields of specialization.

The Applied Mathematics track emphasizes the applications of mathematical methods to the physical and biological sciences and engineering, including acoustics, electromagnetics, fluid dynamics, materials science, biology, and medicine. Mathematical modeling, asymptotic analysis, and scientific computing are emphasized. Students are expected to develop a broad range of capabilities both in mathematics and in an area of application.

The Applied Probability and Statistics track emphasizes directed instruction and independent research in areas that are specializations of the faculty. Current research interest areas of the faculty include applied probability, nonparametric statistics, and statistical reliability theory and applications.

The Pure Mathematics track offers research opportunities in many fields of specialization, including representation theory, number theory, low-dimensional topology, Riemann surfaces and Kleinian groups, geometric group theory, and 4-manifolds.

Admission Requirements:

Admission to the program is based on a review of the applicant's credentials and interests as expressed in academic transcripts, GRE scores, letters of recommendation, statement of interests, and TOEFL scores (for students whose native language is not English). Applicants with strong academic records whose abilities and interests complement the research of the faculty are sought. In general, applicants should have a bachelor's or master's degree in mathematics, an engineering discipline, or a branch of the natural sciences. Students choosing the Applied Mathematics track or the Applied Probability and Statistics track must fulfill the admissions requirements specified in the Admissions section of this catalog.

Students interested in either the Applied Mathematics track or the Applied Probability and Statistics track should apply to NJIT. Students interested in the Pure Mathematics track should apply to Rutgers-Newark.

Degree Requirements:

Applied Mathematics Track (NJIT)

Students choosing the applied mathematics track must fulfill the requirements for the doctor of philosophy as specified in this catalog. Specific courses of study are planned in consultation with a faculty advisor and are subject to approval. In general, students are encouraged to take courses both in mathematics and in areas of application.

Seminar: In addition to the minimum degree credits required, all doctoral students must enroll each semester in Math 791 Graduate Seminar.

Courses: A typical schedule of courses for the first four semesters in Applied Mathematics consists of the following:

Semester I

	Math 599	Teaching in Mathematics (3 credits)
	Math 613	Advanced Applied Mathematics I: Modeling (3 credits)
	Math 631	Linear Algebra (3 credits)
	Math 645	Analysis I (3 credits)

Semester II

	Math 614	Numerical Methods I (3 credits)
	Math 656	Complex Variables I (3 credits)
	Math 689	Advanced Applied Mathematics II: Ordinary Differential Equations (3 credits)
	Math 745	Analysis II (3 credits)

Semester III

	Math 671	Asymptotic Methods I (3 credits)
	Math 690	Advanced Applied Mathematics III: Partial Differential Equations (3 credits)
	Math 712	Numerical Methods II (3 credits)
	Math 756	Complex Variables II (3 credits)

Semester IV

	Math 676	Advanced Ordinary Differential Equations (3 credits)
	Math 707	Advanced Applied Mathematics IV: Special Topics (3 credits)
	Math 713	Advanced Scientific Computing: Multi-Dimensional Finite-Difference Schemes and Spectral Methods (3 credits)
	Elective	(Course from Natural Sciences or Engineering Relevant to Student's Interests.)

In addition to these courses, there are advanced courses in:

- computational neuroscience ([Math 635](#) , [Math 636](#))
- mathematical biology ([Math 637](#) , [Math 672](#) , [Math 673](#))
- statistics ([Math 644](#) , [Math 646](#) , [Math 787](#))
- probability ([Math 662](#) , [Math 668](#))
- partial differential equations ([Math 675](#))
- calculus of variations ([Math 677](#))
- tensor analysis ([Math 720](#))
- asymptotic methods ([Math 771](#))

Also, there are special topics courses in:

- computational fluid dynamics
- elasticity
- electromagnetics
- financial mathematics
- fluid dynamics
- integral equations
- materials science
- mathematical biology
- microwave processing of materials
- wave propagation.

Qualifying Examination: The qualifying examination for the applied mathematics track consists of three components: Analysis, Linear Algebra - Numerical Methods, and Applied Mathematics. Students must achieve a grade of A in each component to pass the qualifying examination. Components may be passed at different times. However, a student may attempt each component at most twice and must pass all three components by the end of the second year in the program. Typically, two opportunities to take each component are provided each year: Analysis and Linear Algebra - Numerical Methods (August and January), Applied Mathematics (January and May).

The following courses will be useful in helping the students to prepare for the qualifying examinations : [Math 645](#), [Math 656](#), and [Math 745](#) for Analysis; [Math 614](#) and [Math 631](#) for Linear Algebra Numerical Methods; and [Math 613](#), [Math 689](#), and [Math 690](#) for Applied Mathematics. It should be noted that taking the above courses is not mandatory but students are strongly encouraged to take them before attempting the qualifying examinations. The scope of the qualifying examinations is not limited to the specific list of topics covered in these courses, but these topics are indicative of the overall scope of these examinations.

Dissertation Committee: The dissertation committee is an important resource for the doctoral student in the conduct of research for their dissertation. Within six months of passing the qualifying examination a dissertation committee must be formed according to the regulations specified in this catalog.

Dissertation Proposal: Doctoral students must prepare a research proposal for approval by their dissertation committee. The student must offer an oral defense of this proposal before the dissertation committee and obtain its approval within one year of passing the qualifying examination. The committee determines if the proposal has an appropriate objective, if there is a reasonable plan to reach that objective, and if the student possesses the knowledge and skills needed to carry out the plan. The dissertation proposal can only be approved by unanimous consent of the committee members.

Dissertation Defense: A public oral defense of the dissertation before the dissertation committee is required. All members of the committee must be present for the defense. Success of the defense is determined by a majority vote of the dissertation committee.

Applied Probability and Statistics Track (NJIT)

Students choosing the applied probability and statistics track must fulfill the requirements for the doctor of philosophy as specified in this catalog. Specific courses of study are planned in consultation with a faculty graduate advisor and are subject to approval. In general, students are encouraged to take courses both in mathematics and in areas of application.

Seminar: In addition to the minimum degree credits required, all doctoral students must enroll each semester [Math 791](#) Graduate

Seminar

Courses: A typical schedule of courses for the first four semesters in Applied Probability and Statistics consists of the following:

Semester I

	Math 599	Teaching in Mathematics (3 credits)
	Math 631	Linear Algebra (3 credits)
	Math 645	Analysis I (3 credits)
	Math 662	Probability Distributions (3 credits)

Semester II

	Math 644	Regression Analysis Methods (3 credits)
	Math 668	Probability Theory (3 credits)
	Math 745	Analysis II (3 credits)
	Math 762	Statistical Inference (3 credits)

Semester III

	Math 646	Time Series Analysis (3 credits)
	Math 699	Design and Analysis of Experiments (3 credits)
	Math 787	Non-Parametric Statistics (3 credits)
	Elective	(Course in statistics/mathematics/engineering/computing sciences relevant to student's interest.)

Semester IV

	Math 664	Methods for Statistical Consulting (3 credits)
	Math 698	Sampling Theory (3 credits)
	Math 707	Advanced Applied Mathematics IV: Special Topics (3 credits)
	Elective	(Course in statistics/mathematics/engineering/computing sciences relevant to student's interest.)

In addition to these courses, there are advanced courses in:

- Time Series Analysis - II (**Math 647**)
- Stochastic processes with applications (**Math 691**)
- Statistical reliability theory and applications (**Math 761**)
- Large sample theory and inference (**Math 786**)

Also, there are special topics courses (**Math 707**), in:

- Categorical data analysis,
- Financial mathematics.
- Generalized linear models,
- Markov chain Monte Carlo methods,

Qualifying Examination: The qualifying examination for the applied probability and statistics track consists of three components: Analysis, Linear Algebra, and Statistics. Students must achieve a grade of A in each component to pass the qualifying examination. Components may be passed at different times. However, a student may attempt each component at most twice and must pass all three components by the end of the second year in the program. Typically, two opportunities to take each component are provided each year: Real Analysis and Probability, Linear Algebra, Distribution Theory and Statistical Inference (August and January); Topics in Statistics (January and May).

The following courses will be useful in helping the students to prepare for the qualifying examinations : **Math 645**, **Math 668**, and **Math**

745 for Real Analysis and Probability; **Math 631**, **Math 662**, and **Math 762** for Linear Algebra, Distribution Theory and Statistical Inference; **Math 644**, **Math 699**, and **Math 707** (Linear Models) for Topics in Statistics. The scope of the "Topics in Statistics" examination may include additional advanced courses in statistics that the students may have taken. It should be noted that taking the above courses are not mandatory but students are strongly encouraged to take them before attempting the qualifying examinations. The scope of the qualifying examinations is not limited to the specific list of topics covered in these courses, but these topics are indicative of the overall scope of these examinations.

Dissertation Committee: The dissertation committee is an important resource for the doctoral student in the conduct of research for their dissertation. Within six months of passing the qualifying examination a dissertation committee must be formed according to the regulations specified in this catalog.

Dissertation Proposal: Doctoral students must prepare a research proposal for approval by their dissertation committee. The student must offer an oral defense of this proposal before the dissertation committee and obtain its approval within one year of passing the qualifying examination. The committee determines if the proposal has an appropriate objective, if there is a reasonable plan to reach that objective, and if the student possesses the knowledge and skills needed to carry out the plan. The dissertation proposal can only be approved by unanimous consent of the committee members.

Dissertation Defense: A public oral defense of the dissertation before the dissertation committee is required. All members of the committee must be present for the defense. Success of the defense is determined by a majority vote of the dissertation committee.

Pure Mathematics Track (Rutgers-Newark)

Students interested in the Pure Mathematics track should contact the Department of Mathematics and Computer Science at Rutgers-Newark.

Students specializing in applied mathematics or computational mathematics may take Math 545 Introductory Mathematical Analysis and Math 546 Advanced Calculus, instead of Math 645 and 3 credits of elective.

Catalog and curricula information approved by the relevant academic department.

Degrees Offered: Master of Architecture (professional and post-professional options); Master of Science in Architectural Studies; Master in Infrastructure Planning; and dual Master of Architecture (professional, or post-professional) and either Master in Infrastructure Planning, or Master of Science in Management or Master of Science in Civil Engineering

Graduate architectural education exposes students to the broad intellectual inquiry of the academy and the specific technical knowledge required in the world of professional practice. Sustainable design is a basic attitude which informs our entire curriculum. Communication skills move from basic visual literacy to instruction in the principles and techniques of digital design: computer-aided design (CAD), computer-aided manufacturing (CAM), three-dimensional digital rendering, and digital animation. Students gain experience through individual design studio projects that range from the small-scale design and manufacture of a single object to a large-scale design of communities.

Our location-five minutes from Newark Penn Station by subway, and thirty minutes from Midtown Manhattan-gives students access to a faculty drawn from the largest concentration of design professionals in the country, and enables those faculty to treat design as a diverse series of real projects on real sites in a vital metropolitan region. In combination with the unparalleled internship opportunities available in New York and Northern New Jersey and the availability of dual degree programs, this approach allows students to both prepare for a career in architecture and to find a direction within the field. The architect envisions and imagines both what is possible, and what ought to be. As a process, design gives form to society and the economic and technological aspects of environmental order.

For students in the Professional M.Arch. Program, partnerships through dual degree tracks in infrastructure planning, management and civil engineering can broaden a general education in architecture. Post-professional opportunities for specialized career

directions, scholarly inquiry and research are also offered through degree programs in architectural studies and infrastructure planning.

The faculty comprises practitioners and scholars whose expertise and professional reputation are based on both breadth and depth of achievement. Their work directly engages the architectural discourse through research, publication, public lectures, symposia and professional practice. Many members have received scholarly recognition and design awards.

The New Jersey School of Architecture offers the only publicly supported professional program in New Jersey and is committed to NJIT's reputation as a nationally recognized technological university.

To become registered as a licensed architect in the State of New Jersey, you must earn a degree accredited by the National Architectural Accrediting Board (NAAB). NJIT's M.Arch. degree program is one of only two NAAB-accredited degree programs in the State of New Jersey.

The following statement is taken from the current edition of NAAB's *Conditions and Procedures for Professional Degree Programs in Architecture*: "In the United States, most state registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (NAAB), which is the sole agency authorized to accredit U.S. professional degree programs in architecture, recognizes three types of degrees: the Bachelor of Architecture, the Master of Architecture and the Doctor of Architecture. A program may be granted a 6-year, 3-year, or 2-year term of accreditation, depending on its degree of conformance with established educational standards.

Master's degree programs may consist of a pre-professional undergraduate degree and a professional graduate degree, which when earned sequentially, constitute an accredited professional education. However, the pre-professional degree is not, by itself, recognized as an accredited degree."

The NJIT Master of Architecture (M.Arch.) is a professional degree fully accredited by the NAAB.

Master of Architecture (M.Arch.)

There are two degree options in the M.Arch. program: professional M.Arch. and post-professional M.Arch.

Professional M.Arch.: For students with undergraduate or graduate degrees who do not have previous architectural design courses or experience; the full-time program of study comprises seven semesters and meets the education requirements for the Architecture Registration Examination (ARE). It is also appropriate for students who have undergraduate degrees in architecture or related fields, those who have a non-NAAB accredited architecture degree, and all international students who would enter the program with advanced placement. Advanced placement, which reduces the 97-credit degree requirement, is determined at the time of admission through an evaluation of previous academic work.

Post-professional M.Arch.: For students who have an NAAB-accredited professional Bachelor of Architecture (B.Arch.) or an equivalent international degree. International students who intend to pursue professional licensure in the U.S. should apply to the Professional M.Arch Program.

Dual Degree M.Arch. and Master of Infrastructure Planning (M.I.P.): Open only to students in the M.Arch. program options, the dual degree program permits students to obtain an M.I.P. in substantially less time than if taken separately; in some cases in only one more semester of full-time study. Also see the program description under "Infrastructure Planning" in this catalog.

Dual Degree M.Arch. and M.S. in Management: Open only to students in the M.Arch. program options, the dual degree program permits students to obtain an M.S. in Management in substantially less time; in some cases in only one more semester of full-time study. Also see the program description under "Management" in this catalog.

Dual Degree M.Arch. and M.S. in Civil Engineering: Open only to students in the M.Arch. program options. The dual degree program permits students to obtain an M.S. in Civil Engineering in substantially less time; in some cases in only one more semester of full-time study. Also see the program description under "Civil Engineering" in this catalog.

Admission Requirements for all M.Arch. Options:

In addition to completing the application required by NJIT's Office of University Admissions, M.Arch. applicants must also submit School of Architecture supplementary materials forms. To ensure prompt consideration, students should request the forms when they apply for admission to the university.

Applicants are expected to have a minimum undergraduate GPA of 3.0. GRE (general test) scores are required. Applicants to the M. Arch./M.S. in Management degree option may submit GRE scores in lieu of the GMAT scores which are normally required for admission to the M.S. in Management program. Exclusive of the GMAT/GRE requirements, dual degree applicants must satisfy admission requirements for both the School of Architecture and the School of Management.

Admission to the M.Arch. program is based on the applicant's personal statement, letters of recommendation, design portfolio, and previous academic and work experience. Applicants should have an appropriate academic background in calculus, or statistics; students who lack such a background will be expected to take equivalent course work before entering the second year of the M.Arch. program. Applicants from non-architectural backgrounds are strongly advised that coursework in drawing, studio art, and AutoCAD is useful preparation for graduate study in architecture, and helpful in the process of generating work for inclusion in the portfolio required as an element in all applications. International students with professional degrees in architecture are required to have transcripts evaluated by Educational Credential Evaluators (information is included with School of Architecture supplementary materials). TOEFL scores are required for all international students, 550 (pencil and paper) and 213 (computer-based).

Graduate Certificate Programs: A 12-credit graduate certificate in Sustainable Architecture is available as a step toward either the Post-Professional M.Arch. or the MSAS degrees. Students in the Professional M.Arch. Program may use some or all of the courses in this certificate program to satisfy upper-level architecture and free electives. See [Graduate Certificates](#) in this catalog for further information. For more information on continuing and distance education, contact the Division of Continuing Professional Education, 1-800-624-9850 or 973-596-3060; email: cpe@njit.edu.

Degree Requirements for Professional M.Arch.:

This 97-credit program consists of a 61-credit core and an options sequence of 21 credits of required and 15 credits of elective courses. Students are expected to complete the core sequence in a minimum of two years. Before registering for courses, all students must consult with the graduate advisor to plan an appropriate course of study.

Students must submit a portfolio of design work at completion of the core courses. The portfolio will be reviewed in connection with advising students on their further program of study.

Core courses in the M.Arch. program represent the minimum background necessary to meet NAAB standards. If students demonstrate that they have previously completed equivalent course work, degree credit requirements may be reduced to less than the 97 credits required for the program.

To remain in good academic standing, students must maintain a cumulative GPA of 3.0 in graduate courses. Students must repeat any design studio course in which they receive a grade of C. A grade of C+ in any design studio must be followed by a subsequent grade sufficient to raise the annual cumulative design studio GPA to 2.75. Incomplete (I) grades for studio and prerequisite courses must be removed before students will be permitted to register for continuing course work in the program.

Degree credits appear in parentheses following the course titles below.

CORE:

61 credits as follows:

Arch 500G	Computer Programming and Graphics Problems (2 credits)
Arch 501G	Architectural Design I (5 credits)
Arch 502G	Architectural Design II (5 credits)
Arch 503G	Architectural Design III (5 credits)
Arch 504G	Architectural Design IV (5 credits)
Arch 511G	Structures I (3 credits)
Arch 512G	Structures II (3 credits)
Arch 513G	Structures III (3 credits)
Arch 521G	Construction I (3 credits)
Arch 522G	Construction II (3 credits)
Arch 523G	Building Performance (3 credits)

	Arch 524G	Environmental Control Systems (3 credits)
	Arch 528G	History of Architecture I (3 credits)
	Arch 529G	History of Architecture II (3 credits)
	Arch 555G	Architectural Graphics (3 credits)
	Arch 569G	Building and Development (3 credits)

6 additional credits of architectural history, selected in consultation with graduate advisor

Core courses must be completed before proceeding to the options sequence.

Option Sequence:

Required:

21 credits minimum:

	ARCH505G	
	ARCH506G	
{	ARCH507G	or
	* MARC 701	Master's Thesis (6 credits)
	Arch 579G	Professional Architectural Practice (3 credits)

Elective:

15 credits selected in consultation with graduate advisor, of which a minimum of 9 credits are architecture electives.

Degree Requirements for Post-Professional M.Arch.

Consists of a minimum of 30 credits. Thesis is optional.

Required:

	ARCH506G	
{	ARCH507G	or
	* MARC 701	Master's Thesis (6 credits)

Elective:

18 credits consisting of 12 credits of architecture electives and 6 credits of free electives selected in consultation with graduate advisor.

Degree Requirements for Dual M.Arch. and M.I.P.:

This dual degree option is available to students in the M.Arch. degree program. The dual degree program permits students to obtain the M.Arch. and the M.I.P. in substantially less time than if each degree was pursued separately. M.Arch. students may partially fulfill M.I.P. course work while completing the M.Arch. program of study. A maximum of 15 credits may be used to satisfy requirements of both degrees.

For more information about the M.I.P. program, see •Infrastructure Planning• in this catalog.

Required:

15 credits:

	ARCH507G	
	Arch 631H	History and Theory of Infrastructure (3 credits)
{	Arch 673	Infrastructure Planning in Practice (3 credits) or
	Arch 674	Infrastructure and Architecture (3 credits)
	Arch 675	Elements of Infrastructure Planning (3 credits)

Additional requirements to complete M.I.P. program:**Required:**

21 credits:

	MIP 602	Interdisciplinary Infrastructure Studio II (6 credits)
	MIP 612	Introduction to Environmental Policy Studies (3 credits)
	MIP 615	Introduction to Transportation Studies (3 credits)
	MIP 618	Public and Private Financing of Urban Areas (3 credits)
	MIP 652	Geographic Information Systems (3 credits)
	MIP 655	Land Use Planning (3 credits)

Degree Requirements for Dual M.Arch. and M.S. in Management:

The dual degree option is only available to students pursuing the M.Arch. The dual degree program permits students to obtain both an M.Arch. and a M.S. in Management in substantially less time; in some cases in only one more semester of full-time study. A maximum of 15 credits may be used to satisfy the requirements of both degrees.

Students take additional credits shown below to fulfill requirements for the M.S. in Management. There is no thesis requirement.

At the time of admission to the dual degree program, the School of Management graduate advisor will determine if any M.S. in Management course requirements can be waived.

The requirements to obtain the M.S. in Management degree are:

**** Core:**

18 credits:

	Arch 650	Economy of Building (3 credits)
	Arch 651	Real Estate Analysis for Architects (3 credits)
	Arch 652	Architectural Project Management (3 credits)
	Fin 516	Principles of Financial Management (3 credits)
	HRM 601	Organizational Behavior (3 credits)
{	Mgmt 680	Entrepreneurial Strategy (3 credits) or
	Mgmt 692	Strategic Management (3 credits)

Required:

3 credits:

	Fin 618	Public and Private Financing of Urban Areas (3 credits)
--	---------	---

Elective:

9 credits from:

	Acct 615	Management Accounting (3 credits)
	Fin 624	Financial Management (3 credits)
	Mgmt 640	New Venture Management (3 credits)
	Mgmt 645	New Venture Finance (3 credits)
	MIS 645	Managing IT for Competitive Advantage (3 credits)
	Mrkt 630	Models of Consumer Behavior (3 credits)
	Mrkt 638	Sales Management for Technical Professionals (3 credits)

Degree Requirements for Dual M.Arch. and M.S. in Civil Engineering:

This dual degree option is a specific tailoring of the construction engineering and management specialization in the M.S. in Civil Engineering program and is only available to students pursuing the M.Arch. degree.

The dual degree program permits students to obtain both an M.Arch. and a M.S. in Civil Engineering in substantially less time than if each degree was pursued separately. A maximum of 15 credits may be used to satisfy requirements of both degrees.

Students take courses shown below to fulfill requirements for the M.S. in Civil Engineering, or their equivalent. There is no thesis requirement. Students without a bachelor's degree in civil engineering must complete the bridge program; these courses do not count toward degree requirements. See the undergraduate catalog for descriptions of these courses.

At the time of admission to the dual degree program, the civil engineering graduate advisor will determine if any M.S. in Civil Engineering course requirements can be waived.

The requirements to obtain the M.S. in Civil Engineering degree are:

Bridge:

	CE 200	Surveying (3-0-3)
	CE 200A	Surveying Laboratory (0-3-1)
	CE 501	Introduction to Soil Behavior (3 credits)
	Math 105	Elementary Probability and Statistics (3-0-3)
	MATH119	

Core:

	CE 610	Construction Management (3 credits)
	CE 611	Project Planning and Control (3 credits)
	CE 616	Construction Cost Estimating (3 credits)
	EM 632	Legal Aspects in Construction (3 credits)

Required:

12 credits:

	Arch 650	Economy of Building (3 credits)
	Arch 652	Architectural Project Management (3 credits)
	Arch 675	Elements of Infrastructure Planning (3 credits)
	MIS 645	Managing IT for Competitive Advantage (3 credits)

Elective:

6 credits from:

	CE 615	Infrastructure and Facilities Remediation (3 credits)
	CE 631	Advanced Reinforced Concrete Design (3 credits)
	CE 642	Foundation Engineering (3 credits)
	CE 702	Special Topics in Civil Engineering (3 credits)
	CE 710	Systems in Building Construction (3 credits)
	CE 711	Methods Improvement in Construction (3 credits)
	EnE 662	Site Remediation (3 credits)
	EnE 671	Environmental Impact Analysis (3 credits)

Co-op Work Experience in Architecture and the **Housing Scholars Program** give students an opportunity to gain additive credits and salaried employment.

To become eligible to take the architecture registration examination in New Jersey, professional M.Arch. graduates must complete three years of practical work experience apprenticeship that meet specific criteria set by the New Jersey State Board of Architects. Co-op internship work experiences in architecture meeting these criteria are acceptable equivalents for such apprenticeships, and are available to NJIT students. Students become eligible after completing the first year of M.Arch. core courses.

The Housing Scholars Program provides college students with paid summer internships at non-profit, community-based affordable housing organizations, and is jointly administered by NJIT's Division of Career Development Services and the New Jersey Department of Community Affairs. Housing Fellows are placed with community-based, non-profit organizations that initiate affordable housing and related projects. Graduate students who have completed at least 28 credits of core courses and who have an overall cumulative GPA of 3.2 or above are eligible to participate. Scholars are selected through a competitive application to the Division of Career Development Services and an interview process throughout February and March, and begin their internship in early June.

Students should consult the School of Architecture co-op advisor for details on work experience and the Housing Scholars program.

Master of Science in Architectural Studies (MSAS)

A non-professional, non-design degree program for careers in architectural research and scholarship. Studies often involve interdisciplinary course work.

Admission Requirements:

Applicants are expected to have either an NAAB-accredited B.Arch., or a bachelor's degree in architecture or disciplines related to production, operation or use of buildings.

In addition to completing the application required by NJIT's Office of University Admissions, M.S.A.S. applicants must also submit School of Architecture supplementary materials forms. To ensure prompt consideration, students should request the forms when they apply for admission to the university.

Applicants are expected to have a minimum undergraduate GPA of 3.0. GRE (general test) scores are required.

Degree Requirements:

The program consists of 36 credits of required and elective courses and may be taken either full- or part-time. A thesis is required. Students are required to design their programs in consultation with the graduate advisor.

To remain in good academic standing, students must maintain a cumulative GPA of 3.0 in graduate courses.

Required:

18 credits:

	Arch 661	Directed Studies of Architecture (3 credits)
***	Arch 686	Research Methods for Environmental Design (3 credits)
***	Math 687	Quantitative Analysis for Environmental Design Research (3 credits)
	MSAS 701	Master of Science in Architectural Studies Thesis (6 credits)

Elective:

18 credits selected in consultation with the graduate advisor.

MASTER IN INFRASTRUCTURE PLANNING:

See "Infrastructure Planning" in this catalog for program description.

* Arch 661 Directed Studies of Architecture (3) is prerequisite for MARC 701 Master of Architecture Thesis. Arch 661 may be taken as an elective.

** For those pursuing the dual M.Arch. and M.S. in Management, Arch 579G fulfills Mgmt 691 Legal and Ethical Issues required for the M.S. in Management.

*** Or appropriate substitute selected with approval of Graduate Advisor

Catalog and curricula information approved by the relevant academic department.

Biology

Administered By: Division of Biological Sciences / Department of Mathematical Sciences**Administration**

Division Director	Farzan Nadim
Academic Coordinator	Karen Roach

NJIT Faculty

Distinguished Professor	Gene M. Jonakait
Associate Professors	Jorge P. Golowasch, Farzan Nadim
Assistant Professor	Gareth J. Russell

Rutgers-Newark Faculty

Chair.	Edward M. Bonder
Professors	Ann Cali, Harvey Feder(Associate Provost), Gerald Frenkel, Doina Ganea, David Kafkewitz, Edward Kirby (Dean: FASN), Judith Weis
Associate Professors	Edward M. Bonder, John Crow, Lion Gardiner, Andrew Kasper, John Maiello, Douglas Morrison
Assistant Professors	Jonathan Adams, Erik Paul Hamerlynk, Claus Holzapfel, Wilma Friedman, Haesum Kim

Degrees Offered: Master of Science in Biology; Doctor of Philosophy in Biology. Both degrees are offered jointly by NJIT and Rutgers-Newark.

Admission Requirements:

Applicants are expected to have an accredited undergraduate degree in biology from an accredited institution. Candidates with other appropriate backgrounds will be considered. The following cognate undergraduate courses are required: general chemistry, organic chemistry, physics, and calculus.

In addition to the application form, a personal statement, three letters of recommendation, undergraduate and graduate transcripts and GRE general test scores are required for admission. The subject test in biology is recommended. If applicable, TOEFL scores are also required.

Bridge Program: To ensure academic success in their graduate studies, students may be required to take additional undergraduate or graduate courses before beginning graduate curricula. Such courses are not counted toward degree requirements.

Facilities:

Departmental equipment, housed at Rutgers-Newark, includes a microscope facility second-to-none in the state of New Jersey. This facility comprises scanning and transmission-electron microscopes, a confocal microscope, and five image-processing stations. In addition, the department boasts an oligo synthesizer, automated DNA sequencer, ultracentrifuges, phosphor-imager, scintillation and gamma counters, FPLC, and AAALAC-approved animal facility, and a greenhouse. Individual research laboratories house tissue culture facilities, electrophysiological equipment, fluorescence microscopes, and thermal cyclers. Additional facilities are available at neighboring institutions. Affiliations are maintained with UMDNJ and industrial research laboratories.

Master of Science in Biology

The Master of Science in Biology is designed to provide students with advanced knowledge of both plant and animal biology and microbiology.

Degree Requirements:

A minimum of 30 credits is required. These must include at least one 3-credit course in each of four of the following five areas: cell biology and biochemistry, molecular biology, physiology, ecology, and plant biology. After taking one course from each of four of the five areas, students may choose to concentrate their remaining credits in any of these five areas. A research component may be satisfied by either writing a thesis or submitting a research paper. Students electing to write a thesis must complete a minimum of 24 credits of course work and 6 credits of research and must pass an oral defense of the submitted thesis. Students who choose the research paper option are required to take 30 credits of course work, pass a written comprehensive exam and complete a research paper.

Required:

30 credits selected in consultation with graduate advisor.

Thesis or Research Paper (required):

6 credits: master's thesis research, topic selected in consultation with graduate advisor or non-credit bearing research paper written on completion of 30 credits of course work.

Doctor of Philosophy in Biology

The Ph.D. in Biology is designed to provide students with advanced knowledge of research in the areas of cell/molecular/biochemistry, ecology/evolution, or computational biology.

Degree Requirements:

The doctoral curriculum in biology is divided into three tracks. Students may select the cell/molecular/biochemical, the ecology/evolution or computational biology track. Each track has a set of required courses that provide a formal foundation in research fields covered in each track. Students must earn at least a grade of B in order to receive credit for these courses. The remainder of the course work is chosen in consultation between the student and the advisor and the Standards Committee with permission of the graduate program director. During the first year all doctoral students undertake rotations through at least two departmental research laboratories.

Required:

36 *credits* of course work, including three core courses

36 *credits* minimum of doctoral dissertation research

CORE (required):

Computational Biology Track:

9 *credits*:

	BIOL601	
	6 credits	(Graduate level Biology courses pertinent to field of specialization) (})

Cell/Molecular/Biochemical Track:

9 credits from:

	R120:515	Molecular Biology of Eukaryotes (3 credits)
	R120:526	Cell Biology (3 credits)
	R120:571	Biochemistry (4 credits)

Ecology/Evolution Track:

3 credits from:

	R120:565	Medical Mycology (3 credits)
	R120:586	Landscape Ecology (3 credits)
	R120:587	Systems Ecology: Ecosystems in the Landscape (3 credits)

3 credits from:

		R215:533	The Behavior of Animal Populations (3 credits)
		R215:590	Population Ecology (4 credits)
		R120:593	Physiological Ecology (3 credits)

3 credits from:

		R120:503	Plant Morphology (3 credits)
		R120:532	Evolution (3 credits)
		R120:594	Systematics (3 credits)

Qualifying Examination - At the completion of the core course requirements and of 6 credits of successful laboratory rotations, the student takes the qualifying examination. The examination consists of a written and oral examination in the cell/molecular/biochemical track; and a written review paper, an oral presentation, and an oral examination in the ecology/evolution track.

Formation of Dissertation Committee - After successful completion of the qualifying examination, the student chooses an advisor, begins research for the dissertation, and forms a dissertation committee. The dissertation committee for all students is composed of the student's thesis advisor, and at least three other members of the graduate faculty. One member must be from outside the program. The dissertation committee administers at least one dissertation prospectus meeting and the final defense of the dissertation. In addition, the dissertation committee may meet with the student once every six months to assess the student's progress.

Catalog and curricula information approved by the relevant academic department.

Biomedical Engineering

Administered By: Department of Biomedical Engineering

Adminstration

Chairperson	William C. Hunter
Undergraduate Program Director	Judith D. Redling
MS Program Director	Richard A. Foulds

Faculty

Foundation Professor	William C. Van Buskirk(Biomechanics)
Distinguished Professor	William C. Van Buskirk
Professors	William C. Hunter, David Kristol, H M. Lacker, Stanley Reisman
Research Professors	Michael Jaffe, Dentcho V. Ivanov, Hans R. Chaudhry, Lisa K. Simone
Associate Professor	Richard A. Foulds
Assistant Professors	Tara L. Alvarez, Treena L. Arinze, Sergei Adamovich, Mesut Sahin, Bryan J. Pfister
Special Lecturer	Bruno A. Mantilla, Joel Schesser, Judith D. Redling

Degrees Offered: Master of Science in Biomedical Engineering

Biomedical engineering is currently the fastest growing field of engineering in the U. S. and requires an education that draws from advanced engineering and computing as well as the biological and medical sciences. NJIT offers an extremely flexible Masters program that encourages students to contribute to an individualized plan of study that builds upon the strengths of their B.S. and develop expertise in an area of concentration leading to careers in research and/or product development, or to prepare for further study in medicine, dentistry, law, and management. Major areas in which NJIT offers courses and conducts research are bioinstrumentation, biomaterials and tissue engineering, biomechanics, neural engineering and rehabilitation engineering.

The M.S. in Biomedical Engineering program at NJIT currently has one of the top five enrollments among biomedical engineering masters programs in the nation. This allows the department to offer a comprehensive set of courses specifically in biomedical engineering, which are augmented by related engineering courses taught in other departments. NJIT's location, in the middle of the nation's largest concentration of biomedical industries, provides access to expert instructors who offer specialized courses, which add to the richness of the academic environment. These industries also support graduate internships and thesis work, and often provide employment after graduation. The NJIT campus is within walking distance of both the University of Medicine and Dentistry of New Jersey flagship campus and Rutgers University-Newark. Graduate education at the three institutions is enhanced by collaboration agreements that allow cross-registration for courses, use of libraries, and opportunities for independent research. This benefits biomedical engineering by opening the possibilities for MS students to take advanced biological and medical science courses in addition to engineering courses.

The NJIT Department of Biomedical Engineering has a very active research program that is accessible to Masters students and provides opportunities for thesis or other independent study, which integrates engineering and the medical sciences. Research is conducted cooperatively between NJIT and the medical and dental schools of UMDNJ, the Kessler Institute for Rehabilitation, St. Barnabas Medical Center, Veteran's Administration Medical Center in East Orange, the Children's Specialized Hospital, the Public Health Research Institute, the Rutgers Center for Biological and Molecular Neuroscience and other institutions in the New Jersey-New York metropolitan area. In addition, cooperative research opportunities exist with a number of biomedical device and pharmaceutical companies within a short commuting distance from NJIT.

Aim of the Program

This program provides the opportunity for individuals with degrees in biomedical engineering to focus on a specialized area to a much greater degree than could be done in their undergraduate studies. Similarly, it also allows those with engineering and science backgrounds in other fields to acquire knowledge and skill that will allow them to join this growing field. The intentional flexibility in the selection of courses reflects the expected maturity of the graduate students as they assume significant responsibility for planning their concentrations. This flexibility also encourages students to exhibit some curiosity about unfamiliar areas of biomedical engineering and allows them to take two courses that may be peripheral to their academic focus.

The opportunity to pursue a thesis has the benefit of allowing students to choose a topic in which they will demonstrate the ability to integrate what they have learned, execute a 2-semester technical project, and communicate their results. Students not electing to pursue a thesis may choose three additional courses (replacing the 6-credit thesis) that increase their depth in engineering and breadth in the life sciences. A 3-credit MS Project may replace one of these three additional courses and provide some of the same experiences as the thesis.

Eligibility for the Program

Students who have a B. S. degree in science or engineering are eligible. All applicants must have had courses in scientific computer programming, differential equations, statistics, and physiology. Students who are missing one or more of these can be conditionally admitted with a requirement to take undergraduate bridge courses. Certain graduate courses or concentrations may require additional background, such as, statics and/or dynamics, thermodynamics, and electronics. Students who do not have these prerequisites may be asked to take additional courses or acquire the necessary material through tutoring and independent study. Prospective students may contact the MS Program Director for advice regarding their specific needs.

Course Offerings

The courses offered through this program allow students to choose concentrations that genuinely reflect their needs and interests. The sample course concentrations listed below reflect a curriculum that is rich in cutting edge engineering and science, and deep in its content. This critical mass of courses at NJIT, UMDNJ and Rutgers allows students to acquire a level of expertise that is uncommon among most biomedical engineering programs. The students in this program are nearly evenly split between those continuing their education immediately following their BS and those who are returning to study after a number of years of employment. The same is true for the educational backgrounds of the students, with approximately half having studied biomedical engineering and the other half coming from different fields. Most candidates for the Masters degree enroll as full-time students. However, the degree can be completed on a part-time basis for those who wish to study while continuing to work. Most courses are offered in the late afternoon and in the evening.

In October 2005, the BME faculty voted to allow a non-thesis option. While the faculty believe that the thesis is very important, it also understands that many students (particularly those with experience in industry) may already have experienced the equivalent of an in-depth, year-long project, and can be better served by taking additional courses. Students who are entering the program directly from their BS studies, or are transitioning from a non-engineering field to biomedical engineering are strongly urged to choose the thesis option. Students considering a thesis are directed to the NJIT Library's web site where most recent theses are available online. Those who have questions about the scope and content of biomedical engineering theses should review several that fall within their areas of interest. These can be found at <http://www.library.njit.edu/etd/list-majors.cfm?d=Biomedical-Engineering>

Co-op Opportunities and Internships

Students have the opportunity to participate in the co-op and internship programs at neighboring medical institutions or at biomedical engineering firms to gain practical experience. NJIT is situated in an area that contains many major biomedical engineering and pharmaceutical companies. The biomedical engineering department has a part-time advisor for co-op and internship experiences.

Prospects for Employment

Considerable opportunity exists in the field of biomedical engineering. This takes the form of basic and applied research and product development. Employment may be found in medical institutes, government agencies, corporations and hospitals, all of which are involved in the design, manufacture and utilization of equipment and procedures intimately involved in health care improvement. Many students go on to obtain professional degrees in medicine, dentistry, law or administration for which an engineering background is becoming ever more important.

Specifics of the M.S. in Biomedical Engineering

Admission Requirements:

Prospective students seeking admission to the Program must have an undergraduate degree in engineering, science or mathematics and satisfy the admission and academic requirements of the Graduate School.

1. General Guidelines:

Each program of study must satisfy the Graduate School academic requirements (see the latest graduate catalog at www.njit.edu).

2. Prerequisite Courses

Minimum Undergraduate Requirements for the Program: B.S. in Biomedical, Chemical, Electrical, Computer, or Mechanical Engineering. Applicants with a B.S. in Computer Science are expected to have had Calculus through differential equations, one full year of Physics, one full year of Chemistry, and a course in Physiology. Applicants with strong life science or medical education, including the equivalent of one full year of Physics as well as Calculus through differential equations, will be considered on a case-by-case basis. Conditional admission may be granted to applicants lacking full preparation with a requirement to take undergraduate bridge courses that will not carry graduate credit.

Admitted students who have not previously taken an upper level physiology course will be required to take BME 669-Engineering Physiology or an equivalent course as one of their graduate courses.

Specific Program Requirements:

Thesis Option 30 Credits

Required Graduate Courses:

- 21 credits Seven graduate courses appropriate for Biomedical Engineering.
- 3 credits One graduate course in experimental design, biostatistics or clinical studies.
- BME 701 Thesis (6 credits)
- BME 791 Graduate Seminar--required for two semesters (0 credits)

Non-Thesis Option

Required Graduate Courses:

- 30 credits Ten graduate courses appropriate for Biomedical Engineering (may include a 3-credit project)
- 3 credits One graduate course in experimental design, biostatistics or clinical studies.
- BME 791 Graduate Seminar--required for two semesters (0 credits)

Program Options

The BME MS Program offers two options. The Thesis option requires a total of 30 credits including a 6-credit thesis. The Non-Thesis option requires a total of 33 credits which may include a 3-credit MS Project and 10 courses, or 11 courses without a project.

Area of Concentration:

Unlike many other programs in biomedical engineering, the NJIT M.S. Program does not require prescribed core courses. Students are given the responsibility of planning a concentration of a minimum of six (6) courses (18 credits) that define a concentration that meets their career goals and intellectual needs. Possible areas of concentrations include:

- Neural Engineering
- Biomaterials and Tissue Engineering
- Biomechanics
- Bioinstrumentation
- Rehabilitation Engineering
- Biomedical Imaging

Concentrations can be combined into new cross-disciplinary areas or can be further specialized to focus on either research or product design.

Breadth Courses:

Students may enroll in two (2) graduate courses (6 credits) in areas outside of their concentration but appropriate for the M.S. in Biomedical Engineering. Alternatively, these two courses could be selected as additional courses within the concentration.

Life and/or Medical Science Courses:

Within the eight (8) courses (24 credits) of the Thesis Option of the eleven (11) courses (33 credits) of the Non-Thesis Option described above, students are strongly encouraged to take at least one (1) course in an area of life or medical science that supports the concentration. Non-Thesis students may wish to take additional life or medical science courses. This emphasizes the important link between engineering and the biological and medical sciences and can include basic or clinical science courses at the University of Medicine and Dentistry of New Jersey and Rutgers University-Newark, which are available to NJIT students via a cross-registration agreement.

Seminars:

MS students are required to register for the 0 credit graduate seminar in each of a minimum of two semesters. This is a non-additive credit (i. e. it does not count toward the 30 required credits), however participation in the seminar is required for graduation. Graduate seminars are offered weekly during the semesters and include guest speakers as well as NJIT graduate students. The Department also maintains lists of seminars in other departments and in neighboring institutions that are of interest to biomedical engineering. Part-time graduate students may request a waiver of this requirement.

Thesis Requirement:

The Thesis Option **requires** a six (6) credit thesis. Because biomedical engineering exists at the intersection of several traditional engineering and computing fields, and the biological and medical sciences, the thesis demonstrates the student's ability to define a problem, plan two semesters of independent work in an interdisciplinary environment, and execute a research and/or design that meets NJIT's standards for a Masters Thesis. The thesis document conforms to the format of the Office of Graduate Studies and is evaluated by a committee of three members, two of whom must be from the NJIT biomedical faculty. External members from industry, medicine or other universities are encouraged. An oral defense before the committee and the departmental community is also required. All NJIT theses are archived in the University Library and are available via the Library's web site.

Thesis topics are selected by the student in consultation with faculty and other potential advisors. Thesis content can include a research study, the development/design of new technology including software, or the design, execution and evaluation of an experiment. A thesis may be conducted in an NJIT laboratory or in another institutional or industrial facility. The individual nature of the work must be clearly identifiable, as should its novelty and importance to biomedical engineering.

In cases where the intellectual property of an industrial sponsor may be in conflict with the public presentation of the thesis or its availability through the NJIT Library, special arrangements can be made by the MS Program Director to protect the firm's property.

Planning of Courses:

Students are responsible for identifying their area of concentration and proposing a coherent collection of courses to the MS Program Director or other designated advisor. The Department maintains an electronic list of graduate courses appropriate to biomedical engineering, which are offered at NJIT, UMDNJ and Rutgers-Newark on a semester by semester basis on the department web site. Course descriptions are available elsewhere in the catalog. Students are advised to continually review their selected set of courses, as there is generally some variability in the scheduling of established and new courses. The Program Director and/or other designated advisor will be available to assist in planning the course selection.

Sample clusters of courses are shown below for different areas of concentration. These clusters are intended to serve as examples of the flexibility students have in choosing a balanced set of courses to meet their educational objectives. They are not program requirements. Students may propose considerably altered clusters that better meet their academic needs. Courses marked with an * meet the requirement for a course in experimental design and statistics. Note: only the Thesis Option is shown. the Non-Thesis Option replaces the six-credit thesis with three additional courses (totaling 9 credits)

BME MS students are encouraged to consider appropriate courses offered by other NJIT departments as well as by departments at Rutgers-Newark and UMDNJ. **Students are cautioned that such courses may have prerequisites and other enrollment restrictions, are advised to check with the appropriate department for clarification.** The procedures for cross-registration at Rutgers-Newark and UMDNJ are explained elsewhere in this catalog.

Neural Engineering

	BME661	
	BME 698	Selected Topics (3 credits)
	BME 681	Medical Imaging (3 credits)
	BME 673	Biorobotics (3 credits)
	Math 635	Analytical Computational Neuroscience (3 credits)
	NEUR5110	
	NEUR5111	
	NEUR509	
	BME 701	Master's Thesis (6 credits)

Biomaterials and Tissue Engineering

	BME 672	Biomaterials (3 credits)
	BME 651	Principles of Tissue Engineering (3-0-3)
	MtSE 601	Fundamentals of Engineering Materials (3 credits)
	BME 788	Selected Topics (3 credits)
	BME 698	Selected Topics (3 credits)
	ME 619	Nano-scale Characterization of Materials (3 credits)
	MSBS5130	
*	Math 663	Introduction to Biostatistics (3-0-3)
	BME 701	Master's Thesis (6 credits)

Biomechanics

	BME 670	Introduction to Biomechanical Engineering (3 credits)
	BME 671	Biomechanics of Human Structure and Motion (3 credits)
	BME 672	Biomaterials (3 credits)
	BME 698	Selected Topics (3 credits)
	ME 614	Continuum Mechanics (3 credits)
	ME 622	Finite Element Methods in Mechanical Engineering (3 credits)
	CBMM5350	
*	IE 604	Advanced Engineering Statistics (3 credits)
	BME 701	Master's Thesis (6 credits)

Biomedical Instrumentation

	BME 687	Design of Medical Instrumentation (3 credits)
	BME 698	Selected Topics (3 credits)
	BME 667	Systems Studies in Biomedical Engineering (3 credits)
	BME 698	Selected Topics (3 credits)
	BME693	
	OPSE788	
	ECE 692	Embedded Computing Systems (3)
*	PhEn 604	Validation and Regulatory Issues in the Pharmaceutical Industry (3 credits)
	BME 701	Master's Thesis (6 credits)

Rehabilitation Engineering

	BME 671	Biomechanics of Human Structure and Motion (3 credits)
	BME 698	Selected Topics (3 credits)
	BME 698	Selected Topics (3 credits)
	BME 673	Biorobotics (3 credits)
	IE 661	Man-Machine Systems (3 credits)
	Arch 662	Special Topics in Architecture (3 credits)
	PTDR6150	
	PTDR7311	
	BME 701	Master's Thesis (6 credits)

Biomedical Imaging

	BME 681	Medical Imaging (3 credits)
	BME 698	Selected Topics (3 credits)
	BME 687	Design of Medical Instrumentation (3 credits)
	BME661	
	PHYS671	
	PHYS675	
	BINF5035	
*	Math 663	Introduction to Biostatistics (3-0-3)
	BME 701	Master's Thesis (6 credits)

The blank table below can be used to start building a personal concentration of courses that supports individual educational objectives. Note that courses are generally offered only once in each academic year so there could be conflicts. Occasionally courses are discontinued and new courses are added. Please check the list of courses that is posted online by the NJIT Registrar prior to each semester.

Personal Concentration (Thesis Option 8 courses plus thesis)

	*	(Course with statistical/experimental design content)
	BME 701	Master's Thesis (6 credits)

Personal Concentration (Non-Thesis Option 11 courses)

	*	(Course with statistical/experimental design content)
--	---	---

Ph.D. in Biomedical Engineering

The Doctor of Philosophy in Biomedical Engineering offers advanced graduate education providing students with the skills necessary for careers in basic and applied research, as well as the intellectual foundation to provide leadership in academia and industry. This program will emphasize depth in both engineering and basic science, as well as the integration of interdisciplinary concepts to address complex problems.

The new program builds upon the collaboration that currently exists between faculty at NJIT and UMDNJ. The physical proximity of the two institutions facilitates access to courses, laboratories, libraries, and seminars, as well as blends scientific and clinical opportunities in education and research. In addition, the location of NJIT and UMDNJ in Newark promotes interaction with New Jersey's pharmaceutical and medical device industries and medical facilities.

Biomedical Engineering research at NJIT and UMDNJ is presently clustered in the following areas:

- Biomaterials
- Biosensors
- Biomechanics and Sensory-motor Control of Human Motion
- Biomedical Signal Processing and Instrumentation
- Computational Biomedical Engineering
- Neural Engineering

The proposed Ph.D. program requires 60 credits beyond the M.S. degree in bioengineering or a related field. Of these, 24 credits must be in graduate level courses and 36 credits in dissertation research. The student will be required to successfully complete a comprehensive examination demonstrating depth and breadth of understanding in engineering and basic medical science necessary to pursue scholarly research and to make an important contribution in the area. A written and oral presentation of a dissertation proposal will also be required which identifies a problem, provides a critical review of related literature, proposes an appropriate hypothesis and presents a rigorous methodology that addresses the problem. A final oral dissertation defense will complete the process.

Highly qualified students may be admitted directly to the Ph.D. program following their B.S. degree. They will be required to complete a total of 78 credits of which 36 credits will be dissertation and 42 credits will be course credits.

Application to this program may be made to either NJIT or UMDNJ. A joint Admissions Committee comprised of faculty from both institutions recommends admission. Funding decisions are made by the Program Steering Committee. (Please note that this procedure differs from the MS Program).

Curriculum:

A student, upon admission to the program, will choose one of the following six areas of specialization. Each area will have an entry-level course and a sequence of advanced courses.

Biomaterials - orthopedic implants, dental materials, tissue engineering.

Biosensors - DNA chips, bioMEMS technology.

Biomechanics and Sensory-motor Control of Human Motion - sensory integration, neuromuscular control, human gait analysis, rehabilitation engineering.

Biomedical Signal Processing and Instrumentation - cardiac dynamics, medical imaging, medical image processing.

Computational Biomedical Engineering - modeling of physiological systems, bioinformatics.

Neural Engineering - neural plasticity, neural growth, neural signal processing.

The academic Progress Committee, comprised of NJIT and UMDNJ faculty, monitors the progress of students in the completion of their degrees.

Course requirements include the following:

A student entering with a Masters degree is required to complete 24 course credits and 36 credits of doctoral dissertation. A student entering without a master's degree is required to complete 42 course credits and 36 credits of doctoral dissertation.

All students must complete. In addition, all students must complete at least 12 of the 24 course credits at the 700-level of which 8 credits are the UMDNJ core course in molecular and cellular biology, and 3 credits are in laboratory rotation. Within the student's major area of specialization, all students must complete at least 12 credits at the 600 and 700 levels. The student must also complete the entry-level course in another (minor) area chosen from among the five areas of specialization and 3 credits in research methods and practices in Biomedical Engineering.

Since students may enter the doctoral program with a variety of academic backgrounds, the admissions committee and/or the student's advisor may require additional courses beyond the 24 credits (42 credits for those without a master's degree).

Qualifying Examination:

Before becoming a doctoral candidate, a student must demonstrate his/her ability to integrate the knowledge acquired in earlier studies. These examinations will include a written examination in the students's chosen area, demonstrating depth and breadth of understanding in engineering and basic medical science necessary to pursue scholarly research. There will also be an examination in a second area, which is not the student's major area. This will assure breadth in biomedical engineering. An oral examination will also be required.

Dissertation:

The dissertation represents an original research contribution, and reflects a student's ability to critically understand the significance of a problem and conduct novel, high quality, and independent research, which advances the state of the art.

Before beginning the dissertation, the student will present a dissertation proposal, in both written and oral form. the proposal will identify a unique scholarly problem, provide a critical review of related literature, propose an appropriate hypothesis, and present a methodology to address the problem.

Graduate Courses

Key to abbreviations: BME-Biomedical Engineering, BIOL-Biology at NJIT, CHE-Chemical Engineering, CIS-Computer and Information Science, ECE-Electrical and Computer Engineering, IE-Industrial Engineering, MATH-Mathematical Sciences, ME-Mechanical Engineering, MTSE-Materials Science and Engineering, OPSE-Optical Sciences and Engineering, PHEN-Pharmaceutical Engineering.

	BME 651	Principles of Tissue Engineering (3-0-3)
	BME661	
	BME 667	Systems Studies in Biomedical Engineering (3 credits)
	BME 670	Introduction to Biomechanical Engineering (3 credits)

	PhEn 603	Pharmaceutical Unit Operations (3 credits)
	PhEn 604	Validation and Regulatory Issues in the Pharmaceutical Industry (3 credits)
	PhEn 618	Principles of Pharmacokinetics and Drug Delivery (3 credits)

Cross Registration at UMDNJ and Rutgers-Newark

Biomedical Engineering graduate students also have the opportunity to cross-register in courses at the University of Medicine and Dentistry's Graduate School of Biomedical Sciences and School of Health-Related Professions, as well as in courses at Rutgers University-Newark. Students are advised to confer with the BME MS Program Director to verify that a specific course at UMDNJ or Rutgers is appropriate for credit towards their degree. Students should also be aware that many courses at UMDNJ and Rutgers often have prerequisites that may preclude their enrollment. Descriptions of courses can be found at the following web sites.

Courses at UMDNJ Graduate School of Biomedical Sciences

<http://www.umdj.edu/gsbsnweb/descriptions.htm>

Courses at Rutgers Institute on Molecular and Behavioral Neuroscience

http://ins.rutgers.edu/html/course_description.html

Courses the Rutgers-NJIT Federated Department of Biological Sciences

<http://newarkbiosci.rutgers.edu/graduate.htm>

Courses at UMDNJ in the School of Health-Related Professions-Biomedical Informatics

<http://coursecatalog.umdj.edu/shrp/byprogram.asp?mnuProgram=BIOMEDICAL+INFORMATICS+-+MS&Submit2=Submit>

Courses at UMDNJ in the School of Health-Related Professions-Physical Therapy

<http://coursecatalog.umdj.edu/shrp/byprogram.asp?mnuProgram=PHYSICAL+THERAPY+%28ENTRY+LEVEL%29+-+DPT&Submit2=Submit>

Biomedical Informatics

Administered By: College of Computing Sciences and UMDNJ

Adminstration

Chairperson:	Narain Gehani
Associate Chairperson:	Michael A. Baltrush
Co-Directors of Bioinformatics:	Qun Ma, Usman W. Roshan

Faculty

Distinguished Professors:	Joseph Y. Leung, Carol A. Venanzi, (joint appointment)
Professors:	Narain Gehani, James Geller, James McHugh, Ali Mili, Teunis J. Ott, Yehoshua Perl, Frank Y. Shih, Alexander Thomasian, verkhovsky, Jason T. Wang
Associate Professors:	Michael A. Baltrush, James M. Calvin, Artur Czumaj, Alexandros Gerbessiotis, Daochuan Hung, Marvin K. Nakayama, David Nassimi, John W. Ryon, Edward Sarian, Andrew Sohn, Dimitrios Theodoratos
Assistant Professors:	Cristian M. Borcea, Barry Cohen, Chengjun Liu, Qun Ma, Vincent Oria, Usman W. Roshan
Special Lecturers:	George Blank, Dale Bromberg, Osama Eljabiri, Jonathan J. Kapleau, Dionissios Karvelas, Joan M. Kettering, Morty D. Kwestel, Theodore L. Nicholson, Kurban K. Niroomand, Wallace Rutkowski, Junilda Spirollari

Advisors:

Bioinformatics Advisors:	George W. Olsen
--------------------------	-----------------

Degrees Offered: The Biomedical Informatics (BINF) programs offered jointly by NJIT and UMDNJ (both M.S. and Ph.D.) are being phased out. Admission applications for the joint program are therefore no longer being accepted. Students who were enrolled in either program as of the Spring 2002 semester will have until December 2006 (for the master's degree) and December 2008 (for the PhD) to complete the degree under the joint program.

Students who have interest in an MS program in Biomedical Informatics may wish to consider the NJIT MS degree in Information Systems with specialization in Biomedical Informatics. That program is continuing. UMDNJ will also continue to offer an MS and a PhD program in Biomedical Informatics through the UMDNJ School of Health Related Professions. Students should contact UMDNJ directly for more information on these.

Master of Science in Biomedical Informatics

The master's program prepares students for the application of computer and information sciences to support and manage health care and hospital management systems, laboratory automation, quality assurance, resource allocation, biomedical research, clinical decision making, and biotechnology systems.

Admission Requirements:

Applicants are expected to have an undergraduate degree in science or engineering and courses in thermodynamics, differential equations, scientific computer programming, statics and/or dynamics, and an introductory course in electrical engineering.

Bridge Program: Students are expected to have basic proficiency in a procedural programming language, database concepts, elementary calculus and differential equations. Those who lack this background are expected to take UMDNJ's BINF 4000 Essentials of Health Computer Science or its equivalent. Students who lack an academic background in the health science disciplines are required to take a course in engineering physiology or an equivalent.

Graduate Certificate Program: A 12-credit graduate certificate in health care information systems is available as a step toward this degree. Students can complete this certificate in part through classes conducted via electronic communications. See Graduate Certificates in this catalog. For further information about extension programs and graduate certificates, call the associate vice president of continuing and distance education, Division of Continuing Professional Education, 1 (800) 624-9850 or (973) 596-3060; e-mail cpe@njit.edu

Degree Requirements:

Students must complete at least 36 degree credits: 18 in required core courses; 6 in an area of emphasis; 6 in electives (in consultation with an advisor); and 6 of thesis. Courses are offered at NJIT and UMDNJ.

Core:

18 credits:

	BINF 600/ BINF 5100	Introduction to Biomedical Informatics (3 credits)
	BINF 601/ BINF 5005	Health Care Information Systems (3 credits)
	BINF 602/ BINF 5020	Biomedical Modeling and Decision-Making Systems (3 credits)
	BINF 603/ BINF 5030	Visualization in Biomedical Sciences (3 credits)
	BINF 621/ BINF 5210	Research Methods in Health Sciences (3 credits)

Thesis (required):

6 credits:

	BINF 700/ BINF 6000	Directed Research/Project (6 credits)
--	------------------------	---------------------------------------

AREA OF EMPHASIS:

6 credits:

Choose one of the four groups. Students should consider course prerequisites in determining course selection.

Group 1: Clinical Decision Support Systems:

	BINF 612/ BINF 5125	Clinical Problem Solving and Decision Making (3 credits)
--	------------------------	--

Group 2: Health Care Management Systems:

	BINF 613/ BINF 5130	Health Care Decision Support Systems (3 credits)
	CS 631	Data Management System Design (3 credits)

Group 3: Health Sciences Education/Multimedia Systems:

{	BINF 631/ BINF 5311	Intelligent Instructional Systems (3 credits) and
	BINF 632/ BINF 5312	Interactive Learning Systems for the Health Sciences (3 credits) or
	IS 658	Multimedia Systems (3 credits)

Group 4: Bioinformatics/Biotechnology Systems:

	BINF 622/ BINF 5220	Topics in Bioinformatics (3 credits)
	BINF 623/ BINF 5230	Advances in Molecular and Cellular Genetics (3 credits)

ELECTIVE:

6 credits:

Choose two courses in consultation with advisor.

	BINF 614/ BINF 5135	Clinical Systems Interface Design (3 credits)
	BME669	
	CS 632	Advanced Database System Design (3 credits)
	IS 634	Information Retrieval (3 credits)
	CS 650	Computer Architecture (3 credits)
	CS 652	Computer Networks-Architectures, Protocols and Standards (3 Credits)
	CS 654	Telecommunication Networks Performance Analysis (3 credits)
	CS 656	Internet and Higher Layer Protocols (3 credits)
	CS 670	Artificial Intelligence (3 credits)
	CS 671	Knowledge-Based Systems (3 credits)
	CS 672	Expert System Methods and Design (3 credits)
	CS678	
	CS 688	Programming for Interactive Environments (3 credits)
	MIS 648	Decision Support Systems for Managers (3 credits)

Doctor of Philosophy in Biomedical Informatics

The Ph.D. degree program builds upon the M.S. in Biomedical Informatics and provides students with expertise in the development and application of biomedical computing solutions and systems. The Ph.D. program is intended for biomedical informatics professionals and scholars who desire to continue to explore the synergism between computer science and the nation's health care delivery system with faculty who are at the forefront of research and development in this field. Students will be able to develop and apply theories and techniques of biomedical informatics to design, testing and evaluation of data structures and algorithms for the conversion of scientific data into biomedical knowledge. They gain a thorough understanding of the processes of conversion and the properties of medical information.

Admission Requirements:

Students admitted to the joint doctoral program in biomedical informatics must meet both NJIT and UMDNJ admission requirements. Students must hold an undergraduate or graduate degree in a health field or biomedical informatics, computer science, engineering or a related field from an accredited institution, with a minimum GPA of 3.5. Students must submit: official baccalaureate and master's degree transcripts, curriculum vitae, three letters of recommendation, and GRE/GMAT/MCAT/DAT or comparable graduate admission examination scores. International students must demonstrate proficiency in the English language by scoring a minimum of 550 (pencil and paper) and 213 (computer-based) on the TOEFL. In addition, applicants must demonstrate superior performance in a procedural programming language, database concepts and mathematics corresponding to the contents of **CIS 431**, **CIS 505**, **Math 111**, **Math 121** and **Math 211**. See the NJIT undergraduate catalog for course descriptions. Students who fail to demonstrate performance in these areas will be required to take prerequisite courses. Applicants must have taken appropriate courses in biomedical informatics and demonstrate aptitude, interest and commitment to scholarly activities and research, documented by the quality of papers and projects completed by the applicant and letters of recommendation submitted by persons familiar with the applicant's academic work.

Degree Requirements:

The Ph.D. in Biomedical Informatics requires completion of at least 61 credits beyond the master of science degree and maintenance of a cumulative graduate GPA of 3.0 or better with no more than two grades of C.

Required:

24 credits of advanced courses at the 600 level (above 5000 level at UMDNJ) subject to advisor's approval and related to the expected research area of specialization are required. A minimum of 12 credits must be at the 700 level (7000 level at UMDNJ). For course descriptions of 7000-level courses, see the program director.

36 credits of dissertation research culminating in a dissertation, which meets the publication requirements of both UMDNJ and NJIT. A maximum of 6 credits of pre-doctoral research can be applied to the dissertation research requirement.

Qualifying Examination - Students must pass a qualifying examination of preparatory studies in the areas of biomedical informatics theory and systems as well as selected biomedical informatics courses related to the area of the student's interest.

Dissertation Proposal and Defense - After successfully completing the qualifying examination students must submit and give an oral defense of a dissertation proposal.

Research - Students who have passed the qualifying examination are permitted to register for doctoral dissertation research. The student's doctoral advisor and doctoral committee supervise the student's extensive research.

Dissertation and Defense - Students are required to write a dissertation summarizing the results of their research and give an oral defense in front of the student's doctoral committee. Submission of a journal quality paper on the student's dissertation research to a peer-reviewed journal.

Participate in the graduate colloquium/seminars, **BINF 7910** Biomedical Informatics Seminar or **CIS 791** Graduate Seminar every semester.

Participate in the instruction of at least one course in biomedical informatics or a related area under the supervision of a faculty member.

** Joint appointee with the School of Architecture

Degrees Offered: Master of Business Administration in Management of Technology; Master of Science in Management.

Master of Business Administration in Management of Technology (48 credits)

NJIT's MBA in the Management of Technology is designed to prepare a new generation of technology savvy business leaders. The curriculum integrates fundamental business knowledge with applications of technology to business to prepare students to think strategically about business and technology. The program is built upon four themes that are transforming business: a) the transition to a knowledge based economy; b) the emergence of the digital firm; c) the globalization of business; and d) innovation as the primary source of competitive advantage.

Concentration areas are offered in Management Information Systems, e-Commerce, Marketing, Finance, Operations Management, Infrastructure Management and Transportation and Logistics.

Admission Requirements:

Applicants to the MBA must submit complete transcripts of all undergraduate work and scores on the Graduate Management Admissions Test (GMAT). The GMAT is required of all applicants except those holding master's or doctoral degrees from an accredited U.S. university. Up to nine credits of graduate work may be transferred from another school, provided that they are not counted towards a terminal degree at that school.

MBA Pre-Qualifying Requirements : Students are expected to demonstrate competency in the area of accounting, finance, quantitative methods, information systems and economics. Depending on the applicant's undergraduate degree program all or part of the pre-qualifier requirements can be met with prior undergraduate course work. Applicants who do not meet pre-qualifying requirements will be required to complete up to 12 credits of course work.

Degree Requirements:

Pre-Qualifying Courses (Conditional Admits only):

	Mgmt 501	Management Foundations (3-0-3)
	Mgmt 580	Managerial Science (3 credits)
	MIS 246	Tools and Technologies for the Digital Firm (3-0-3)
	Econ 565	Managerial Economics (3 credits)

MODULE I : Core Courses (All courses required. No substitutions) 27 Credits:

	Acct 615	Management Accounting (3 credits)
	Fin 600	Financial and Economic Environment (3 credits)
	Fin 624	Financial Management (3 credits)
	Mrkt 620	Competing in Global Markets (3 credits)
	MIS 680	Management Science (3 credits)
	MIS 645	Managing IT for Competitive Advantage (3 credits)
	HRM 601	Organizational Behavior (3 credits)
	Mgmt 691	Legal and Ethical Issues (3 credits)
{	Mgmt 692	Strategic Management (3 credits) or
	Mgmt 680	Entrepreneurial Strategy (3 credits)

MODULE II : Managing Knowledge and Information (Choose 2 Courses) 6 Credits:

	Mgmt 650	Knowledge Management (3 credits)
	Mgmt 635	Data Mining and Analysis (3 credits)
	Mgmt 660	Managing Supply and Value Chains (3 credits)
	MIS 648	Decision Support Systems for Managers (3 credits)
	Mgmt 710	Forecasting Methods for Business Decisions (3 credits)

MODULE III : Managing Technology, Innovation and Change (Choose 2 Courses) 6 Credits:

	Mgmt 620	Management of Technology (3 credits)
	HRM 630	Managing Technological and Organizational Change (3 credits)
	Mgmt 676	Managing the Digital Firm (3 credits)
	Mgmt 690	Electronic Communities in Organizations (3 credits)

MODULE IV : CONCENTRATION AREA:

Choose 3 Courses in one concentration for 9 credits (MIS, Finance, Marketing, e-Commerce, Operations Management, Transportations and Logistics):

MIS Concentration Courses - Choose Three Courses:

	CS 631	Data Management System Design (3 credits)
	CS 632	Advanced Database System Design (3 credits)
	IS 675	Information System Evaluation (3 credits)
	MIS 625	Management Strategies for E-Commerce (3 credits)
	MIS 635	Management of Telecommunications (3 credits)
	MIS 690	Executive Information Systems (3 credits)
	Mgmt 630	Decision Analysis (3 credits)

Finance Concentration Courses- Choose Three Courses:

	Fin 626	Financial Investment Institutions (3 credits)
	Fin 627	International Finance (3 credits)
	Fin 631	Working Capital Management and Credit Analysis (3 credits)
	Fin 632	Financial Valuation of Technology-Based Companies (3 credits)
	Fin 634	Mergers, Acquisitions, and Restructuring (3 credits)

Marketing Concentration Courses - Choose Three Courses:

	Mrkt 631	Market Planning and Analysis (3 credits)
	Mrkt 637	Marketing Communications and Promotions (3 credits)
	MIS 625	Management Strategies for E-Commerce (3 credits)
	Mrkt 645	Internet Marketing Strategy (3 credits)
	Mrkt 630	Models of Consumer Behavior (3 credits)
	Mgmt 635	Data Mining and Analysis (3 credits)

e-Commerce Concentration Courses - Choose Three Courses :

	MIS 620	E-Commerce Technologies (3 credits)
	MIS 625	Management Strategies for E-Commerce (3 credits)
	MIS 635	Management of Telecommunications (3 credits)
	Mrkt 645	Internet Marketing Strategy (3 credits)
	Mgmt 676	Managing the Digital Firm (3 credits)

Operations Management Concentration Courses - Choose Three Courses:

	IE 674	Quality Maintenance and Support Systems (3 credits)
	Mgmt 630	Decision Analysis (3 credits)
	MnE 601	Manufacturing Systems (3 credits)
	MnE 602	Flexible and Computer Integrated Manufacturing (3 credits)
	MnE 603	Management of Manufacturing Systems (3 credits)

Transportation and Logistics Concentration Courses - Choose Three Courses:

	Mgmt 630	Decision Analysis (3 credits)
	Mgmt 710	Forecasting Methods for Business Decisions (3 credits)
	Tran 603	Introduction to Urban Transportation Planning (3 credits)
	Tran 740	Management of Transportation Carriers (3 credits)
	Tran 765	Multi-modal Freight Transportation Systems Analysis (3 credits)

Master of Science in Management (30 credits)

The Master of Science in Management is designed to allow students to build specialized knowledge in one of four concentration areas : Management Information Systems, e-Commerce, Organization Management or Management of Technology. Specialized knowledge is augmented with a 15 credit management core that provides the general knowledge needed to manage technical and specialized units.

Admission Requirements:

Applicants to the MSM must submit complete transcripts of all undergraduate work and scores on the Graduate Management Admissions Test (GMAT). The GMAT is required of all applicants except those holding master's or doctoral degrees from an accredited U.S. university. Up to nine credits of graduate work may be transferred from another school, provided that they are not counted towards a terminal degree at that school.

MSM Pre-Qualifying Requirements : Students are expected to demonstrate competency in the area of accounting, finance, quantitative methods, information systems and economics. Depending on the applicant's undergraduate degree program, all or part of the pre-qualifier requirements can be met with prior undergraduate course work. Applicants who do not meet pre-qualifying requirements will be required to complete up to 12 credits of course work.

Degree Requirements:

Pre-Qualifying Courses (Conditional Admits only) :

	Mgmt 501	Management Foundations (3-0-3)
	Mgmt 580	Managerial Science (3 credits)
	MIS 246	Tools and Technologies for the Digital Firm (3-0-3)
	Econ 565	Managerial Economics (3 credits)

Core Courses (All courses required. No substitutions) 15 Credits:

	Acct 615	Management Accounting (3 credits)
	Mrkt 620	Competing in Global Markets (3 credits)
	Fin 600	Financial and Economic Environment (3 credits)
	HRM 601	Organizational Behavior (3 credits)
{	Mgmt 680	Entrepreneurial Strategy (3 credits) or
	Mgmt 692	Strategic Management (3 credits)

Choose 5 Courses in one specialization for 15 Credits:

e-COMMERCE SPECIALIZATION COURSES:

	MIS 620	E-Commerce Technologies (3 credits)
	MIS 625	Management Strategies for E-Commerce (3 credits)
	IS 679	Management of Computer and Information Systems (3 credits)
	CS 656	Internet and Higher Layer Protocols (3 credits)
	Mgmt 635	Data Mining and Analysis (3 credits)
	CS 652	Computer Networks-Architectures, Protocols and Standards (3 Credits)
	CS 688	Programming for Interactive Environments (3 credits)
	Mrkt 645	Internet Marketing Strategy (3 credits)

MIS SPECIALIZATION COURSES:

		Mgmt 650	Knowledge Management (3 credits)
		MIS 645	Managing IT for Competitive Advantage (3 credits)
		CS 631	Data Management System Design (3 credits)
		MIS 648	Decision Support Systems for Managers (3 credits)
		CS 671	Knowledge-Based Systems (3 credits)
		CS 632	Advanced Database System Design (3 credits)
		EM 636	Project Management (3 credits)
		IS 675	Information System Evaluation (3 credits)
		IS 679	Management of Computer and Information Systems (3 credits)

ORGANIZATION MANAGEMENT SPECIALIZATION COURSES:

		HRM 605	Managing High Performance Work Teams (3 credits)
		HRM 606	Human Resource Management (3 credits)
		HRM 640	Cultures in Organizations (3 credits)
		HRM 630	Managing Technological and Organizational Change (3 credits)
		HRM 685	Cross Cultural Management Studies (3 credits)
		HRM 610	Seminar on Leadership Skills (3 credits)
		Mgmt 650	Knowledge Management (3 credits)
		Mgmt 690	Electronic Communities in Organizations (3 credits)

MANAGEMENT OF TECHNOLOGY SPECIALIZATION COURSES:

		Mgmt 620	Management of Technology (3 credits)
		HRM 630	Managing Technological and Organizational Change (3 credits)
		MIS 645	Managing IT for Competitive Advantage (3 credits)
		MIS 620	E-Commerce Technologies (3 credits)
		MIS 625	Management Strategies for E-Commerce (3 credits)
		MIS 648	Decision Support Systems for Managers (3 credits)
		Mgmt 676	Managing the Digital Firm (3 credits)
		Mgmt 650	Knowledge Management (3 credits)

Chemical Engineering

Administered By: Otto H. York Department of Chemical Engineering

Administration

Chairperson	Basil C. Baltzis
Associate Chairperson for Undergraduate Studies	Reginald P. Tomkins
Associate Chairperson for Graduate Studies and Industrial Relations	Reginald P. Tomkins
Director of Pharmaceutical Engineering Program	Piero M. Armenante

Faculty

Distinguished Professors	Piero M. Armenante, Gordon A. Lewandowski, Kamalesh K. Sirkar
Foundation Professor	Kamalesh K. Sirkar(Membrane Separations)
Professors	Basil C. Baltzis, Robert B. Barat, Teddy Greenstein, Deran Hanesian, Howard S. Kimmel, Dana E. Knox, Angelo Perna, Reginald P. Tomkins, Marino Xanthos
Associate Professor	Norman Loney
Assistant Professors	Ernest N. Bart, Maureen A. Howley, Chien-yueh Huang, Laurent Simon, Jing Wu
Honorary Professor	Otto York
Distinguished Research Professors	Costas G. Gogos, Robert Pfeffer
Research Professors	Hyun J. Jun, Todd B. David
Joint Appointments	Joseph W. Bozzelli(Chemistry), James M. Grow(Chemistry), Rajesh N. Dave(Mechanical Engineering)
Special Lecturer	Joseph Kisutcza

Advisors

Undergraduate Advisor	Reginald P. Tomkins
Graduate Advisor	Reginald P. Tomkins

Degrees Offered: Master of Science in Chemical Engineering; Master of Science in **Pharmaceutical Engineering** and Doctor of Philosophy in Chemical Engineering

The graduate programs in Chemical Engineering offer opportunities for students to enhance their knowledge in the core areas of the discipline, learn about advanced topics in various established as well as emerging technologies through specialized courses, and engage in original research. Courses are taught by full-time faculty members that are also involved in cutting-edge research, and adjunct faculty with extensive industrial experience. The department enjoys close ties to the pharmaceutical and petrochemical industries, and plastics manufacturers through the Polymer Processing Institute (PPI). In addition to independent research, faculty members are associated with various research centers including the Center for Membrane Technology, the Particle Technology Center, and PPI. There are opportunities for interdisciplinary collaborative research with the Federated Department of Biological Sciences, the Department of Biomedical Engineering, the Department of Chemistry and Environmental Science, and the University of Medicine and Dentistry of New Jersey.

Master of Science in Chemical Engineering

This program is intended for those interested in advancing their understanding of chemical engineering. It may be taken on a part-time or full-time basis. There are two options, one of which includes a master's thesis.

Admission Requirements:

An undergraduate degree in chemical engineering is usually required. Students who do not have a degree in chemical engineering may be considered for admission through the bridge program. The bridge program is comprised of a sequence of two courses, **ChE 501** and **ChE 502**, that needs to be completed before beginning the graduate program. Bridge courses are not counted toward degree credit. The bridge program is primarily for individuals who have a degree in either chemistry or an engineering discipline other than chemical engineering.

A minimum undergraduate GPA of 3.0 on a 4.0 scale, or equivalent, is typically required for admission. Applicants must submit GRE scores unless they hold a B.S. degree in Chemical Engineering from an ABET-accredited program in the U.S.A. International students must achieve a minimum TOEFL score of 550 (pencil and paper) and 213 (computer-based).

Degree Requirements:

A minimum of 30 credits is required. Students must attain a minimum GPA of 3.0 in the core courses listed below, and a minimum overall GPA of 3.0. Students following option 1 (below) must also successfully complete a master's thesis.

Core Courses:

12 credits:

	ChE 611	Thermodynamics (3 credits)
	ChE 612	Kinetics of Reactions and Reactor Design (3 credits)
	ChE 624	Transport Phenomena I (3 credits)
	ChE 626	Mathematical Methods in Chemical Engineering (3 credits)

Option 1:

Required of those receiving partial or full departmental or research-based support. Students who do not receive financial support, may follow Option 1 without the Seminar and **ChE 599** requirements listed below.

Thesis:

	ChE 701	Master's Thesis (6 credits)
--	----------------	-----------------------------

Before deciding on a thesis topic and advisor, students must discuss thesis topics with at least three faculty members and get their signature on a form provided by the department. The signed form with the name of advisor selected and tentative title of thesis topic must be returned to the department for approval. Change of advisor requires consent of the previous advisor and departmental approval. The completed thesis must be examined and signed by three faculty members at least two of which must be on the department faculty. An oral presentation is also required. The MS thesis committee must be formed and submitted to the department for approval at least one semester before the expected graduation date. The department provides a form for the formation of the MS thesis committee.

Seminar:

In addition to the minimum 30 degree credits required, all students who receive departmental or research-based support must enroll each semester in **ChE 791** Graduate Seminar.

ChE 599, Methods for Teaching Assistants and Graduate Assistants :

In addition to the minimum 30 degree credits, students receiving departmental support must enroll in **ChE 599** at least once a year.

Elective Courses (12 credits):

A minimum of 3 credits of 600- or 700-level courses in chemical engineering. Of the remaining 9 credits, at least 3 credits must be in chemical engineering, pharmaceutical engineering, or chemistry. No more than 3 credits may be at the 500-level. 500-level courses offered in the department do not count towards degree requirements.

Option 2:

Available to students who do not receive any departmental or research-based support.

Elective Courses (18 credits):

A minimum of 9 credits of 600- and 700-level courses in chemical engineering. Of the remaining 9 credits, at least 3 credits must be in chemical engineering, pharmaceutical engineering, or chemistry. No more than 3 credits may be at the 500-level. 500-level courses offered in the department do not count towards degree requirements.

Doctor of Philosophy in Chemical Engineering

This is a research-oriented degree intended primarily for full-time students. Although courses may be taken on a part-time basis, a minimum of one year of full-time residency is typically required for completion of the doctoral dissertation.

Admission Requirements: A master's degree in chemical engineering and a GPA of at least 3.5 on a 4.0 scale, or equivalent, are usually required. All applicants must submit GRE scores. International students must also achieve a minimum TOEFL score of 213 (computer-based) or 550 (non-computer-based). Exceptional students with undergraduate degrees in chemical engineering may also apply directly for admission to the doctoral program. In addition to the GRE and TOEFL requirements mentioned above, a minimum undergraduate GPA of 3.5 on a 4.0 scale, or equivalent, is normally required. Students admitted to the program without a master's degree in chemical engineering must complete an additional 18 credits of course work as specified below. Admission of full-time doctoral students is on a competitive basis as the department admits only as many students as it can support through departmental and research-based funds.

Degree Requirements: To graduate, students must have an approved dissertation and attain an overall GPA of at least 3.0. In addition, students admitted to the program without a master's degree in chemical engineering must also attain a minimum GPA of 3.0 in the following four required courses: **ChE 611**, **ChE 612**, **ChE 624** and **ChE 626**.

Course Work (24 credits): At least 24 credits of course work beyond the master's degree are required, of which at least 12 credits must be at the 700-level. For the required 700-level courses, at least 6 credits must be in chemical engineering or chemistry. No more than 6 credits may be in Independent Study (**ChE 705** or **Chem 705**). No more than 3 credits in Independent Study may be taken with the same supervising faculty member. The supervising faculty member may never be the student's dissertation advisor. Students need always to get departmental approval for the courses they take for their degree requirements.

ChE 790, Doctoral Dissertation (36 credits): A minimum of 36 credits of **ChE 790**, Doctoral Dissertation are required. Students cannot register for **ChE 790** before they have officially selected a dissertation advisor and passed the doctoral qualifying examination. Should the required 36 credits of **ChE 790** be completed before submission of the final dissertation document, students must register for a minimum of 3 credits of **ChE 790** each semester until the dissertation has been submitted and accepted.

Seminar and ChE 599: In addition to the minimum 60-degree credits specified above, students must register every semester for **ChE 791**, Graduate Seminar. Part-time students may request that this requirement be waived for some semesters. In addition, students who receive support through teaching and/or graduate assistantships must register for **ChE 599**, Methods for Teaching Assistants and Graduate Assistants, at least every other semester they receive such assistantships.

Additional Requirements for Students Admitted without a Master's Degree in Chemical Engineering (18 credits):

In addition to the requirements specified above, students admitted to the program without a master's degree in chemical engineering must complete an additional 18 credits of course work as follows:

	ChE 611	Thermodynamics (3 credits)
	ChE 612	Kinetics of Reactions and Reactor Design (3 credits)
	ChE 624	Transport Phenomena I (3 credits)
	ChE 626	Mathematical Methods in Chemical Engineering (3 credits)

6 credits from 600- or 700-level courses in chemical engineering, pharmaceutical engineering, or chemistry.

Selection of Dissertation Advisor: Students must select a dissertation topic and advisor within 6 months of joining the program. Before making a decision, students should discuss research topics with at least five faculty members of the department and get their signature on a form provided by the department. The signed form with the names of advisors selected must be returned to the department for further processing. Advisors are assigned based on student preferences and availability of funding. Change of advisor requires consent of the previous advisor and departmental approval. In cases where more than one advisor is directing the dissertation, the primary advisor must be on the departmental faculty.

Qualifying Examination: All students are expected to pass a qualifying examination that tests general competence in chemical engineering at the master's level. Students with a master's degree in chemical engineering must take the exam during the first year of their studies. Students admitted to the program without a master's degree in chemical engineering must take the exam within the first three semesters of their studies. All students must pass the exam within the first two years of their studies. Students are allowed only two attempts to pass the examination.

The doctoral qualifying examination is offered in January and June of every year. It is an 8-hour written examination. Students are expected to solve/answer 6 problems as follows: 1 problem in Applied Mathematics for Chemical Engineers, 1 problem in Reaction Kinetics and Reactor Design, 1 problem in Chemical Engineering Thermodynamics, 1 problem in Transport Phenomena, and 2 problems from 2 different elective areas out of six elective areas offered on the exam. The 6 elective areas may vary, but they are announced to the students at least three months before an examination is held. There are two problems in each of the required and elective areas and students have to select one problem from each area. All problems are weighed equally and are graded on the 0 to 10 scale. A grade of at least 42 out of 60 points (i.e., at least 70%) implies an automatic pass. A grade of no more than 30 out of 60 points (i.e., no more than 50%) implies that the student has failed the exam. Students receiving grades higher than 50% but less than 70% (i.e., more than 30 but less than 42 points out of 60) may pass, fail, or conditionally pass the exam based on the decision of the departmental committee on Graduate Studies.

Students are notified about an upcoming exam (date, elective areas) at least three months in advance and asked to respond in writing if they intend to take the exam.

Formation of Dissertation Committee: Within three months of passing the qualifying examination, doctoral students must form a dissertation committee. The department provides a special form. The signed form must be submitted for the approval of the Associate Chair for Graduate Studies in Chemical Engineering. The committee must consist of the doctoral student's dissertation advisor, three additional faculty members from the department, and one member from outside the department (preferably outside the university). The committee may consist of more than five persons, subject to the approval of the Associate Chair. Once formed, the committee cannot change unless there is a written explanation and request from the doctoral student and/or his/her advisor. The Associate Chair for Graduate Studies handles such requests.

Research Proposal: Within six months of forming the dissertation committee (i.e., no more than nine months after passing the qualifying examination), doctoral students must make an oral presentation to their dissertation committee and other interested persons on the scope of their proposed research. The committee must formally approve the proposal within a maximum of three additional months. This ensures meeting the requirements that doctoral students must have an approved dissertation committee and an approved dissertation proposal within a year of passing the qualifying examination. The approved and signed proposal must be submitted to the Associate Chair for Graduate Studies so that it is kept in the student's file.

Dissertation Defense: An oral defense of the dissertation is required after submission of the final document to the dissertation committee for approval. Signatures of all members of the dissertation committee must be received for final approval to be granted. The oral defense is open to the university community and general public and must be announced early.

Degrees Offered: Master of Science in Chemistry

Master of Science in Chemistry

An undergraduate degree in chemistry or chemical engineering is usually required. Students with baccalaureate degrees in other areas of science and engineering may be considered for admission and required to take an individually designed program that includes undergraduate courses before beginning the graduate program. These courses are not counted toward degree credit.

A minimum undergraduate GPA of 3.0 on a 4.0 scale, or equivalent, is typically required for admission. General GRE scores must be submitted by those seeking financial support and those whose last prior degree was from outside the United States. Subject GRE is not required. International students must achieve a minimum TOEFL score of 550 (paper and pencil) and 213 (computer based).

Off-Campus Programs: At the National Starch and Chemical Corporation, NJIT offers sufficient courses to fulfill all degree requirements. NJIT faculty teach all courses. For locations, see [Extension Programs](#) in this catalog. In addition, a distance-based, 12-credit graduate certificate in Applied Chemistry is available as a step toward this degree for employees of the corporation. For further information about extension programs and [Graduate Certificates](#), call the Associate Vice President for Continuing and Distance Education, Division of Continuing Professional Education, 1 (800) 624-9850 or (973) 596-3060; e-mail: cpe@njit.edu.

Degree Requirements:

A minimum of 30 degree credits is required. Students must attain a cumulative GPA of 3.0 or better in the core courses listed below, and a minimum overall GPA of 3.0.

Seminar: In addition to the minimum 30 degree credits required, all students who receive departmental or research-based awards must enroll each semester in **CHE 791** Graduate Seminar.

Core:

3 credits from:

	Chem 602	Advanced Organic Chemistry II: Reactions (3 credits)
	Chem 605	Advanced Organic Chemistry I: Structure (3 credits)

3 credits from:

	Chem 661	Instrumental Analysis Laboratory (3 credits)
	Chem 664	Advanced Analytical Chemistry (3 credits)

3 credits from:

	Chem 610	Advanced Inorganic Chemistry (3 credits)
	Chem 673	Biochemistry (3 credits)

3 credits from:

	Chem 658	Advanced Physical Chemistry (3 credits)
--	-----------------	---

Thesis:

Required of those receiving departmental or research-based support; others may choose 6 credits of 600- or 700-level courses in chemical engineering or chemistry instead of thesis.

	Chem 701	Master's Thesis (6 credits)
--	-----------------	-----------------------------

Elective:

12 credits for those completing a master's thesis

18 credits for those not completing a master's thesis

A maximum of 6 elective credits may be taken from outside chemistry or chemical engineering; a maximum of 3 credits may be at the 500 level.

Doctor of Philosophy in Chemistry

Doctoral candidates are expected to demonstrate creative thinking, self-motivation and a commitment to achieving quality in their research product. Departmental research includes a well-balanced mixture of experimental, computational, and theoretical projects in the areas of analytical, bio-, organic, inorganic, and physical chemistry. Chemistry doctoral students address real problems, have strong interactions with their advisors and are expected to solve pertinent chemical and environmental problems.

Qualified students may be accepted directly into the program with a bachelor's degree or after they have completed a master's degree in chemistry. A GPA in previous work of 3.5 or better is expected, and international students must submit a TOEFL score of at least 550 (214 on the computer based test). General GRE scores are also required for admission. GRE subject scores are not required. Although the program is intended for full-time students, courses may be taken on a part-time basis initially. A minimum of one year in full-time residency required for completion of the dissertation. Teaching assistantships (TAs) and Research Assistantships (RAs) are available on a competitive basis. In addition to tuition remission, assistantships include stipends for Ph.D. students.

Credits:

Students entering with bachelor's degrees are required to complete a minimum of 78 credits. This includes 42 credits of course work. The required core courses for the M.S. in Chemistry are mandatory; and no less than 24 credits in chemistry or related courses must be taken. At least 12 credits must be in courses at the 700 level (of which at least 6 should be in chemistry), and none may be at the 500 level. The qualifying examinations must be passed (see below). A minimum of 36 credits of research must be completed, and a dissertation must be submitted and defended.

For students who have completed a masters degree: The program requires a minimum of 24 credits of course work, at least 12 of which are at the 700 level. Of the 700 level courses, 6 credits must be in chemistry. Students must also take 36 credits of research work, followed by the submission and defense of a dissertation. While it is not required that the core courses be taken, students will have to pass qualifying examinations in these areas (see below). Therefore, it is recommended that they take these courses unless they already have a strong background in these areas.

Seminar:

Each semester, Ph.D. students must register for and attend departmental seminars. The credits awarded for this seminar are not applied to fulfillment of degree requirements.

Grades:

All students must maintain a grade point average of at least 3.0. Students entering without the MS degree must also attain a GPA of 3.0 in the core courses.

Qualifying Examination:

Within the first year after admission to the program, students must take a qualifying examination, which will include questions on the required core courses as well as recently offered elective courses. Students have two chances to pass all of the sections. If any section is failed or is not taken on the first trial, one more attempt is allowed. The examinations are given in January and June, and students should notify the Graduate Advisor for Chemistry of their intent to take the examinations at least a month before they are scheduled. After passing the qualifying examinations, students should select a research advisor and a doctoral research committee. The committee must meet the approval of the Departmental Graduate Advisor for Chemistry. It should consist of, at a minimum, the research advisor, three departmental faculty members and one person from outside the department. The graduate advisor should be notified of these selections. Forms are available from the departmental office to report the selections.

Dissertation:

Within six months of passing the qualifiers, the student must give an oral presentation to their research committee, detailing the background of the selected research project, and the student's plans for carrying out the research. The committee must formally approve the proposal. The committee may meet at other times to follow the student's progress, at the request of the student and the research advisor.

After the dissertation is completed, the student will present the research to the committee and the public, and defend it. It is expected that the committee will have been given copies of the document several weeks before the defense meeting to ensure that they have adequate time to review it. The date, time and place of the defense must be posted throughout campus and e-mailed to the department at least two weeks ahead of time.

Obtaining a Ph.D. is expected to entail more than just fulfilling formal requirements. There are skills which students will develop while completing the formal program. We call these skills "**The Informal Requirements**".

Catalog and curricula information approved by the relevant academic department.

Degrees Offered: Master of Science in Civil Engineering; Doctor of Philosophy in Civil Engineering

In the information technology age, more resources are available for building new cities, repairing the infrastructure, cleaning up the environment: these are all tasks for the civil engineer. Major corporations, government agencies, private consulting and construction firms, and universities are just some of the organizations that employ civil engineers.

In-depth knowledge in one of the areas of civil engineering is essential for professional practice as well as for research. Courses are taught by full-time faculty members with a range of academic and professional experience as well as by adjunct instructors who are experts in their fields. Those students interested in research at the master's level or continuing their education at the doctoral level should consider working with faculty involved in one of the university's related research centers.

Master of Science in Civil Engineering

The M.S. in Civil Engineering is designed for those who want both specialized course work and the flexibility to tailor their program to their needs.

Admission Requirements:

Applicants are expected to have an undergraduate degree in civil engineering or its equivalent, and must have proficiency in basic sciences and mathematics. Students who lack an appropriate undergraduate background may be granted conditional admission in order to complete a bridge program or its equivalent. These courses are taken in addition to regular degree requirements; descriptions may be found in the undergraduate catalog.

Graduate Certificate Program: A 12-credit graduate certificate in Construction Management is available as a step toward this degree. Please see **Graduate Certificates** in this catalog for further information. For more information about continuing and distance education, please contact the Division of Continuing Professional Education, 1-800-624-9850 or 973-596-3060; email: cpe@njit.edu.

Bridge Program: Students who do not have a bachelor's degree in civil engineering, but who want to obtain a master's degree in civil engineering must complete a bridge program for their chosen area of specialization. These courses are not counted for degree credit. See the areas of specialization in this section for specific bridge programs. Please note that prerequisites for bridge courses also must be met. See the undergraduate catalog for descriptions of 100- to 400-level courses. Some of the bridge courses may be waived depending on the student's background.

Master of Architecture (M.Arch.) and M.S. in Civil Engineering Dual Degree Program: This program permits students to obtain a Master of Architecture with a Master of Science in Civil Engineering. There is no reduction in the degree requirements for the Master of Architecture program. This dual degree program permits students to obtain the M.S. in Civil Engineering in substantially less time; in some cases, in only one more semester of full-time study. This dual degree program is described in the "Architecture" degree program section in this catalog.

Degree Requirements:

The program as shown below offers numerous areas of specialization, each with its own list of required and elective courses and bridge program. Once the choice of specialization is made, the student consults his/her specialization advisor to plan and develop an individualized and cohesive sequence of courses that will meet the program requirements of at least 30 degree credits.

Seminar: In addition to the minimum 30 degree credits required, all students who receive departmental or research-based awards must enroll each semester in CE 791 Graduate Seminar.

Area of Specialization:

Construction Engineering and Management:

Bridge Program:

	CE 200	Surveying (3-0-3)
	CE 200A	Surveying Laboratory (0-3-1)
	CE 210	Construction Materials and Procedures (3-0-3)
	CE 341	Soil Mechanics (3-0-3)
	CE 341A	Soil Mechanics Laboratory (0-3-1)
	CS 101	Computer Programming and Problem Solving (2-1-2)
	Math 225	Survey of Probability and Statistics (1-0-1)
	Math 112	Calculus II (4-1-4)
	MATH237	

One design course, approved by program advisor.

Required:

12 credits:

	CE 610	Construction Management (3 credits)
	CE 611	Project Planning and Control (3 credits)
	CE 616	Construction Cost Estimating (3 credits)
	EM 632	Legal Aspects in Construction (3 credits)

Thesis:

Required of those receiving departmental awards; elective for all others.

	CE 701	Master's Thesis (6 credits)
--	---------------	-----------------------------

Elective:

Select 9 credits if completing a master's thesis; 15 credits if not completing a master's thesis, from:

	Arch 675	Elements of Infrastructure Planning (3 credits)
	CE 545	Rock Mechanics I (3 credits)
	CE 553	Design and Construction of Asphalt Pavements (3 credits)
	CE 614	Underground Construction (3 credits)
	CE 615	Infrastructure and Facilities Remediation (3 credits)
	CE 631	Advanced Reinforced Concrete Design (3 credits)
	CE 637	Short Span Bridge Design (3 credits)
	CE 642	Foundation Engineering (3 credits)
	CE 659	Flexible and Rigid Pavements (3 credits)
	CE 700	Civil Engineering Project (3 credits)
	CE 702	Special Topics in Civil Engineering (3 credits)
	CE 710	Systems in Building Construction (3 credits)
	CE 711	Methods Improvement in Construction (3 credits)
	EM 660	Financing an Industrial Enterprise (3 credits)
	EM 693	Managerial Economics (3 credits)
	EnE 662	Site Remediation (3 credits)
	EnE 671	Environmental Impact Analysis (3 credits)
	HRM 693	Employment Relationships and the Law (3 credits)
	IE 603	Behavioral Science in Engineering Organization (3 credits)

3 credits from:

	Arch 647	Special Topics in Computer Applications (3 credits)
	CE 602	Geographic Information System (3 credits)
	EM 602	Management Science (3 credits)
	EM 655	Management Aspects of Information Systems (3 credits)
	Math 611	Numerical Methods for Computation (3 credits)
	MIS 645	Managing IT for Competitive Advantage (3 credits)

Other suitable electives may be taken subject to approval of program advisor.

Environmental Engineering:

Bridge Program:

	CE 320	Fluid Mechanics (4-0-4)
	CE 321	Water Resources Engineering (3-0-3)
	CE 322	Hydraulic Engineering (3-0-3)
	CE 501	Introduction to Soil Behavior (3 credits)
	Chem 126	General Chemistry II (3-0-3)
	CS 101	Computer Programming and Problem Solving (2-1-2)
	Math 222	Differential Equations (4-0-4)
	MATH234	
	Mech 236	Dynamics (2-0-2)

Required:

6 credits:

	EnE 663	Water Chemistry (3 credits)
	EnE 661	Microbiology for Environmental Engineers (3 credits)

Thesis:

Required of those receiving departmental awards; elective for all others.

	CE 701	Master's Thesis (6 credits)
	EnE 701	Master's Thesis (6 credits)

Elective:

Select 15 credits if completing a master's thesis; 21 credits if not completing a master's thesis, from:

	CE 602	Geographic Information System (3 credits)
	CE 604	Environmental Modeling in Remote Sensing (3 credits)
	CE 618	Applied Hydrogeology (3 credits)
	CE 620	Open Channel Flow (3 credits)
	CE 621	Hydrology (3 credits)
	CE 623	Groundwater Hydrology (3 credits)
	CE 626	Sediment Transport (3 credits)
	CE 647	Geotechnical Aspects of Solid Waste (3 credits)
	CE 648	Flow Through Soils (3 credits)
{	CE 700	Civil Engineering Project (3 credits) or
	EnE 700	Environmental Engineering Project (3 credits)
{	CE 702	Special Topics in Civil Engineering (3 credits) or
	EnE 702	Special Topics in Environmental Engineering (3 credits)
	EnE 610	Hazardous Site Operations (3 credits)
	EnE 660	Introduction to Solid and Hazardous Waste Problems (3 credits)
	EnE 662	Site Remediation (3 credits)
	EnE 664	Physical and Chemical Treatment (3 credits)
	EnE 665	Biological Treatment (3 credits)
	EnE 666	Analysis of Receiving Waters (3 credits)
	EnE 668	Air Pollution Control (3 credits)
	EnE 669	Water and Wastewater Analysis (3 credits)
	EnE 670	Advanced Processes in Water Pollution Control (3 credits)
	EnE 671	Environmental Impact Analysis (3 credits)
	EnE 672	Stormwater Management (3 credits)
	EnE 720	Environmental Chemodynamics (3)

Up to 6 credits may be selected from departments other than civil and environmental engineering subject to approval of program advisor.

3 credits from:

	Math 611	Numerical Methods for Computation (3 credits)
	Math 661	Applied Statistics (3 credits)
	Math 687	Quantitative Analysis for Environmental Design Research (3 credits)

Other suitable electives may be taken subject to approval of program advisor.

Geoenvironmental Engineering:

Bridge Program:

	CE 320	Fluid Mechanics (4-0-4)
	CE 321	Water Resources Engineering (3-0-3)
	CE 501	Introduction to Soil Behavior (3 credits)
	Chem 126	General Chemistry II (3-0-3)
	CS 101	Computer Programming and Problem Solving (2-1-2)
	Math 222	Differential Equations (4-0-4)

Required:

12 credits:

	CE 618	Applied Hydrogeology (3 credits)
	CE 647	Geotechnical Aspects of Solid Waste (3 credits)
	EnE 663	Water Chemistry (3 credits)
	EnE 662	Site Remediation (3 credits)

Thesis:

Required of those receiving departmental awards; elective for all others

	CE 701	Master's Thesis (6 credits)
--	---------------	-----------------------------

Elective:

Select 9 credits if completing a master's thesis; 15 credits if not completing a master's thesis, from:

	CE 545	Rock Mechanics I (3 credits)
	CE 602	Geographic Information System (3 credits)
	CE 621	Hydrology (3 credits)
	CE 623	Groundwater Hydrology (3 credits)
	CE 641	Engineering Properties of Soils (3 credits)
	CE 642	Foundation Engineering (3 credits)
	CE 643	Advanced Foundation Engineering (3 credits)
	CE 644	Geology in Engineering (3 credits)
	CE 646	Geosynthetics and Soil Improvement (3 credits)
	CE 700	Civil Engineering Project (3 credits)
	CE 702	Special Topics in Civil Engineering (3 credits)
	CE 743	Contaminant Transport in Soils (3 credits)
	EM 631	Legal Aspects in Environmental Engineering (3 credits)
	EnE 660	Introduction to Solid and Hazardous Waste Problems (3 credits)
	EnE 664	Physical and Chemical Treatment (3 credits)
	EnE 665	Biological Treatment (3 credits)
	EnE 667	Solid Waste Disposal Systems (3 credits)

		EnE 669	Water and Wastewater Analysis (3 credits)
		EnE 671	Environmental Impact Analysis (3 credits)

Other suitable electives may be taken subject to approval of program advisor.

3 credits from:

		Math 611	Numerical Methods for Computation (3 credits)
		Math 651	Applied Mathematics I (3 credits)
		Math 661	Applied Statistics (3 credits)
		Math 687	Quantitative Analysis for Environmental Design Research (3 credits)

Civil Engineering

Geotechnical Engineering:

Bridge Program:

		CE 320	Fluid Mechanics (4-0-4)
		CE 332	Structural Analysis (3-0-3)

	Math 222	Differential Equations (4-0-4)
	Mech 235	Statics (3-0-3)
	Mech 236	Dynamics (2-0-2)
	Mech 237	Strength of Materials (3-1-3)

Required:

3 credits:

	CE 639	Applied Finite Element Methods (3 credits)
--	--------	--

Thesis:

Required of those receiving departmental awards; elective for all others

	CE 701	Master's Thesis (6 credits)
--	--------	-----------------------------

Elective:

Select 18 credits if completing a master's thesis; 24 credits if not completing a master's thesis, from:

	CE 531	Design of Masonry and Timber Structures (3 credits)
	CE 545	Rock Mechanics I (3 credits)
	CE 631	Advanced Reinforced Concrete Design (3 credits)
	CE 632	Prestressed Concrete Design (3 credits)
	CE 634	Structural Dynamics (3 credits)
	CE 635	Fracture Mechanics of Engineering Materials (3 credits)
	CE 636	Stability of Structures (3 credits)
	CE 637	Short Span Bridge Design (3 credits)
	CE 638	Nondestructive Testing Methods in Civil Engineering (3 credits)
	CE 641	Engineering Properties of Soils (3 credits)
	CE 642	Foundation Engineering (3 credits)

	CE 661	Analysis and Design of Shell Structures (3 credits)
	CE 700	Civil Engineering Project (3 credits)
	CE 702	Special Topics in Civil Engineering (3 credits)
	CE 730	Plastic Analysis and Design (3 credits)
	CE 733	Design of Metal Structures (3 credits)
	CE 734	Design of Tall Buildings and Space Structures (3 credits)
	CE 736	Finite Element Methods in Structural and Continuum Mechanics (3 credits)
	CE 737	Earthquake Engineering (3 credits)
	CE 738	Advanced Matrix Analysis of Structures (3 credits)
	CE 739	Structural Optimization (3 credits)
	Mech 540	Advanced Strength of Materials (3 credits)
	Mech 630	Theory of Elasticity (3 credits)

Other suitable electives may be taken subject to approval of program advisor.

3 credits from:

	Math 611	Numerical Methods for Computation (3 credits)
	Math 630	Linear Algebra and Applications (3 credits)
	Math 651	Applied Mathematics I (3 credits)
	Mgmt 580	Managerial Science (3 credits)

Urban and Transportation Engineering:

Bridge Program - Students who lack an appropriate background are asked to make up deficiencies by taking a program of courses that is designed in consultation with the graduate advisor. These courses are taken in addition to the degree requirements.

Required:

12 credits from:

	CE 650	Urban Systems Engineering (3 credits)
	CE 655	Land Use Planning (3 credits)
	CE 660	Traffic Studies and Capacity (3 credits)
	Math 661	Applied Statistics (3 credits)

Thesis:

Required of those receiving departmental awards; elective for all others

	CE 701	Master's Thesis (6 credits)
--	--------	-----------------------------

Elective:

Select 9 credits if completing a master's thesis; 15 credits if not completing a master's thesis, from:

	CE 552	Geometric Design of Transportation Facilities (3 credits)
	CE 553	Design and Construction of Asphalt Pavements (3 credits)
	CE 603	Introduction to Urban Transportation Planning (3 credits)
	CE 625	Public Transportation Operations and Technology (3 credits)
	CE 653	Traffic Safety (3 credits)
	CE 659	Flexible and Rigid Pavements (3 credits)
	CE 700	Civil Engineering Project (3 credits)
	CE 705	Mass Transportation Systems (3 credits)
	CE 751	Transportation Design (3 credits)
	CE 752	Traffic Control (3 credits)
	CE 753	Airport Design and Planning (3 credits)
	CE 754	Port Design and Planning (3 credits)

	CE 765	Multi-modal Freight Transportation Systems Analysis (3 credits)
	Tran 604	Public and Private Financing of Urban Areas (3 credits)
	Tran 610	Transportation Economics (3 credits)
	Tran 643	Transportation Finance (3 credits)

3 credits from:

	CE 602	Geographic Information System (3 credits)
	EnE 671	Environmental Impact Analysis (3 credits)

Other suitable electives may be taken subject to approval of program advisor.

PhD in Civil Engineering

This is a program for superior students with master's degrees in civil engineering or allied fields who wish to do advanced research in an area of civil engineering. In exceptional circumstances, highly qualified students with bachelor's degrees in civil engineering may be accepted directly into the doctoral program.

Admission Requirements:

A minimum master's GPA of 3.5 on a 4.0 scale, or equivalent, is normally required for admission. The GRE (general section) is required of all applicants. All international students must also achieve a minimum TOEFL score of 550.

Degree Requirements:

The department approves specific degree requirements and dissertation topics on an individual basis. Students must attain a minimum overall GPA of 3.0. Students must conduct independent original research in a specific area of civil engineering. Students must select an advisor willing to supervise dissertation work.

36 credits minimum of CE 790 Doctoral Dissertation is generally required. These 36 credits should be completed before submission of the final dissertation document. Students must register for a minimum of 3 credits of CE 790 until the dissertation has been submitted and accepted.

24 credits minimum of course work beyond the master's degree are required, of which at least 12 credits must be at the 700 level; the remaining credits may be at the 600 level.

Seminar: CE 791 Graduate Seminar is required of all doctoral students every semester.

Preliminary Qualifying Examination: Full-time students must take the preliminary qualifying exam for the first time within one year of beginning active study and must pass it completely by the next time the examination is offered. Part-time students must take the preliminary qualifying exam for the first time within three years of the beginning of active study and must pass it completely by the next time the examination is offered. Exceptional students having only bachelor's degrees who are admitted directly into the doctoral program must take the preliminary qualifying examination within one and one-half years of admission and must pass it within two years. All students are permitted to take the examination only twice.

Dissertation Committee: After passing the preliminary qualifying examination, each student in consultation with the major faculty member develops a list of five faculty members who have agreed to serve on an advisory committee as follows: two or three members of the graduate faculty in the student's major area of interest; a member of the graduate faculty in the student's major area appointed by the department chairperson; a member of the graduate faculty of the Department of Civil and Environmental Engineering from another field of interest; a member of the graduate faculty from the area of the student's minor field of interest.

Research Proposal : Doctoral students must prepare a written research proposal and make an oral presentation for approval by their dissertation committee. The proposal must be presented after formation of the committee but within six months after passing the qualifying examination. Research is expected to investigate or develop a unique contribution to science and technology.

Dissertation Defense : An oral defense of the dissertation is required after submission of the final document to the department for approval. Signatures of all members of the dissertation committee must be received for final approval to be granted.

Degrees Offered: Master of Science in Computational Biology

New Jersey Institute of Technology has introduced a Master's Degree in Computational Biology to address the growing need for professionals with an educational background that blends biology with computer science and mathematics. This combination of skills is needed both in the pharmaceutical and biotechnology industries, as well as in biomedical research. Faculty at NJIT specialize in technological, computational, and mathematical aspects of biology, including the application and development of DNA microarray techniques, modeling of molecules, genetic data mining and warehousing, fluid flow in biological systems, biophysical models of neurons and networks of neurons, and rehabilitation technology, among other areas. Cross training in biology, computer science, and mathematics is necessary for all of these subjects.

Master of Science in Computational Biology

This master's program is designed to provide computational biology skills for those with a background in either biology or computer science/physical science.

Admission Requirements:

1. BS or BA degree.
2. Computer courses in programming and data structures equivalent to CS 113 and CS 114.
3. At least one course in genetics or molecular biology, equivalent to R120:352 Genetics or R120:356 Molecular Biology or BIOL 603 Molecular Biology for CS.

4. Mathematics courses in calculus equivalent to Math 111 and Math 112.

Students without the necessary prerequisites may be admitted provided they complete the necessary coursework in addition to the graduate requirements of the program. Additional bridge courses, depending on the student's background, may also be a condition of acceptance.

Graduate Certificate Program: A 12-credit graduate certificate in Bioinformatics is available as a step toward this degree. Please see [Graduate Certificates](#) in this catalog for further information. For more information about continuing and distance education, please contact the Division of Continuing Professional Education, 1-800-624-9850 or 973-596-3060; email: cpe@njit.edu.

Degree Requirements: A minimum of 30 credits is required for the degree, excluding bridge courses. The graduate curriculum consists of six core courses and additional elective courses, with an optional thesis (six credits) or research project (three credits).

The core courses are:

	BIOL601	
	BIOL602	
	BNFO615	
	CS 744	Data Mining and Management in Bioinformatics (3 credits)
	Math 661	Applied Statistics (3 credits)
	Biol 794	Computational Biology Colloquium (1 credit)

Electives from the following. Other courses may be substituted with the permission of the program advisor.

	Chem 601	Special Topics in Chemistry I (3 credits)
	Chem 602	Advanced Organic Chemistry II: Reactions (3 credits)
	Chem 658	Advanced Physical Chemistry (3 credits)
	Chem 673	Biochemistry (3 credits)
	Chem 702	Special Topics in Chemistry II (3 credits)
	R120:548	Biology of Cancer (3)
	R120:512	Mammalian Physiology (3 credits)
	R120:515	Molecular Biology of Eukaryotes (3 credits)
	R120:516	Microbial Ecology (3)
	R120:526	Cell Biology (3 credits)
	R120:573	Pharmacology (3)
	R120:640	Topics in Immunology (3 credits)
	Math 611	Numerical Methods for Computation (3 credits)
	Math 630	Linear Algebra and Applications (3 credits)
	Math 635	Analytical Computational Neuroscience (3 credits)
	Math 636	Systems Computational Neuroscience (3 credits)
	Math 637	Foundations of Mathematical Biology (3 credits)
	Math 662	Probability Distributions (3 credits)
	CS 610	Data Structures and Algorithms (3 credits)
	CS 631	Data Management System Design (3 credits)
	CS 632	Advanced Database System Design (3 credits)
	IS 634	Information Retrieval (3 credits)
	BNFO698	
	CS 659	Image Processing and Analysis (3 credits)

	CS 665	Algorithmic Graph Theory (3 credits)
	CS 731	Applications of Database Systems (3 credits)
	CS 734	Data Mining (3 credits)
	CS 782	Pattern Recognition and Applications (3 credits)
	CS 786	Special Topics (3 credits)
	CS 786	Special Topics (3 credits)
	CS 786	Special Topics (3 credits)
	CS 786	Special Topics (3 credits)
	BIOL700	
	BIOL701	

* For students with computer science, mathematical or physics science backgrounds(pending).

** For students without a computer science background.

Catalog and curricula information approved by the relevant academic department.

Computer Engineering

Administered By: Department of Electrical and Computer Engineering**Administration**

Chairperson	Atam P. Dhawan
Associate Chairpersons	Sui-hoi E. Hou(Undergraduate), Ansarin(Graduate)

Faculty

Distinguished Professors	Yeheskel Bar-Ness, Bernard Friedland, Jacob Savir
Professors	Ali N. Akansu, Ansarin, William N. Carr, Roy H. Cornely, Atam P. Dhawan, Haim Grebel, Richard A. Haddad, Alexander M. Haimovich, Jacob Klapper, Durgamadhab Misra, Solomon Rosenstark, Yun-qing Shi, Kenneth S. Sohn, Marek Sosnowski, Gerald Whitman, Mengchu Zhou, Sotirios G. Ziavras
Associate Professors	Symeon Papavassiliou, John D. Carpinelli, Timothy N. Chang, Hongya Ge, Sui-hoi E. Hou, Walid Hubbi, Constantine N. Manikopoulos, Edip Niver, Sirin Tekinay, Leonid Tsybeskov
Assistant Professors	Ali Abdi, Jie Hu, Swades K. De, Roberto Rojas-Cessa, Roy R. You
Special Lecturer	Ezzat Bakhoun, Arthur B. Glaser

Advisors

Undergraduate Advisor	Geny A. Moreno
Undergraduate Advisor	Sui-hoi E. Hou
MS Computer Engineering Advisor	John D. Carpinelli
PHD Computer Engineering Advisor	ansarin
MS Electrical Engineering Advisor	Durgamadhab Misra
PHD Electrical Engineering Advisor	Ansarin

Degrees Offered: Master of Science in Computer Engineering; Doctor of Philosophy in Computer Engineering

Focus on interdisciplinary course work and research provides students enrolled in the M.S. and Ph.D. in Computer Engineering programs with an advanced background in both the hardware and software aspects of computing.

The master's program prepares computer engineers to successfully make the hardware-software design trade-offs inherent to computing today. The rapid development of computer hardware and software in the last decade has created a demand for engineers who are not only knowledgeable in both these areas, but who also understand their interaction. The fields of embedded computer system design and computer networks are based squarely on this knowledge.

The doctoral program is designed for superior students with a master's degree in computer engineering, computer science, electrical engineering, or other related fields, who wish to pursue advanced research in the area of computer engineering. The master's and doctoral programs emphasize computer architecture and systems, computer networking, intelligent systems, microprocessor-based systems, and VLSI system design.

Master of Science in Computer Engineering

This program prepares its graduates to successfully handle problems requiring in-depth knowledge of both computer hardware and software, and more important, their interaction. Students may concentrate in microprocessor-based systems, parallel computing systems, computer networking, VLSI system design, or machine vision systems. All applicants must submit GRE scores. International students must achieve a minimum TOEFL score of 550 (pencil and paper) and (213 computer-based).

Admission Requirements:

Applicants are expected to have an undergraduate education in engineering or computer science. Applicants with baccalaureate degrees in areas other than computer engineering may be admitted and required to complete a bridge program. Those with undergraduate degrees in other fields should consult the MSCOE Program Advisor for bridge requirements. Bridge courses do not count toward degree requirements.

Bridge Program: Students with undergraduate degrees in computer science take courses from:

	ECE 353	Computer Organization and Architecture (3-0-3)
	ECE 395	Microprocessor Laboratory (0-4-2)
	ECE 231	Circuits and Systems I (3-1-3)
	ECE 684	Advanced Microprocessor Systems (3 credits)

Students with undergraduate degrees in electrical engineering take courses from:

	CIS 505	Programming, Data Structures, and Algorithms (3 credits)
	ECE 353	Computer Organization and Architecture (3-0-3)
	ECE 395	Microprocessor Laboratory (0-4-2)
	ECE 684	Advanced Microprocessor Systems (3 credits)

Graduate Certificate Program: A 12-credit graduate certificate in Information Assurance is available as a step toward this degree. Please see **Graduate Certificates** in this catalog for further information. For more information about continuing and distance education, please contact the Division of Continuing Professional Education, 1-800-624-9850 or 973-596-3060; email: cpe@njit.edu.

Degree Requirements:

Students must complete 30 credits; 21 or more credits must be from ECE courses. They include two required computer engineering core courses, two more required courses for one of the five areas of specialization, and a master's project or thesis. As a requirement for graduation, students must achieve a 3.0 cumulative GPA, not including the master's thesis or project. The master's thesis or project grade must be B or higher.

All M.S. students are required to fulfill two semesters of **ECE 791** (Graduate Seminar).

Core:

Required for all specializations

6 credits:

	CS 610	Data Structures and Algorithms (3 credits)
	ECE 690	Computer Systems Architecture (3 credits)

Project or Thesis (required):

{	ECE 700	Master's Project (3 credits) or
	ECE 701	Master's Thesis (3 credits)

Areas of Specialization:

Electives:

15 credits if completing master's thesis or 18 credits if completing master's project:

A list of suggested complementary elective courses is available for each area of concentration/specialization. Consult the Graduate Advisor of Computer Engineering for a current list of these courses. Other courses may be used as electives with the permission of the graduate advisor.

Computer Architecture and Systems:

Required:

6 credits:

		ECE 658	VLSI Design I (3 credits)
		ECE 692	Embedded Computing Systems (3)

Microprocessor-Based Systems:

Required:

6 credits:

		ECE 686	Instrumentation Systems and Microprocessors (3 credits)
		ECE 688	Microcontrollers in Instrumentation (3 credits)

Intelligent Systems:

Required:

6 credits:

		ECE 605	Discrete Event Dynamic Systems (3 credits)
		ECE 609	Artificial Neural Networks (3 credits)

VLSI System Design:

Required:

6 credits

		ECE 658	VLSI Design I (3 credits)
		ECE 758	VLSI Design II (3 credits)

Computer Networking:

Required:

6 credits:

		ECE 683	Computer Network Design and Analysis (3 credits)
		ECE 637	Introduction to Internet Engineering (3 credits)

Doctor of Philosophy in Computer Engineering

This program is intended for superior students with a master's degree in computer engineering, computer science, electrical engineering, or other related fields, who wish to pursue advanced research in computer engineering. The program emphasizes the following areas: computer architecture and systems, computer networking, intelligent systems, microprocessor-based systems, and VLSI systems design.

Admission Requirements:

Applicants are expected to have a master's degree in computer engineering, computer science, electrical engineering, or other related fields. Students who lack an appropriate background may be admitted and required to take bridge courses that cannot be applied as degree credits.

Students must demonstrate superior academic background in engineering, mathematics, and physical science; skills in programming; and proficiency in major areas of computer engineering and science. A minimum master's GPA of 3.5 on a 4.0 scale, or equivalent, is required for admission. GRE scores must be submitted. International students must also achieve a minimum TOEFL score of 550 (213 computer-based).

Superior undergraduate students may apply to be admitted directly into the Ph.D. program. Such an accelerated program requires a minimum entrance GPA of 3.5 and an interview with the Electrical and Computer Engineering Department Graduate Affairs Committee.

Degree Requirements:

A minimum of 60 degree credits beyond the master's degree is required; 24 credits of course work beyond the master's degree, with at least 12 at the 700 level; and 36 credits of doctoral dissertation. Doctoral students must register for six semesters of **ECE 791** Graduate Seminar. Students must attain a minimum overall GPA of 3.0. Students admitted into the program at the baccalaureate level must complete a total of 87 credits, consisting of 51 course credits and 36 dissertation credits. At least 12 course credits must be at the 700 level. Courses will be selected in consultation with the graduate advisor. Dissertations should demonstrate original research that contributes to the knowledge in the field and should result in the submission of at least one paper for publication in a peer-reviewed journal. Students must provide the department with a written proposal showing that facilities are available and that there is a faculty member willing to supervise dissertation work. Students who complete 36 credits of **ECE 790** before research is finished must register for a minimum of 3 credits of **ECE 790** each semester thereafter until the dissertation is accepted.

Residence: Degree-seeking students must spend at least one academic year in full-time residence.

Qualifying Examination: Contains material related to the student's intended area of specialization. See department for more details.

Dissertation Defense: An oral defense of the dissertation is required after submission of the final document to the department for approval.

Pre-Doctoral Research: With department approval, well-qualified students may register for up to a maximum of 9 credits of **ECE 792** Pre-Doctoral Research before passing the qualifying examination. A maximum of 6 credits of **ECE 792** may be applied toward **ECE 790**. For further information, see **Academic Policies and Procedures** in this catalog and the department **Handbook for Graduate Students**.

* ECE 701 (6 credits)

Computer Science

Administered By: Department of Computer Science, Guttenberg Information Technologies Center, Room 4400.

Administration

Chairperson	Narain Gehani
Associate Chairperson	Michael A. Baltrush
PhD Director	David Nassimi

Faculty

Distinguished Professor	Joseph Y. Leung
Professors	Narain Gehani, James Geller, James McHugh, Ali Mili, Teunis J. Ott, Yehoshua Perl, Wojciech Rytter, Frank Y. Shih, Alexander Thomasian, Boris S. Verkhovsky, Jason T. Wang
Associate Professors	Michael A. Baltrush, James M. Calvin, Artur Czumaj, Alexandros Gerbessiotis, Daochuan Hung, Marvin K. Nakayama, David Nassimi, John W. Ryon, Edward Sarian, Andrew Sohn, Dimitrios Theodoratos
Assistant Professors	Cristian M. Borcea, Barry Cohen, Chengjun Liu, Qun Ma, Vincent Oria, Usman W. Roshan
Special Lecturers	George Blank, Dale Bromberg, Osama Eljabiri, Jonathan J. Kapleau, Dionissios Karvelas, Joan M. Kettering, Morty D. Kwestel, Theodore L. Nicholson, Kurban K. Niroomand, Wallace Rutkowski, Junilda Spirollari

Advisors

Graduate Advisor	Thomas G. Moore
Undergraduate Advisor	Sarah Vandermark

PhD in Computer Science

Bridge Program:

Applicants are expected to have backgrounds in computer science and mathematics equivalent to the bridge program courses listed below. Students who lack this background may be admitted and required to take these courses and attain a cumulative GPA of 3.0.

	CS 251	Computer Organization (3-0-3)
	CS 332	Principles of Operating Systems (3-0-3)
	CS 333	Introduction to UNIX Operating Systems (3-0-3)
	CS 505	Programming, Data Structures, and Algorithms (3 credits)
	CS 510	Assembly Language Programming and Principles (3 credits)
	Math 111	Calculus I (4-1-4)
	Math 112	Calculus II (4-1-4)
	Math 211	Calculus III A (3-0-3)
	Math 226	Discrete Analysis (4-0-4)
	Math 333	Probability and Statistics (3-0-3)

Core Requirements:

All PhD students are required to take qualifying examinations in the following areas:

	CS 610	Data Structures and Algorithms (3 credits)
	CS 611	Introduction to Computability and Complexity (3 credits)
	CS 665	Algorithmic Graph Theory (3 credits)

Concentration Areas:

A PhD. student within the program is required to pick an area of concentration. While the areas of concentrations change according to faculty research interests, here are examples of possible concentrations with possible courses taken within those concentrations..

	CS 631	Data Management System Design (3 credits)
	CS 632	Advanced Database System Design (3 credits)
	IS 634	Information Retrieval (3 credits)
	CS 665	Algorithmic Graph Theory (3 credits)
	CS 667	Design Techniques for Algorithms (3 credits)
	CS 670	Artificial Intelligence (3 credits)
	CS 734	Data Mining (3 credits)
	BIOL601	

Computer Algorithms and Theory of Computing:

	CS 610	Data Structures and Algorithms (3 credits)
	CS 611	Introduction to Computability and Complexity (3 credits)
	CS 665	Algorithmic Graph Theory (3 credits)
	CS 667	Design Techniques for Algorithms (3 credits)
	CS 668	Parallel Algorithms (3 credits)
	CS 669	Computational Geometry (3 credits)
	IE 704	Sequencing and Scheduling (3 credits)

Computer Systems, and Parallel and Distributed Processing:

	CS 630	Operating System Design (3 credits)
	CS 633	Distributed Systems (3 credits)
	CS 636	Compiling System Design (3 credits)
	CS 637	Real-Time Systems (3 credits)
	CS 650	Computer Architecture (3 credits)
	CS 668	Parallel Algorithms (3 credits)
	CS 750	High Performance Computing (3 credits)
	ECE 658	VLSI Design I (3 credits)
	ECE 758	VLSI Design II (3 credits)
	ECE 689	Digital System Design for Machine Arithmetic (3 credits)
	ECE 785	Parallel Processing Systems (3 credits)

Databases, Data Mining, and Knowledge-Based Engineering:

	CS 630	Operating System Design (3 credits)
	CS 631	Data Management System Design (3 credits)
	CS 632	Advanced Database System Design (3 credits)
	IS 634	Information Retrieval (3 credits)
	IS 658	Multimedia Systems (3 credits)
	CS 665	Algorithmic Graph Theory (3 credits)
	CS 667	Design Techniques for Algorithms (3 credits)
	CS 670	Artificial Intelligence (3 credits)
	CS 671	Knowledge-Based Systems (3 credits)
	CS 731	Applications of Database Systems (3 credits)
	CS 734	Data Mining (3 credits)

Image Processing and Computer Graphics:

	CS 630	Operating System Design (3 credits)
	CS 632	Advanced Database System Design (3 credits)
	CS 657	Principles of Interactive Computer Graphics (3 credits)
	CS 659	Image Processing and Analysis (3 credits)
	CS 665	Algorithmic Graph Theory (3 credits)
	CS 667	Design Techniques for Algorithms (3 credits)
	CS 682	Geometric Modeling (3 credits)
	CS 759	Advanced Image Processing and Analysis (3 credits)
	CS 780	Computer Vision (3 credits)
	CS 782	Pattern Recognition and Applications (3 credits)
	ECE 601	Linear Systems (3 credits)
	ECE 643	Digital Image Processing I (3 credits)
	ME 635	Computer-Aided Design (3 credits)

Other 600/700-level courses as approved by advisor.

Networking and Security:

	CS 604	Client/Server Computing (3 credits)
	CS 630	Operating System Design (3 credits)
	CS 651	Data Communications (3 credits)
	CS 652	Computer Networks-Architectures, Protocols and Standards (3 Credits)
	CS 654	Telecommunication Networks Performance Analysis (3 credits)
	CS 656	Internet and Higher Layer Protocols (3 credits)
	CS 696	Network Management and Security (3 credits)
	CS 697	Principles of Broadband ISDN and ATM (3 credits)
	CS 741	Communication Network Design (3 credits)
	CS 752	Communication Protocol Synthesis and Analysis (3 credits)

Software Engineering:

	CS 601	Object-Oriented Programming (3 credits)
	CS 610	Data Structures and Algorithms (3 credits)
	CS 611	Introduction to Computability and Complexity (3 credits)
	CS 630	Operating System Design (3 credits)
	CS 635	Computer Programming Languages (3 credits)
	CS 636	Compiling System Design (3 credits)
	CS 641	Formal Languages and Automata (3 credits)
	CS 667	Design Techniques for Algorithms (3 credits)
	CS 673	Software Design and Production Methodology (3 credits)
	IS 676	Requirements Engineering (3 credits)
	IS 683	Object-Oriented Software Development (3 credits)
	CS 688	Programming for Interactive Environments (3 credits)

Systems Analysis, Simulation and Modeling:

	CS 605	Discrete Event Dynamic Systems (3 credits)
	CS 621	Numerical Analysis I (3 credits)
	CS 622	Numerical Analysis II (3 credits)
	CS 630	Operating System Design (3 credits)
	CS 631	Data Management System Design (3 credits)
	CS 637	Real-Time Systems (3 credits)
	CS 651	Data Communications (3 credits)
	CS 654	Telecommunication Networks Performance Analysis (3 credits)
	CS 661	Systems Simulation (3 credits)
	CS 662	Model Analysis and Simulation (3 credits)
	CS 741	Communication Network Design (3 credits)

Electrical Engineering

Administered By: Department of Electrical and Computer Engineering

Administration

Chairperson	Atam P. Dhawan
Associate Chairperson	Sui-hoi E. Hou(Undergraduate), ansarin(Graduate)

Faculty

Distinguished Professors	Yeheskel Bar-Ness, Bernard Friedland, Jacob Savir
Professors	Ali N. Akansu, Ansarin, William N. Carr, Roy H. Cornely, Atam P. Dhawan, Haim Grebel, Richard A. Haddad, Alexander M. Haimovich, Jacob Klapper, Durgamadhab Misra, Solomon Rosenstark, Yun-qing Shi, Kenneth S. Sohn, Marek Sosnowski, Gerald Whitman, Mengchu Zhou, Sotirios G. Ziavras
Associate Professors	Symeon Papavassiliou, John D. Carpinelli, Timothy N. Chang, Hongya Ge, Sui-hoi E. Hou, Walid Hubbi, Constantine N. Manikopoulos, Edip Niver, Sirin Tekinay, Leonid Tsybeskov
Assistant Professors	Ali Abdi, Jie Hu, Swades K. De, Roberto Rojas-Cessa, Roy R. You
Special Lecturer	Ezzat Bakhoun, Arthur B. Glaser

Advisors

Undergraduate Advisor	Geny A. Moreno
Undergraduate Advisor	Sui-hoi E. Hou
MS Electrical Engineering Advisor	John D. Carpinelli
PHD Electrical Engineering Advisor	ansarin
MS Computer Engineering Advisor	Durgamadhab Misra
PHD Computer Engineering Advisor	Ansarin

Degrees Offered: Master of Science in Electrical Engineering; Doctor of Philosophy in Electrical Engineering

The Department of Electrical and Computer Engineering serves the community, the state and the nation by educating engineers, expanding knowledge and developing new tools for solving complex technological problems. The department's graduate programs offer students with backgrounds in electrical engineering or related areas unusual opportunities to specialize in advanced phases of electrical engineering. In addition to more than 30 full-time faculty members devoted to teaching and research, students are taught by adjunct professors from industry who offer specialty courses in their area of expertise and serve on thesis and dissertation committees.

The master's degree programs provide state-of-the-art training at advanced levels in areas of technical specialization, including faculty-supervised research. Students in the doctoral program conduct significant original research in areas of interest to department members. Students also have opportunities to conduct thesis research at industrial sites, hospitals, biomedical engineering facilities, and university centers and departments.

Master of Science in Electrical Engineering

A program for students with an undergraduate degree in engineering who wish either to specialize in an advanced phase of electrical engineering or prepare for a more advanced degree.

Admission Requirements:

Applicants are expected to have undergraduate backgrounds in physics, mathematics (through differential equations and vector analysis), electrical networks and devices, electronics, analysis and design methods, transients, electromagnetic fields, and appropriate laboratory work in some of these areas. GRE scores must be submitted. International students must also achieve a minimum TOEFL score of 550 (313 computer-based). For further information, see the Admissions section in this catalog.

Bridge Program: Students who have earned a Bachelor of Science in Engineering Technology (B.S.E.T.) degree, or who lack an appropriate background may be admitted and be required to take selected courses such as the ones listed below in addition to the degree requirements in order to make up deficiencies. They must attain a grade of B or better in each course. At the discretion of the department, students who have taken courses equivalent to these may have their bridge programs reduced accordingly.

	ECE 321	Random Signals and Noise (3-0-3)
	ECE 232	Circuits and Systems II (3-1-3)
	ECE 333	Systems and Signals (3-0-3)
	ECE 361	Electromagnetic Fields I (3-0-3)
	ECE 362	Electromagnetic Fields II (3-0-3)
	ECE 372	Electronic Circuits II (3-0-3)
	ECE 373	Electronic Circuits III (3-0-3)

Graduate Certificate Program: A 12-credit graduate certificate in Telecommunications Networking is available as a step toward this degree. See **Graduate Certificates** in the Degree Programs section of this catalog. For further information, call the Associate Vice President of Continuing and Distance Education, Division of Continuing Professional Education, 1 (800) 624-9850 or (973) 596-3060; e-mail cpe@njit.edu

Degree Requirements:

Upon entering the program, students select an area of specialization supervised by the MSEE Program Advisor. The master's program consists of 30 credits. Students who enter the program but who do not receive departmental or research-based awards have three program options: 24 course credits and 6 credits of master's thesis; or 27 course credits and 3 credits of master's project; or 30 course credits not to include either a master's project or thesis. Students should consult with the Program Advisor or designee before registering for courses to make sure they are meeting department requirements. As a requirement for graduation, students must achieve a 3.0 cumulative GPA in graduate-level courses, not including the master's thesis or project. The project grade must be B or better.

ECE courses at the 500 level are not acceptable for credit toward a graduate degree in electrical engineering. Only one 500 level course outside the department may be applied for credit toward a graduate degree in electrical engineering.

All students are required to fulfill two semesters of **ECE 791** Graduate Seminar.

Project, Thesis:

Thesis is required for all those receiving departmental or research-based support. For all others, a project or thesis is optional.

	ECE 700	Master's Project (3 credits)
*	ECE 701	Master's Thesis (3 credits)

Areas of Specialization:

Entering students must select an area of specialization during their first semester. Special topics courses and electives are chosen with the approval of the MSEE Program Advisor or designee. Two non-ECE graduate courses may be chosen. Students should contact the MSEE Program Advisor for guidance.

Electrical Engineering Core:

Applies to all areas of specialization in Electrical Engineering

6 credits:

	ECE 601	Linear Systems (3 credits)
{	ECE 673	Random Signal Analysis I (3 credits) or
	ECE 620	Electromagnetic Field Theory (3 credits)

Focus Area: Communications, Signal Processing and Microwave:

Area requirements (Choose at least two)

	ECE 642	Communication Systems I (3 credits)
	ECE 742	Communication Systems II (3 credits)
	ECE 740	Advanced Digital Signal Processing (3 credits)
	ECE 630	Microwave Engineering (3 credits)
	ECE 632	Antenna Theory (3 credits)

Suggested Electrical Engineering Electives:

	ECE 609	Artificial Neural Networks (3 credits)
	ECE 622	Wave Propagation (3 credits)
	ECE 623	Fourier Optics (3 credits)
	ECE 625	Fiber and Integrated Optics (3 credits)
	ECE 626	Optoelectronics (3 credits)
	ECE 642	Communication Systems I (3 credits)
	ECE 644	Introduction to Wireless and Personal Communications Systems (3 credits)
	ECE 684	Advanced Microprocessor Systems (3 credits)
	ECE 746	Adaptive Array Processing and Interference Cancellation (3 credits)
	ECE 747	Signal Decomposition Techniques: Transforms, Sub-bands, and Wavelets (3 credits)
	ECE 755	Advanced Topics in Digital Communications (3 credits)
	ECE 757	Advanced Wireless Communications (3 credits)
	ECE 776	Information Theory (3 credits)
	ECE 777	Statistical Decision Theory in Communications (3 credits)
	ECE 778	Algebraic Coding for Information Transmission (3 credits)

Focus Area : Computer Networking:

Area requirements

	ECE 683	Computer Network Design and Analysis (3 credits)
	ECE 783	Computer Communication Networks (3 credits)

Suggested Electrical Engineering Electives:

	ECE 605	Discrete Event Dynamic Systems (3 credits)
	ECE 637	Introduction to Internet Engineering (3 credits)
	ECE 638	Network Management and Security (3 credits)
	ECE 639	Principles of Broadband Networks (3 credits)
	ECE 642	Communication Systems I (3 credits)
	ECE 644	Introduction to Wireless and Personal Communications Systems (3 credits)
	ECE 645	Wireless Networks (3 credits)
	ECE 658	VLSI Design I (3 credits)
	ECE 677	Optimization Techniques (3 credits)
	ECE 681	Broadband Packet Switches (3 credits)
	ECE 690	Computer Systems Architecture (3 credits)
	ECE 742	Communication Systems II (3 credits)
	ECE 745	Advanced Wireless Networks (3 credits)
	ECE 785	Parallel Processing Systems (3 credits)
	ECE 685	Network Interface Design (3 credits)
	CS 610	Data Structures and Algorithms (3 credits)
	CS 665	Algorithmic Graph Theory (3 credits)
	Math 661	Applied Statistics (3 credits)
	Mgmt 685	Operations Research and Decision Making (3 credits)

Focus Area : Computer Architecture and Systems:

Area requirements

	ECE 689	Digital System Design for Machine Arithmetic (3 credits)
	ECE 690	Computer Systems Architecture (3 credits)

Suggested Electrical Engineering Electives:

	ECE 605	Discrete Event Dynamic Systems (3 credits)
	ECE 612	Computer Methods Applied to Power Systems (3 credits)
	ECE 640	Digital Signal Processing (3 credits)
	ECE 643	Digital Image Processing I (3 credits)
	ECE 650	Electronic Circuits (3 credits)
	ECE 660	Control Systems I (3 credits)
	ECE 664	Real-time Computer Control Systems (3 credits)
	ECE 684	Advanced Microprocessor Systems (3 credits)
	ECE 686	Instrumentation Systems and Microprocessors (3 credits)
	ECE 687	Design of Medical Instrumentation (3 credits)
	ECE 688	Microcontrollers in Instrumentation (3 credits)
	ECE 785	Parallel Processing Systems (3 credits)

Focus Area : Solid State, VLSI and Electro-optics Systems:

Area requirements (Choose at least two)

	ECE 622	Wave Propagation (3 credits)
	ECE 626	Optoelectronics (3 credits)
	ECE 650	Electronic Circuits (3 credits)
	ECE 657	Semiconductor Devices (3 credits)
	ECE 658	VLSI Design I (3 credits)
	ECE 758	VLSI Design II (3 credits)

Suggested Electrical Engineering Electives:

	ECE 605	Discrete Event Dynamic Systems (3 credits)
	ECE 623	Fourier Optics (3 credits)
	ECE 624	Optical Engineering (3 credits)
	ECE 625	Fiber and Integrated Optics (3 credits)
	ECE 630	Microwave Engineering (3 credits)
	ECE 648	Digital Microelectronics (3 credits)
	ECE 659	Fabrication Principles of Electronic and Optoelectronic Devices (3 credits)
	ECE 660	Control Systems I (3 credits)
	ECE 677	Optimization Techniques (3 credits)
	ECE 684	Advanced Microprocessor Systems (3 credits)
	ECE 690	Computer Systems Architecture (3 credits)
	ECE 730	Theory of Guided Waves (3 credits)
	ECE 739	Laser Systems (3 credits)
	ECE 756	Advanced Topics in Semiconductor Devices (3 credits)
	ECE 785	Parallel Processing Systems (3 credits)
	ECE 789	Selected Topics in Electrical and Computer Engineering II (3 credits)
	ECE 677	Optimization Techniques (3 credits)
	ECE 768	Optimal Control Theory (3 credits)
	MtSE 702	Characterization of Solids (3 credits)
	MtSE 650	Physical Metallurgy (3 credits)
	MtSE 765	Science and Technology of Thin Films (3 credits)

Focus Area : Intelligent Systems:

Area requirements (choose at least two)

	ECE 605	Discrete Event Dynamic Systems (3 credits)
	ECE 609	Artificial Neural Networks (3 credits)
	ECE 610	Power System Steady-State Analysis (3 credits)
	ECE 660	Control Systems I (3 credits)

Suggested Electrical Engineering Electives:

	ECE 611	Transients in Power Systems (3 credits)
	ECE 612	Computer Methods Applied to Power Systems (3 credits)
	ECE 613	Protection of Power Systems (3 credits)
	ECE 614	Dynamics of Electromechanical Energy Conversion (3 credits)
	ECE 615	Advanced Electromechanical Energy Conversion I (3 credits)
	ECE 616	Power Electronics (3 credits)
	ECE 640	Digital Signal Processing (3 credits)
	ECE 664	Real-time Computer Control Systems (3 credits)
	ECE 666	Control Systems II (3 credits)
	ECE 661	Control System Components (3 credits)
	ECE 677	Optimization Techniques (3 credits)
	ECE 684	Advanced Microprocessor Systems (3 credits)
	ECE 766	Stability Theory of Nonlinear Systems (3 credits)
	ECE 768	Optimal Control Theory (3 credits)
	ECE 769	Stochastic Estimation and Control (3 credits)

Doctor of Philosophy in Electrical Engineering

This is a program for superior students with master's degrees in electrical engineering or allied fields who wish to conduct advanced research in an area of electrical engineering.

Exceptional Candidates with a Bachelor of Science in Electrical Engineering

Highly qualified students with bachelor's degrees in electrical engineering may be accepted directly into the doctoral program. Contact the doctoral program coordinator for further information.

Admission Requirements:

Applicants are expected to have a broad background in engineering, mathematics, physics, and computer science. At least half of undergraduate course work should have been in the physical sciences or similar fields. Doctoral students should have majored in electrical engineering or related field, with course work at the master's level in mathematics, physics and/or computer science. In addition, students are expected to be proficient in computer programming. GRE scores must be submitted. International students must also achieve a minimum TOEFL score of 550 (213 computer-based).

Students who lack an appropriate background will be required to take additional courses that cannot be applied as degree credits.

Degree Requirements:

Course selection is determined in consultation with the area faculty.

24 credits minimum of course work beyond the master's degree.

12 credits of 700-level courses (normally associated with the area of specialization as listed in the master's degree description). For details, see the department "Handbook for Graduate Students."

36 credits of ECE790 Doctoral Dissertation.

Registrations for six semesters of ECE 791 Graduate Seminar are required of all doctoral students.

Dissertation and Defense: The dissertation should demonstrate original research that contributes to the knowledge in the field and should result in the submission of at least one paper for publication in a peer-reviewed journal. Students must provide the department a written proposal showing that facilities are available and that there is a faculty member willing to supervise dissertation work. Students who complete 36 credits of ECE 790 before their research is finished, must register for a minimum of 3 credits of ECE 790 every semester thereafter until the dissertation has been accepted. An oral defense of the dissertation is required after submission of the final document to the dissertation committee for approval.

Residency: Degree-seeking students must spend at least one academic year in full-time residence.

Qualifying Examination: The examination contains material related to the student's fundamental knowledge, which includes the area of specialization. Contact the doctoral programs coordinator for more information.

Pre-Doctoral Research: With department approval, well-qualified students may register for up to a maximum of 9 credits of ECE 792 Pre-Doctoral Research prior to passing the qualifying examination. A maximum of 6 credits of ECE 792 may be applied toward the ECE 790 requirement.

* ECE 701 (6 credits)

Catalog and curricula information approved by the relevant academic department.

Engineering Management

Administered By: Department of Industrial and Manufacturing Engineering

Administration

Chairperson	Athanassios Bladikas
Associate Chairperson	George Abdou
Program Director	Carl Wolf

Faculty

Professors	Layek Abdel-Malek, Reggie J. Caudill, Sanchoy K. Das, Paul G. Ranky, Donald H. Sebastian, Stephen J. Tricamo, Carl Wolf
Associate Professors	George Abdou, Golgen Bengu, Athanassios Bladikas, Kevin J. Mcdermott*
Assistant Professors	Arijit Sengupta, Jian Yang
Distinguished Professor	Alok K. Chakrabarti**

* Joint appointment with Department of Engineering Technology.

** Joint appointment with School of Management.

Degrees Offered: Master of Science in Engineering Management

By drawing on the diverse resources available through the university and surrounding industry, the M.S. in Engineering Management program develops engineers and other technically trained individuals for leadership roles in a technologically-based, project-oriented enterprise.

Focus on interdisciplinary course work and research provides students with an advanced background in both the theoretical and practical aspects of managing technical/engineering projects and programs via case studies, role playing, and course work. The engineering management program faculty bring to the classroom a critical blend of practical and academic experience.

Master of Science in Engineering Management

The program is particularly valuable to individuals who have a number of years of experience in industry, government, and service organizations, or those who have been entrepreneurs. It provides these professionals with broad-based knowledge and skills to succeed as organizational managers and project managers, from conceptualization through implementation.

Admission Requirements:

Eligibility for admission requires completion of an undergraduate degree in engineering, the sciences or a closely related area. Students are expected to have achieved an undergraduate GPA of at least 2.8 on a 4.0 scale. Students not satisfying the above requirement will be considered for conditional admission on a case-by-case basis. In some cases, a bridge program will be required to qualify for matriculation.

Bridge Program: Students who lack appropriate academic preparation may be required to take one or more of the following courses before being admitted to the program. These courses are taken in addition to degree requirements:

	EM 501	Industrial Management (3 credits)
	EM 502	Engineering Cost Analysis (3 credits)
	EM 503	Methods and Applications of Industrial Statistics and Probability (3 credits)

Graduate Certificate Program: A 12-credit graduate certificate in Construction Management, Operations Productivity, Pharmaceutical Management or Project Management is available as a step toward this degree. Please see **Graduate Certificates** in this catalog for further information. For more information about continuing and distance education, please contact the Division of Continuing Professional Education, 1-800-624-9850 or 973-596-3060; email: cpe@njit.edu.

Off-Campus Programs: At extension and corporate sites, NJIT offers sufficient courses to fulfill all degree requirements. NJIT faculty teach all courses. For locations, see **Extension Programs** in this catalog. The university's distance learning arm, ACCESS/NJIT, offers this program (as well as part of the bridge program described above) to qualified students who have access to the Internet and a VCR. In addition, distance-based, 12-credit graduate certificates in **Construction Management, Operations Productivity, Pharmaceutical Management or Project Management**, are available as a step toward this degree. See **Graduate Certificates** in this catalog. For further information about extension programs, ACCESS/NJIT programs, and graduate certificates, call the associate vice president of continuing and distance education, Division of Continuing Professional Education, 1 (800) 624-9850 or (973) 596-3060; email cpe@njit.edu.

Degree Requirements:

The program requires 30 credits, 18 of which are taken in a required core. A purpose of the core is to provide knowledge in the functional areas that are the cornerstones of the discipline: organization and people management, cost management, and systems management. The remaining 12 credits are elective courses, which may be within an area of specialization to meet the individual's specific professional and personal objectives. A 3-credit project or a 6-credit thesis is optional. In some cases, students may select courses to enhance their technical competency. In other cases, individuals may select courses to prepare for a change in responsibilities or job function. At least half of the elective courses must be selected from those offered by the Department of Industrial and Manufacturing Engineering.

Seminar : In addition to the minimum 30 degree credits required, all students who receive departmental or research-based awards must enroll each semester in **IE 791** Graduate Seminar.

Core:
18 credits:

	Acct 615	Management Accounting (3 credits)
	EM 602	Management Science (3 credits)
	EM 636	Project Management (3 credits)
	HRM 601	Organizational Behavior (3 credits)
	IE 673	Total Quality Management (3 credits)
	MIS 648	Decision Support Systems for Managers (3 credits)

Project or Thesis (optional):

{	IE700	or
	IE 701	Master's Thesis (6 credits)

Areas of Specialization:

For all areas of specialization, select 6 credits if completing a master's thesis; 9 credits if completing a master's project; 12 credits if not completing either a master's project or thesis.

Project Management:

		EM 634	Legal, Ethical and Intellectual Property Issues for Engineering Managers (3 credits)
		EM 637	Project Control (3 credits)
		EM 691	Cost Estimating for Capital Projects (3 credits)
		IE 651	Industrial Simulation (3 credits)

Cost Engineering:

		EM 632	Legal Aspects in Construction (3 credits)
{		EM 637	Project Control (3 credits) <i>or</i>
		IE 618	Engineering Cost and Production Economics (3 credits)
		EM 691	Cost Estimating for Capital Projects (3 credits)
		Fin 624	Financial Management (3 credits)

Technical Marketing:

		EM 640	Distribution Logistics (3 credits)
		EM 641	Engineering Procurement and Materials Management (3 credits)
		Mrkt 631	Market Planning and Analysis (3 credits)
		Mrkt 636	Design and Development of High Technology Products (3 credits)

Technological Entrepreneurship:

		EM 634	Legal, Ethical and Intellectual Property Issues for Engineering Managers (3 credits)
		Mgmt 620	Management of Technology (3 credits)
		MnE 655	Concurrent Engineering (3 credits)
		Mrkt 636	Design and Development of High Technology Products (3 credits)

Quality:

		EM 674	Benchmarking and Quality Function Deployment (3 credits)
		IE 605	Engineering Reliability (3 credits)
		IE 672	Industrial Quality Control (3 credits)
		MnE 654	Design for Manufacturability (3 credits)

Facility Management:

		Arch 650	Economy of Building (3 credits)
		EM 632	Legal Aspects in Construction (3 credits)
		Fin 624	Financial Management (3 credits)
		IE 653	Facility Maintenance (3 credits)

Manufacturing Systems Management:

		MnE 601	Manufacturing Systems (3 credits)
		MnE 602	Flexible and Computer Integrated Manufacturing (3 credits)
		MnE 603	Management of Manufacturing Systems (3 credits)
		MnE 655	Concurrent Engineering (3 credits)

Management Information Systems:

		EM 655	Management Aspects of Information Systems (3 credits)
		IE 651	Industrial Simulation (3 credits)
		IE 661	Man-Machine Systems (3 credits)
		MIS 690	Executive Information Systems (3 credits)

Engineering Management:

	EM 635	Management of Engineering Research and Development (3 credits)
	EM 714	Multicriteria Decision Making (3 credits)
	HRM 606	Human Resource Management (3 credits)
	IE 618	Engineering Cost and Production Economics (3 credits)
	MIS 645	Managing IT for Competitive Advantage (3 credits)
	MnE 655	Concurrent Engineering (3 credits)

Catalog and curricula information approved by the relevant academic department.

Engineering Science

Administered By: Office of the Dean, Newark College of Engineering

Administration

Program Director

David Kristol

Faculty

Professors from Newark College of Engineering and College of Science and Liberal Arts, as appropriate

Degrees Offered: Master of Science in Engineering Science

The M.S. in Engineering Science allows students to study areas not covered by traditional engineering or science discipline graduate programs. For those already in the work force, the program provides the opportunity to develop expertise relevant to their work.

Master of Science in Engineering Science

This is a very flexible program that permits advanced study from numerous disciplines in engineering and the sciences.

Admission Requirements:

Applicants are expected to have an accredited undergraduate degree in science or engineering. Candidates with other appropriate backgrounds may be considered.

Bridge Program: To ensure academic success in their graduate studies, students may be required to take additional undergraduate or graduate courses before beginning graduate curricula. This program of courses will be individually-designed in consultation with the student's graduate advisor. Such courses are not counted toward degree requirements.

Degree Requirements:

A minimum of 30 credits is required. A thesis or project may be included.

Seminar : In addition to the minimum 30 degree credits, all students who receive departmental or research-based awards must enroll each semester in a graduate seminar. The seminar is selected in consultation with the graduate advisor.

Required:

15 credits, selected in consultation with graduate advisor: 6 credits of 600-level mathematics 3 credits of 600-level physics, chemistry, or biology 6 credits of 600-level engineering courses

PROJECT OR THESIS (optional):

3 or 6 credits: selected in consultation with graduate advisor

Elective:

15 credits selected in consultation with graduate advisor

The elective credits must form a meaningful and coherent program integrated with the specialization in science or engineering.

Catalog and curricula information approved by the relevant academic department.

Graduate Advisor

Hsin-neng Hsieh

Undergraduate Advisor

Taha F. Marhaba

Degrees Offered: Master of Science in Environmental Engineering; Doctor of Philosophy in Environmental Engineering

Environmental engineers are essential participants in the planning, design and construction of waste water and potable water treatment plants, solid waste disposal systems, site remediation and emission control measures, and other similar projects. Major corporations, government agencies, private consulting and construction firms, and universities are just some of the organizations that employ environmental engineers.

In-depth knowledge in environmental engineering is essential for professional practice as well as for research. Full-time faculty members with a range of academic and professional practice experience as well as by adjunct instructors who are experts in their field teach the courses. Those students interested in research at the master's level or continuing their education at the doctoral level should consider working with faculty involved in one of the university's related major research centers.

Master of Science in Environmental Engineering

The M.S. in Environmental Engineering is designed for those who want both specialized course work and the flexibility to tailor their program to their needs.

Admission Requirements:

Applicants are expected to have an undergraduate degree in engineering or its equivalent. Students who lack an appropriate undergraduate background may be granted conditional admission in order to complete a bridge program or its equivalent. These courses are taken in addition to regular degree requirements; descriptions may be found in the undergraduate catalog.

Bridge Program: Students who lack appropriate background are asked to make up deficiencies by taking a program of courses, including any prerequisites, that is designed in consultation with graduate advisors. See the undergraduate catalog for description of bridge courses. These courses are taken in addition to the degree requirements:

	CE 320	Fluid Mechanics (4-0-4)
	CE 321	Water Resources Engineering (3-0-3)
	CE 322	Hydraulic Engineering (3-0-3)
	CE 501	Introduction to Soil Behavior (3 credits)
	Chem 126	General Chemistry II (3-0-3)
	CIS 101	Computer Programming and Problem Solving (2-1-2)
	Math 222	Differential Equations (4-0-4)
	Mech 234	Engineering Mechanics (2-0-2)
	Mech 236	Dynamics (2-0-2)

Degree Requirements:

The program comprises 30 credits of required and elective courses. The student consults the graduate advisor to plan and maintain an individualized and cohesive sequence of courses.

Seminar: In addition to the minimum 30 degree credits required, all students who receive departmental or research-based awards must enroll each semester in EnE 791 Graduate Seminar.

Required:

12 credits as follows:

	EnE 663	Water Chemistry (3 credits)
	EnE 660	Introduction to Solid and Hazardous Waste Problems (3 credits)
	EnE 661	Microbiology for Environmental Engineers (3 credits)
	Math	(Graduate mathematics or computer science course approved by graduate advisor)

Thesis:

Required of those receiving departmental awards; elective for all others.

	EnE 701	Master's Thesis (6 credits)
--	---------	-----------------------------

Elective:

Select 12 credits if completing a master's thesis; 18 credits if not completing a master's thesis, from:

	CE 601	Advanced Remote Sensing (3 credits)
	CE 602	Geographic Information System (3 credits)
	CE 604	Environmental Modeling in Remote Sensing (3 credits)
	CE 605	Research Methods in Remote Sensing (3 credits)
	CE 618	Applied Hydrogeology (3 credits)
	CE 620	Open Channel Flow (3 credits)
	CE 621	Hydrology (3 credits)
	CE 623	Groundwater Hydrology (3 credits)
	CE 647	Geotechnical Aspects of Solid Waste (3 credits)
	CE 702	Special Topics in Civil Engineering (3 credits)
	EnE 610	Hazardous Site Operations (3 credits)
	EnE 662	Site Remediation (3 credits)
	EnE 664	Physical and Chemical Treatment (3 credits)
	EnE 665	Biological Treatment (3 credits)
	EnE 666	Analysis of Receiving Waters (3 credits)
	EnE 668	Air Pollution Control (3 credits)
	EnE 669	Water and Wastewater Analysis (3 credits)

	EnE 670	Advanced Processes in Water Pollution Control (3 credits)
	EnE 671	Environmental Impact Analysis (3 credits)
	EnE 672	Stormwater Management (3 credits)
	EnE 700	Environmental Engineering Project (3 credits)
	EnE 702	Special Topics in Environmental Engineering (3 credits)
	EnE 720	Environmental Chemodynamics (3)
	EnE 760	Applied Environmental Soil Chemistry (3 credits)

Doctor of Philosophy in Environmental Engineering

This is a program for superior students with master's degrees in environmental engineering, civil engineering, or allied fields who wish to conduct advanced research in an area of environmental engineering. In exceptional circumstances, highly qualified students with bachelor's degrees in civil engineering or environmental engineering may be accepted directly into the doctoral program.

Admission Requirements:

A minimum master's GPA of 3.5 on a 4.0 scale, or equivalent, is normally required for admission. The GRE (general section) is required of all applicants. All international students must also achieve a minimum TOEFL score of 550 (pencil and paper) and 213 (computer-based).

Degree Requirements:

The department approves specific degree requirements and dissertation topics on an individual basis. Students must attain a minimum overall GPA of 3.0. Students must conduct independent original research in a specific area of environmental engineering. Students must select an advisor willing to supervise dissertation work.

36 credits minimum of EnE 790 Doctoral Dissertation is generally required. These 36 credits should be completed before submission of the final dissertation document. Students must register for a minimum of 3 credits of EnE 790 until the dissertation has been submitted and accepted.

24 credits minimum of course work beyond the master's degree is required, of which at least 12 credits must be at the 700 level; the remaining credits may be at the 600 level.

Seminar: EnE 791 Graduate Seminar is required for all doctoral students every semester.

Preliminary Qualifying Examination: Full-time students must take the preliminary qualifying examination for the first time within one year of beginning active study and must pass it completely by the next time the examination is offered. Part-time students must take the preliminary qualifying examination for the first time within three years of the beginning of active study and must pass it completely by the next time it is offered. Exceptional students having only bachelor's degrees who are admitted directly into the doctoral program must take the preliminary qualifying examination within one and one-half years of admission and must pass it within two years. All students are permitted to take the examination only twice.

Dissertation Committee: After passing the preliminary qualifying examination, each student in consultation with the major faculty member develops a list of five faculty members who have agreed to serve on an advisory committee as follows: two or three members of the graduate faculty in the student's major area of interest; a member of the graduate faculty in the student's major area appointed by the department chairperson; a member of the graduate faculty of the Department of Civil and Environmental Engineering from another field of interest; a member of the graduate faculty from the area of the student's minor field of interest.

Research Proposal: Doctoral students must prepare a written research proposal and make an oral presentation for approval by their dissertation committee. The proposal must be presented after formation of the committee but within six months after passing the qualifying examination. Research is expected to investigate or develop a unique contribution to science and technology.

Dissertation Defense: An oral defense of the dissertation is required after submission of the final document to the department for approval. Signatures of all members of the dissertation committee must be received for final approval to be granted.

Environmental Policy Studies

Administered By: Division of Policy Sciences, Department of Chemistry and Environmental Science

Administration

Division Director, Program Director

Nancy L. Jackson

Program Coordinator

Michele L. Collins

Faculty

Professor Emeritus

Barbara B. Kebbekus

Associate Professor

Nancy L. Jackson

Assistant Professors

Maurie Cohen, Zeyuan Qiu

Affiliated Faculty

Sima Bagheri, Daniel J. Watts, Eric M. Katz, Somenath Mitra

Degrees Offered: Master of Science in Environmental Policy Studies, Ph.D. Environmental Science, policy concentration

The Master of Science in Environmental Policy Studies focuses on the role of the social sciences in the development, implementation and evaluation of environmental policy. Building on the strengths of a technological university, students take foundation courses in geography, economics, ethics and policy. Application courses on economic modeling, geospatial analysis and applied ethics enable students to acquire skills in the tools and methods used in environmental problem solving and policy analysis. The core faculty is multidisciplinary with strengths in geography, economics, planning and ethics. Affiliated faculty have strengths in GIS, remote sensing, chemistry, engineering, and history. Graduates of the program have secured employment in both the public and private sectors including: U.S. Environmental Protection Agency, regional planning commissions, local community development programs, private engineering and planning firms, and software development corporations. Graduates have entered doctoral level programs in environmental science, history and law.

The Ph.D. in Environmental Science - policy concentration is offered jointly with the Department of Chemistry and Environmental Science at NJIT. Successful environmental policies must rest on the development of reliable models for assessing change to the biophysical environment in the presence of human action. The Department of Chemistry and Environmental Science and the Graduate Program in Environmental Policy Studies offers a research-oriented doctoral degree in Environmental Science with a concentration in Environmental Policy. The program emphasis is on the integration of the environmental and social science to develop more effective responses to resource problems. For more information about this program and the degree requirements, please visit the Department of Chemistry and Environmental Science [website](#).

Master of Science in Environmental Policy Studies

The program is designed to provide students the opportunity to acquire skills in the tools and methods used in environmental problem solving and policy analysis. The program may be completed on a part-time or full-time basis.

Admission Requirements:

The following criteria are applied when considering an applicant for admission to the program:

- An undergraduate degree in earth sciences (e.g. geography, geology, meteorology), social sciences (e.g. economics, ethics, policy sciences), engineering (e.g. environmental, chemical) or another related discipline.
- An undergraduate GPA of at least 3.0 and at least 3.5 in major field (on a scale of 4.0).
- A minimum of one semester of statistics at the undergraduate level; an advanced statistics course at the undergraduate level is highly desirable.
- A combined GRE score (verbal and quantitative) of at least 1100

The following materials must be submitted to be considered for admission:

- Application for Admission to Graduate Study form
- MS-EPS Supplemental Materials form
- Official transcripts of all prior work and certificate of graduation
- Personal statement (two to three pages)
- Three letters of recommendation
- Graduate Record Examination (GRE) scores
- International students are required to pass the TOEFL at 550 (pencil and paper), 213 (computer based) or above.

Degree Requirements:

Students are required to complete a total of 30 graduate course credits: 18 credits of required Foundation courses and 12 credits of elective courses selected from Application courses. Students may elect to write a 6 credit thesis. All courses are three credits unless indicated.

Core:

18 credits:

	EPS 601	Behavioral Research Methods and Analysis (3 credits)
	EPS 612	Introduction to Environmental Policy Studies (3 credits)
	EPS 614	Environmental Economics (3 credits)
	EPS 622	Sustainable Development (3 credits)
	EPS 638	Physical Geography (3)
	EPS 660	Ethics and Environmental Policy (3 credits)

Thesis Option:

	EPS 701	Master's Thesis (6 credits)
--	---------	-----------------------------

APPLICATION COURSES:

Students must complete 12 credits of application courses. Those students that wish to pursue a master's thesis must complete 6 credits of application courses in addition to the thesis.

Students may select from courses in a number of different disciplines. The following is a partial listing of course offerings:

Environmental Policy Studies:

	EPS632	
	EPS640	
	EPS652	
	EPS698	
	EPS 725	Independent Study I (3 credits)
	EPS 726	Independent Study II (3 credits)

Environmental Science:

		EvSc 612	Environmental Analysis (3 credits)
		EvSc 613	Environmental Problem Solving (3 credits)
		EvSc 614	Quantitative Environmental Risk Assessment (3 credits)
		EVSC621	
		EVSC622	

Civil and Environmental Engineering:

		CE 506	Remote Sensing of Environment (3 credits)
		CE 602	Geographic Information System (3 credits)
		EnE 671	Environmental Impact Analysis (3 credits)
		EnE 662	Site Remediation (3 credits)

Catalog and curricula information approved by the relevant academic department.

------------------------	-------------------------------------

Degrees Offered: Master of Science in Environmental Science; Doctor of Philosophy in Environmental Science. Both degrees are offered jointly by NJIT and Rutgers-Newark.

The environmental science graduate programs are offered through several departments at New Jersey Institute of Technology and at Rutgers Newark, collaborating in an interdisciplinary program of research and teaching. These are the departments of Chemistry and Environmental Science, and Environmental Policy at NJIT, the Federated Department of Biological Sciences, and the Rutgers-Newark Department of Earth & Environmental Sciences. The strong research program is supported by major grants from federal and state agencies, and industry. Environmental science plays a major role in several NJIT research centers, including the Hazardous Substance Management Research Center, the Northeast Hazardous Substance Research Center, the Particle Technology Center, and the Center for Membrane Technologies. Research grants involve collaborations with other universities including MIT, Princeton, Rutgers, UMDNJ, Utah, Karlsruhe (Germany), Bordeaux and Lille (France).

Master of Science in Environmental Science

This is an interdisciplinary program intended for individuals with backgrounds in science or engineering who want advanced education in the identification, management, treatment and effects of hazardous and toxic materials in the environment. It may be taken on a part-time or full-time basis.

Admission Requirements:

Applicants should have undergraduate degrees in chemistry, biology, chemical engineering, environmental engineering, environmental science, or related fields who have taken a minimum of one year of college chemistry and mathematics through calculus. Students who lack an appropriate background may be considered for admission and required to take a program of courses that is designed in consultation with the graduate advisor. These may include undergraduate courses which are not counted toward degree credit.

A minimum undergraduate GPA of 3.0 on a 4.0 scale, or equivalent, is typically required for admission. Those applying for financial support and those whose last prior degree was from outside the United States must submit GRE scores. International students must achieve a minimum TOEFL score of 550 (pencil and paper) and 213 (computer-based).

Degree Requirements:

A minimum of 30 degree credits is required. Candidates must consult with the graduate advisor (not thesis advisor) in designing appropriate programs of study.

Students must attain a minimum GPA of 3.0 in the core courses listed below, and a minimum overall GPA of 3.0.

Seminar: In addition to the minimum 30 degree credits required, all students who receive departmental or research-based awards must enroll each semester in **EvSc 600** Environmental Science Seminar.

Core:

15 credits:

	EM 631	Legal Aspects in Environmental Engineering (3 credits)
	EvSc 610	Environmental Chemical Science (3 credits)
	EvSc 612	Environmental Analysis (3 credits)
	EvSc 616	Toxicology for Engineers and Scientists (3 credits)

R120:604 Microbiology: Principles and Applications

Thesis:

Required of those receiving departmental or research-based support; others may choose 6 credits of course work instead of thesis.

6 credits:

	EvSc 701	Master's Thesis (3 credits)
--	-----------------	-----------------------------

Elective:

Courses are offered at NJIT and Rutgers-Newark and selected with the graduate advisor's (not thesis advisor's) approval.

9 credits if completing a master's thesis; 15 credits if not completing a master's thesis from:

	R120:551	Biology of Pollution (3 credits)
	R120:536	Multivariate Biostatistics (3 credits)
	R120:616	Topics in Biology (1 to 3 credits by arrangement)
	R460:577	Seminar in Environmental Geology (3 credits)
	CE 618	Applied Hydrogeology (3 credits)
	ChE 685	Industrial Waste Control I (3 credits)
	ChE 686	Industrial Waste Control II (3 credits)
	ChE 687	Industrial Gas Cleaning (3 credits)
	ChE 740	Biological Treatment of Hazardous Chemical Wastes (3 credits)
	Chem 662	Air Pollution Analysis (3 credits)
	Chem 664	Advanced Analytical Chemistry (3 credits)
	EnE 660	Introduction to Solid and Hazardous Waste Problems (3 credits)
	EnE 662	Site Remediation (3 credits)
	EnE 664	Physical and Chemical Treatment (3 credits)
	EnE 665	Biological Treatment (3 credits)
	EnE 668	Air Pollution Control (3 credits)
	EPS671	
	EPS 613	Environmental History and Policy (3 credits)
	EPS 614	Environmental Economics (3 credits)
	EPS 660	Ethics and Environmental Policy (3 credits)
	EvSc 602	Special Topics in Environmental Science I (3 credits)
	EvSc 611	Hazardous Waste Management (3 credits)
	EvSc 613	Environmental Problem Solving (3 credits)
	EvSc 614	Quantitative Environmental Risk Assessment (3 credits)
	EvSc 615	Global Environmental Problems (3 credits)
	EvSc 700	Master's Project (3 credits)
	EvSc 702	Special Topics in Environmental Science II (3 credits)
	EvSc 711	Advanced Environmental Analysis (3 credits)
	EvSc 725	Independent Study I (3 credits)
	EvSc 726	Independent Study II (3 credits)
	IE 615	Industrial Hygiene and Occupational Health (3 credits)
	ME 660	Noise Control (3 credits)
	ME661	
	ME662	

Doctor of Philosophy in Environmental Science

This is a research-oriented degree intended for full-time students. Although courses may be taken on a part-time basis, a minimum of one year of full-time residency is typically required for completion of the doctoral dissertation.

Admission and Degree Requirements for Students Entering with a Master's Degree

A master's degree in chemistry, biology, chemical engineering, environmental engineering, environmental science, or related fields is usually required. Highly qualified students with bachelor's degrees in these fields may also be accepted directly into the doctoral program.

A minimum master's GPA of 3.5 on a 4.0 scale, or equivalent, is typically required for admission. GRE scores must be submitted. International students must achieve a minimum TOEFL score of 550.

Specific degree requirements and dissertation topics are approved by the department on an individual basis. Students must attain a minimum overall GPA of 3.0. A minimum of 36 credits of **EvSc 790** Doctoral Dissertation, and registration every semester for **EvSc 600** Environmental Science Seminar, are required. Should the 36 credits of **EvSc 790** be completed before submission of the final dissertation document, students must register for a minimum of 3 credits of **EvSc 790** per semester until it has been submitted and accepted. In addition, at least 24 credits of course work beyond the master's degree are required, of which 12 credits must be at the 700-level and chosen in consultation with the graduate advisor. No more than 6 credits may be in Independent Study (**EvSc 725** or **EvSc 726**).

Qualifying Examination: All applicants are expected to pass a qualifying examination that tests general competence in environmental sciences at the master's level. It must be taken within the first year following admission to the program, and passed within two years. A student will be allowed only two attempts to pass the examination.

Formation of Dissertation Committee: Within three months of passing the qualifying examination, doctoral students must form a dissertation committee that meets the approval of the graduate advisor (not the dissertation advisor) in environmental science. As a minimum, the committee must consist of the doctoral student's dissertation advisor, three additional faculty members from the program, and one member from outside the program and the Department of Chemical Engineering, Chemistry and Environmental Science.

Research Proposal: Within six months of forming the dissertation committee, doctoral students must make a formal oral presentation to their dissertation committee and other interested persons on the scope of their proposed research. The committee must formally approve the proposal within a maximum of three additional months. This ensures meeting the requirements that doctoral students must have an approved dissertation committee and an approved dissertation proposal within a year of passing the qualifying examination.

Dissertation Defense: An oral defense of the dissertation is required after submission of the final document to the dissertation committee for approval. Signatures of all members of the dissertation committee must be received for final approval to be granted.

Students must attain a minimum GPA of 3.0 in the required courses (**EvSc 610**, **EvSc 612**, **EvSc 616**, **EM 631**, and **R120:604**), and a minimum overall GPA of 3.0.

Admission and Degree Requirements for Students Entering with a Bachelor's Degree

Exceptional students with appropriate undergraduate degrees may apply directly for admission to the doctoral program. Applicants are evaluated on a case-by-case basis. A minimum undergraduate GPA of 3.5 on a 4.0 scale, or equivalent, is typically required for admission. GRE scores must be submitted. International students must achieve a minimum TOEFL score of 550.

Students must attain a minimum GPA of 3.0 in the required courses (**EvSc 610**, **EvSc 612**, **EvSc 616**, **EM 631**, and **R120:604**), and a minimum overall GPA of 3.0.

Required:

51 credits as follows:

	R120:604	Microbiology: Principles and Applications (3 credits)
	EM 631	Legal Aspects in Environmental Engineering (3 credits)
	EvSc 610	Environmental Chemical Science (3 credits)
	EvSc 612	Environmental Analysis (3 credits)
	EvSc 616	Toxicology for Engineers and Scientists (3 credits)

In addition, a minimum of 36 credits of **EvSc 790** Doctoral Dissertation, and registration every semester for **EvSc 600** Environmental Science Seminar, are required. Should the 36 credits of **EvSc 790** be completed before submission of the final dissertation document, students must register for a minimum of 3 credits of **EvSc 790** per semester until it has been submitted and accepted.

Elective:

27 credits as follows :

12 credits from 700-level courses chosen in consultation with the graduate advisor. No more than 6 credits may be in Independent Study(**EvSc 725** or **EvSc 726**).

15 credits from any 600- or 700-level courses (may be from outside the department)

Qualifying Examination - A qualifying examination must be taken within three semesters of admission to the program, and passed within two years. A student will only be allowed two attempts to pass the examination.

Formation of Dissertation Committee - Within three months of passing the qualifying examination, doctoral students must form a dissertation committee that meets the approval of the graduate advisor (not the dissertation advisor) in environmental science. As a minimum, the committee must consist of the doctoral student's dissertation advisor, three additional faculty members from the program, and one member from outside the program and the Department of Chemical Engineering, Chemistry and Environmental Science.

Research Proposal - Within six months of forming the dissertation committee, doctoral students must make an oral presentation to their dissertation committee and other interested persons on the scope of their proposed research. The committee must formally approve the proposal within a maximum of three additional months. This ensures meeting requirements that doctoral students must have an approved dissertation committee and an approved dissertation proposal within a year of passing the qualifying examination.

Dissertation Defense - An oral defense of the dissertation is required after submission of the final document to the dissertation committee for approval. Signatures of all members of the dissertation committee must be received for final approval to be granted.

If students are unable to complete the requirements for the Ph.D. degree, they may become a candidate for the Master of Science in Environmental Science upon completion of requirements for that degree.

Catalog and curricula information approved by the relevant academic department.

History

Administered By: Federated History Department of Rutgers-Newark and NJIT

Administration

Chairpersons	Richard B. Sher, Jan Lewis
Director, Graduate Programs	Susan Carruthers
NJIT Graduate Coordinator	Neil M. Maher
Deputy Chair(Rutgers-Newark)	Jon Cowans

Faculty

Distinguished Professors	Richard B. Sher
Professors	John E. O'Connor
Assistant Professors	Neil M. Maher, Stephen G. Pemberton, Doris H. Sher
Special Lecturer	Kevin P. Gumienny

Rutgers-Newark Faculty

Board of Governors Distinguished Service Professor	Clement Price
Professors	Peter Golden, Jan Lewis, Jonathan Lurie, Said Samatar, Odoric Wou
Associate Professors	Susan Carruthers, Jon Cowans, James Goodman, Frederic Russell, Beryl Satter
Assistant Professors	Karen Caplan, Prachi Deshpande, Gary Farney, Eva Giloi

Degrees Offered: Master of Arts in History, Master of Arts in Teaching (History). Both degrees are offered by NJIT and Rutgers-Newark.

Students interested in history of technology, environment and medicine should contact the graduate coordinator and apply to NJIT; students interested in American history, world history or the master's in teaching for history should contact the graduate programs director and apply to Rutgers-Newark.

The Federated History Department offers the master of arts for generalists and for students interested in preparing for further graduate study in history, and the Master of Arts in Teaching for current and prospective secondary school teachers of history and social studies. The objective of the graduate history program is to furnish a broad yet rigorous course of study in preparation for careers in teaching, business, law, government, administration, and other fields related to history, as well as to enhance the professional experience and increase the opportunities for advancement of students who are already working as professionals in these fields.

Program administration and teaching are shared by faculty from both campuses, and the full resources of both universities are available to all history graduate students and faculty. Resources include access to the Rutgers University library system of more than three million volumes, to the outstanding collection in the history of medicine at UMDNJ, and to excellent history collections in the region. The program emphasizes hands-on learning and archival research in association with local institutions, such as the Thomas Edison National Historic Site in nearby West Orange and the Newark Museum and the New Jersey Historical Society in Newark.

The joint Rutgers-Newark/NJIT graduate history program is the largest and most diverse master's-level history program in New Jersey. Many of the graduate faculty have national or international reputations as scholars, representing a wide variety of time periods and fields of study. The program is particularly noted for its strengths in environmental history and the history of science, technology and medicine; the history of film, broadcasting, and print culture; cultural and intellectual history; diplomatic history; history of women; pre-Civil War and contemporary America; African and African-American history; legal history; and global and comparative history.

Master of Arts in History

The M.A. in History furnishes a broad yet rigorous training in history in preparation for a wide variety of careers in education, law, business, medicine, and administration.

Admission Requirements:

Applicants must have an undergraduate degree from an accredited institution and favorable letters of recommendation from professors familiar with their work. An undergraduate GPA of at least 3.0 is normally required. Students must provide GRE scores.

Bridge Program: Students who lack appropriate undergraduate preparation for the program are required to make up deficiencies by taking a program of courses designed in consultation with the graduate advisor. Bridge courses are not counted toward degree credit.

Note: Students interested in history of technology, environment and medicine major field should apply to NJIT. Students interested in the American history or world history major field should contact the graduate programs director and apply to Rutgers-Newark.

Degree Requirements:

A minimum of 30 credits is required: 18 in a major field and 6 in a minor field chosen in consultation with a faculty advisor. The remaining 6 credits may be completed through additional course work or a thesis. A comprehensive examination is also required. Students must have reading ability in a foreign language.

Seminar: In addition to the minimum 30 degree credits required, all students who receive departmental or research-based awards must enroll every semester in **Hist 791** Seminar in History of Technology, Environment and Medicine.

Although faculty from NJIT and Rutgers-Newark teach in all three of the major fields offered, NJIT has primary administrative responsibility for history of technology, environment and medicine. Rutgers-Newark has primary administrative responsibility for the major fields in American history and world history.

History of Technology, Environment and Medicine is unique in its integration of three relatively new and increasingly important historical sub-disciplines. Their rapid growth in recent years reflects greater awareness among professional historians and the general public of the significance of broader issues concerning technology, the environment, and medicine in contemporary life. As these issues loom larger in the consciousness of society, so does the need to learn more about their historical origins, causes, and patterns of development. The department has a distinguished concentration of faculty in these areas, with particular strengths in American environmental history; urban environmental history; the social and cultural history of medicine and technology (including gender issues); military medicine; history of mental health; history of printing and communication; and technology and warfare.

American History Contact the graduate programs director for more information.

World History Contact the graduate programs director for more information.

The following is a sample curriculum for a student completing a major field of study in history of technology, environment and medicine. Those interested in completing a major in world history or American history should contact Rutgers-Newark for information.

Major Field:

History of Technology, Environment and Medicine:

18 credits:

	Hist 622	Culture and Science in the History of American Medicine (3 credits)
	Hist 628	Gender, Science and Technology in the Modern World (3 credits)
	Hist 632	Technology, Culture and History (3 credits)
	Hist 634	Environmental History of North America (3 credits)
	Hist 635	History of Technology, Environment and Medicine: Theory and Method (3 credits)
	Hist 638	Social History of Communication (3 credits)

Minor Field:

6 credits of course work selected in consultation with a faculty advisor

Thesis (optional):

	Hist 701	Master's Thesis (6 credits)
--	----------	-----------------------------

Elective:

6 credits of course work if not completing a master's thesis; selected in consultation with a faculty advisor

Master of Arts in Teaching (History)

The Master of Arts in Teaching is a terminal degree for students who are preparing for, or are already engaged in, careers in secondary school teaching in history and social studies. See the Rutgers Graduate School-Newark catalog for more information.

------------------	----------------

* Joint appointment with Department of Engineering Technology

Degrees Offered: Master of Science in Industrial Engineering; Doctor of Philosophy in Industrial Engineering

The field of industrial engineering brings together the various sciences concerned with technology, the production of goods, performance of services and the way in which people work. Industrial engineers address the efficient utilization of resources to produce quality, as well as cost competitive goods and services in a healthy and efficient work environment. Industrial engineering covers a broad spectrum including production planning and control, manufacturing systems and processes, facilities design, human factors, occupational safety, quality control, systems reliability, and systems analysis and design with a strong emphasis on advanced computing.

Master of Science in Industrial Engineering

A program for individuals who seek professional advancement in the industrial engineering field.

Admission Requirements:

Applicants are expected to have an accredited undergraduate degree in industrial engineering or related fields. For further information, see Admissions in this catalog.

Bridge Program: Students who do not have a bachelor of science degree in industrial engineering may be admitted and required to complete the following bridge program. These courses do not count toward degree requirements:

EM 502	Engineering Cost Analysis (3 credits)
EM 602	Management Science (3 credits)
IE 501	Fundamentals of Industrial Engineering (3 credits)

Graduate Certificate Program: A 12-credit graduate certificate in Operations Productivity is available as a step toward this degree. Please see **Graduate Certificates** in this catalog for further information. For more information about continuing and distance education, please contact the Division of Continuing Professional Education, 1-800-624-9850 or 973-596-3060; email: cpe@njit.edu.

Degree Requirements:

A minimum of 30 credits beyond a baccalaureate degree is required. A master's thesis or independent research is optional. Students select an area of specialization and individually design their programs in consultation with the graduate advisor. Faculty advisor approval must be obtained by students before they are permitted to register for **IE 701** Master's Thesis.

Seminar: In addition to the minimum 30 degree credits required, all students who receive departmental or research-based awards must enroll each semester in **IE 791** Graduate Seminar.

Core:

12 credits:

	IE 604	Advanced Engineering Statistics (3 credits)
	IE 618	Engineering Cost and Production Economics (3 credits)
	IE 621	Systems Analysis and Simulation (3 credits)
	IE 650	Advanced Topics in Operations Research (3 credits)

Thesis or Independent Research (optional):

The following optional courses are appropriate for all areas of specialization:

{	IE 701	Master's Thesis (6 credits) or
	IE 725	Independent Research (3 credits)

Areas of Specialization:

The range of possible specializations is broad. Students should consult the graduate advisor in designing specializations and related degree requirements. The following is a list of possible specializations and suggested electives.

Courses are selected from an area of specialization with the approval of the graduate advisor as follows: 12 credits if completing a master's thesis, 15 credits if completing independent research, or 18 credits if not completing either a master's thesis or independent research.

Quality and Reliability Engineering:

	EM 635	Management of Engineering Research and Development (3 credits)
	EM 640	Distribution Logistics (3 credits)
	IE 605	Engineering Reliability (3 credits)
	IE 606	Maintainability Engineering (3 credits)
	IE 608	Product Liability Control (3 credits)
	IE 672	Industrial Quality Control (3 credits)
	IE 674	Quality Maintenance and Support Systems (3 credits)
	MnE 655	Concurrent Engineering (3 credits)

Cost Engineering:

	EM 636	Project Management (3 credits)
	EM 691	Cost Estimating for Capital Projects (3 credits)
	EM 693	Managerial Economics (3 credits)
	EM 771	Operations Cost and Management Control (3 credits)
	IE 605	Engineering Reliability (3 credits)
	IE 606	Maintainability Engineering (3 credits)
	IE 618	Engineering Cost and Production Economics (3 credits)
	IE 641	Operations Analysis (3 credits)
	IE 651	Industrial Simulation (3 credits)
	IE 653	Facility Maintenance (3 credits)
	IE 672	Industrial Quality Control (3 credits)

Operations Research and Decision Sciences:

	EM 714	Multicriteria Decision Making (3 credits)
	IE 605	Engineering Reliability (3 credits)
	IE 623	Linear Programming (3 credits)
	IE 624	Heuristic Methods (3 credits)
	IE 651	Industrial Simulation (3 credits)
	IE 652	Facilities Location and Plant Layout (3 credits)
	IE 672	Industrial Quality Control (3 credits)
	IE 704	Sequencing and Scheduling (3 credits)
	IE 705	Mathematical Programming in Management Science (3 credits)
	IE 706	A Queueing Approach to Performance Analysis (3 credits)

Human Factors/Ergonomics:

	IE 605	Engineering Reliability (3 credits)
	IE 614	Safety Engineering Methods (3 credits)
	IE 615	Industrial Hygiene and Occupational Health (3 credits)
	IE 665	Applied Industrial Ergonomics (3 credits)
	IE 670	Industrial Work Physiology (3 credits)
	IE 672	Industrial Quality Control (3 credits)
	IE 675	Safety in Facility and Product Design (3 credits)
	IE 760	Quantitative Methods in Human Factors (3 credits)
	ME 660	Noise Control (3 credits)
	ME 670	Introduction to Biomechanical Engineering (3 credits)
	ME 671	Biomechanics of Human Structure and Motion (3 credits)
	MnE 601	Manufacturing Systems (3 credits)
	MNE612	

Production and Manufacturing Systems:

	CS 610	Data Structures and Algorithms (3 credits)
	CS 651	Data Communications (3 credits)
	EM 655	Management Aspects of Information Systems (3 credits)
	IE 618	Engineering Cost and Production Economics (3 credits)
	IE654	
	IE655	
	ME 635	Computer-Aided Design (3 credits)
	MnE 601	Manufacturing Systems (3 credits)
	MnE 602	Flexible and Computer Integrated Manufacturing (3 credits)
	MnE 603	Management of Manufacturing Systems (3 credits)
	MNE612	

Service Systems:

	CS 632	Advanced Database System Design (3 credits)
	EM 636	Project Management (3 credits)
	HRM 606	Human Resource Management (3 credits)
	IE 622	Simulation and Risk Analysis in Operations Management (3 credits)
	IE 624	Heuristic Methods (3 credits)
	IE 641	Operations Analysis (3 credits)
	IE 651	Industrial Simulation (3 credits)
	IE 652	Facilities Location and Plant Layout (3 credits)
	IE 673	Total Quality Management (3 credits)
	IE 674	Quality Maintenance and Support Systems (3 credits)
	MIS 545	Management Information Systems (3 credits)

Systems Analysis:

	CS 505	Programming, Data Structures, and Algorithms (3 credits)
	CS 631	Data Management System Design (3 credits)
	CS 673	Software Design and Production Methodology (3 credits)
	IS 676	Requirements Engineering (3 credits)
	EM 636	Project Management (3 credits)
	EM 691	Cost Estimating for Capital Projects (3 credits)
	IE 622	Simulation and Risk Analysis in Operations Management (3 credits)
	IE 624	Heuristic Methods (3 credits)
	IE 651	Industrial Simulation (3 credits)
	IE 673	Total Quality Management (3 credits)
	MnE 655	Concurrent Engineering (3 credits)

Doctor of Philosophy in Industrial Engineering

The objectives of the Ph.D. in Industrial Engineering program are to provide the knowledge and develop the skills that students need to become leaders of research in academia, industry and government.

This program is intended for highly qualified students who wish to pursue advanced research in industrial engineering and related areas. The program emphasizes two areas: manufacturing systems and assurance sciences, and human factors and occupational safety.

Admission Requirements:

Applicants should have a master's degree in industrial engineering or a related field. In certain circumstances, a qualified student with a bachelor's degree in industrial engineering or related field may be admitted into the program.

Degree Requirements:

For students entering with an appropriate master's degree, a minimum of 60 degree credits is required as follows: 36 credits of dissertation and 24 credits of course work beyond the master's degree in an area of specialization, 12 credits of which must be at the 700 level and none at the 500 level. Of the 24 credits of course work, 12 credits are core courses and the other 12 credits are technical electives.

Registration for **IE 791** Graduate Seminar is required each semester for all students.

If the 36 credits of dissertation are completed before the dissertation is finished, students must register each semester for at least 3 credits of dissertation until the dissertation is accepted.

For students entering with bachelor's degrees, a minimum of 42 credits of course work and at least 36 credits of dissertation research is required.

Specific degree requirements and dissertation topics are approved by the department on an individual basis. Before being permitted to register for dissertation, students must complete course requirements, pass qualifying examinations, both written and oral, and demonstrate that there are facilities and a faculty member available to supervise the research.

Qualifying Examinations: All doctoral students are expected to pass both a written and oral qualifying examination. Passing the written qualifying examination is a prerequisite for the oral examination. Students are urged to take these examinations as soon as possible after being admitted into the program.

Students must take a two-part written examination within the first year following admission to the program, and pass within two years. The examination is offered every October. A student will be allowed only two attempts to pass the examination. Both parts must be taken at the same time. It consists of two sections:

Section I General competence in mathematics including calculus, probability and statistics, differential equations, and linear algebra.

Section II Proficiency in fundamentals of industrial engineering including: operations research (deterministic and probabilistic), quality control, reliability, engineering economy, production planning and control, and human factors.

The oral examination should be taken and passed in the semester after the written examination is passed. The dissertation committee assigns a topic for the oral examination from the student's area of specialization. The examination is offered by the dissertation committee. Thorough study and understanding of theoretical, technical and practical aspects of the assigned topic should be demonstrated in the oral examination.

Formation of a Dissertation Committee: With the approval of the graduate advisor, within two months after passing the written examination, students must form a dissertation committee. The committee should consist of at least four faculty members from the department including the student's advisor. In addition, one member of the committee must be chosen from outside the department.

Dissertation Proposal: Within three months of passing the oral examination, students must submit, for the approval of their dissertation committee, both in writing and orally, a doctoral proposal on the scope of their proposed research.

The dissertation must represent original research leading to meaningful advances in the industrial engineering profession. The work must be worthy of publication in refereed journals on industrial engineering or related fields. Doctoral students must complete the dissertation in the five years subsequent to passing their written and oral qualifying examinations.

Dissertation Defense: Each doctoral student must submit to their committee a written dissertation for their approval. After the dissertation committee approves the document, the student must successfully defend the dissertation in front of the committee and other interested faculty and students.

Areas of Specialization:

Manufacturing Systems and Assurance Sciences:

Core:

12 credits:

		IE 704	Sequencing and Scheduling (3 credits)
		IE 705	Mathematical Programming in Management Science (3 credits)
		IE 706	A Queueing Approach to Performance Analysis (3 credits)
		MnE 654	Design for Manufacturability (3 credits)

Elective:

12 credits, 3 credits of which must be at the 700 level and none at the 500 level

Courses selected from IE, ME, MnE, CS, and Math.

Human Factors and Occupational Safety:

Core:

12 credits:

		IE 604	Advanced Engineering Statistics (3 credits)
		IE 760	Quantitative Methods in Human Factors (3 credits)
		IE 761	Advanced Studies in Human Factors (3 credits)
		IE 762	Psychophysical Methods in Human Factors (3 credits)

Elective:

12 credits, 3 credits of which must be at the 700 level and none at the 500 level

Courses selected from IE, ME, MnE, CS, and Math.

Catalog and curricula information approved by the relevant academic department.

Information Systems

Administered By: Department of Information Systems

Administration

Acting Dean, College of Computing Sciences	Daljit S. Ahluwalia
Acting Associate Dean, College of Computing Sciences	Barry Cohen
Assistant to the Dean, College of Computing Sciences	Serena Branson
Acting Chair, Information Systems Department	Michael P. Bieber
Assistant to the Chair, Information Systems	Michelle D. Craddock
Associate Chair, Undergraduate Programs	Julian M. Scher
Director of Undergraduate HCI Program	Quentin Jones
Director of Graduate Program	George R. Widmeyer
Director of PhD Program	S R. Hiltz
Secretary	Tracey Richards

Faculty

Distinguished Professors	Murray Turoff, S R. Hiltz
Professors	Michael P. Bieber, Fadi Deek, Stephen B. Seidman
Associate Professors	Julian M. Scher, Michael L. Recce, George R. Widmeyer
Assistant Professors	Quentin Jones, Robert M. Klashner, David Mendonca, Yi-fang Wu
Special Lecturers	Morgan C. Benton, Michael J. Chumer, Richard W. Egan, Mojgan Mohtashami

Advisors

Advisor B.A/ B.S/M.S	George W. Olsen
Advisor PhD	Michael P. Bieber

Degrees Offered: Master of Science in Information Systems; Doctor of Philosophy in Information Systems.

The field of Information Systems (IS) addresses the application software lifecycle, including the design, creation, management, evaluation and analysis of the wide variety of computing systems applications that are directly used by individuals, groups and organizations to support their work and social lives. Students in this program will master both the technology and the human behavior in the computing environment.

The study of Information Systems is based upon the concept that there is a growing body of knowledge on the relationships between people and computers that is independent of any specific application. Understanding of the total system involves both the human and the computing environment as an integrated whole. Students will master both the technology and the understanding of human behavior in the computing environment.

The MSIS program provides solid grounding in three principal areas, all of which are applicable to the areas described above:

Systems analysis and software engineering
Information and communication technologies
Management of information system

The program emphasizes the planning, investigation, design, development, application, management and evaluation of Information Systems. The program trains students to be integral members of application design and development teams.

The program also provides exposure to the state-of-the-art in IS research, so that students will be prepared to work with both emerging concepts and technologies. For students wishing to become directly involved in research, there are ample opportunities to participate in ongoing projects, as well as to write a master's thesis under faculty supervision. A number of master's level courses are also included in the Ph.D. curriculum. The MSIS program is designed as a subset of the PH.D program in IS. The description here includes several notes for students considering continuing on with the Ph.D. program.

The program is offered both face-to-face and in a distance learning mode employing collaborative learning methods including team and project activities.

Masters in Information Systems

Admission Requirements

The field of IS is broadly interdisciplinary. Applicants with degrees in any field are therefore welcome to apply for the MS IS program. A series of "bridge courses" are used to develop the required skills of incoming students who may not have been exposed to some parts of the IS curriculum.

Applicants with undergraduate degrees in Information Systems, Management Information Systems, Information Technology, Computer Science, Computer Engineering and similar areas usually are sufficiently prepared for entry. Requirements for entry include a working knowledge of an object-oriented programming language, at least one year of calculus, one course in calculus-based probability and statistics, and finally an additional advanced mathematics course such as discrete analysis.

Applicants must have a GPA of 2.8 or higher in their prior academic work. (Applicants not meeting this requirement, but who have significant work experience since their last degree may be considered on an individual basis.)

Applicants without a prior undergraduate or master's degree from the United States must submit GRE, GMAT or MCAT scores for admission.

Bridge Program:

Computer and Information Systems Technology:

	CS 505	Programming, Data Structures, and Algorithms (3 credits)
	IS 245	Information Technology Systems: Hardware/Software (3-0-3)

Mathematics:

	Math 111	Calculus I (4-1-4)
	Math 112	Calculus II (4-1-4)
	Math 333	Probability and Statistics (3-0-3)

Management:

	Acct 115	Principles of Accounting I (3-0-3)
--	----------	------------------------------------

Students may substitute Math 226, Discrete Analysis, for Math 112, Calculus II. Students must get a B in all IS bridge courses, and no grade lower than a C in the others. Students without an excellent command of English may be required to take specific written and spoken English courses. Final determination of bridge requirements can only be made from the examination of a completed formal application folder. Applicants with prior coursework covering the bridge topics should attach a note to their application clearly showing which courses correspond to these bridge requirements, if possible.

Off-Campus Programs: At extension and corporate sites, NJIT offers sufficient courses to fulfill all degree requirements. NJIT faculty teach all courses. For locations, see [Extension Programs](#) in this catalog. The university's distance learning arm, ACCESS/NJIT, offers this program (as well as part of the bridge program described above) to qualified students who have access to the Internet and a VCR. In addition, distance-based, 12-credit graduate certificates in Information Assurance, Internet Applications Development or Telecommunications Networking are available as a step toward this degree. See [Graduate Certificates](#) in this catalog. For further information about extension programs, ACCESS/NJIT programs, and graduate certificates, call the associate vice president of continuing and distance education, Division of Continuing Professional Education, 1 (800) 624-9850 or (973) 596-3060; e-mail cpe@njit.edu.

Important Note: Students assigned to bridge courses or English courses must take these courses before taking before taking 600- and 700-level graduate courses. It is possible, however, to sign up for graduate courses (i) in the final semester in which bridge courses are taken and (ii) when prerequisites delay taking of a particular bridge course.

Degree Requirements:

The student is required to take 30 credits (10 courses).

The course planning form, posted on the MSIS Web site, lays out much of the information in this program description. Students should use it to plan out their courses for the MS IS degree. They should bring this (or email it) to the Program Director whenever they wish to discuss their progress.

The required courses are:

IS Core Courses (6 courses/18 credits)

All six IS core courses are required:

IS 677	Information System Principles (3 credits)
IS 663	Advanced System Analysis and Design (3 credits)
CS 631	Data Management System Design (3 credits)
IS 679	Management of Computer and Information Systems (3 credits)
CS 652	Computer Networks-Architectures, Protocols and Standards (3 Credits)
HRM 601	Organizational Behavior (3 credits)

We recommend that students start taking the core courses immediately. Note that one must take [IS 677](#) before [IS 679](#).

Electives (4 courses/12 credits):

The remaining four courses are electives chosen from the list below. Students will normally choose a specialization track that includes two to four courses. Students may also customize a track with approval from the Director of the MSIS Program.

We encourage Masters students doing well in the program to take electives at the 700-level.

Students planning to continue with the IS Ph.D. program may take up to four non-IS courses after gaining written approval from their MS IS Advisor. They also should check the Ph.D. program requirements and consider taking specific required courses as MS IS elective. They are advised to take as many 700-level courses as possible.

Masters Project and Masters Thesis

We strongly encourage students to consider a one-semester Masters Project ([IS 700](#)) or two-semester masters Thesis ([IS 701](#)). The masters project provides the opportunity to apply knowledge and skills to develop an application system or solve a complex problem. The thesis option extends the project by conducting publishable research in the project area. Both courses count as IS electives, and

are not mandatory for graduation.

While we encourage people to partake in NJIT's **Cooperative Program**, it does not count as IS elective credit.

For further details, please see <http://is.njit.edu/msis/>

ELECTIVE TRACK:

Select one of the following tracks and choose two to four of the courses listed in that area. The student is responsible for checking with the program director to determine if the necessary course prerequisites have been met. All other electives must be chosen from the list below.

Research and Pre-PhD:

	IS 675	Information System Evaluation (3 credits)
	IS 735	Computer Mediated Communication Systems (3 credits)
	IS 763	Qualitative Methods in IS Research (3)

Data Management:

	CS 602	Java Programming (3 credits)
	CS 632	Advanced Database System Design (3 credits)
	IS 634	Information Retrieval (3 credits)
	CS 731	Applications of Database Systems (3 credits)
	CS 734	Data Mining (3 credits)
	CS 744	Data Mining and Management in Bioinformatics (3 credits)
	Mgmt 635	Data Mining and Analysis (3 credits)

Decision Making and Knowledge Management:

	MIS 648	Decision Support Systems for Managers (3 credits)
	CS 661	Systems Simulation (3 credits)
	IS 762	Computerized Information Systems for Planning and Forecasting (3 credits)
	IS 767	Decision Support Systems (3 credits)
	Mgmt 630	Decision Analysis (3 credits)
	Mgmt 650	Knowledge Management (3 credits)

Electronic Commerce:

	IS 684	Business Process Innovation (3 credits)
	MIS 625	Management Strategies for E-Commerce (3 credits)
	Mgmt 690	Electronic Communities in Organizations (3 credits)
	Mgmt 676	Managing the Digital Firm (3 credits)
	Mrkt 645	Internet Marketing Strategy (3 credits)

HCI - Interaction Design:

	IS624	
	IS 658	Multimedia Systems (3 credits)
	IS 675	Information System Evaluation (3 credits)
	IS 735	Computer Mediated Communication Systems (3 credits)
	IS 686	Pervasive Computing: An HCI Perspective (3 credits)
	IS 732	Design of Interactive Systems (3 credits)

HCI - Communication Design:

	PTC 601	Advanced Professional and Technical Communication (3 credits)
	PTC 605	Elements of Visual Design (3 credits)
	PTC 610	Evaluating Hypertext: User and Task Analysis (3 credits)
	PTC 632	Content Management, Manuals and On-Line Help (3 credits)

Security:

	CS 608	Cryptography and Security (3-1-3)
	IS 681	Computer Security Auditing (3 credits)
	CS 696	Network Management and Security (3 credits)

Network Management:

	CS 604	Client/Server Computing (3 credits)
	CS 651	Data Communications (3 credits)
	CS 656	Internet and Higher Layer Protocols (3 credits)
	CS 696	Network Management and Security (3 credits)
	CS 697	Principles of Broadband ISDN and ATM (3 credits)
	ECE 645	Wireless Networks (3 credits)
	MIS 635	Management of Telecommunications (3 credits)

Systems Analysis and Design:

	IS 683	Object-Oriented Software Development (3 credits)
	IS 684	Business Process Innovation (3 credits)
	IS 786	Special Topics (3 credits)
	IS 676	Requirements Engineering (3 credits)
	EM 636	Project Management (3 credits)

Software Systems:

	CS 602	Java Programming (3 credits)
	CS 610	Data Structures and Algorithms (3 credits)
	CS 630	Operating System Design (3 credits)
	CS 635	Computer Programming Languages (3 credits)
	CS 650	Computer Architecture (3 credits)

Ph.D. in Information Systems

IS Ph.D. Program Web Site: <http://is.njit.edu/isphd/>

Please check this site for any updates and additional information.

The Department of Information Systems is distinguished by prominent researchers who are actively investigating conceptual and practical advances in Computer-Mediated Communications, Computer-Supported Collaborative Learning, Asynchronous Learning Networks, Decision Analysis and Support, Group Decision Support, Negotiation Systems, Emergency Preparedness and Response, Social Computing, Pervasive and Ubiquitous Computing, Human-Computer Interaction, Web Ethics and Integrity, Bioinformatics, Information Science, Text Analysis, Data Mining, Search Engines, Digital Libraries, Web Engineering, Hypermedia Functionality, Relationship Analysis, Systems Analysis and Design, and Software Engineering.

The department provides an environment that gives students the background and skills necessary for entry into today's workplace. This is achieved through team research in state-of-the-art facilities; a faculty that works steadily in the forefront of many research areas; interaction with industry and experts; and an administration focused on research and student services. As a result, the department attracts the largest student population for information systems in the greater New York/New Jersey area.

The Information Systems Department maintains and offers computing facilities for its students, faculty, and staff. The computing facilities include the Collaborative Hypermedia Research Laboratory and the Electric Arts Habitat (EARTH) Laboratory. Users have access to the state-of-the-art software and hardware including Oracle database, UNIX and LINUX-based workstations, Macintosh and Microsoft Windows PCs supported by several file and computer servers. Internet access, departmental intranets, and conferencing systems provide an integrated infrastructure of supporting teaching and research.

Objectives:

The field of Information Systems concerns the effective design and use of information technologies by individuals, groups and organizations. Information Systems can be applied to many different areas, including support of business, science, engineering, community, social and education activities, both in the public and private sectors. Across all these areas, information systems is broadly concerned with the effective use and integration of computing technologies into human endeavors; that is, with human-centered computing.

The study of Information Systems is based upon the concept that there is a growing body of knowledge on the relationships between people and computers that is independent of any specific application. Understanding of the total system involves both the human and the computing environment as an integrated whole. Students will master both the technology and the understanding of human behavior in the computing environment.

The Ph.D. program in Information Systems is designed to produce scholars who possess a commanding knowledge of the nature of Information Systems, applications of and research on Information Systems, and the supporting technology in Computer Science.

The program seeks to develop individuals who can expand both the practice and theory of information systems for complex applications and/or organizational environments. It deals with integrated information, computer and communication systems that support and augment individuals and groups in any field of application; management, business, engineering and manufacturing, health and medicine, education, social sciences, arts and humanities, etc.

There have been dramatic developments in information systems, computing technology, economics and related social sciences which have substantially affected the underlying methodological and scientific frameworks of business. The area of information systems has shown explosive growth as organizations have become increasingly complex, electronically integrated, and interdependent.

Graduates will be prepared for research, teaching, and/or practice in this field. The program also emphasizes the behavioral and organizational context of computer-based information systems, their requirements, design, implementation, user acceptance, management and the evaluation of their effectiveness and consequences.

The program is designed to attract students from different disciplinary backgrounds and encourages an interdisciplinary approach to the concepts of information system design, utilization, and evaluation. It provides students with the ability to analyze and organize the information needs and resources of an application environment and to design and develop systems to respond to those needs.

Students are expected, as a result of the program, to be able to advance the state-of-the art knowledge in information systems. They are prepared for research and/or development activities in either academia or industry. They are expected to be able to deal with the evolution and creation of systems to handle new application areas.

An outstanding student with a Bachelors or Masters in any field may apply and be accepted, which may be conditional on completing an appropriate set of bridge courses to make up necessary pre-requisites or knowledge deficiencies in such areas as Computer Science, Information Systems and Mathematics.

Policies on Part-Time and Distance Students:

Full-time students normally take 18-24 or more credits a year. Part time students normally take 12 credits per year. The general rule is that part-time students have twice the amount of time as full-time students to fulfill a requirement. However, it may be necessary at some point in their work for a student to devote full-time to work related to the dissertation, in order to complete it within the maximum time allowed. The absolute limit is eight years from the time of admission to graduation.

Distance:

We DO NOT have a distance learning Ph.D. program. We do have a distance learning masters degree in information systems, so many of our 600 level courses and some of our 700 level courses are available online. Students in the Ph.D. program should be

careful to select sections taught by full-time faculty members. All students will need to spend at least a semester in residence, and often a full year, to be determined by the dissertation advisor who is chosen after qualifying examinations are passed.

Program Admission Requirements:

A student seeking admission to this Doctor of Philosophy program must satisfy the following minimum admission requirements.

Students must have successfully completed a baccalaureate program from an accredited institution.

Submit:

1. Resume of Experience and Background (This should include details of experience, knowledge, and skills with respect to computer technology and information systems.)
2. Transcripts of academic record; GPA should be 3.5 or better on a 4.0 scale.
3. Three letters of recommendation by persons familiar with the student's academic work and/or related work experience.
4. GRE, GMAT, or MCAT scores. The normal minimum GRE total score is in the 85% percentile.
5. Personal statement (see below).

International students must demonstrate proficiency in the English language by scoring a minimum score required by the university which is currently 550 (pencil and paper) and 213 (computer-based) on the TOEFL exam. However, those seeking support must demonstrate a level of spoken and written English proficiency sufficient for teaching activities (600 or over on the TOEFL). Students may be admitted below the minimum score but will be required to take English courses to prove proficiency.

Applications should include documented aptitude, interest in and commitment to scholarly activities and research. This may be demonstrated by your personal statement, the quality of papers or projects completed by the student or employee, and/or letters of recommendation by individuals qualified to judge your professional performance.

As part of your personal statement, on one single-spaced page of paper, please list your areas of research interest in information systems. For each area, please describe: your understanding of the area, what related work you have done, and what specific topics you plan to research.

Supplemental materials: photocopy or electronic copy of your published papers, screen shots of systems you developed, etc. Please send these to Graduate Admissions as part of your supporting material.

In addition, applicants must have demonstrated superior performance in the following areas/courses or their equivalents. Applicants who have not met all these course requirements prior to admission, may be provisionally accepted and then complete these requirements while in the program. Those seeking support must have satisfied this knowledge requirement.

Table of Undergraduate Prerequisites or Demonstrated Knowledge:

IS Technical Background	
Mathematics:	Calculus: two semesters. Discrete Math Methods or another appropriate upper level Math or Statistics Course.
Computing:	Four undergraduate courses in Computer Science and/or Information Systems in such areas as programming, data structures, data bases, software engineering, communications, etc. Appropriate work experience may be applicable to satisfying part or all of this requirement.
	A working knowledge of one development oriented computer language such as C++ or JAVA. Computer, Society, and Ethics may be required if no similar course has been taken.

Admission to Candidacy Requirements:

Admission to the doctoral program does not imply candidacy for a degree. To be admitted to candidacy, the student must:

1. Qualifying exams: The student must take the qualifying exam which will cover the IS core area. Full-time Ph.D. students usually take the exam within 18 months of matriculation; e.g., if they enter in September of 2005, they should plan to take the exam by January 2007. The exam is given every January, and if needed, in June.

Students will be provided with a reading list of all course materials that they are responsible for in the courses involved in the qualifying exam. The objective of the qualifying exam is to determine if the student has mastered the basic knowledge in the field of Information Systems and is prepared to go on to dissertation research. Students may not enroll in the State-of-the-Art paper of pre-dissertation research until they pass the exam.

2. Maintain a grade average of 3.5 (B+) or better in the core courses. No graduate course may have a grade of less than B and count toward candidacy, this includes potential transfers. A grade of B or better in each core course is required in order to take the qualifying exam.

3. Successfully complete courses in Computing Systems technical foundations. Credits may be utilized for these requirements, with the approval of an advisor, from a prior masters degree, if the courses match these requirements.

4. Choose a Research Specialty within Information Systems that will be the focus of the Ph.D. dissertation. A total of at least 12 courses will be needed for this specialty area; up to two may be Independent Study or the IS Ph.D. seminar, IS 788. At least 5 of these must be at the 700 level. Up to four may be in an application area track, for which credit may be applied from a previous master's degree, with the approval of the advisor.

5. Develop a state-of-the-art paper in your specialty area under the guidance of a faculty member, usually by taking IS 776. The state-of-the-art paper will usually form the basis for one or more publications and for the student's subsequent dissertation proposal. The state-of-the-art paper, once approved by the advisor, will be submitted to an exam committee approved by the program director but including the student's advisor. The examination committee will determine the nature of any additional comprehensive exam after careful review of the state-of-the-art paper.

After fulfilling these requirements, the student will be a candidate for the doctoral degree with all work but the dissertation completed (ABD).

6. Dissertation Proposal and Dissertation:

This comprises the original research leading to a dissertation and demonstrating the student's ability to conceive and carry out independent research.

Six (6) credits of pre-doctoral research allow the student to identify a research problem and to prepare a proposal for solving the problem in the dissertation. The proposal must be in writing and be defended orally in the presence of a formal review committee before it is accepted. The student is expected to successfully pass the proposal defense within a period of two (2) years after passing the qualifying examination. The committee, chaired by the student's research advisor, will contain at least four (4) faculty members, with at least one (1) committee member from outside CCS. The outside member may be from other institutions or industry provided he or she is currently engaged in relevant research. It is expected this committee will later become the thesis committee.

7. Dissertation and Defense:

At least twenty-four (24) credits of dissertation research is required. After the research is completed, the dissertation will be defended at an open meeting of the NJIT faculty, in the presence of the dissertation committee.

However, if the student does not successfully complete the dissertation within a period of six years after passing the qualifying examination, the student's ABD status will be removed and the state-of-the-art paper must be redone and the examination must be taken and passed again to restore the status.

Summary of Academic Credit Requirements:

Area	Courses	Credits
IS Core	4	12
CS Core	2	6
Early Research	2	6
Advanced IS and Research Specialty	12	36
Predoctoral Research	-	6
Thesis Research	-	24
Total	20	90

Those entering with a masters degree are required to complete a minimum of 30 additional course credits. However, they must also satisfy the candidacy requirements. Up to 30 credits may be transferred from a masters degree if the courses are appropriate for satisfying the Ph.D. requirements. The transferability of credits for specialty area courses must have the approval of both the program director and the student's research specialty advisor.

Other Requirements:

8. Participation in the Ph.D. IS graduate seminar for at least 4 semesters or credits (IS 787/IS 788).

9. Teaching or assistance in teaching at least one course in Information Systems or a related area, under the supervision of a faculty member.

10. Submission of at least one research paper for publication in a peer review conference or journal.

11. Submission of the final draft of the dissertation in the format required by the university, with signed approvals of the dissertation committee.

Should twenty-four (24) credits of dissertation research be completed before submission of the final copy of the dissertation and its acceptance by the department, it will be necessary for the student to register for a minimum of six (6) additional dissertation credits per year until the dissertation has been submitted and accepted. The oral examination will be given only after the submission of the final draft of the dissertation.

We encourage part-time students to take part in this program but most thesis advisors will require a full-time effort after successful completion of the qualifying exam, during the period when the dissertation proposal is being developed and the dissertation research begun.

Many of the courses are available in distance mode, but a period of on campus study will be necessary to complete advanced courses and dissertation proposal requirements.

Core Requirements:

An extensive foundation which is intended to establish a core of expertise in computing, information systems, and management is required: two courses in Computing Sciences Tools and Methodologies; and four courses in Information Systems. The Ph.D. student is expected to maintain a B+ average in the core courses.

Computing Sciences Tools and Methodologies:

To ensure a strong technical foundation, Ph.D. students should choose at least one course from the Programming and Database area

courses listed below.

Programming Languages and Methodologies: CS 602 or equivalent.

Database Design: CS 631, CS 632 or CS 731

Information Systems Core:

	IS 663	Advanced System Analysis and Design (3 credits)
	IS 677	Information System Principles (3 credits)
	IS 675	Information System Evaluation (3 credits)
	IS 679	Management of Computer and Information Systems (3 credits)

Ph.D. students should take those core IS courses from full time faculty members.

Early Research Requirement:

All Ph.D. students should get involved in research groups early and continuously. Presentations at the IS Seminar and consultation with their advisor help students to identify faculty and groups with whom they may work. All students should register for one research-related course each semester during the first year. Normally this will be done by registering for the 3-credit IS seminar, IS 787, involving a research internship during the first or second semester and Independent Study research (with a different professor) during a subsequent semester.

As part of each of these first two early research courses, the equivalent of an AMCIS submission of research in progress, and associated NJIT presentations are expected from the student.

Planned Program of Study

The student must fill in a planned program of study form and update it and submit it to his or her advisor at least once every academic year to indicate the courses that have been taken.

Advanced Studies

Upon successful completion of the qualifying examinations, the student must select a specialty area under the approval of an advisor. These 36 credits (12 courses) must be in Information Systems or a closely related discipline and constitute a coherent body of knowledge in support of the student's expected area of specialization and research. A maximum of four may be outside of the College of Computing Sciences, with permission of the advisor. At least 5 must be at the 700 level. (Note, these courses can include IS 776, State-of-the-Art Paper Independent Study.)

Besides including at least five courses at the 700 level, the advanced courses shall:

1. Include Math 661, Applied Statistics. It should ideally be taken in the first semester, before IS 675.
2. Include an advanced course in Qualitative Research in Information Systems (e.g. IS 763) and in Quantitative Research in Information Systems.
3. A maximum of two independent study courses may normally be included in the minimum courses for the degree (including 776).
4. Specific application oriented advanced courses or additional IS and CS courses (12 credits) for a specialty area within IS.

Advanced courses may include up to four courses eligible for transfer credit from a prior program beyond the Bachelor's. This planned program of study will be filed with the program director, but may be changed later with the consent of the advisor. Course choices must be focused and include both the beginning and advanced course or courses in a given topic.

State-of-the-Art Paper and Comprehensive Exam:

The state-of-the-art paper is a product the student works on with an advisor towards the end of the period when he or she is taking the 36 credits of advanced study. It focuses on summarizing the students' command and understanding of the current research issues and activity in the specialty area and important related findings from all of the coherent set of courses in the advanced study. The student may include in the advanced study an independent study or seminar course (IS 776) with the advisor to allow for the compilation of the State-of-the-Art paper under the advisor's guidance.

The State-of-the-Art Paper will usually form the basis for the student's subsequent dissertation proposal. It will summarize literature in the specialty area, carefully exposing related research areas from relevant topics making up the specialty area. The objective of this requirement is to insure the student has obtained a solid understanding of the research issues in the chosen area of study. Full-time students should plan to complete the state-of-the-art paper within one year of passing the qualifying examination on the IS core areas; e.g., if the student takes the qualifying exam in June 2006, he or she should complete the state-of-the-art paper by the end of May 2007..

The state-of-the-art paper, once approved by the advisor, will be submitted to an exam committee approved by the program director but including the student's advisor, who will also make recommendations as to other members. The examination committee will determine the nature of any additional comprehensive exam after careful review of the state-of-the-art paper.

Dissertation Proposal and Dissertation:

This comprises the original research leading to a dissertation and demonstrating the student's ability to conceive and carry out independent research.

Dissertation Proposal and Defense:

The purpose of the six (6) credits of Pre-doctoral research is to allow the student to identify a research problem and to prepare a proposal for solving the problem in the dissertation. The proposal must be in writing and be defended orally in the presence of a formal review committee before it is accepted. Our objective is to have the full-time student successfully defend the dissertation proposal in their third year. Students entering with only a bachelor's degree or who are attending part time may take somewhat longer. In any case, the full-time student is expected to successfully pass the proposal defense within a period of two (2) years after passing the comprehensive examination.

The thesis proposal review committee will be made formal when the student has passed the comprehensive examination. The committee, chaired by the student's research advisor, will contain at least five (5) faculty members, with at least three (3) IS faculty members and at least one (1) committee member from outside of the College of Computing Sciences and normally from outside of NJIT. The outside member may be from other institutions or industry provided he or she is currently engaged in relevant research. The members of the committee will be appointed by the student's research advisor with the agreement of the student and the Program Director. It is expected this committee will later become the thesis committee.

Dissertation and Defense:

With the approval of the dissertation proposal, the student may conduct research under the guidance of the research advisor. At least twenty-four (24) credits of dissertation research is also required. However, if the student does not complete the dissertation within the twenty-four (24) credits, the student must continue to register for at least three (3) credits of dissertation research each semester until dissertation is accepted by the dissertation committee as completed. After the research is completed, the dissertation will be defended at an open meeting of the NJIT faculty, in the presence of the dissertation committee.

The formal dissertation committee will be formed after the student has successfully defended the dissertation proposal. The purpose of the dissertation committee is to guide the student to carry out high quality research and to evaluate the student's progress during the research. The primary dissertation research advisor must be a member of the tenure-track faculty of IS, which includes faculty with joint appointments in IS. The Committee, chaired by the student's research advisor, will contain at least four (4) faculty members and at least one (1) committee member from outside of NJIT. The members of the committee will be nominated by the student's research advisor for the Ph.D. Program Director's approval. The Ph.D. Program Director will formally appoint the examination committee. There is a form on which the names of the nominated members must be submitted for approval to the Program Director.

Dismissal from the Program:

Any student failing any part of the qualifying examination, or any course work, may petition the Ph.D. Program Director for a second try presenting, in conjunction with the Program Director, a plan for rectifying any deficiencies. The student may be required to retake the entire examination or only selected parts. The plan to rectify deficiencies may require the completion of additional course work.

The retaking of parts of the qualifying examination must be completed by the next offering of the exam, e.g., if part of the exam is failed in June, the exam should be retaken the next January.

Students failing the qualifying examination, a second time will be dismissed from the program. Students may be denied permission to take a second qualifying examination or comprehensive and be dismissed from the program. Students failing the qualifying examination, comprehensive examination, or advanced course work may, with the approval of the department, elect to complete all requirements for the master's degree in Information Systems or the master's degree in Computer Science provided they do not already have such a degree.

Part-Time Students:

The program welcomes part-time students. A great many of the required courses are being offered in a distance learning mode as well as the normal face-to-face offerings.

It should be recognized that after completing the courses and exams and entering the phase of dissertation work most Ph.D. students need to invest a minimum full-time effort for six months to a year to insure success.

Industry Collaborative Doctor of Philosophy:

Individuals currently engaged in relevant research areas in industry or other organizations should check the Industry Collaborative Doctor of Philosophy program (See Graduate Catalog) offered by NJIT which allows the waiver of residency requirements and more specific tailoring of requirements.

Admissions & Support:

Outstanding full-time Ph.D. students are encouraged to apply for support. There may be either Teaching Assistantships or Research Assistantships available. Current minimum requirements for consideration for support are GRE scores of 90% or above, a GPA of 3.7 or above, and work experience or outstanding accomplishments.

Teaching assistants and Research Assistants

Doctoral students supported by the department serve as Teaching Assistants. During the first semester or two, they are usually assigned as a TA to an instructor, and they usually start as a grader and assistant. They should be given progressively greater degrees of responsibility and practice in the various pedagogical roles and responsibilities involved in preparing, delivering, and grading a course. By the end of the first year, at the latest, the TA should be prepared to teach that course or another course (under the guidance of the course supervisor). As a teaching assistant, the total work expectation is 20 hours a week maximum. Usually grading and assisting a faculty member with teaching takes no more than 15 hours a week, so that at least five of the 20 hours should be available to serve as a research intern to the supervising faculty member, or working on research with another faculty member. The supervising faculty member may choose to do the grading himself or herself, and to assign more research assistantship duties to the TA instead. However, the first year TA must also receive sufficient teaching experience to be prepared to teach a section of the course. From the second year on, TAs normally teach one section of a course per semester.

Research assistants are supported by research grants awarded to faculty members, and are chosen by the Principal Investigator for the grant. These assistantships involve 20 hours a week of assigned tasks working on the research during the academic year and often include support for summer research working on the grant. Usually, the student who chooses to work as a research assistant under a grant agrees that their dissertation research will also be related to the grant.

All teaching and research assistants are also expected to serve as a lab monitor in one of the department labs for approximately five hours a week. During this time, they are usually working mostly on their own research or grading or courses, but they are responsible for opening or closing the lab at the designated times, making sure that people in the lab are authorized to be there, assuring the security and cleanliness of the equipment and facilities, enforcing the "rules" of the lab, and answering any requests for help from new users of the lab. Lab monitors who cannot make their assigned hours are responsible for finding a substitute.

The forms for applying for the above programs may be obtained from the Office of University Admissions (NJIT, University Heights, Newark NJ 07102, Tel.: (973) 596-3300). Forms for admission also appear on the NJIT web site (<http://www.njit.edu>). A non refundable fee is required with the actual application for admission. Those seeking work experience credit for admission prerequisites for technical knowledge in computers should include in the application package a detailed resume with specific details of various related job experiences.

Program Director for IS Ph.D. Degree:

Those interested in the Ph.D. in Information Systems who have specific questions may contact the Program Director (Roxanne Hiltz; Hiltz@njit.edu). However, it is impossible to express (before the complete application is reviewed) any specific opinions about admission, support, and transfer credits. If you do wish to visit, please arrange via e-mail first.

Other Information:

The **NJIT web site** is <http://www.njit.edu> and one may find there web pages for the [College of Computing Sciences](#), [Information Systems Department](#), [Computer Science Department](#) and the [School of Management](#). One can, at those sites, and related ones, learn about these communities, the faculty, many of the courses and some of the current research taking place. Applications for graduate admissions may be found at the web site for the [NJIT Office of Admissions](#).

Related Programs:

NJIT currently offers the [M.S. Degree in Computer Science](#) and the [M.S. Degree in Information Systems](#) through the [College of Computing Sciences](#). In addition, an M.S. Degree in Management offered by the School of Management includes concentrations in both Information Systems Management and Information Systems Auditing. The IS degrees at the master levels train individuals to be part of application development teams and to possess a high degree of computer skills for the development of applications. The management degrees are meant to train managers knowledgeable in the utilization of computers in a commercial organization but do not require the same degree of technical capability.

There is also a [B.A. in Information Systems](#), [B.S. in Information Systems](#), [B.S. in Human Computer Interaction](#), [B.S. in Information Technology](#) and a [B.S. in Computer Science](#) offered by the [College of Computing Sciences](#) at NJIT. While these are adequate preparatory programs for entering the Masters or Ph.D. program in Information Systems, they are not the only path that may be taken.

Catalog and curricula information approved by the relevant academic department.

Infrastructure Planning

Administered By: New Jersey School of Architecture

Administration

Program Director	Antonio P. De Sousa Santos
Associate Program Director	Darius T. Sollohub
Graduate Program and Admissions Coordinator	Frederick A. Little

Faculty

Distinguished Professor	G M. Mostoller, Zeynep Celik
Professors	Sima Bagheri, Robert Dresnack, Karen A. Franck, Urs P. Gauchat, Glenn Goldman, David L. Hawk, Peter C. Papademetriou, Antonio P. De Sousa Santos, Lazar Spasovic
Associate Professors	Janice R. Daniel, David H. Elwell, Joshua S. Greenfeld, Anthony W. Schuman, Donald R. Wall
Assistant Professors	Maurie Cohen, Gabrielle Esperdy, Richard J. Garber, Wassim Jabi, Darius T. Sollohub, Georgeen Theodore
Research Professors	Ervin Bales, Richard V. Olsen

Degrees Offered: Master in Infrastructure Planning

Through interdisciplinary teaching, research and practice made possible by NJIT's resources in architecture, civil and environmental engineering, transportation, management, and environmental policy studies, the program addresses the global need to train planning and design professionals capable of acting across the spectrum of disciplines involved in infrastructure development.

Infrastructure is defined as the whole built fabric of public spaces, institutions, facilities and services that shapes and sustains daily life. Collaboration between the disciplines concerned with different infrastructure components is necessary to develop holistic strategies for building more livable and efficient urban environments. The goal of the M.I.P. program is to gain a coherent understanding of the interrelationships between those components and to develop the potential of integrally planned and designed infrastructure systems to deal more effectively with the critical problems confronting our cities.

Using a variety of project settings, the program focuses on the natural environment and on public space, roads, transportation, services and utilities as interacting physical and spatial systems, as well as on parks, schools, housing and civic institutions. The purpose is to develop operational strategies that integrate the broadest possible range of planning and design policies, methods and actions for improving human settlements; and to resolve in environmental terms the larger social and political issues that affect the quality of life in our communities.

Capitalizing on NJIT 's multidisciplinary resources and location at the center of the nation's greatest regional concentration of urban infrastructure, the M.I.P. program incorporates applied research and realistic problem solving in its curriculum and also offers internships and research assistantships. M.I.P. faculty, drawn from the university's four academic divisions, is supplemented by eminent infrastructure planning practitioners. Collaborative relationships have been established with complementary academic programs at Rutgers University and with regional, national and international institutions concerned with infrastructure. At NJIT, a number of notable research facilities are engaged in specialized work related to infrastructure planning and design.

Master in Infrastructure Planning

A unique interdisciplinary program in infrastructure planning and design directed at students with previous degrees in architecture, landscape architecture, urban planning or civil engineering.

Dual Degree Programs: Dual M.Arch./M.I.P. or M.S. in Civil Engineering/M.I.P. degree options that reduce the number of credits required to obtain the two degrees separately are available to students with superior academic records who hold bachelor's degrees in architecture or engineering from NJIT or equivalent degrees from other universities; or who are prospective graduates of the professional M.Arch. program at NJIT. See "Architecture" for the M.Arch./M.I.P dual degree program description. See the graduate advisor for the M.S. in Civil Engineering/M.I.P. dual degree program description.

Admission Requirements:

Applicants must have a bachelor's or a master's degree in architecture, landscape architecture, urban planning, or engineering. A GPA of at least 3.0 is expected and evidence of potential for graduate study is to be demonstrated by a portfolio, letters of recommendation, GRE scores, and TOEFL scores of 550 (pencil and paper) and 213 (computer-based) in the case of international students.

Bridge Program: Students not sufficiently experienced in design will be required to take an intensive bridge course in design prior to entering the program. This course does not count toward degree credit.

Degree Requirements:

Students must complete 36 course credits through full- or part-time study. Up to 6 credits toward the degree may be waived based on previous academic study. Additional elective courses may be taken in disciplines related to infrastructure planning, but do not count toward degree credit.

Required:

The following courses are required, subject to those waived in individual cases; however, no waivers will be given for studio courses. A typical full-time study plan over two semesters is shown below; degree credits are in parentheses.

Semester 1:

	MIP 601	Interdisciplinary Infrastructure Studio I (6 credits)
	MIP 612	Introduction to Environmental Policy Studies (3 credits)
	MIP 615	Introduction to Transportation Studies (3 credits)
	MIP 631	History and Theory of Infrastructure (3 credits)
	MIP 675	Elements of Infrastructure Planning (3 credits)

Semester 2:

	MIP 602	Interdisciplinary Infrastructure Studio II (6 credits)
*	MIP 618	Public and Private Financing of Urban Areas (3 credits)
	MIP 652	Geographic Information Systems (3 credits)
*	MIP 655	Land Use Planning (3 credits)
{	MIP 673	Infrastructure Planning in Practice (3 credits) <i>or</i>
	MIP 674	Infrastructure and Architecture (3 credits)

* Or substitute selected with the approval of Graduate Advisor.

Catalog and curricula information approved by the relevant academic department.

Internet Engineering

Administered By: Department of Electrical and Computer Engineering (ECE).

Advisors

Graduate Advisor

ansarin

Degrees Offered: MASTER OF SCIENCE IN INTERNET ENGINEERING

The objective of this program is to educate students in the field of internet engineering, with emphasis on computer internetworking and relevant applications.

Master of Science in Internet Engineering

Admission Requirements:

Applicants should have an undergraduate degree in Computer Engineering, Electrical Engineering or other relevant discipline from an accredited institution (or its equivalent). All applicants must submit scores on the Graduate Record Examinations (GRE) verbal, quantitative, and analytical aptitude tests. International students must also achieve a minimum TOEFL score of 550 (pencil and paper) and 213 (computer-based). Applicants with undergraduate degrees in computer science, computer engineering or electrical engineering from an accredited institution are expected to have a GPA of at least 3.0 on a 4.0 scale. These students should have taken **ECE 321** (Random Signal and Noise), or another equivalent course; **ECE 333** (Signals and Systems); and **CIS 112** (Introduction to Computing or equivalent proficiency in C++ programming).

Bridge Program: The curriculum requires a basic knowledge of computer and communications fundamentals, such as signals and systems (**ECE 333**), basic communication systems (**ECE 481**), programming (**CS 112** or C++ programming), data structures and algorithms (**CS 505**), and computer organization (**ECE 251**). The bridge courses are usually selected from this list, but some additional bridge courses, appropriate to each student's background, may be required.

Degree Requirements:

Candidates must complete a minimum of 30 credits, 9 in core courses and 21 in elective courses; or 21 credits must be from ECE courses.

The required courses provide the basics of Internet Engineering. Electives are to be chosen from the available course pool to tailor the program to the student's professional needs and interests. This program utilizes graduate courses in Electrical and Computer Engineering, Computer and Information Science, Management Information Systems, and Management Programs at NJIT. They provide the necessary blend of education required for appropriate strength in Internet Engineering. All MS students are required to fulfill two semesters of ECE 791 (Graduate Seminar).

Core Courses (9 Credits):

	ECE 637	Introduction to Internet Engineering (3 credits)
	ECE 683	Computer Network Design and Analysis (3 credits)
	CS 602	Java Programming (3 credits)

***Electives (21 Credits):

Select 15 credits if completing a master's thesis; 18 credits if completing a master's project; 21 credits if not completing either a master's project or a thesis.

	ECE 673	Random Signal Analysis I (3 credits)
	ECE 681	Broadband Packet Switches (3 credits)
	ECE 685	Network Interface Design (3 credits)
	ECE 638	Network Management and Security (3 credits)
	ECE 639	Principles of Broadband Networks (3 credits)
	ECE 649	Compression in Multimedia Engineering (3 credits)
	ECE 645	Wireless Networks (3 credits)
	ECE 636	Computer Networking Laboratory (3 credits)
	CS 604	Client/Server Computing (3 credits)
	Mgmt 620	Management of Technology (3 credits)
	MIS 625	Management Strategies for E-Commerce (3 credits)
	MIS 636	Telecommunications: Policies and Regulations
	ECE 783	Computer Communication Networks (3 credits)
	ECE 745	Advanced Wireless Networks (3 credits)
{	ECE 788	Selected Topics in Electrical and Computer Engineering (3 credits) or
	ECE 789	Selected Topics in Electrical and Computer Engineering II (3 credits)

Project, Thesis (optional):

	ECE 700	Master's Project (3 credits)
	ECE 701	Master's Thesis (3 credits)

*** Other (new) courses related to Internet Engineering may be selected as electives with approval from the Graduate Advisor

Catalog and curricula information approved by the relevant academic department.

Manufacturing Systems Engineering

Administered By: Department of Industrial and Manufacturing Engineering

Administrator

Chairperson	Athanassios Bladikas
Associate Chairperson	George Abdou
Program Director	Sanchoy K. Das

Faculty

Professors	Layek Abdel-Malek, Reggie J. Caudill, Sanchoy K. Das, Paul G. Ranky, Donald H. Sebastian, Stephen J. Tricamo, Carl Wolf
Associate Professors	George Abdou, Golgen Bengu, Athanassios Bladikas, Kevin J. Mcdermott, Arijit Sengupta*
Assistant Professors	Jian Yang

Advisors

Graduate Advisors	Sanchoy K. Das
-------------------	----------------

* Joint appointment with Department of Engineering Technology

Degrees Offered: Master of Science in Manufacturing Systems Engineering

The manufacturing engineering discipline addresses problems and methods of manufacturing systems integration. The M.S. in Manufacturing Systems Engineering program emphasizes the interrelationships between manufacturing equipment, processes and controls, and their integration into production factories.

The curriculum is computer and multimedia intensive and includes the use and understanding of new technologies such as robotics, programmable logic controllers, microprocessors and computer-integrated manufacturing and their application in automated production, assembly, automated inspection, and automated packaging. Focus is on computer-aided design and computer-aided manufacturing. Automation laboratories are used that contain many state-of-the-art devices including several industrial robots, CNC millers, CNC lathes, computer vision systems, and a fully automated flexible manufacturing system.

Master of Science in Manufacturing Systems Engineering

This is an interdisciplinary program of advanced study for individuals with backgrounds in engineering, focusing on efficient production in technology-intensive manufacturing industries.

Admission Requirements:

Applicants should be graduates of an accredited undergraduate engineering program. Students with degrees in science may also be considered.

Bridge Program: Students who lack appropriate undergraduate preparation for the program are required to make up deficiencies by taking a program of courses that are designed in consultation with graduate advisors. These courses are taken in addition to the degree requirements and may include undergraduate courses.

Degree Requirements:

A minimum of 30 credits is required: 12 credits of core courses and 18 in an area of specialization. A master's project or thesis is optional. Students select an area of specialization in consultation with the graduate advisor and must take a set of core, required and elective courses.

Seminar: All students who receive departmental or research-based awards must register each semester for **MnE 791** Manufacturing Engineer Seminar.

Core:

12 credits:

		MnE 601	Manufacturing Systems (3 credits)
		MnE 602	Flexible and Computer Integrated Manufacturing (3 credits)
		MnE 603	Management of Manufacturing Systems (3 credits)
		MnE 654	Design for Manufacturability (3 credits)

Project, Thesis, Independent Study (optional):

The following optional courses are appropriate for all areas of specialization:

		MnE 700	Master's Project (3 credits)
		MnE 701	Master's Thesis (6 credits)
		MnE 725	Independent Study in Manufacturing (3 credits)

Area of Specialization:

The range of possible specializations is broad. Students should consult the program director in designing specializations and related degree requirements. Some examples follow.

Design for Manufacturability:

18 credits from:

		CE 736	Finite Element Methods in Structural and Continuum Mechanics (3 credits)
		IE 675	Safety in Facility and Product Design (3 credits)
		ME 620	Stress Methods in Mechanical Design (3 credits)
		ME 621	Energy Methods in Mechanical Design (3 credits)
		ME 622	Finite Element Methods in Mechanical Engineering (3 credits)
		ME 635	Computer-Aided Design (3 credits)
		ME 636	Mechanism Design: Analysis and Synthesis (3 credits)
		MnE 655	Concurrent Engineering (3 credits)

System Automation:

18 credits from:

		CS 651	Data Communications (3 credits)
		CS 652	Computer Networks-Architectures, Protocols and Standards (3 Credits)
		ECE 638	Network Management and Security (3 credits)
		ME 638	Computer-Aided Machining (3 credits)
		ME 735	Advanced Topics in Robotics (3 credits)
		MNE612	

Computer Control of Manufacturing Systems:

18 credits from:

		ECE 601	Linear Systems (3 credits)
		ECE 660	Control Systems I (3 credits)
		ECE 664	Real-time Computer Control Systems (3 credits)
		ECE 666	Control Systems II (3 credits)
		IE 624	Heuristic Methods (3 credits)
		ME 655	Introduction to Modern Control Methods (3 credits)
		ME 755	Adaptive Control Systems (3 credits)

Manufacturing Systems Analysis and Design:*18 credits from:*

		CS 631	Data Management System Design (3 credits)
		CS 651	Data Communications (3 credits)
		ECE 683	Computer Network Design and Analysis (3 credits)
		IE616	
		IE 621	Systems Analysis and Simulation (3 credits)
		IE 622	Simulation and Risk Analysis in Operations Management (3 credits)
		IE 651	Industrial Simulation (3 credits)
		IE 652	Facilities Location and Plant Layout (3 credits)
		MnE 655	Concurrent Engineering (3 credits)

Management of Manufacturing Systems:*18 credits from:*

		EM 602	Management Science (3 credits)
		EM 635	Management of Engineering Research and Development (3 credits)
		EM 636	Project Management (3 credits)
		EM 640	Distribution Logistics (3 credits)
		EM653	
		EM 660	Financing an Industrial Enterprise (3 credits)
		EM 691	Cost Estimating for Capital Projects (3 credits)
		EM 771	Operations Cost and Management Control (3 credits)
		IE 618	Engineering Cost and Production Economics (3 credits)
		IE 673	Total Quality Management (3 credits)
		IE 674	Quality Maintenance and Support Systems (3 credits)

Catalog and curricula information approved by the relevant academic department.

Material Science and Engineering

Administered By: Committee for the Interdisciplinary Program in Materials Science and Engineering

Administration

Academic Director

Trevor A. Tyson

Degrees Offered: Master of Science in Materials Science and Engineering; Doctor of Philosophy in Materials Science and Engineering

This intercollegiate (CSLA and NCE), interdepartmental, and interdisciplinary degree program is intended for individuals with a strong background in science and/or engineering.

Master of Science in Materials Science and Engineering

Admissions Requirement

Applicants are expected to have an undergraduate degree from an accredited institution. A minimum undergraduate GPA of 3.0 on a 4.0 scale, or equivalent is normally required for admission. An undergraduate major in physics, chemistry, materials science, or a related engineering discipline is preferred. GRE quantitative scores of 700 or higher are highly desirable. Students from countries where English is not the native language should demonstrate TOEFL scores higher than 550 (pencil and paper) and 213 (computer-based).

Bridge Program

Students who lack appropriate undergraduate preparation for the program may be admitted and required to make up deficiencies by taking a program of courses which is designed in consultation with the graduate advisor. These courses are taken in addition to the degree requirements and may include undergraduate courses.

Degree Requirements

Candidates must complete a minimum of 30 credits, including 18 credits of required materials science courses and 12 credits in an area of specialization, which are selected in consultation with the program director or graduate advisor.

Seminar

In addition to the minimum 30 degree credits required, all students who receive program or research-based awards must enroll each semester in MtSE 791 Graduate Seminar.

Required:

	MtSE 601	Fundamentals of Engineering Materials (3 credits)
	MtSE 602	Thermodynamics of Materials (3 credits)
{	MtSE 619	Nano-scale Characterization of Materials (3 credits) or
	ME 619	Nano-scale Characterization of Materials (3 credits)

9 credits from the following:

	MtSE 610	Mechanical Properties of Materials (3 credits)
	MtSE 648	NanoMaterials (3 credits)
	MtSE 655	Diffusion and Solid State Kinetics (3 credits)
	MtSE 681	Composite Materials (3 credits)
	MtSE 682	Introduction to Ceramics (3 credits)
	MtSE 688	Mathematical and Statistical Methods in Materials Science (3 credits)
	BME 672	Biomaterials (3 credits)
{	ChE 681	Polymerization-Principles and Practice (3 credits) or
	CHEM681	
{	ChE 682	Polymer Structures and Properties (3 credits) or
	CHEM682	
	ChE 602	Selected Topics in Chemical Engineering I (3 credits)
	ChE 664	Experiments and Simulations in Particle Technology (3 credits)
	ECE 657	Semiconductor Devices (3 credits)
	PHYS682	
	Phys 687	Physics of Materials (3 credits)

PROJECT OR THESIS:

Required of all students receiving program or research-based awards, optional for all others.

	MtSE 700	Master's Project (3 credits)
	MtSE 701	Master's Thesis (6 credits)

AREAS OF SPECIALIZATION:

The range of possible specialization is broad. Students should consult the graduate advisor in designing the area of specialization and related degree requirements. Three areas and suggested courses are listed below.

Electronic and Photonic Materials

	MtSE 681	Composite Materials (3 credits)
	MtSE 682	Introduction to Ceramics (3 credits)
	MtSE 687	Glass Science and Engineering (3 credits)
	MtSE 688	Mathematical and Statistical Methods in Materials Science (3 credits)
	MtSE 719	Physical Principles of Characterization of Solids (3 credits)
	MtSE 722	Science and Technology of Thin Films (3 credits)
	MtSE 723	Defects in Solids (3 credits)
	MtSE 724	Transport of Electrons and Phonons in Solids (3 credits)
	MtSE 725	Crystallography and Diffraction (3 credits)
	PHYS661	
	PHYS682	
	Phys 687	Physics of Materials (3 credits)
	PHYS762	
	PHYS763	
	PHYS771	
	PHYS781	
	PHYS789	
	ChE 664	Experiments and Simulations in Particle Technology (3 credits)

	ChE 702	Selected Topics in Chemical Engineering II (3 credits)
	Chem 611	Solid-State Inorganic Chemistry (3 credits)
	Chem 626	Chemistry of Contemporary Materials (3 credits)
	ECE 623	Fourier Optics (3 credits)
	ECE 625	Fiber and Integrated Optics (3 credits)
	ECE 626	Optoelectronics (3 credits)
	ECE 657	Semiconductor Devices (3 credits)
	ECE 658	VLSI Design I (3 credits)
	ECE 659	Fabrication Principles of Electronic and Optoelectronic Devices (3 credits)
	ECE 739	Laser Systems (3 credits)
	ECE 760	Solid-State Image Sensors (3 credits)

Polymer and Biomaterials

	MtSE 681	Composite Materials (3 credits)
	MtSE 682	Introduction to Ceramics (3 credits)
	MtSE 687	Glass Science and Engineering (3 credits)
	MtSE 688	Mathematical and Statistical Methods in Materials Science (3 credits)
	MtSE 719	Physical Principles of Characterization of Solids (3 credits)
	MtSE 722	Science and Technology of Thin Films (3 credits)
	MtSE 655	Diffusion and Solid State Kinetics (3 credits)
	BME669	
	BME 672	Biomaterials (3 credits)
	BME 667	Systems Studies in Biomedical Engineering (3 credits)
	BME 698	Selected Topics (3 credits)
{	ChE 681	Polymerization-Principles and Practice (3 credits) or
	CHEM681	
{	ChE 682	Polymer Structures and Properties (3 credits) or
	CHEM682	
	ChE 627	Introduction to Biomedical Engineering (3 credits)
	ChE 664	Experiments and Simulations in Particle Technology (3 credits)
	ChE 702	Selected Topics in Chemical Engineering II (3 credits)
	Chem 640	Polymer Chemistry (3 credits)
	Chem 643	Polymer Laboratory I (3 credits)
	Chem 645	Polymer Laboratory II (3 credits)
	Chem 661	Instrumental Analysis Laboratory (3 credits)
	Chem 673	Biochemistry (3 credits)
	Math 661	Applied Statistics (3 credits)
	ME 670	Introduction to Biomechanical Engineering (3 credits)
	ME 671	Biomechanics of Human Structure and Motion (3 credits)
	ME 675	Mechanics of Fiber Composites (3 credits)
	ME 676	Applied Plasticity (3 credits)
	ME 678	Engineering Design of Plastic Products (3 credits)
	ME 679	Polymer Processing Techniques (3 credits)
	ME 680	Polymer Processing Equipment (3 credits)

Courses in metallic biomaterials and polymeric biomaterials offered at the University of Medicine and Dentistry of New Jersey may be taken as electives. See the program director/graduate advisor for information on how to register for them.

Particulate and Nano Materials

	MtSE 681	Composite Materials (3 credits)
	MtSE 682	Introduction to Ceramics (3 credits)
	MtSE 687	Glass Science and Engineering (3 credits)
	MtSE 688	Mathematical and Statistical Methods in Materials Science (3 credits)
	MtSE 719	Physical Principles of Characterization of Solids (3 credits)
	MtSE 722	Science and Technology of Thin Films (3 credits)
	MtSE 655	Diffusion and Solid State Kinetics (3 credits)
	BME669	
	BME 672	Biomaterials (3 credits)
{	ChE 681	Polymerization-Principles and Practice (3 credits) or
	CHEM681	
{	ChE 682	Polymer Structures and Properties (3 credits) or
	CHEM682	
	ChE 627	Introduction to Biomedical Engineering (3 credits)
	PHYS661	
	PHYS682	
	Phys 687	Physics of Materials (3 credits)
	ME 675	Mechanics of Fiber Composites (3 credits)
	ME 676	Applied Plasticity (3 credits)
	ME 678	Engineering Design of Plastic Products (3 credits)

Other Fields of Materials Science and Engineering

	MtSE 655	Diffusion and Solid State Kinetics (3 credits)
	MtSE 681	Composite Materials (3 credits)
	MtSE 682	Introduction to Ceramics (3 credits)
	MtSE 687	Glass Science and Engineering (3 credits)
	MtSE 688	Mathematical and Statistical Methods in Materials Science (3 credits)
	MtSE 719	Physical Principles of Characterization of Solids (3 credits)
	MtSE 722	Science and Technology of Thin Films (3 credits)
	MtSE 723	Defects in Solids (3 credits)
	MtSE 724	Transport of Electrons and Phonons in Solids (3 credits)
	MtSE 725	Crystallography and Diffraction (3 credits)
	PHYS661	
{	ChE 681	Polymerization-Principles and Practice (3 credits) or
	CHEM681

Doctor of Philosophy in Materials Science and Engineering

This is an intercollegiate (CSLA and NCE), interdepartmental, and interdisciplinary degree program for superior students who wish to do advanced research in an area of materials science and engineering. Current areas of research include electronic and photonic materials, nano and particulate materials, polymer and biomaterials, and other areas of materials science and engineering.

Admission Requirements:

Applicants are expected to have an appropriate master's degree in materials science or related field, physics, chemistry, or engineering from an accredited institution. Students entering with a master's degree must have at least a 3.5 GPA on a 4.0 scale in previous graduate study. Highly qualified students with bachelor's degrees may be accepted directly into the doctoral program. These students must have at least a 3.5 GPA in undergraduate work.

Degree Requirements:

Students with an appropriate master's degree in materials science or related field, physics, chemistry or engineering, are required to complete a minimum of 60 credits beyond the master's degree: 24 credits of course work, 12 of which must be at the 700 level and none at the 500 level, and no less than 9 are materials science and engineering (MTSE) courses. A minimum of 36 credits of doctoral dissertation research is required. Specific course selection, the area of specialization and dissertation topics are approved by the program advisor on an individual basis.

Students entering with bachelor's degrees are required to complete a minimum of 78 credits: 42 credits of course work and 36 credits of doctoral dissertation research. For the course work, the required courses for the M.S. in Materials Science and Engineering are mandatory; no less than 24 credits must be materials science and engineering courses, and no less than 12 credits must be at the 700 level and none at the 500 level. Specific course selection, the area of specialization, and dissertation topics are approved by the program advisor on an individual basis.

Required:

For those entering with a master's degree:

24 credits of course work beyond the master's degree and 36 credits of MtSE 790 Doctoral Dissertation and every semester of MtSE 791 Graduate Seminar.

For those entering with a bachelor's degree:

42 credits of course work and 36 credits of MtSE 790 Doctoral Dissertation and every semester of MtSE 791 Graduate Seminar. Among the course work, the following 18 credits are mandatory.

	MTSE 601	
	MTSE 602	
	MtSE 619	Nano-scale Characterization of Materials (3 credits)

9 credits from the following:

	MtSE 610	Mechanical Properties of Materials (3 credits)
	MtSE 648	NanoMaterials (3 credits)
	MtSE 681	Composite Materials (3 credits)
	MtSE 682	Introduction to Ceramics (3 credits)
	MtSE 688	Mathematical and Statistical Methods in Materials Science (3 credits)
	BME 672	Biomaterials (3 credits)
	BME 667	Systems Studies in Biomedical Engineering (3 credits)
	BME 698	Selected Topics (3 credits)
{	ChE 681	Polymerization-Principles and Practice (3 credits) or
	CHEM681	
{	ChE 682	Polymer Structures and Properties (3 credits) or
	CHEM682	
	Chem 640	Polymer Chemistry (3 credits)
	ChE 602	Selected Topics in Chemical Engineering I (3 credits)
	ChE 664	Experiments and Simulations in Particle Technology (3 credits)
	ECE 657	Semiconductor Devices (3 credits)
	PHYS682	
	Phys 687	Physics of Materials (3 credits)

Qualifying Examination

The student must pass a written and an oral qualifying examination. The written qualifying exam given every summer is administered to test general academic preparation and competence in the research of materials science and engineering. Within one year after passing the written qualifying exam, the student is required to pass the oral qualifying exam to achieve Ph.D. candidacy, in which the potential Ph.D. candidate presents a preliminary research proposal for approval by the dissertation committee. The student will be allowed two attempts to pass the written or oral qualifying exam.

The 4 topics of written qualifying exam are:

	MtSE 601	Fundamentals of Engineering Materials (3 credits)
	MtSE 602	Thermodynamics of Materials (3 credits)
	MtSE 619	Nano-scale Characterization of Materials (3 credits)

One of the following:

	MtSE 722	Science and Technology of Thin Films (3 credits)
	MtSE 648	NanoMaterials (3 credits)
	ChE 664	Experiments and Simulations in Particle Technology (3 credits)
{	ChE 681	Polymerization-Principles and Practice (3 credits) or
	CHEM681	
	BME 672	Biomaterials (3 credits)

Formation of Dissertation Committee:

Within one year of passing the written qualifying examination, doctoral students must form a five-member dissertation committee that meets the approval of the graduate program director for materials science and engineering. The committee must include the dissertation advisor, three additional faculty members from the program, and at least one member from outside the program or NJIT.

Dissertation and Defense:

An oral presentation and public defense of the doctoral dissertation is required.

Areas of Specializations

The range of possible specializations is broad. Students should consult the graduate advisor in designing the area of specializations and related degree requirements. Three focused areas and suggested courses are listed below.

Electronic and Photonic Materials

	MtSE 681	Composite Materials (3 credits)
	MtSE 682	Introduction to Ceramics (3 credits)
	MtSE 687	Glass Science and Engineering (3 credits)
	MtSE 688	Mathematical and Statistical Methods in Materials Science (3 credits)
	MtSE 719	Physical Principles of Characterization of Solids (3 credits)
	MtSE 722	Science and Technology of Thin Films (3 credits)
	MtSE 723	Defects in Solids (3 credits)
	MtSE 724	Transport of Electrons and Phonons in Solids (3 credits)
	MtSE 725	Crystallography and Diffraction (3 credits)
	PHYS661	
	PHYS682	
	Phys 687	Physics of Materials (3 credits)
	PHYS762	
	PHYS763	
	PHYS771	
	PHYS781	
	PHYS789	
	PHYS661	
	ChE 627	Introduction to Biomedical Engineering (3 credits)
	ChE 664	Experiments and Simulations in Particle Technology (3 credits)
	ChE 702	Selected Topics in Chemical Engineering II (3 credits)
	Chem 611	Solid-State Inorganic Chemistry (3 credits)
	Chem 626	Chemistry of Contemporary Materials (3 credits)
	ECE 623	Fourier Optics (3 credits)
	ECE 625	Fiber and Integrated Optics (3 credits)
	ECE 626	Optoelectronics (3 credits)
	ECE 657	Semiconductor Devices (3 credits)
	ECE 658	VLSI Design I (3 credits)
	ECE 659	Fabrication Principles of Electronic and Optoelectronic Devices (3 credits)
	ECE 739	Laser Systems (3 credits)
	ECE 760	Solid-State Image Sensors (3 credits)

Particulate and Nano Materials

Select 12 credits if completing a master's thesis; 15 credits if completing a master's project; 18 credits if not completing either a master's project or thesis from:

	MtSE 681	Composite Materials (3 credits)
	MtSE 682	Introduction to Ceramics (3 credits)
	MtSE 687	Glass Science and Engineering (3 credits)
	MtSE 688	Mathematical and Statistical Methods in Materials Science (3 credits)
	MtSE 719	Physical Principles of Characterization of Solids (3 credits)
	MtSE 722	Science and Technology of Thin Films (3 credits)
	MtSE 725	Crystallography and Diffraction (3 credits)
	MtSE 648	NanoMaterials (3 credits)
	ChE 664	Experiments and Simulations in Particle Technology (3 credits)
	Chem 640	Polymer Chemistry (3 credits)
	BME 672	Biomaterials (3 credits)
{	ChE 681	Polymerization-Principles and Practice (3 credits) or
	CHEM681	
{	ChE 682	Polymer Structures and Properties (3 credits) or
	CHEM682	
	BME669	
	BME 672	Biomaterials (3 credits)
	ChE 627	Introduction to Biomedical Engineering (3 credits)
	PHYS661	
	PHYS682	
	Phys 687	Physics of Materials (3 credits)
	ME 675	Mechanics of Fiber Composites (3 credits)
	ME 676	Applied Plasticity (3 credits)
	ME 678	Engineering Design of Plastic Products (3 credits)

Polymers and Biomaterials

Select 12 credits if completing a master's thesis; 15 credits if completing a master's project; 18 credits if not completing either a master's project or thesis from:

	MTSE 681	
	MtSE 682	Introduction to Ceramics (3 credits)
	MtSE 687	Glass Science and Engineering (3 credits)
	MtSE 688	Mathematical and Statistical Methods in Materials Science (3 credits)
	MtSE 719	Physical Principles of Characterization of Solids (3 credits)
	MtSE 722	Science and Technology of Thin Films (3 credits)
	MtSE 725	Crystallography and Diffraction (3 credits)
	BME 672	Biomaterials (3 credits)
	BME 667	Systems Studies in Biomedical Engineering (3 credits)
	BME 698	Selected Topics (3 credits)
	ChE 681	Polymerization-Principles and Practice (3 credits) or

{	CHEM681	
	ChE 682	Polymer Structures and Properties (3 credits) or
{	CHEM682	
	BME669	
	ChE 627	Introduction to Biomedical Engineering (3 credits)
	ChE 664	Experiments and Simulations in Particle Technology (3 credits)
	ChE 702	Selected Topics in Chemical Engineering II (3 credits)
	Chem 640	Polymer Chemistry (3 credits)
	Chem 643	Polymer Laboratory I (3 credits)
	Chem 645	Polymer Laboratory II (3 credits)
	Chem 661	Instrumental Analysis Laboratory (3 credits)
	Chem 673	Biochemistry (3 credits)
	Math 661	Applied Statistics (3 credits)
	ME 670	Introduction to Biomechanical Engineering (3 credits)
	ME 671	Biomechanics of Human Structure and Motion (3 credits)
	ME 675	Mechanics of Fiber Composites (3 credits)
	ME 676	Applied Plasticity (3 credits)
	ME 678	Engineering Design of Plastic Products (3 credits)
	ME 679	Polymer Processing Techniques (3 credits)
	ME 680	Polymer Processing Equipment (3 credits)

Courses in metallic biomaterials and polymeric biomaterials offered at the University of Medicine and Dentistry of New Jersey may be taken as electives. See the graduate advisor for information on how to register for them.

Other Fields of Materials Science and Engineering

Select 12 credits if completing a master's thesis; 15 credits if completing a master's project; 18 credits if not completing either a master's project or thesis from:

	MTSE 681	
	MtSE 682	Introduction to Ceramics (3 credits)
	MtSE 687	Glass Science and Engineering (3 credits)
	MtSE 688	Mathematical and Statistical Methods in Materials Science (3 credits)
	MtSE 719	Physical Principles of Characterization of Solids (3 credits)
	MtSE 722	Science and Technology of Thin Films (3 credits)
	MtSE 723	Defects in Solids (3 credits)
	MtSE 724	Transport of Electrons and Phonons in Solids (3 credits)
	MtSE 725	Crystallography and Diffraction (3 credits)
	PHYS661	
	BME 672	Biomaterials (3 credits)
	BME 667	Systems Studies in Biomedical Engineering (3 credits)
	BME 698	Selected Topics (3 credits)
{	ChE 681	Polymerization-Principles and Practice (3 credits) or
	CHEM681	
	ChE 682	Polymer Structures and Properties (3 credits) or

{	CHEM682	
	ChE 627	Introduction to Biomedical Engineering (3 credits)
	ChE 664	Experiments and Simulations in Particle Technology (3 credits)
	ChE 702	Selected Topics in Chemical Engineering II (3 credits)
	Chem 640	Polymer Chemistry (3 credits)
	Chem 643	Polymer Laboratory I (3 credits)
	Chem 645	Polymer Laboratory II (3 credits)
	Chem 661	Instrumental Analysis Laboratory (3 credits)
	Chem 673	Biochemistry (3 credits)
	Math 661	Applied Statistics (3 credits)
	ME 670	Introduction to Biomechanical Engineering (3 credits)
	ME 671	Biomechanics of Human Structure and Motion (3 credits)
	ME 675	Mechanics of Fiber Composites (3 credits)
	ME 676	Applied Plasticity (3 credits)
	ME 678	Engineering Design of Plastic Products (3 credits)
	ME 679	Polymer Processing Techniques (3 credits)
	ME 680	Polymer Processing Equipment (3 credits)
	PHYS682	
	Phys 687	Physics of Materials (3 credits)

Chair (On Assignment)	Daljit S. Ahluwalia
Acting Chair	Robert M. Miura
Acting Associate Chair	Amitabha K. Bose
Director(Undergraduate Program)	Zoi-heleni Michalopoulou
Director(Graduate Program)	Michael R. Booty
Director(Statistics Program)	Manish Bhattacharjee
Departmental Coordinator	Padma Gulati

Faculty

Foundation Chair	Gregory A. Kriegsmann
Distinguished Professors	Nadine N. Aubry* , Vladislav Goldberg, Gene M. Jonakait, Gregory A. Kriegsmann
Professors	Daljit S. Ahluwalia, Roman I. Andrushkiw, Manish Bhattacharjee, Denis L. Blackmore, Amitabha K. Bose, Fadi Deek*** , H M. Lacker** , Dorothy Levy, Jonathan H. Luke, Petronije Milojevic, Robert M. Miura** , Demetrius Papageorgiou, Manuel Perez, Michael S. Siegel, David Stickler, John Tavantzis
Associate Professors	John K. Bechtold, Michael R. Booty, Bruce G. Bukiet, Hamilton A. Chase, Wooyoung Choi, Sunil K. Dhar, Rose Dios, Jorge P. Golowasch† , Jay M. Kappraff, Martin Katzen, Lou Kondic, Murray I. Lieb, Zoi-heleni Michalopoulou‡ , Farzan Nadim† , Peter G. Petropoulos, Roy A. Plastock, Kewal S. Sran, Sheldon Wang
Assistant Professors	Christopher E. Elmer, Daniel Goldman** , Roy H. Goodman, Peter Gordon, David J. Horntrop, Shidong Jiang, Victor V. Matveev, Richard O. Moore, Cyrill B. Muratov, Christopher S. Raymond, Gareth J. Russell† , Louis Tao, yoow, Yuan-nan Young
Special Lecturers	Aridaman K. Jain, Hafiz M. Khan, Karen D. Rappaport, Jeyakumaran Ratnaswamy, Venkatasubraman Venkateswaran
Lecturers	Soha R. Abdeljaber, John Hunter, Soroosh Mohebbi Forushani, David Whitebook, Joseph Zaleski
Post Doctoral Fellows	Ozgur Ozen
Research Professors	Victoria Booth, Thomas Erneux, Anna Georgieva, Roberto Mauri, Dawn A. Lott-Crumpler, Jean Vanden-Broeck

* Joint appointment with Department of Mechanical Engineering

** Joint appointment with Department of Biomedical Engineering

*** Joint appointment with the Department of Information Systems

† Joint appointment with the Federated Department of Biological Sciences

‡ Joint appointment with the Department of Electrical and Computer Engineering

Degrees Offered:

- Master of Science in Applied Mathematics
- Master of Science in Applied Statistics
- Doctor of Philosophy in Mathematical Sciences

Master of Science in Applied Mathematics

This program is intended for students with a strong interest in Applied Mathematics. Applied Mathematics is the application of classical and modern mathematical techniques to the solution of practical problems in the physical and biological sciences and engineering. The applied mathematician develops and analyzes mathematical models of physical and biological phenomena and engineering systems, interprets solutions to mathematical problems and uses the results to identify relationships, patterns, and the effects of altering one or more variables or modeling assumptions. Many of the courses in the program illustrate how mathematics can be used to predict the behavior of physical, biological, and engineering systems.

The Master of Science in Applied Mathematics, with its areas of specialization in analysis, applied mathematics, computational methods, and mathematical biology is designed to serve the needs of students who may be interested in pursuing a doctoral degree in the mathematical, physical, or biological sciences. The program also strengthens the quantitative and analytical skills of students with a baccalaureate degree who are planning to work in industry, commerce, or education, as well as practicing engineers and others already employed in industry and commerce.

Admission Requirements:

It is expected that students applying for admission will have an undergraduate education in mathematics, the physical or biological sciences, or engineering. For additional information, see the Admissions section of this catalog. An undergraduate GPA of at least 3.0 on a 4.0 scale or equivalent is normally required. Submission of GRE scores is encouraged but not required. However, GRE scores are required for those students applying for financial support. Applications are considered on a case-by-case basis.

Bridge Program: Students with a baccalaureate degree in an area different from mathematics may be admitted and required by the department to take an individually-designed program of courses that may include undergraduate courses before proceeding to the graduate curriculum. Such courses do not count towards a graduate degree.

Degree Requirements:

The Master of Science in Applied Mathematics requires 30 credits: 15 credits in core courses, 15 credits in an area of specialization, of which six credits are required and nine credits are electives. Students must successfully complete at least 24 of these credits at the 600-level or higher, and no more than six credits at the 500-level will be counted towards the degree. Specific course requirements depend on the area of specialization. A master's thesis or a master's project is optional.

Seminar: In addition to the minimum 30 degree credits required, all students who receive departmental or research-based awards must enroll every semester in Math 791 Graduate Seminar.

Core:

15 credits:

		Math 613	Advanced Applied Mathematics I: Modeling (3 credits)
		Math 631	Linear Algebra (3 credits)
#		Math 645	Analysis I (3 credits)
		Math 656	Complex Variables I (3 credits)
		Math 689	Advanced Applied Mathematics II: Ordinary Differential Equations (3 credits)

Project, Thesis (optional):

		Math 700	Master's Project (3 credits)
		Math 701	Master's Thesis (6 credits)

Required Courses in Areas of Specialization:

6 credits:

Analysis:

	Math 745	Analysis II (3 credits)
	Math 756	Complex Variables II (3 credits)

Applied Mathematics:

	Math 614	Numerical Methods I (3 credits)
	Math 690	Advanced Applied Mathematics III: Partial Differential Equations (3 credits)

Computational Mathematics:

	Math 614	Numerical Methods I (3 credits)
	Math 712	Numerical Methods II (3 credits)

Mathematical Biology:

	Math 635	Analytical Computational Neuroscience (3 credits)
	Math 637	Foundations of Mathematical Biology (3 credits)

Elective:

9 credits selected with approval of graduate advisor.

Electives are chosen in consultation with a Departmental Graduate Advisor and consist of advanced courses in mathematics and advanced courses from biology, physics, computer science, and engineering, for example. Courses offered by appropriate departments at NJIT, UMDNJ, and Rutgers-Newark can be used as electives within the limits of the NJIT transfer policy. All elective courses must be approved by the graduate advisor.

Master of Science in Applied Statistics

The objective of the Master of Science in Applied Statistics is to prepare students for a wide range of professional activities as practicing statisticians in both academia and industry. A statistician develops and analyzes models of data-driven situations where uncertainty of the outcomes plays a major role, identifies statistical relationships among observable variables, forecasts probable future outcomes, and draws inferences about background parameters that impact the phenomenon of interest. Thus the program is designed to provide students with the comprehensive knowledge and technical skills that are needed for the planning, execution, and analysis of statistical studies. These statistical studies are increasingly used as advisory instruments for policy decisions in the corporate and other sectors of the economy.

The Master of Science in Applied Statistics program will serve the needs of students with a baccalaureate degree who are planning to work in industry, commerce, or education, as well as practicing engineers and others already employed in industry and commerce. The program also strengthens the analytical and quantitative skills of graduate students who may be interested in pursuing a doctoral degree in Applied Probability and Statistics, since it equips them with basic training in the foundations of statistics in preparation for further advanced studies and research.

Admission Requirements:

Applicants must have a degree from an accredited institution with at least 12 credits in mathematics, including calculus. Students who do not meet these requirements may be admitted if they satisfy the university's requirements for admission. An undergraduate GPA of at least 3.0 on a 4.0 scale or equivalent is normally required. Submission of GRE scores is encouraged but not required. However, GRE scores are required for those students applying for financial support. Applications are considered on a case-by-case basis.

Bridge Program: Students who do not satisfy the credit requirement in mathematics will be required to take a bridge program of six credits in appropriate mathematics courses. Such courses do not count towards a graduate degree.

Degree Requirements:

The Master of Science in Applied Statistics requires 30 credits: 21 credits in core courses and 9 credits of elective courses. Students must successfully complete at least 24 of these credits at the 600-level or higher, and no more than six credits at the 500-level will be counted towards the degree. A master's thesis or a master's project is optional.

Seminar: In addition to the minimum 30 degree credits required, all students who receive departmental or research-based awards must enroll every semester in Math 791 Graduate Seminar.

Core:

21 credits:

{	Math 611	Numerical Methods for Computation (3 credits) or
	Math 630	Linear Algebra and Applications (3 credits)
	Math 644	Regression Analysis Methods (3 credits)
	Math 661	Applied Statistics (3 credits)
	Math 662	Probability Distributions (3 credits)
	Math 664	Methods for Statistical Consulting (3 credits)
	Math 699	Design and Analysis of Experiments (3 credits)
	Math 762	Statistical Inference (3 credits)

Project, Thesis (optional):

	Math 700	Master's Project (3 credits)
	Math 701	Master's Thesis (6 credits)

Elective:

9 credits selected with approval of graduate advisor.

Electives are chosen in consultation with a departmental graduate advisor and consist of advanced courses in mathematics and statistics and advanced courses from engineering, computer science, and biology. Students are encouraged to choose courses in application areas. Courses offered by appropriate departments at NJIT, UMDNJ, and Rutgers University-Newark can be used as electives within the limits of the NJIT transfer policy. All elective courses must be approved by the graduate advisor.

Doctor of Philosophy in Mathematical Sciences

The Doctor of Philosophy in Mathematical Sciences is offered in collaboration with the Department of Mathematics and Computer Science at Rutgers University-Newark. The doctoral program in Mathematical Sciences is designed to prepare students for a wide range of professional activities in science and engineering. Prospective students must choose one of the following tracks:

- Applied Mathematics
- Applied Probability and Statistics
- Pure Mathematics

The doctoral program reflects the research interests of the faculty and is focused on the development and use of mathematical tools for solving modern scientific, technological and industrial problems, and advancing the research knowledge and methodology in various fields of specialization.

The Applied Mathematics track emphasizes the applications of mathematical methods to the physical and biological sciences and engineering, including acoustics, electromagnetics, fluid dynamics, materials science, biology, and medicine. Mathematical modeling, asymptotic analysis, and scientific computing are emphasized. Students are expected to develop a broad range of capabilities both in mathematics and in an area of application.

The Applied Probability and Statistics track emphasizes directed instruction and independent research in areas that are specializations of the faculty. Current research interest areas of the faculty include applied probability, nonparametric statistics, and statistical reliability theory and applications.

The Pure Mathematics track offers research opportunities in many fields of specialization, including representation theory, number theory, low-dimensional topology, Riemann surfaces and Kleinian groups, geometric group theory, and 4-manifolds.

Admission Requirements:

Admission to the program is based on a review of the applicant's credentials and interests as expressed in academic transcripts, GRE scores, letters of recommendation, statement of interests, and TOEFL scores (for students whose native language is not English). Applicants with strong academic records whose abilities and interests complement the research of the faculty are sought. In general, applicants should have a bachelor's or master's degree in mathematics, an engineering discipline, or a branch of the natural sciences. Students choosing the Applied Mathematics track or the Applied Probability and Statistics track must fulfill the admissions requirements specified in the Admissions section of this catalog.

Students interested in either the Applied Mathematics track or the Applied Probability and Statistics track should apply to NJIT. Students interested in the Pure Mathematics track should apply to Rutgers-Newark.

Degree Requirements:

Applied Mathematics Track (NJIT)

Students choosing the applied mathematics track must fulfill the requirements for the doctor of philosophy as specified in this catalog. Specific courses of study are planned in consultation with a faculty advisor and are subject to approval. In general, students are encouraged to take courses both in mathematics and in areas of application.

Seminar: In addition to the minimum degree credits required, all doctoral students must enroll each semester in Math 791 Graduate Seminar.

Courses: A typical schedule of courses for the first four semesters in Applied Mathematics consists of the following:

Semester I

	Math 599	Teaching in Mathematics (3 credits)
	Math 613	Advanced Applied Mathematics I: Modeling (3 credits)
	Math 631	Linear Algebra (3 credits)
	Math 645	Analysis I (3 credits)

Semester II

	Math 614	Numerical Methods I (3 credits)
	Math 656	Complex Variables I (3 credits)
	Math 689	Advanced Applied Mathematics II: Ordinary Differential Equations (3 credits)
	Math 745	Analysis II (3 credits)

Semester III

	Math 671	Asymptotic Methods I (3 credits)
	Math 690	Advanced Applied Mathematics III: Partial Differential Equations (3 credits)
	Math 712	Numerical Methods II (3 credits)
	Math 756	Complex Variables II (3 credits)

Semester IV

	Math 676	Advanced Ordinary Differential Equations (3 credits)
	Math 707	Advanced Applied Mathematics IV: Special Topics (3 credits)
	Math 713	Advanced Scientific Computing: Multi-Dimensional Finite-Difference Schemes and Spectral Methods (3 credits)
	Elective	(Course from Natural Sciences or Engineering Relevant to Student's Interests.)

In addition to these courses, there are advanced courses in:

- computational neuroscience ([Math 635](#) , [Math 636](#))
- mathematical biology ([Math 637](#) , [Math 672](#) , [Math 673](#))
- statistics ([Math 644](#) , [Math 646](#) , [Math 787](#))
- probability ([Math 662](#) , [Math 668](#))
- partial differential equations ([Math 675](#))
- calculus of variations ([Math 677](#))
- tensor analysis ([Math 720](#))
- asymptotic methods ([Math 771](#))

Also, there are special topics courses in:

- computational fluid dynamics
- elasticity
- electromagnetics
- financial mathematics
- fluid dynamics
- integral equations
- materials science
- mathematical biology
- microwave processing of materials
- wave propagation.

Qualifying Examination: The qualifying examination for the applied mathematics track consists of three components: Analysis, Linear Algebra - Numerical Methods, and Applied Mathematics. Students must achieve a grade of A in each component to pass the qualifying examination. Components may be passed at different times. However, a student may attempt each component at most twice and must pass all three components by the end of the second year in the program. Typically, two opportunities to take each component are provided each year: Analysis and Linear Algebra - Numerical Methods (August and January), Applied Mathematics (January and May).

The following courses will be useful in helping the students to prepare for the qualifying examinations : [Math 645](#), [Math 656](#), and [Math 745](#) for Analysis; [Math 614](#) and [Math 631](#) for Linear Algebra Numerical Methods; and [Math 613](#), [Math 689](#), and [Math 690](#) for Applied Mathematics. It should be noted that taking the above courses is not mandatory but students are strongly encouraged to take them before attempting the qualifying examinations. The scope of the qualifying examinations is not limited to the specific list of topics covered in these courses, but these topics are indicative of the overall scope of these examinations.

Dissertation Committee: The dissertation committee is an important resource for the doctoral student in the conduct of research for their dissertation. Within six months of passing the qualifying examination a dissertation committee must be formed according to the regulations specified in this catalog.

Dissertation Proposal: Doctoral students must prepare a research proposal for approval by their dissertation committee. The student must offer an oral defense of this proposal before the dissertation committee and obtain its approval within one year of passing the qualifying examination. The committee determines if the proposal has an appropriate objective, if there is a reasonable plan to reach that objective, and if the student possesses the knowledge and skills needed to carry out the plan. The dissertation proposal can only be approved by unanimous consent of the committee members.

Dissertation Defense: A public oral defense of the dissertation before the dissertation committee is required. All members of the committee must be present for the defense. Success of the defense is determined by a majority vote of the dissertation committee.

Applied Probability and Statistics Track (NJIT)

Students choosing the applied probability and statistics track must fulfill the requirements for the doctor of philosophy as specified in this catalog. Specific courses of study are planned in consultation with a faculty graduate advisor and are subject to approval. In general, students are encouraged to take courses both in mathematics and in areas of application.

Seminar: In addition to the minimum degree credits required, all doctoral students must enroll each semester [Math 791](#) Graduate

Seminar

Courses: A typical schedule of courses for the first four semesters in Applied Probability and Statistics consists of the following:

Semester I

	Math 599	Teaching in Mathematics (3 credits)
	Math 631	Linear Algebra (3 credits)
	Math 645	Analysis I (3 credits)
	Math 662	Probability Distributions (3 credits)

Semester II

	Math 644	Regression Analysis Methods (3 credits)
	Math 668	Probability Theory (3 credits)
	Math 745	Analysis II (3 credits)
	Math 762	Statistical Inference (3 credits)

Semester III

	Math 646	Time Series Analysis (3 credits)
	Math 699	Design and Analysis of Experiments (3 credits)
	Math 787	Non-Parametric Statistics (3 credits)
	Elective	(Course in statistics/mathematics/engineering/computing sciences relevant to student's interest.)

Semester IV

	Math 664	Methods for Statistical Consulting (3 credits)
	Math 698	Sampling Theory (3 credits)
	Math 707	Advanced Applied Mathematics IV: Special Topics (3 credits)
	Elective	(Course in statistics/mathematics/engineering/computing sciences relevant to student's interest.)

In addition to these courses, there are advanced courses in:

- Time Series Analysis - II (**Math 647**)
- Stochastic processes with applications (**Math 691**)
- Statistical reliability theory and applications (**Math 761**)
- Large sample theory and inference (**Math 786**)

Also, there are special topics courses (**Math 707**), in:

- Categorical data analysis,
- Financial mathematics.
- Generalized linear models,
- Markov chain Monte Carlo methods,

Qualifying Examination: The qualifying examination for the applied probability and statistics track consists of three components: Analysis, Linear Algebra, and Statistics. Students must achieve a grade of A in each component to pass the qualifying examination. Components may be passed at different times. However, a student may attempt each component at most twice and must pass all three components by the end of the second year in the program. Typically, two opportunities to take each component are provided each year: Real Analysis and Probability, Linear Algebra, Distribution Theory and Statistical Inference (August and January); Topics in Statistics (January and May).

The following courses will be useful in helping the students to prepare for the qualifying examinations : **Math 645**, **Math 668**, and **Math**

745 for Real Analysis and Probability; **Math 631**, **Math 662**, and **Math 762** for Linear Algebra, Distribution Theory and Statistical Inference; **Math 644**, **Math 699**, and **Math 707** (Linear Models) for Topics in Statistics. The scope of the "Topics in Statistics" examination may include additional advanced courses in statistics that the students may have taken. It should be noted that taking the above courses are not mandatory but students are strongly encouraged to take them before attempting the qualifying examinations. The scope of the qualifying examinations is not limited to the specific list of topics covered in these courses, but these topics are indicative of the overall scope of these examinations.

Dissertation Committee: The dissertation committee is an important resource for the doctoral student in the conduct of research for their dissertation. Within six months of passing the qualifying examination a dissertation committee must be formed according to the regulations specified in this catalog.

Dissertation Proposal: Doctoral students must prepare a research proposal for approval by their dissertation committee. The student must offer an oral defense of this proposal before the dissertation committee and obtain its approval within one year of passing the qualifying examination. The committee determines if the proposal has an appropriate objective, if there is a reasonable plan to reach that objective, and if the student possesses the knowledge and skills needed to carry out the plan. The dissertation proposal can only be approved by unanimous consent of the committee members.

Dissertation Defense: A public oral defense of the dissertation before the dissertation committee is required. All members of the committee must be present for the defense. Success of the defense is determined by a majority vote of the dissertation committee.

Pure Mathematics Track (Rutgers-Newark)

Students interested in the Pure Mathematics track should contact the Department of Mathematics and Computer Science at Rutgers-Newark.

Students specializing in applied mathematics or computational mathematics may take Math 545 Introductory Mathematical Analysis and Math 546 Advanced Calculus, instead of Math 645 and 3 credits of elective.

Catalog and curricula information approved by the relevant academic department.

Mechanical Engineering

Administered By: Department of Mechanical Engineering

Administration

Acting Chair.	William C. Van Buskirk
Associate Chair.	Pasquale J. Florio
Associate Chair. for Graduate Studies	Edward L. Dreyzin

Faculty

Distinguished Professors	Robert Altenkirch, Nadine N. Aubry(F Leslie and Mildred Jacobus Chair)
Professors	Thomas R. Blake, Rong-yaw Chen, Rajesh N. Dave, Edward L. Dreyzin, Ian S. Fischer, Avraham Harnoy, Boris Khusid, Bernard Koplik, Ernest S. Geskin, Anthony D. Rosato, Pushpendra Singh, Rajpal S. Sodhi
Associate Professors	Roman Dubrovsky, Pasquale J. Florio, Zhiming Ji, Kwabena A. Narh, Chao Zhu, I J. Rao
Special Lecturers	Andrea Giorgioni, Harry V. Kountouras, Benjamin J. Serico, Herli Surjanhata

Degrees Offered: Master of Science in Mechanical Engineering; Doctor of Philosophy in Mechanical Engineering

Mechanical engineering is concerned with the design, development, manufacture, and operation of a wide variety of energy conversion and machine systems. The research and education facilities of the department are housed in the 60,000-square-foot Mechanical Engineering Building. Major research laboratories include Particle Technology, Energetic Materials, Machine Vision and Motion Analysis, Waterjet Machining, Robotics and Intelligent Manufacturing, Bearing Lubrication, and Plastic Processing and Analysis.

Master of Science in Mechanical Engineering

A program for engineering graduates who want advanced professional preparation and further graduate study in mechanical engineering.

Admission Requirements:

Applicants are expected to have an accredited undergraduate degree in mechanical engineering or a related field. General admissions requirements for master's programs as described in this catalog apply to applicants to the M.S. in Mechanical Engineering. Sufficient preparation in science and mathematics to complete the course of study is also necessary.

Bridge Program: Students who lack appropriate undergraduate preparation may be admitted and are asked to make up deficiencies by taking a program of courses that is designed in consultation with the graduate advisor. These courses are taken in addition to the degree requirements and may include undergraduate courses.

** Degree Requirements:

The program shown below offers numerous areas of specialization, each with its own list of required and elective courses. Once the specialization is chosen, the student consults the graduate advisor to plan and develop an individualized and cohesive sequence of courses that meet program requirements of at least 30 degree credits.

Seminar: In addition to the minimum 30 degree credits required, every student must take a minimum of two semesters of ME 794 Mechanical Engineering Colloquium. Students who receive departmental or research-based awards must enroll every semester in ME 794.

Project, Thesis:

Thesis is required of all students who receive departmental or research-based awards. For all others, a project or thesis is optional.

	ME 700	Master's Project (3 credits)
	ME 701	Master's Thesis (6 credits)

**** Areas of Specialization:**

The range of possible areas of specialization is broad. Students should consult with the graduate advisor in designing specialization and related degree requirements. With the approval of the advisor, students may take courses from other departments to enhance areas of specialization after completion of 12 credits in mechanical engineering. Some example areas of specialization and the courses for each follow. The number of elective credits for each area of specialization will vary according to the number of required course credits and also if a student enrolls in ME 700 or ME 701.

Biomechanical Engineering:**Required:**

15 credits:

	ME 616	Matrix Methods in Mechanical Engineering (3 credits)
	ME 620	Stress Methods in Mechanical Design (3 credits)
	ME 622	Finite Element Methods in Mechanical Engineering (3 credits)
	ME 635	Computer-Aided Design (3 credits)
	ME 671	Biomechanics of Human Structure and Motion (3 credits)

Elective:

Select 9 credits if completing a master's thesis; 12 credits if completing a master's project; 15 credits if not completing either a master's project or thesis.

	BME669	
	ME 670	Introduction to Biomechanical Engineering (3 credits)
	ME 672	Biomaterials-Characterization (3 credits)

Other suitable courses selected with approval of the graduate advisor.

Particle Technology:**Required:**

12 credits:

	ME 616	Matrix Methods in Mechanical Engineering (3 credits)
	ME 620	Stress Methods in Mechanical Design (3 credits)
	ME 624	Microlevel Modeling in Particle Technology (3 credits)
	ME 664	Experiments and Simulations in Particle Technology (3 credits)

Elective:

Select 12 credits if completing a master's thesis; 15 credits if completing a master's project; 18 credits if not completing either a master's project or thesis.

	ME 628	Machine Vision Principles and Applications (3 credits)
	ME 643	Combustion (3 credits)

Other suitable courses selected with approval of the graduate advisor.

Robotics and Controls:**Required:**

12 credits:

	ME 616	Matrix Methods in Mechanical Engineering (3 credits)
	ME 620	Stress Methods in Mechanical Design (3 credits)
	ME 625	Introduction to Robotics (3 credits)
	ME 655	Introduction to Modern Control Methods (3 credits)

Elective:

Select 12 credits if completing a master's thesis; 15 credits if completing a master's project; 18 credits if not completing either a master's project or thesis.

	ME 628	Machine Vision Principles and Applications (3 credits)
	ME 633	Dynamics of Machinery (3 credits)
	ME 635	Computer-Aided Design (3 credits)
	ME 735	Advanced Topics in Robotics (3 credits)
	ME 755	Adaptive Control Systems (3 credits)

Other suitable courses selected with approval of the graduate advisor.

Design and Mechanisms:**Required:**

12 credits:

	ME 616	Matrix Methods in Mechanical Engineering (3 credits)
	ME 620	Stress Methods in Mechanical Design (3 credits)
	ME 621	Energy Methods in Mechanical Design (3 credits)
	ME 637	Kinematics of Spatial Mechanisms (3 credits)

Elective:

Select 12 credits if completing a master's thesis; 15 credits if completing a master's project; 18 credits if not completing either a master's project or thesis.

	ME 615	Advanced Mechanical Vibrations (3 credits)
	ME 630	Analytical Methods in Machine Design (3 credits)
	ME 633	Dynamics of Machinery (3 credits)
	ME 635	Computer-Aided Design (3 credits)
	ME 636	Mechanism Design: Analysis and Synthesis (3 credits)
	ME 736	Advanced Mechanism Design (3 credits)

Other suitable courses selected with approval of the graduate advisor.

CAD/CAM:**Required:**

12 credits:

	ME 616	Matrix Methods in Mechanical Engineering (3 credits)
	ME 620	Stress Methods in Mechanical Design (3 credits)
	ME 622	Finite Element Methods in Mechanical Engineering (3 credits)
	ME 635	Computer-Aided Design (3 credits)

Elective:

Select 12 credits if completing a master's thesis; 15 credits if completing a master's project; 18 credits if not completing either a master's project or thesis.

	ME 625	Introduction to Robotics (3 credits)
	ME 628	Machine Vision Principles and Applications (3 credits)
	ME 630	Analytical Methods in Machine Design (3 credits)
	ME 638	Computer-Aided Machining (3 credits)
	ME 734	Analysis and Synthesis for Design (3 credits)
	ME 736	Advanced Mechanism Design (3 credits)

Other suitable courses selected with approval of the graduate advisor.

Thermal Systems:**Required:**

12 credits:

	ME 607	Advanced Thermodynamics (3 credits)
	ME 610	Applied Heat Transfer (3 credits)
	ME 611	Dynamics of Incompressible Fluids (3 credits)
	ME 616	Matrix Methods in Mechanical Engineering (3 credits)

Elective:

Select 12 credits if completing a master's thesis; 15 credits if completing a master's project; 18 credits if not completing either a master's project or thesis.

	ME 641	Refrigeration and Air Conditioning (3 credits)
	ME 643	Combustion (3 credits)
	ME 644	Building Environmental Control Principles (3 credits)
	ME 712	Mechanics of Viscous Fluids (3 credits)

Other suitable courses selected with approval of the graduate advisor.

Fluid Dynamics:**Required:**

12 credits:

	ME 611	Dynamics of Incompressible Fluids (3 credits)
	ME 616	Matrix Methods in Mechanical Engineering (3 credits)
	ME 712	Mechanics of Viscous Fluids (3 credits)
*	ME 713	Non-Newtonian Fluid Dynamics (3 credits)

Elective:

Select 12 credits if completing a master's thesis; 15 credits if completing a master's project; 18 credits if not completing either a master's project or thesis.

	ME 609	Dynamics of Compressible Fluids (3 credits)
	ME 610	Applied Heat Transfer (3 credits)
	ME 631	Bearings and Bearing Lubrication (3 credits)
	ME 643	Combustion (3 credits)
	Math 611	Numerical Methods for Computation (3 credits)

Other suitable courses selected with approval of the graduate advisor.

Materials and Processing:**Required:**

12 credits:

	ME 610	Applied Heat Transfer (3 credits)
	ME 616	Matrix Methods in Mechanical Engineering (3 credits)
	ME 675	Mechanics of Fiber Composites (3 credits)
	ME 678	Engineering Design of Plastic Products (3 credits)

Elective:

Select 12 credits if completing a master's thesis; 15 credits if completing a master's project; 18 credits if not completing either a master's project or thesis.

	ME 624	Microlevel Modeling in Particle Technology (3 credits)
	ME 643	Combustion (3 credits)
	ME 680	Polymer Processing Equipment (3 credits)
	ME 776	Dynamics of Polymeric Liquids (3 credits)
	MtSE 605	Fundamentals of Engineering Materials (3 credits)
	MtSE 610	Mechanical Properties of Materials (3 credits)
	MtSE 615	Composite Materials (3 credits)
	MtSE 650	Physical Metallurgy (3 credits)

Other suitable courses selected with approval of the graduate advisor.

Doctor of Philosophy in Mechanical Engineering

This is a program for superior students with master's degrees in mechanical engineering or allied fields who wish to do advanced research in an area of mechanical engineering. In exceptional circumstances, highly qualified students with bachelor's degrees in mechanical engineering may be accepted directly into the doctoral program.

Admission Requirements:

Applicants should have a master's degree from an accredited institution, and have successfully taken courses in applied mathematics and engineering sciences. In addition, applicants must fulfill the admissions requirements for doctoral study as specified in the Admissions section of this catalog. Students who lack an appropriate background will be required to take additional courses before gaining admission to the program. These courses are prescribed by the department on an individual basis and may not be applied as degree credit.

Degree Requirements:

Specific degree requirements and dissertation topics are approved by the department on an individual basis. Before being permitted to register for dissertation research, students must complete courses specified by the department, pass qualifying examinations and demonstrate that there are facilities and a faculty member available to supervise the research. Should dissertation research not be completed within the normal 36 credits of ME 790, students must register for a minimum of 3 credits per semester until the dissertation is completed and approved. An oral defense of the dissertation is required after submission of the final document to the department for approval.

Required:

24 credits of course work beyond the master's degree

ME 794 Mechanical Engineering Colloquium; required every semester for all doctoral students

36 credits of ME 790 Doctoral Dissertation

Required:

24 credits of course work beyond the master's degree

ME 794 Mechanical Engineering Colloquium; required every semester for all doctoral students

36 credits of ME 790 Doctoral Dissertation

Qualifying Examination: Once admitted to the program, candidates are expected to pass a two-part written qualifying examination. It is given at least once a year. Students must apply in writing to the graduate advisor for permission to take qualifying examinations. From the time of formal admission into the program, the examination must be taken by the second time it is offered, except students with departmental or research-based assistantships who must take the examination the first time it is offered. At the discretion of the department, an additional oral examination may be required.

Part I Applied Mathematics (ordinary and partial differential equations, vector analysis, complex variables, numerical methods, and boundary value problems)

Part II Two parts selected from engineering mechanics, fluid mechanics, heat transfer, stress analysis, system dynamics, thermodynamics.

* pending

** Note: Before registering for courses, all students must see the graduate advisor to obtain the latest version of the brochure, "Graduate Programs in Mechanical Engineering." All new students must obtain approval from the graduate advisor before registering for courses.

Catalog and curricula information approved by the relevant academic department.

** Joint appointee with the School of Architecture

Degrees Offered: Master of Business Administration in Management of Technology; Master of Science in Management.**Master of Business Administration in Management of Technology** (48 credits)

NJIT's MBA in the Management of Technology is designed to prepare a new generation of technology savvy business leaders. The curriculum integrates fundamental business knowledge with applications of technology to business to prepare students to think strategically about business and technology. The program is built upon four themes that are transforming business: a) the transition to a knowledge based economy; b) the emergence of the digital firm; c) the globalization of business; and d) innovation as the primary source of competitive advantage.

Concentration areas are offered in Management Information Systems, e-Commerce, Marketing, Finance, Operations Management, Infrastructure Management and Transportation and Logistics.

Admission Requirements:

Applicants to the MBA must submit complete transcripts of all undergraduate work and scores on the Graduate Management Admissions Test (GMAT). The GMAT is required of all applicants except those holding master's or doctoral degrees from an accredited U.S. university. Up to nine credits of graduate work may be transferred from another school, provided that they are not counted towards a terminal degree at that school.

MBA Pre-Qualifying Requirements : Students are expected to demonstrate competency in the area of accounting, finance, quantitative methods, information systems and economics. Depending on the applicant's undergraduate degree program all or part of the pre-qualifier requirements can be met with prior undergraduate course work. Applicants who do not meet pre-qualifying requirements will be required to complete up to 12 credits of course work.

Degree Requirements:

Pre-Qualifying Courses (Conditional Admits only):

	Mgmt 501	Management Foundations (3-0-3)
	Mgmt 580	Managerial Science (3 credits)
	MIS 246	Tools and Technologies for the Digital Firm (3-0-3)
	Econ 565	Managerial Economics (3 credits)

MODULE I : Core Courses (All courses required. No substitutions) 27 Credits:

	Acct 615	Management Accounting (3 credits)
	Fin 600	Financial and Economic Environment (3 credits)
	Fin 624	Financial Management (3 credits)
	Mrkt 620	Competing in Global Markets (3 credits)
	MIS 680	Management Science (3 credits)
	MIS 645	Managing IT for Competitive Advantage (3 credits)
	HRM 601	Organizational Behavior (3 credits)
	Mgmt 691	Legal and Ethical Issues (3 credits)
{	Mgmt 692	Strategic Management (3 credits) or
	Mgmt 680	Entrepreneurial Strategy (3 credits)

MODULE II : Managing Knowledge and Information (Choose 2 Courses) 6 Credits:

	Mgmt 650	Knowledge Management (3 credits)
	Mgmt 635	Data Mining and Analysis (3 credits)
	Mgmt 660	Managing Supply and Value Chains (3 credits)
	MIS 648	Decision Support Systems for Managers (3 credits)
	Mgmt 710	Forecasting Methods for Business Decisions (3 credits)

MODULE III : Managing Technology, Innovation and Change (Choose 2 Courses) 6 Credits:

	Mgmt 620	Management of Technology (3 credits)
	HRM 630	Managing Technological and Organizational Change (3 credits)
	Mgmt 676	Managing the Digital Firm (3 credits)
	Mgmt 690	Electronic Communities in Organizations (3 credits)

MODULE IV : CONCENTRATION AREA:

Choose 3 Courses in one concentration for 9 credits (MIS, Finance, Marketing, e-Commerce, Operations Management, Transportations and Logistics):

MIS Concentration Courses - Choose Three Courses:

	CS 631	Data Management System Design (3 credits)
	CS 632	Advanced Database System Design (3 credits)
	IS 675	Information System Evaluation (3 credits)
	MIS 625	Management Strategies for E-Commerce (3 credits)
	MIS 635	Management of Telecommunications (3 credits)
	MIS 690	Executive Information Systems (3 credits)
	Mgmt 630	Decision Analysis (3 credits)

Finance Concentration Courses- Choose Three Courses:

	Fin 626	Financial Investment Institutions (3 credits)
	Fin 627	International Finance (3 credits)
	Fin 631	Working Capital Management and Credit Analysis (3 credits)
	Fin 632	Financial Valuation of Technology-Based Companies (3 credits)
	Fin 634	Mergers, Acquisitions, and Restructuring (3 credits)

Marketing Concentration Courses - Choose Three Courses:

	Mrkt 631	Market Planning and Analysis (3 credits)
	Mrkt 637	Marketing Communications and Promotions (3 credits)
	MIS 625	Management Strategies for E-Commerce (3 credits)
	Mrkt 645	Internet Marketing Strategy (3 credits)
	Mrkt 630	Models of Consumer Behavior (3 credits)
	Mgmt 635	Data Mining and Analysis (3 credits)

e-Commerce Concentration Courses - Choose Three Courses :

	MIS 620	E-Commerce Technologies (3 credits)
	MIS 625	Management Strategies for E-Commerce (3 credits)
	MIS 635	Management of Telecommunications (3 credits)
	Mrkt 645	Internet Marketing Strategy (3 credits)
	Mgmt 676	Managing the Digital Firm (3 credits)

Operations Management Concentration Courses - Choose Three Courses:

	IE 674	Quality Maintenance and Support Systems (3 credits)
	Mgmt 630	Decision Analysis (3 credits)
	MnE 601	Manufacturing Systems (3 credits)
	MnE 602	Flexible and Computer Integrated Manufacturing (3 credits)
	MnE 603	Management of Manufacturing Systems (3 credits)

Transportation and Logistics Concentration Courses - Choose Three Courses:

	Mgmt 630	Decision Analysis (3 credits)
	Mgmt 710	Forecasting Methods for Business Decisions (3 credits)
	Tran 603	Introduction to Urban Transportation Planning (3 credits)
	Tran 740	Management of Transportation Carriers (3 credits)
	Tran 765	Multi-modal Freight Transportation Systems Analysis (3 credits)

Master of Science in Management (30 credits)

The Master of Science in Management is designed to allow students to build specialized knowledge in one of four concentration areas : Management Information Systems, e-Commerce, Organization Management or Management of Technology. Specialized knowledge is augmented with a 15 credit management core that provides the general knowledge needed to manage technical and specialized units.

Admission Requirements:

Applicants to the MSM must submit complete transcripts of all undergraduate work and scores on the Graduate Management Admissions Test (GMAT). The GMAT is required of all applicants except those holding master's or doctoral degrees from an accredited U.S. university. Up to nine credits of graduate work may be transferred from another school, provided that they are not counted towards a terminal degree at that school.

MSM Pre-Qualifying Requirements : Students are expected to demonstrate competency in the area of accounting, finance, quantitative methods, information systems and economics. Depending on the applicant's undergraduate degree program, all or part of the pre-qualifier requirements can be met with prior undergraduate course work. Applicants who do not meet pre-qualifying requirements will be required to complete up to 12 credits of course work.

Degree Requirements:

Pre-Qualifying Courses (Conditional Admits only) :

	Mgmt 501	Management Foundations (3-0-3)
	Mgmt 580	Managerial Science (3 credits)
	MIS 246	Tools and Technologies for the Digital Firm (3-0-3)
	Econ 565	Managerial Economics (3 credits)

Core Courses (All courses required. No substitutions) 15 Credits:

	Acct 615	Management Accounting (3 credits)
	Mrkt 620	Competing in Global Markets (3 credits)
	Fin 600	Financial and Economic Environment (3 credits)
	HRM 601	Organizational Behavior (3 credits)
{	Mgmt 680	Entrepreneurial Strategy (3 credits) or
	Mgmt 692	Strategic Management (3 credits)

Choose 5 Courses in one specialization for 15 Credits:

e-COMMERCE SPECIALIZATION COURSES:

	MIS 620	E-Commerce Technologies (3 credits)
	MIS 625	Management Strategies for E-Commerce (3 credits)
	IS 679	Management of Computer and Information Systems (3 credits)
	CS 656	Internet and Higher Layer Protocols (3 credits)
	Mgmt 635	Data Mining and Analysis (3 credits)
	CS 652	Computer Networks-Architectures, Protocols and Standards (3 Credits)
	CS 688	Programming for Interactive Environments (3 credits)
	Mrkt 645	Internet Marketing Strategy (3 credits)

MIS SPECIALIZATION COURSES:

		Mgmt 650	Knowledge Management (3 credits)
		MIS 645	Managing IT for Competitive Advantage (3 credits)
		CS 631	Data Management System Design (3 credits)
		MIS 648	Decision Support Systems for Managers (3 credits)
		CS 671	Knowledge-Based Systems (3 credits)
		CS 632	Advanced Database System Design (3 credits)
		EM 636	Project Management (3 credits)
		IS 675	Information System Evaluation (3 credits)
		IS 679	Management of Computer and Information Systems (3 credits)

ORGANIZATION MANAGEMENT SPECIALIZATION COURSES:

		HRM 605	Managing High Performance Work Teams (3 credits)
		HRM 606	Human Resource Management (3 credits)
		HRM 640	Cultures in Organizations (3 credits)
		HRM 630	Managing Technological and Organizational Change (3 credits)
		HRM 685	Cross Cultural Management Studies (3 credits)
		HRM 610	Seminar on Leadership Skills (3 credits)
		Mgmt 650	Knowledge Management (3 credits)
		Mgmt 690	Electronic Communities in Organizations (3 credits)

MANAGEMENT OF TECHNOLOGY SPECIALIZATION COURSES:

		Mgmt 620	Management of Technology (3 credits)
		HRM 630	Managing Technological and Organizational Change (3 credits)
		MIS 645	Managing IT for Competitive Advantage (3 credits)
		MIS 620	E-Commerce Technologies (3 credits)
		MIS 625	Management Strategies for E-Commerce (3 credits)
		MIS 648	Decision Support Systems for Managers (3 credits)
		Mgmt 676	Managing the Digital Firm (3 credits)
		Mgmt 650	Knowledge Management (3 credits)

Occupational Safety and Health Engineering

Administered By: Department of Industrial and Manufacturing Engineering

Administration

Chairperson	Athanassios Bladikas
Associate Chairperson	George Abdou

Faculty

Program Director	Arijit Sengupta
Professors	Layek Abdel-Malek, Reggie J. Caudill, Sanchoy K. Das, Paul G. Ranky, Stephen J. Tricamo, Carl Wolf
Associate Professors	George Abdou, Golgen Bengu, Athanassios Bladikas, Kevin J. Mcdermott, Arijit Sengupta*
Assistant Professor	Jian Yang

* Joint appointment with the Department of Engineering Technology

Degrees Offered: Master of Science in Occupational Safety and Health Engineering

The curriculum has been designed in accordance with the National Institute for Occupational Safety and Health (NIOSH), which sponsors the program. Through course work and research, individuals are exposed to all of the principal areas of concern to the entry-level safety professional, including how technology and hazardous materials affect the safety of the workplace.

NJIT's program is just one of a handful offered in the United States and the only master's-level program in New Jersey. NIOSH offers a limited number of stipends and tuition remission grants to qualified students.

Master of Science in Occupational Safety and Health Engineering

This program educates engineers in the specialty of occupational safety and health. Upon graduation, students are able to assume both the technical and managerial responsibilities of safety professionals.

Admission Requirements:

Applicants normally are practicing engineers with an accredited bachelor's degree in an engineering or scientific field.

Bridge Program: Students who lack an appropriate background may be admitted and required to make up deficiencies by taking a program of courses that is designed in consultation with graduate advisors. These courses are taken in addition to the degree requirements and may include undergraduate courses.

Degree Requirements:

A minimum of 36 credits is required.

Seminar: In addition to the minimum 36 degree credits required, all students who receive departmental or research-based awards must enroll each semester in **IE 791** Graduate Seminar.

Required::

18 credits:

	EM 633	Legal Aspects of Health and Safety (3 credits)
	IE 614	Safety Engineering Methods (3 credits)
	IE 615	Industrial Hygiene and Occupational Health (3 credits)
	IE 665	Applied Industrial Ergonomics (3 credits)
	IE 677	Applied Statistics and Epidemiology for Hazard Analysis (3 credits)
	IE 685	Systems Safety (3 credits)

Thesis:

Required for NIOSH; trainees; optional for all others.

	IE 701	Master's Thesis (6 credits)
--	--------	-----------------------------

Elective:

Select 12 credits if completing a master's thesis; 18 credits if not completing a master's thesis.

	BME669	
	ChE 791	Graduate Seminar (Non-credit)
	ChE 702	Selected Topics in Chemical Engineering II (3 credits)
	EvSc 603	Hazardous Waste Operations and Emergency Response (3 credits)
	EvSc 614	Quantitative Environmental Risk Assessment (3 credits)
	EvSc 616	Toxicology for Engineers and Scientists (3 credits)
	IE 608	Product Liability Control (3 credits)
	IE 661	Man-Machine Systems (3 credits)
	IE 662	Cognitive Engineering (3 credits)
	IE 664	Advanced Ergonomics (3 credits)
	IE 669	Human Design Factors in Engineering (3 credits)
	IE 670	Industrial Work Physiology (3 credits)
	IE 675	Safety in Facility and Product Design (3 credits)
	IE 681	Interdisciplinary Seminar in Occupational Safety and Health (1 credit)
	IE 682	Industrial Safety and Health Evaluation (3 credits)
	IE 725	Independent Research (3 credits)
	ME 660	Noise Control (3 credits)
	ME 670	Introduction to Biomechanical Engineering (3 credits)

Catalog and curricula information approved by the relevant academic department.

Pharmaceutical Engineering

Administered By: Otto H. York Department of Chemical Engineering

Administration

Program Director

Piero M. Armenante

Program Objective:

The Master of Science Program in Pharmaceutical Engineering is a program developed and administered by the Otto H. York Department of Chemical Engineering at NJIT. The primary objective of the program is to educate professionals and provide them with the skills required to work in the pharmaceutical field, with particular emphasis on the engineering aspects of drug manufacturing, pharmaceutical production, pharmaceutical development, and pharmaceutical operations.

The pharmaceutical/medical technology industry is the largest manufacturing industry in New Jersey. New Jersey is home to the headquarters of more global pharmaceutical and medical technology companies than any other state in the country, or any single country throughout the world. NJIT's M.S. program in Pharmaceutical Engineering provides the intellectual climate and the necessary tools needed to prepare students for positions and career advancement within the industry, based on the rigorous technological requirements of this highly regulated work environment.

The program is designed to provide opportunities for specialization in such areas as pharmaceutical processing and manufacturing, validation and regulatory issues in the pharmaceutical industry, pharmaceutical facility design, pharmaceutical packaging technology, reaction engineering for pharmaceutical production, pharmaceutical separation processes, pharmacokinetics and drug delivery, molecular modeling for drug discovery, pharmaceutical synthesis, fluid mixing in the pharmaceutical industry, instrumental analysis, and industrial quality control.

Master of Science in Pharmaceutical Engineering

Admission Requirements:

An undergraduate degree in chemical engineering or, in most cases, mechanical engineering, with a cumulative grade point average (GPA) of at least 3.0 on a 4.0 scale is usually required. Applicants with: (1) a science degree, (2) an engineering degree in a discipline other than chemical or mechanical engineering, or (3) a GPA below 3.0 but at least 2.8, may be conditionally admitted to the program. Conditions may involve completion of a bridge program designed on a case-by-case basis, and typically requiring taking extra bridge courses, as further explained below. Depending on the background of the student, admission conditions may additionally require taking undergraduate courses (e.g., chemistry) or graduate courses. Bridge and undergraduate courses do not count toward degree credit; graduate-level courses do.

Submission of Graduate Record Examination (GRE) scores is encouraged in all cases, and required of those seeking financial support and those whose last prior degree is from an institution outside the United States. International students must also submit scores from the Test of English as a Foreign Language (TOEFL). According to university policy, a minimum TOEFL score of 550 (pencil and paper) and 213 (computer-based) is required.

The admission requirements described above can be partially relaxed for applicants with significant industrial experience in the pharmaceutical industry (5+ years). The admission requirements for such candidates will be established on a case-by-case basis, and will be determined through an interview with the prospective student and the submission of letters of support attesting the level of experience attained.

Bridge Program:

The Pharmaceutical Engineering program has been designed so that applicants with different backgrounds can be admitted. Nevertheless, the program is strongly oriented toward the engineering component of "Pharmaceutical Engineering". In addition, since

the pharmaceutical industry is a chemistry-based industry a chemical engineering background is the most appropriate to enter the program (mechanical engineers are also generally well prepared to enter the program). This implies that students who have a science background (e.g., a chemistry or pharmacy B.S. degree) or an engineering degree in a discipline other than chemical or, possibly, mechanical engineering, may be required to take a bridge program. Depending on the background of the applicant this bridge program may consist of up to (but generally speaking less, at least for students with engineering degrees) three 3-credit courses (PhEn 500, PhEn 501 and PhEn 502) specifically designed to provide non-chemical engineers with the necessary prerequisites to enter the program. The bridge courses cover a variety of topics, such as differential equations, statistics and business math (PhEn 500), mass balances, thermodynamics, and chemical kinetics (PhEn 501), and fluid flow, heat transfer and mass transfer (PhEn 502).

A grade point average of at least 3.0 must be achieved in the bridge courses. Students should pay special attention to the successful completion of the bridge courses, since failure to do so may preclude them from enrolling in regular PhEn courses. PhEn 500 and PhEn 501 can and should be taken concurrently. Both courses are only offered in the fall semester. Successful completion of both PhEn 500 and PhEn 501 is required to enroll in PhEn 502, which is offered only in the spring semester. Students must take the bridge courses before taking any other PhEn courses, with the exception of PhEn 601 and PhEn 604, which can be taken concurrently with the bridge courses. As already mentioned, admission conditions may also include taking additional undergraduate or graduate courses, if needed.

Degree Requirements:

The Master of Science in Pharmaceutical Engineering is a 30-credit program structured along two different tracks. The two tracks have a common 15-credit core. Each track has an additional 6-credit track-core, as described below. Each track has 9 credits of electives selected by the student in consultation with, and subject to, the approval of the program advisor for the selected track

Students have the option of fulfilling 6 of the 9 credits of electives by doing a Master's Thesis. The thesis option is primarily, but not exclusively, meant for full-time students. Full-time students receiving support (full or partial) must complete a Master's Thesis. Part-time students working in the pharmaceutical industry are encouraged to pursue a Master's Thesis, possibly conducted at their site and in collaboration with their supervisor.

Students must maintain an overall cumulative grade point average of at least 3.0 throughout their academic career. Students are certified for graduation only if they:

- achieve an OVERALL cumulative grade point average of at least 3.0; and
- achieve a grade point average of at least 3.0 in the required seven CORE COURSES; and
- achieve a grade point average of at least 3.0 in the BRIDGE COURSES.

Students may not repeat a course without approval of both the Program Director and the Office of Graduate Studies, located in the East Building, Suite 140. The grade received in a repeated course will replace the original grade in the calculation of the cumulative grade point average, although the first grade will still appear on the transcript. A MAXIMUM OF TWO COURSES MAY BE REPEATED. Students who receive an F in a course are required to repeat the course.

Program of Study:

The program of study includes common core courses, track-specific core courses, elective courses, and, if the students so chooses, a thesis (in lieu of some elective courses), as specified below. The common core courses cover a variety of topics ranging from drug dosage forms to drug manufacturing processes, validation and regulatory issues, design criteria and unit operations for pharmaceutical processes, pharmacokinetics and drug delivery.

The program has two tracks, i.e.:

- Track 1 - Process Development and Design for Drug Substance Manufacturing. This track is focused on the engineering aspects of chemical reaction and separation processes required for the manufacturing of active pharmaceutical ingredients.
- Track 2 - Process Development and Design for Drug Product Manufacturing. This track is focused on the engineering aspects of processes required for the manufacturing of final drug products.

All students must take the same five (5) common core courses as well as the two (2) track-specific core courses for the track that they have selected. Irrespective of the track selected, the total number of core courses (7) and the corresponding core credits (21) are the same for both tracks.

Course Requirements:

- Five (5) core courses common to both tracks (3 credits each; 15 credits total), as follows:

PhEn 601	Principles of Pharmaceutical Engineering (3 credits)
PhEn 603	Pharmaceutical Unit Operations (3 credits)
PhEn 604	Validation and Regulatory Issues in the Pharmaceutical Industry (3 credits)
PhEn 606	Pharmaceutical Unit Operations: Solids Processing (3 credits)
PhEn 618	Principles of Pharmacokinetics and Drug Delivery (3 credits)

- Two (2) additional core courses specific to the track selected (3 credits each; 6 credits total), as follows:

Track 1 • Process Development and Design for Drug Substance Manufacturing:

PhEn 612	Pharmaceutical Reaction Engineering (3 credits)
PhEn 614	Pharmaceutical Separation Processes (3 credits)

Track 2 • Process Development and Design for Drug Product Manufacturing:

PhEn 602	Pharmaceutical Facility Design (3 credits)
PhEn 605	Pharmaceutical Packaging Technology (3 credits)

- Three (3) additional elective courses (3 credits each) selected from the list of available courses (9 credits total). Electives can be selected from among pharmaceutical engineering courses (such as the courses in the track not chosen by the student), as well as appropriate courses in disciplines such as chemical engineering, mechanical engineering, industrial engineering, biomedical engineering, chemistry, biology, mathematics, and others. A partial list of electives is provided below.

M.S. THESIS:

Students who are required, or choose, to do a thesis must take 6 credits of PhEn 701 (Master's Thesis) in lieu of 6 credits worth of elective courses. Part-time students working in the pharmaceutical industry are eligible and encouraged to pursue the thesis option. NJIT requires that a student must register for thesis during the last semester before graduation, even if this requires taking addition thesis credit beyond the required 6.

List of Elective Courses:

The following is a non-exhaustive, partial list of courses that can be taken as elective courses [all courses are 3-credits unless otherwise stated]:

PhEn 602	Pharmaceutical Facility Design (3 credits)
PhEn 605	Pharmaceutical Packaging Technology (3 credits)
PhEn 612	Pharmaceutical Reaction Engineering (3 credits)
PhEn 614	Pharmaceutical Separation Processes (3 credits)
PHEN616	
PhEn 700	Master's Thesis (3 credits)
PhEn 701	Master's Thesis (6 credits)
PhEn 702	Selected Topics in Pharmaceutical Engineering (3 credits)
PhEn 725	Independent Study (3 credits)
BME 627	Introduction to Biomedical Engineering (3 credits)
BME 672	Biomaterials (3 credits)
BME 675	Principles of Tissue Engineering (3 credits)
ChE 611	Thermodynamics (3 credits)
ChE 624	Transport Phenomena I (3 credits)
ChE 626	Mathematical Methods in Chemical Engineering (3 credits)
ChE 628	Biochemical Engineering (3 credits)

	ChE 656	Catalysis (3 credits)
	ChE 675	Statistical Thermodynamics (3 credits)
	ChE 681	Polymerization-Principles and Practice (3 credits)
	Chem 601	Special Topics in Chemistry I (3 credits)
	Chem 602	Advanced Organic Chemistry II: Reactions (3 credits)
	Chem 603	Advanced Organic Chemistry Laboratory (3 credits)
	Chem 605	Advanced Organic Chemistry I: Structure (3 credits)
	Chem 606	Physical Organic Chemistry (3 credits)
	Chem 644	Fundamentals of Adhesion (3 credits)
	Chem 658	Advanced Physical Chemistry (3 credits)
	Chem 661	Instrumental Analysis Laboratory (3 credits)
	Chem 664	Advanced Analytical Chemistry (3 credits)
	Chem 673	Biochemistry (3 credits)
	CS 610	Data Structures and Algorithms (3 credits)
	CS 631	Data Management System Design (3 credits)
	EM 636	Project Management (3 credits)
	EM 637	Project Control (3 credits)
	EM 640	Distribution Logistics (3 credits)
	IE 604	Advanced Engineering Statistics (3 credits)
	IE 605	Engineering Reliability (3 credits)
	IE 618	Engineering Cost and Production Economics (3 credits)
	IE 672	Industrial Quality Control (3 credits)
	IE 673	Total Quality Management (3 credits)
	IE 674	Quality Maintenance and Support Systems (3 credits)
	IE 704	Sequencing and Scheduling (3 credits)
	ME 624	Microlevel Modeling in Particle Technology (3 credits)
	ME 664	Experiments and Simulations in Particle Technology (3 credits)
	MnE 601	Manufacturing Systems (3 credits)
	MnE 602	Flexible and Computer Integrated Manufacturing (3 credits)

Student Involvement in Research:

In addition to taking courses, students have the opportunity to work, one-on-one, with faculty members on research projects in areas of common interest, allowing maximum flexibility for independent work, and providing students with valuable research experience. Students have the option to complete a Master's thesis. PART-TIME STUDENTS WORKING IN THE PHARMACEUTICAL INDUSTRY ARE ENCOURAGED TO PURSUE A MASTER'S THESIS, POSSIBLY CONDUCTED AT THEIR SITE AND IN COLLABORATION WITH THEIR SUPERVISOR.

Qualified and research oriented students have the option of continuing their studies at NJIT by pursuing a Ph.D. in chemical engineering, industrial engineering, chemistry, or related disciplines. The NJIT-Industry Collaborative Ph.D. Program allows greater flexibility to industrial students who are interested in pursuing their Ph.D. while working full-time in industry.

Distinguished Research Professors	John C. Hensel, Louis J. Lanzerotti
Research Professors/Special Lecturers	Halina Opyrchal, Jan Opyrchal, Slawomir Piatek, Roumiana S. Petrova, Moses Fayngold, Libarid A. Maljian, Richard H. Janow, Vitaly A. Shneidman, Oktay H. Gokce

Rutgers- Newark Faculty

Professors Rank II	Daniel Murnick
Associate Professor	Zhen Wu

Degrees Offered: Master of Science in Physics; Doctor of Philosophy in Physics. Both degrees are offered jointly by NJIT and Rutgers-Newark.

The NJIT and Rutgers-Newark departments of physics offer a unique opportunity to pursue master's and doctoral degree physics in a joint program combining the resources of two of New Jersey's public research universities.

Interdisciplinary physics research is available in collaboration with faculties of NJIT, Rutgers-Newark and Rutgers-New Brunswick, and UMDNJ in areas such as device physics, materials research, ultrafast optical and optoelectronic phenomena, imaging technology, surface physics, free electron laser physics, biophysics, discharge physics, solar physics, and applied laser physics. Cooperative research efforts are underway with the National Solar Observatory, Lucent Technologies Bell Labs Innovations, U.S. Army Research Laboratory, and other industrial and federal research laboratories.

Master of Science in Physics

The program is for students with an undergraduate degree in physics, applied physics, or engineering, who wish to apply physics to optical science, microelectronics, device physics, materials science, surface science, laser physics, solar phenomena, and other related areas.

Admission Requirements:

A bachelor's degree in physics, applied physics, or related areas from an accredited institution is required. An undergraduate GPA above 3.0 is required. Students must submit GRE (general test) scores. In addition, applicants are required to provide letters of recommendation from their previous academic institutions. Students for whom English is not their native language are required to have TOEFL scores no lower than 550 (pencil and paper) and 213 (computer-based).

Degree Requirements:

A minimum of 30 degree credits (600 or 700 level), including a 6-credit thesis or a 3-credit project is required. Of the 30 credits, 18 must be physics courses (including 3 credits of mathematical physics or applied mathematics). The remaining 12 to 15 credits are elective courses.

Seminar: In addition to the minimum 30 degree credits required, all students who receive departmental or research-based awards must enroll each semester in **R755:791** Applied Physics Seminar.

Required:

12 credits:

	R755:611	Advanced Classical Mechanics (3 credits)
	R755:621	Classical Electrodynamics (3 credits)
	R755:631	Quantum Mechanics (3 credits)
	R755:641	Statistical Mechanics (3 credits)

Project or Thesis (required):

3 credits:

{	R755:700	Master's Project (3 credits) <i>or</i>
	R755:701	Master's Thesis (6 credits)

Elective:

12 *credits* if completing a master's thesis; 15 credits if completing a master's project: Selected in consultation with a graduate advisor.

Doctor of Philosophy in Physics

This program is for superior students in applied physics who are interested in and committed to scholarly research.

Admission Requirements:

Applicants are expected to have a master's degree in physics, applied physics, or related engineering disciplines from an accredited institution. Highly qualified students with bachelor's degrees may be accepted directly into the doctoral program. A GPA of at least 3.5 in undergraduate and previous graduate studies is normally required for admission. The GRE (general test) and advanced (physics) test scores are required. Applicants are required to provide three letters of recommendation from their previous academic institutions. Students for whom English is not their native language are required to have TOEFL scores no lower than 550 (pencil and paper) and 213 (computer-based).

Degree Requirements:

For students entering with B.S. or B.A. degrees, the Ph.D. requires 75 (600 or 700 level) credits as follows:

39 *credits* of course work, of which 24 credits are physics courses (including 3 credits of mathematical physics or applied mathematics), and 15 credits are electives. No less than 12 credits must be at the 700 level.

36 credits of **R:755:790** Doctoral Dissertation

For students entering with M.S. or M.A. degrees, the Ph.D. requires 54 (above 600 level) credits as follows:

18 credits of course work, of which 9 credits are physics courses (including mathematical physics or applied mathematics), and 9 credits are electives. No less than 12 credits must be at the 700 level.

36 credits of R755:790 Doctoral Dissertation

Seminar: All doctoral students must enroll in R755:791 Applied Physics Seminar each semester, including each semester they are enrolled in R755:790 Doctoral Dissertation.

Required:

18 credits:

	R755:611	Advanced Classical Mechanics (3 credits)
	R755:621	Classical Electrodynamics (3 credits)
	R755:631	Quantum Mechanics (3 credits)
	R755:641	Statistical Mechanics (3 credits)
	R755:721	Classical Electrodynamics II (3 credits)
	R755:731	Quantum Mechanics II (3 credits)

The four 600-level physics courses can be replaced by other courses for entering students who have M.S. degrees and have taken these courses in the master's program.

Qualifying Examination and Research Examination - The student must pass a written qualifying examination and oral research examination. The written qualifying examination is administered yearly to test general academic preparation and competence for research in applied physics. Within one year after passing the written qualifying examination, the student is required to pass the oral qualifying examination to achieve Ph.D. candidacy, in which the prospective Ph.D. candidate presents a preliminary research proposal for approval by the dissertation committee. The student will be allowed two attempts to pass the written or oral qualifying examination.

Dissertation and Defense - An oral presentation and defense of the doctoral dissertation is required. A five-member committee, chaired by the dissertation advisor, must approve the content and presentation of the dissertation research.

Catalog and curricula information approved by the relevant academic department.

Professional and Technical Communication

Administered By: Department of Humanities

Administration

Chairperson	Robert E. Lynch
Program Director Undergraduate	Burt J. Kimmelman
Program Director Graduate	Nancy W. Coppola

Faculty

Professors	Norbert Elliot, Robert E. Lynch, W P. Beaton
Associate Professors	Nancy W. Coppola, Robert S. Friedman, Burt J. Kimmelman, Nancy L. Steffen
Assistant Professors	Christopher T. Funkhouser, Carol S. Johnson
Lecturers	Michael V. Kerley, Robert Myre

Degrees Offered: Master of Science in Professional and Technical Communication

This program is designed to prepare students for careers in the field of technical communication. Students learn to approach communication issues in a scholarly and professional manner, developing abilities in critical thinking, problem solving, and navigating effectively and ethically through our scientific and technological society.

The program is intended for students and communication professionals who want to develop abilities in

- digital media
- user-centered design
- usability testing and knowledge management
- advanced communication theory and research methods
- technical editing
- writing and speaking in teams, in corporations, and in technology

Masters of Science in Professional and Technical Communication

Please see our web site <http://www.njit.edu/MSPTC> for updated information.

The Master of Science in Professional and Technical Communication (MSPTC) prepares students for careers in the rapidly growing field of technical communication. This degree enables students to acquire an understanding of information technologies and to approach communication issues with new problem-solving skills. Professional experts will provide strong theoretical foundations within a practical framework. The MSPTC is entirely available online (in distance learning format), with courses available in traditional face-to-face classrooms on the Newark campus.

Admission Requirements:

Students must have an undergraduate degree in a field of science, computer science or engineering, or have an undergraduate degree in another area with experience or strong interest in science and technology.

- a statement outlining how the degree will meet personal and professional objectives;
- a current resume;
- two letters of recommendation;

- a portfolio of work (writing, web development, CD-ROM or other appropriate showcase of work);
- Application for Admission to Graduate Study form;
- Official transcripts of all prior work and certificate of graduation;
- GRE scores (These scores are required of all international applicants, all applicants who have earned their last degree outside of the United States, and students who wish to apply for merit-based financial support on individual basis);
- TOEFL scores of 550 (pencil and paper) and 213 (computer-based) is required of all international applicants.

Graduate Certificate Programs: Three 12-credit graduate certificates are available as a step toward this degree

- Practice of Technical Communications
- User-Centered Design
- Health Communications

Please see Graduate Certificates in this catalog for further information. For more information about continuing and distance education, please contact the Division of Continuing Professional Education, 1-800-624-9850 or 973-596-3060; email: cpe@njit.edu.

Degree Requirements:

Students are required to complete a total of 30 graduate course credits:

For students entering in or after FALL 2005

Core:

15 credits:

	PTC 601	Advanced Professional and Technical Communication (3 credits)
	PTC 603	Cultural and Technological Change (3 credits)
	PTC 604	Communication Theory and Research (3 credits)
	PTC 605	Elements of Visual Design (3 credits)
	PTC 606	Advanced Online Design (3 credits)

PROJECT (required):

3 credits:

	PTC 700	Master's Project (3 credits)
--	---------	------------------------------

ELECTIVE:

12 credits from:

	PTC 610	Evaluating Hypertext: User and Task Analysis (3 credits)
	PTC 612	Theory and Practice of Text Encoding (3 credits)
	PTC 620	Proposal Writing (3 credits)
	PTC 622	Working in Teams: Collaborative and Interpersonal Communications (3 credits)
	PTC 624	Professional and Technical Editing (3 credits)
	PTC 626	Hypertext Design Studio (3 credits)
	PTC 631	Communication and Environmental Problem Solving (3 credits)
	PTC 632	Content Management, Manuals and On-Line Help (3 credits)
	PTC 640	Health Communications (3 credits)
	PTC 642	Corporate Communication (3 credits)
	PTC 650	Web Based Training Design (3 credits)
	PTC 698	Selected Topics in Professional and Technical Communication (3 credits)
	PTC 701	Master's Thesis (6 credits)

PTC 725

Independent Study in Professional and Technical Communication (3 credits)

Note: Students may also select 2 courses (6 credits) from another NJIT college.

Catalog and curricula information approved by the relevant academic department.

(UMDNJ-NJMS)	Marvin A. Lavenhar
(UMDNJ-NJMS)	Marian R. Passannante
(Rutgers-Newark)	Evan Stark

Degrees Offered: Master of Public Health offered jointly with Rutgers-Newark and UMDNJ

The Master in Public Health (M.P.H.) degree program, established by UMDNJ-NJMS, Rutgers-Newark and NJIT, addresses critical issues surrounding the nation's health, especially that of high-risk, urban, and under-served populations. The program in public health develops and applies knowledge from multiple disciplines for the promotion and protection of the health of the human population, giving due consideration to cultural perspectives that abound in our multicultural world. This program is part of the UMDNJ-School of Public Health.

Program participants carry out research, and formulate policies that answer local needs and provide models for similar nationwide and worldwide problems. The three universities collaborate with community-based practitioners and researchers in Newark and in northern New Jersey. Student projects and placements are designed to maximize problem solving in large urban settings.

Master in Public Health

The program is designed to prepare existing professionals to assume new and expanded analytical and administrative roles in the planning and organization of efficient and cost-effective health services, health education, and health policy; to increase the number of public health professional qualified to assist and conduct original community-based research that will lead to advances in health promotion and disease prevention; and to provide systems thinking about public health and social values that relate to physical and mental well being.

Admission Requirements:

Applicants must meet one of these criteria: hold degrees or positions in the health or health-related professions; be graduates of baccalaureate or post-baccalaureate programs with formal training and/or experience in the health field; be candidates for joint degree programs (M.D./M.P.H., D.M.D./M.P.H.); hold exceptionally strong credentials from baccalaureate; post-baccalaureate programs outside of the health field.

Applicants must supply scores from the GRE or its equivalent (e.g., MCAT, GMAT, or LSAT) from within the last five years. Those with a doctoral degree from a U.S. or Canadian university may seek a waiver of test scores by providing supporting documentation with the application. Test score waivers for individuals with other graduate degrees are decided on a case-by-case basis. Contact the administrative director. International students applying for admission must show a TOEFL score of at least 550 (pencil and paper) and 213 (computer-based). All applicants must supply official academic transcripts; an essay/statement addressing career goals, how the course offerings would help meet them, and how previous experience has contributed to personal and professional growth; and three letters of recommendation.

An application may be obtained from Newark Public Health Program at Science Park, UMDNJ-New Jersey Medical School, 185 South Orange Ave., MSB F-506, Newark, N.J. 07103-2714 or by calling (973) 972-7212.

Degree Requirements:

The MPH program requires the successful completion of 45 credits. The credits are divided into 18 credits in core courses, 6 to 12 credits in required courses in one of three tracts, 9 to 15 credits of electives and 3 credits each in fieldwork and thesis.

Three general tracks are available. While they share a common core, each is designed to suit various interests:

Urban and Environmental Health brings a multi-disciplinary perspective to bear on the identification, assessment, and remediation of stressors specific to health problems in the urban environment.

Quantitative Methods: Biostatistics and Epidemiology develops quantitative, analytic, and research skills for public health practitioners.

Health Policy and Administration teaches the concepts, principles, and scientific skills necessary for health services management, policy development, and program evaluation.

Core:

18 credits:

	BINF 601/ BINF 5005	Health Care Information Systems (3 credits)
	Hist 634	Environmental History of North America (3 credits)
	Hist 635	History of Technology, Environment and Medicine: Theory and Method (3 credits)
	MPH 650	Medical Geography (3 credits)

Quantitative Methods: Epidemiology and Biostatistics:

Select either epidemiology or biostatistics.

Required:

6 credits:

		QM 611	Design of Epidemiological Studies and Clinical Trials (3 credits)
		QM 612	Linear Models: Regression and Analysis of Variance (3 credits)

Epidemiology:*6 credits:*

		EPI 615	Introduction to Epidemiology and Control of Chronic and Infectious Diseases (3 credits)
		EPI 616	Advanced Topics in Infectious and Chronic Diseases Epidemiology (3 credits)

9 credits from:

		BINF7570	
		EPI 621	Survey Research Methods/Questionnaire Design (3 credits)
		EPI 625	Community-Based Epidemiological Research (3 credits)
		EPI 626	Emerging and Re-emerging Infections (3 credits)
		EPI 627	Innovations in Public Health (3 credits)
		EPI 628	Pharmacoepidemiology (3 credits)
		EPI 629	Oral Epidemiology of Chronic and Infectious Diseases (3 credits)

The following courses are in development: genetic epidemiology, and environmental and occupational epidemiology

Biostatistics:*6 credits:*

		BIO 613	Life Tables and Survival Analysis (3 credits)
		BIO 614	Categorical Data Analysis (3 credits)

9 credits from:

		BIO 618	Nonparametric Statistical Methods (3 credits)
		BIO 619	Biostatistical Consulting (2 credits)

Health Policy and Administration:

Select either health policy or health care administration.

Required:*6 credits*

		R834:582	Health Care Management (3 credits)
		R834:585	Health Care Policy (3 credits)

Health Policy:*15 credits from:*

		R790:501	Policy Making in the American Political System (3 credits)
		R790:512	Ethical Issues in Public Policy and Administration (3 credits)
		R790:516	Urban Public Policy (3 credits)
		R834:541	Political Economy and Public Administration (3 credits)
		R834:562	Policy and Program Assessment (3 credits)
		R834:586	Violence in the United States (3 credits)
		R834:587	
		R834:602	Decision Making and Policy Analysis (3 credits)
		MPH 660	Health Economics (3 credits)

The following courses are in development: law, health care and public policy; advanced policy analysis; human rights in health care; public health and family; privatization and public health; comparative health care; and quality assurance in health.

Health Care Administration:

12 credits from:

	R705:534	Community Health Nursing Theory II (3 credits)
	R834:521	Technology and Public Administration (3 credits)
	R834:523	Human Resources Administration (3 credits)
	R834:524	Strategic Planning and Management (3 credits)
	R834:527	
	R834:584	Health Care Finance (3 credits)
	R834:542	Government Budgeting Systems (3 credits)

The following courses are in development: accounting and financial analysis; public budgeting; managing managed care; health services research; fundamentals of human resource administration; cases in public sector productivity.

Catalog and curricula information approved by the relevant academic department.

Telecommunications

Administered By: Department of Electrical and Computer Engineering(ECE) and Department of Computer Science(CS)**Administration**

Chairperson	Atam P. Dhawan
Associate Chairperson	Sui-hoi E. Hou(Undergraduate), ansarin(Graduate)

Faculty

Distinguished Professors	Yeheskel Bar-Ness, Bernard Friedland, Jacob Savir
Professors	Ali N. Akansu, Ansarin, William N. Carr, Roy H. Cornely, Atam P. Dhawan, Haim Grebel, Richard A. Haddad, Alexander M. Haimovich, Jacob Klapper, Durgamadhab Misra, Solomon Rosenstark, Yun-qing Shi, Kenneth S. Sohn, Marek Sosnowski, Gerald Whitman, Mengchu Zhou, Sotirios G. Ziavras
Associate Professors	Symeon Papavassiliou, John D. Carpinelli, Timothy N. Chang, Hongya Ge, Sui-hoi E. Hou, Walid Hubbi, Constantine N. Manikopoulos, Edip Niver, Sirin Tekinay, Leonid Tsybeskov
Assistant Professors	Ali Abdi, Jie Hu, Swades K. De, Roberto Rojas-Cessa, Roy R. You
Special Lecturer	Ezzat Bakhom, Arthur B. Glaser

Advisors

Undergraduate Advisor	Geny A. Moreno
Undergraduate Advisor	Sui-hoi E. Hou
MS Electrical Engineering Advisor	John D. Carpinelli
PHD Electrical Engineering Advisor	ansarin
MS Computer Engineering Advisor	Durgamadhab Misra
PHD Computer Engineering Advisor	Ansarin

Degrees Offered: Master of Science in Telecommunications

Telecommunications is one of the most rapidly growing fields in engineering. Telecommunications specialization also is rapidly becoming necessary in such diverse fields as banking, reservation systems, office information systems, corporate networks, and the Internet. Rapid technological progress in gigabit optical networks, multimedia communications, and wireless network access, make the future of the field very exciting.

Master of Science in Telecommunications

The objective of this program is to educate individuals in one or more telecommunication specializations.

Admission Requirements:

Applicants are expected to have an undergraduate degree in computer science, computer engineering or electrical engineering from an accredited institution (or its equivalent) with a minimum GPA of 3.0 on a 4.0 scale. These students should have taken **CIS 333**, **ECE 321** and **ECE 333** (or their equivalents) or **ECE 501**. Students without this course work will be required to complete a bridge program. Applicants having degrees in other fields may be considered for admission on an individual basis and required to complete a bridge program. GRE scores must be submitted. International students must also achieve a minimum TOEFL score of 550 (pencil and paper) and 213 (computer-based).

Bridge Program: The curriculum requires a basic knowledge of computer and communications fundamentals such as programming, data structures, computer architecture, signals and systems, and basic communication systems. Bridge courses do not count toward

the degree. The bridge courses are selected from the following list depending on individual background in consultation with the graduate advisor. See the undergraduate catalog for descriptions of 200- to 400-level courses.

{	CIS 251	Computer Organization (3-0-3) or
	ECE 353	Computer Organization and Architecture (3-0-3) or
	ECE 252	Microprocessors (3-0-3)
	CIS 332	Principles of Operating Systems (3-0-3)
	CIS 333	Introduction to UNIX Operating Systems (3-0-3)
	CIS 505	Programming, Data Structures, and Algorithms (3 credits)
*	ECE 501	Linear Systems and Random Signals (3 credits)
	ECE 321	Random Signals and Noise (3-0-3)
	ECE 333	Systems and Signals (3-0-3)
	ECE 481	Communications Systems (3-0-3)

Graduate Certificate Program - A 12-credit graduate certificate in Telecommunications Networking is available as a step toward this degree. See "Graduate Certificates" in this catalog. For further information about extension programs and graduate certificates, call the associate vice president of continuing and distance education, Division of Continuing Professional Education, 1 (800) 624-9850 or (973) 596-3060; e-mail cpe@njit.edu

Degree Requirements:

Candidates must complete a minimum of 30 credits: 15 in core courses and 15 in elective courses in an area of specialization with a minimum overall GPA of 3.0. In addition, a minimum cumulative 3.0 GPA is required in the five core courses. Students with an exceptionally strong telecommunications background may be allowed to replace required courses with advanced electives. Permission of the graduate advisor is required.

Core:

15 credits:

	CIS 630	Operating System Design (3 credits)
	CIS 651	Data Communications (3 credits)
{	CIS 652	Computer Networks-Architectures, Protocols and Standards (3 Credits) or
	ECE 683	Computer Network Design and Analysis (3 credits)
	ECE 642	Communication Systems I (3 credits)
	ECE 644	Introduction to Wireless and Personal Communications Systems (3 credits)

Elective:

Select 9 credits if completing a master's thesis; 12 credits if completing a master's project; 15 credits if not completing either a master's project or thesis. These courses are to be used in an area of specialization.

	CIS 604	Client/Server Computing (3 credits)
	CIS 631	Data Management System Design (3 credits)
	CIS 633	Distributed Systems (3 credits)
	CIS 637	Real-Time Systems (3 credits)
{	CIS 650	Computer Architecture (3 credits) or
	ECE 690	Computer Systems Architecture (3 credits)
	CIS 654	Telecommunication Networks Performance Analysis (3 credits)
{	CIS 656	Internet and Higher Layer Protocols (3 credits) or
	ECE 637	Introduction to Internet Engineering (3 credits)
{	CIS 658	Multimedia Systems (3 credits) or
	ECE 649	Compression in Multimedia Engineering (3 credits)

	CIS 665	Algorithmic Graph Theory (3 credits)
{	CIS 668	Parallel Algorithms (3 credits) or
	ECE 785	Parallel Processing Systems (3 credits)
	CIS 679	Management of Computer and Information Systems (3 credits)
{	CIS 696	Network Management and Security (3 credits) or
	ECE 638	Network Management and Security (3 credits)
{	CIS 697	Principles of Broadband ISDN and ATM (3 credits) or
	ECE 639	Principles of Broadband Networks (3 credits)
	CIS 752	Communication Protocol Synthesis and Analysis (3 credits)
	ECE 673	Random Signal Analysis I (3 credits)
	ECE 685	Network Interface Design (3 credits)
	ECE 742	Communication Systems II (3 credits)
	ECE 755	Advanced Topics in Digital Communications (3 credits)
	ECE 757	Advanced Wireless Communications (3 credits)
	ECE 783	Computer Communication Networks (3 credits)
	MIS 635	Management of Telecommunications (3 credits)
	MIS 636	Telecommunications: Policies and Regulations

Project, Thesis (optional):*3 credits:*

{	CIS 700	Master's Project (3 credits) or
	ECE 700	Master's Project (3 credits)

6 credits:

	CIS 701	Master's Thesis (6 credits)
	ECE 701	Master's Thesis (3 credits)

Area of Specialization:

The following are suggested areas of specialization and sample elective courses for each. Students may develop an individual area of specialization in consultation with a graduate advisor.

Management and Administration:

{	CIS 696	Network Management and Security (3 credits) or
	ECE 638	Network Management and Security (3 credits)
	CIS 679	Management of Computer and Information Systems (3 credits)
	MIS 635	Management of Telecommunications (3 credits)
	MIS 636	Telecommunications: Policies and Regulations

and one additional course.

Communication Systems:

{	CIS 697	Principles of Broadband ISDN and ATM (3 credits) or
	ECE 639	Principles of Broadband Networks (3 credits)
{	CIS 658	Multimedia Systems (3 credits) or
	ECE 649	Compression in Multimedia Engineering (3 credits)
	ECE 673	Random Signal Analysis I (3 credits)
	ECE 742	Communication Systems II (3 credits)
	ECE 755	Advanced Topics in Digital Communications (3 credits)
	ECE 757	Advanced Wireless Communications (3 credits)
	ECE 685	Network Interface Design (3 credits)

Networking:

	CIS 604	Client/Server Computing (3 credits)
	CIS 633	Distributed Systems (3 credits)
	CIS 637	Real-Time Systems (3 credits)
{	CIS 650	Computer Architecture (3 credits) or
	ECE 690	Computer Systems Architecture (3 credits)
	CIS 654	Telecommunication Networks Performance Analysis (3 credits)
{	CIS 656	Internet and Higher Layer Protocols (3 credits) or
	ECE 637	Introduction to Internet Engineering (3 credits)
	CIS 665	Algorithmic Graph Theory (3 credits)
{	CIS 668	Parallel Algorithms (3 credits) or
	ECE 785	Parallel Processing Systems (3 credits)
{	CIS 696	Network Management and Security (3 credits) or
	ECE 638	Network Management and Security (3 credits)
{	CIS 697	Principles of Broadband ISDN and ATM (3 credits) or
	ECE 639	Principles of Broadband Networks (3 credits)
	ECE 673	Random Signal Analysis I (3 credits)
	ECE 783	Computer Communication Networks (3 credits)

Information Technologies:

	CIS 604	Client/Server Computing (3 credits)
	CIS 631	Data Management System Design (3 credits)
{	CIS 658	Multimedia Systems (3 credits) or
	ECE 649	Compression in Multimedia Engineering (3 credits)
{	CIS 696	Network Management and Security (3 credits) or
	ECE 638	Network Management and Security (3 credits)

one additional course.

Other CIS and ECE courses related to telecommunications may be selected as elective courses with the written approval of the corresponding graduate advisor.

* ECE 321 and ECE 333 may be substituted for ECE 501.

Catalog and curricula information approved by the relevant academic department.

Transportation

Administered By: Executive Committee for the Interdisciplinary Program in Transportation

Administration

Program Director

Athanassios Bladikas

Faculty

Professor

Lazar Spasovic

Associate Professors

Athanassios Bladikas, I J. Chien, Janice R. Daniel

Assistant Professors

Rongfang Liu, Jian Yang

Degrees Offered: Master of Science in Transportation; Doctor of Philosophy in Transportation

NJIT's transportation program prepares students to be transportation planners, engineers, and managers who can plan, design, operate, and manage transportation systems capable of satisfying society's transportation needs.

Transportation is vital to our society's proper functioning, providing mobility of people, goods and services. It enables people to access job markets and participate in recreational, cultural, educational, and social activities. It adds value to products by moving them to their destination in time for their use. The transportation field also is a major contributor to the economy, as a consumer of resources and as a supplier of jobs.

Transportation functions in a very complex environment which, at the beginning of the 21st Century, is characterized by constant change in the technological, regulatory and legal frameworks. Transportation professionals must not only be able to meet the technological challenges of new systems, they must also be capable of fitting these systems into the social, economic, and physical environments in a manner that improves the quality of life for all.

Through the NJIT-based Institute for Transportation, the transportation graduate program provides excellent opportunities for students to engage in research on all forms of transportation, including all phases of activities concerned with the provision of services and the movement of people and goods. The Institute for Transportation is a major resource for public and private organizations and is well-known for its academic programs and research activities.

Master of Science in Transportation

This is a program for students from diverse educational backgrounds with a variety of career goals that prepares them for careers in designing, planning, operating, maintaining and managing urban and rural transportation systems. The master's degree is a valued professional credential for individuals engaged in the transportation field.

Off-Campus Programs: At the New Jersey Department of Transportation (NJ DOT), in Trenton, NJIT offers sufficient courses to fulfill all degree requirements. All courses are taught by NJIT faculty and are open to non-DOT employees. For further information about extension programs, call the associate vice president of continuing and distance education, Division of Continuing Professional Education, 1 (800) 624-9850 or (973) 596-3060; e-mail cpe@njit.edu

Admission Requirements:

Applicants should have a bachelor's degree from an accredited institution with some undergraduate background in economics, mathematics, probability and statistics, and computers.

Bridge Program: Students who lack an appropriate background may be admitted and required to make up deficiencies by taking a program of courses designed in consultation with graduate advisors. These courses are taken in addition to the degree requirements.

See the undergraduate catalog for descriptions of 100- to 400-level courses. Students may be required to take or demonstrate that they already have taken courses equivalent to the following:

*	CE 350	Transportation Engineering (3-0-3)
	CIS 101	Computer Programming and Problem Solving (2-1-2)
	Econ 265	Microeconomics (3-0-3)
	Math 105	Elementary Probability and Statistics (3-0-3)
	Math 309	Mathematical Analysis for Technology (4-0-4)

Degree Requirements:

Students must select one area of specialization and take a minimum of 30 credits. Tran 792 Seminar is required for all students who receive departmental or research-based awards. A maximum of 6 credits may be taken from the 500-level courses for the master of science.

Three general areas of specialization are available. While they share a common methodological core, each is designed to suit various interests:

Transportation Engineering focuses on traffic engineering, physical design and operational aspects of transportation systems. This area is best suited for students with an undergraduate engineering degree.

Transportation Planning emphasizes the analysis and planning aspects, in particular the integration of transportation systems with urban and regional considerations such as economics, land use, and the environment.

Advanced Transportation Systems and Technologies emphasizes the use of emerging technologies such as intelligent transportation systems in planning, design and operations of multi- and inter-modal transportation systems.

Core:

Required for all specializations

9 credits:

	Tran 603	Introduction to Urban Transportation Planning (3 credits)
{	Tran 610	Transportation Economics (3 credits) or
	Econ 565	Managerial Economics (3 credits)
{	Tran 650	Urban Systems Engineering (3 credits) or
	EM 602	Management Science (3 credits)

Project, Thesis (optional):

Students may elect to complete a master's project or thesis. These courses are considered as electives.

	Tran 700	Master's Project (3 credits)
	Tran 701	Master's Thesis (6 credits)

Areas of Specialization:

Additional elective courses for all areas of specialization may be taken with approval of the graduate advisor.

Transportation Engineering:

Required:

9 credits:

	Tran 615	Traffic Studies and Capacity (3 credits)
	Tran 625	Public Transportation Operations and Technology (3 credits)
	Tran 752	Traffic Control (3 credits)

Elective:

Select 6 credits if completing a master's thesis; 9 credits if completing a master's project; 15 credits if not completing either a master's project or thesis, from:

	CE 611	Project Planning and Control (3 credits)
	EM 691	Cost Estimating for Capital Projects (3 credits)
	EnE 671	Environmental Impact Analysis (3 credits)
	HRM 601	Organizational Behavior (3 credits)
	IE 651	Industrial Simulation (3 credits)
	Math 661	Applied Statistics (3 credits)
	ME 635	Computer-Aided Design (3 credits)
	Mgmt 692	Strategic Management (3 credits)
	MIS 648	Decision Support Systems for Managers (3 credits)
	Mrkt 632	Marketing Strategy for Technology-Based Organizations (3 credits)
	Tran 552	Geometric Design of Transportation Facilities (3 credits)
	Tran 602	Geographic Information Systems (3 credits)
	Tran 608	Behavioral Issues in Transportation Studies (3 credits)
	Tran 640	Distribution Logistics (3 credits)
	Tran 653	Traffic Safety (3 credits)
	Tran 659	Flexible and Rigid Pavements (3 credits)
	Tran 700	Master's Project (3 credits)
	Tran 701	Master's Thesis (6 credits)
	Tran 753	Airport Design and Planning (3 credits)
	Tran 754	Port Design and Planning (3 credits)
	Tran 755	Intelligent Transportation Systems (3 credits)
	Tran 760	Urban Transportation Networks (3 credits)

Transportation Planning:**Required:**

9 credits:

	Tran 655	Land Use Planning (3 credits)
{	Tran 625	Public Transportation Operations and Technology (3 credits) or
	Tran 705	Mass Transportation Systems (3 credits)
	Tran 765	Multi-modal Freight Transportation Systems Analysis (3 credits)

Elective:

Select 6 credits if completing a master's thesis; 9 credits if completing a master's project; 15 credits if not completing either a master's project or thesis, from:

	CE 611	Project Planning and Control (3 credits)
	EnE 671	Environmental Impact Analysis (3 credits)
	Fin 630	Applied Business Econometrics (3 credits)
	HRM 601	Organizational Behavior (3 credits)
	HRM 606	Human Resource Management (3 credits)
	HRM 662	Organizational Diagnosis and Development (3 credits)
	Math 661	Applied Statistics (3 credits)
	Mgmt 691	Legal and Ethical Issues (3 credits)
	Mgmt 692	Strategic Management (3 credits)
	MIS 620	E-Commerce Technologies (3 credits)

	Mrkt 632	Marketing Strategy for Technology-Based Organizations (3 credits)
	Tran 602	Geographic Information Systems (3 credits)
	Tran 604	Public and Private Financing of Urban Areas (3 credits)
	Tran 608	Behavioral Issues in Transportation Studies (3 credits)
	Tran 615	Traffic Studies and Capacity (3 credits)
	Tran 640	Distribution Logistics (3 credits)
	Tran 643	Transportation Finance (3 credits)
	Tran 653	Traffic Safety (3 credits)
	Tran 700	Master's Project (3 credits)
	Tran 701	Master's Thesis (6 credits)
	Tran 720	Discrete Choice Modeling for Travel Demand Forecasting (3 credits)
	Tran 740	Management of Transportation Carriers (3 credits)
	Tran 753	Airport Design and Planning (3 credits)
	Tran 755	Intelligent Transportation Systems (3 credits)
	Tran 760	Urban Transportation Networks (3 credits)

Advanced Transportation Systems and Technologies :**Required:***9 credits:*

	Tran 615	Traffic Studies and Capacity (3 credits)
	Tran 755	Intelligent Transportation Systems (3 credits)
	Tran 765	Multi-modal Freight Transportation Systems Analysis (3 credits)

Elective:

Select 6 credits if completing a master's thesis; 9 credits if completing a master's project; 15 credits if not completing either a master's project or thesis, from:

	CIS 610	Data Structures and Algorithms (3 credits)
	CIS 651	Data Communications (3 credits)
	CIS 661	Systems Simulation (3 credits)
	ECE 609	Artificial Neural Networks (3 credits)
	ECE 642	Communication Systems I (3 credits)
	EM 714	Multicriteria Decision Making (3 credits)
	EnE 671	Environmental Impact Analysis (3 credits)
	HRM 601	Organizational Behavior (3 credits)
	IE 624	Heuristic Methods (3 credits)
	IE 642	Network Flows and Applications (3 credits)
	IE 644	Application of Stochastic Modeling in Systems Control (3 credits)
	IE 651	Industrial Simulation (3 credits)
	IE 705	Mathematical Programming in Management Science (3 credits)
	IE 706	A Queueing Approach to Performance Analysis (3 credits)
	Math 661	Applied Statistics (3 credits)
	ME 635	Computer-Aided Design (3 credits)
	Mgmt 692	Strategic Management (3 credits)
	MIS 648	Decision Support Systems for Managers (3 credits)
	Mrkt 632	Marketing Strategy for Technology-Based Organizations (3 credits)
	Mrkt 636	Design and Development of High Technology Products (3 credits)
	Mrkt 640	Industrial Marketing Management (3 credits)

	Tran 602	Geographic Information Systems (3 credits)
	Tran 608	Behavioral Issues in Transportation Studies (3 credits)
	Tran 625	Public Transportation Operations and Technology (3 credits)
	Tran 640	Distribution Logistics (3 credits)
	Tran 700	Master's Project (3 credits)
	Tran 701	Master's Thesis (6 credits)
	Tran 752	Traffic Control (3 credits)
	Tran 760	Urban Transportation Networks (3 credits)

Doctor of Philosophy in Transportation

The doctoral program is for well-qualified students who are mature in scholarship and purpose. It offers a well-balanced mixture of theoretical studies and experimental research. A student must demonstrate creative thinking, self-motivation, and ability to do independent research. In their research, students are expected to deal with complex issues, effectively formulate difficult problems, devise new methodology, and achieve new and exceptional results.

Admission Requirements:

Students should have adequate preparation in mathematical and other analytical techniques, and substantial knowledge of the ideas and techniques of synthesis. A thorough understanding of the social and economic factors intrinsic to the functioning and development of transport in urban areas also is necessary. It is expected that students will have earned a minimum GPA of 3.5 in a master's degree program in engineering, planning, or business administration from an accredited university. Outstanding students with baccalaureate degrees also may be accepted. All applicants must take the GRE. Full-time study is preferred for doctoral studies.

Degree Requirements:

Requirements consist of a minimum of 54 credits of course work beyond the bachelor's degree, including at least 12 credits of 700-level courses, passage of a qualifying examination, a minimum of 36 credits of Tran 790 Doctoral Dissertation and Tran 791 Doctoral Seminar. Independent original research must be conducted by the candidate in a specific area of transportation. Dissertation work must be of publishable quality.

Dissertation: A program committee must approve a dissertation topic and an NJIT faculty member, approved by the program, must be available to supervise the dissertation research. An oral defense of the dissertation is required after the dissertation committee accepts the written document.

Qualifying Examination: All doctoral students must pass a doctoral qualifying examination. To prepare adequately for the examination, students should take appropriate course work in transportation engineering, transportation planning, and advanced transportation systems and technologies, as well as other related subjects.

The examination has four parts: the first three are written, and the fourth is oral. The oral part is given after the written parts are evaluated.

Part I Analytical Techniques

Part II Transportation Facilities and Operations

Part III Transportation Planning and Technologies

Part IV Oral (includes a field problem)

For additional information about doctoral degree requirements, refer to the Academic Policies and Procedures section of this catalog.

* Students who have demonstrated professional transportation work experience may have this course waived.

Catalog and curricula information approved by the relevant academic department.

Accounting: Offered by the School of Management. See [Management](#) course list for faculty.

UNDERGRADUATE COURSES:

Acct 115 - Principles of Accounting I (3-0-3) Basic accounting concepts, documents, work sheets, ledgers, and procedures for keeping accounts. Emphasis given to inventory and job order accounting methods.

Acct 116 - Principles of Accounting II (3-0-3) Prerequisite: Acct 115. A continuation of Acct 115. Valuation, depreciation, costing methods, overhead accumulations, and distribution. Emphasis given to standard costs, cost estimating and budgets.

Acct 315 - Accounting for Managerial Decision Making (3-0-3) This course will concentrate on management decisions and the contribution of accounting toward making these decisions. Emphasis is upon using accounting information to solve business problems.

Acct 317 - Managerial Accounting (3-0-3) Prerequisites: Acct 115, Acct 116. The techniques of evaluating labor, material and overhead costs. Rate of return, variance analysis, and break-even analysis.

GRADUATE COURSES:

Acct 515 - Managerial Accounting (3 credits) Case study approach to accounting issues that have an impact on management decision making: nature of managerial accounting, cost behavior, cost-volume-profit analysis, full costing and its use, standard costs, variances, differential cost analysis, and responsibility accounting.

Acct 610 - Internal Auditing Concepts and Procedures (3 credits) The entire internal audit function including planning, surveying, audit performance, work paper documentation, reporting, standards, controls, sampling, and fraud detection.

Acct 615 - Management Accounting (3 credits) Builds on traditional concepts of managerial accounting (break-even analysis, alternate choice decisions, profit planning, and transfer pricing) and develops the skills that an executive needs in strategic cost analysis. Explores strategic decisions of value chains and activity-based management. Emphasis on using managerial accounting data in executive planning and control.

Acct 630 - Concepts and Applications of Control (3 credits) Examines the need for and implementation of internal controls to protect corporate assets. Emphasizes the role of the controller in the organization.

Acct 650 - Operational Auditing (3 credits) Stresses the functions of the auditor in assessing the effectiveness and efficiency of operations. Includes such areas as environmental auditing, auditing the human resource management function, auditing OSHA, psychological impact on internal auditors, auditing in a just-in-time environment, ethics, and auditing for fraud. Financial areas are discussed only to the extent of their operational impact.

Acct 670 - Seminar in Accounting Theory (3 credits) Focuses on contemporary areas relating to accounting theory. Taught from the viewpoint of the corporate controller.

Acct 680 - Seminar in Auditing (3 credits) Discusses contemporary auditing topics as they impact on management control and decisions.

Acct 690 - Seminar in Taxation (3 credits) Focuses on contemporary issues in taxation as they impact on the corporate decision making process.

AeroSpace Studies:

UNDERGRADUATE COURSES:

AS 111 - The Air Force Today I (1-1.5-1) Explores the mission and organizational structure of the United States Air Force. Introduces the student to Reserve Officer Training Corps by examining air power, customs and courtesies, officership, and core values. Examines Air Force opportunities, benefits, career choices, and installations which provides information needed to determine whether or not to pursue a career as an Air Force officer. An introduction to effective communication is included. One hour of class, and, two hours of Leadership Laboratory per week (not required for those with Special Student status). **Effective From: Fall 2005**

AS 112 - The Air Force Today II (1-1.5-1) Prerequisite: AS 111 or approval of the professor of aerospace studies. Continues with the mission and organizational structure of the Air Force. A macro view of U.S. military history is introduced with emphasis on U.S. air power. Air Force communications is developed with emphasis on interpersonal communications, oral communications, and written communications. Leadership abilities are developed through group leadership problems and Leadership Laboratory. One hour of class and two hours of Leadership Laboratory per week (not required for those with Special Student status). **Effective From: Fall 2005**

AS 221 - U.S. Air Power: Ascension to Prominence I (1-1.5-1) Prerequisite: AS 112 or approval of the professor of aerospace studies. Examines the development of air power from its earliest beginnings to the present, including in-depth examination of World War I, World War II, Korean Conflict, Vietnam War, Cold War, and Desert Storm. Traces the evolution of air power concepts and doctrine and continues to develop leadership abilities through Leadership Laboratory. One hour of class and two hours of Leadership Laboratory per week (not required for those with Special Student status). **Effective From: Fall 2005**

AS 222 - U.S. Air Power: Ascension to Prominence II (1-1.5-1) Prerequisite: AS 221 or approval of the professor of aerospace studies. Emphasizes the concepts and skills required by the Air Force officer including oral communications, Air Force quality, leadership, followership, ethics, and values. Continues to develop leadership abilities through group leadership problems and Leadership Laboratory. One hour of class and two hours of Leadership Laboratory per week (not required for those with Special Student status). **Effective From: Fall 2005**

AS 333 - Leadership and Management I (3-1.5-3) Prerequisite: AS 222 or approval of the professor of aerospace studies. Emphasizes the concepts and skills required by the successful management and leader. Curriculum includes individual motivational and behavioral processes, leadership, communication, and group dynamics, providing the foundation for developing the junior officer's professional skills. Course material stresses decision making, and the use of analytic aids in planning, organizing, and controlling in a changing environment. Develops communication skills through writing and speaking exercises. Three hours of class and two hours of Leadership Laboratory per week. Note: AS 333 may be taken to satisfy the Management GUR. **Effective From: Fall 2005**

AS 334 - Leadership and Management II (3-1.5-3) Prerequisite: AS 333 or approval of the professor of aerospace studies. A continuation of AS 333. Organizational and personal ethics, management of change, organizational power, politics, and managerial strategy are discussed within the context of the military. Actual Air Force case studies are used throughout the course. Three hours of class and two hours of Leadership Laboratory per week. **Effective From: Fall 2005**

AS 443 - National Security Forces in Contemporary American Society (3-1.5-3) Prerequisite: AS 334 or approval of the professor of aerospace studies. Focusing on the U.S. Armed Forces as an integral element of American society, this course examines a wide variety of topics concerning American civil and military relations and the environment in which U.S. defense policy is formulated. Specific topics include the role of the professional officer in a democratic society, socialization processes within the American military forces, and the requisites for maintaining adequate national security forces. A special emphasis is placed on further refining the student's communications skills in the context of the course material. Three hours of class and one and one-half hours of Leadership Laboratory per week.

AS 444 - Preparation for Active Duty (3-1.5-3) Prerequisite: AS 443 or approval of the professor of aerospace studies. Focuses on

2007-2008

the role of the Air Force officer while on active duty. Includes responsibilities as an officer, a commander, a leader, and a manager. Topics include a review of military law, nonjudicial punishment, role of the staff judge advocate, laws of armed conflict, military ethics, officer professional development, an officer's social responsibilities, fraternization, personal finances, staff work, and Air Force base services and activities. Concludes with a review of the Air Force Core Values. Three hours of class and two hours of Leadership Laboratory per week. **Effective From: Fall 2005**

2007-2008

Afro-American and African Studies : Offered by the Department of Afro-American and African Studies at Rutgers-Newark Conklin Hall (973/353-5428)

UNDERGRADUATE COURSES:

R014:301 - African Cultural Retentions in the Americas (3)For more details go to [Rutgers Catalog](#).

R014:302 - Special Topics in Black Studies (3)For more details go to [Rutgers Catalog](#).

R014:305 - Black Women in the United States (3)For more details go to [Rutgers Catalog](#).

R014:306 - Comparative Race Relations: South Africa and the United States (3)For more details go to [Rutgers Catalog](#).

R014:358 - Black Writers of Africa and the Caribbean (3)For more details go to [Rutgers Catalog](#).

R014:403 - The Third World and The Media (3)For more details go to [Rutgers Catalog](#).

R014:465 - African Religions and Philosophical Thought Systems (3)For more details go to [Rutgers Catalog](#).

Anthropology: Offered by the Department of Afro-American and African Studies at Rutgers-Newark Conklin Hall (973/353-5428)

UNDERGRADUATE COURSES:

R070:204 - Introduction to Cultural Anthropology (3)For more details go to [Rutgers Catalog](#).

R070:303 - Anthropology of Postcolonialism (3)For more details go to [Rutgers Catalog](#).

R070:309 - Medical Anthropology (3)For more details go to [Rutgers Catalog](#).

R070:310 - Comparative Religion (3)For more details go to [Rutgers Catalog](#).

R070:319 - Anthropology Through Film (3)For more details go to [Rutgers Catalog](#).

R070:331 - Urban Anthropology (3)For more details go to [Rutgers Catalog](#).

R070:337 - Anthropology of Inequality (3)For more details go to [Rutgers Catalog](#).

R070:340 - Comparative Roles of Women (3)For more details go to [Rutgers Catalog](#).

R070:369 - New World Archaeology (3)For more details go to [Rutgers Catalog](#).

R070:420 - Tribal Warfare (3)For more details go to [Rutgers Catalog](#).

Architecture: Offered by the New Jersey School of Architecture

UNDERGRADUATE COURSES:

Arch 155 - Architectural Graphics (2-3-3) Techniques of graphic presentation introduced as a basic language of architecture. Students work with a broad range of graphic presentation methods. Skills developed in drawing and architectural delineation. Fundamentals of perspective drawing, rendering techniques and format layout examined through an array of projects.

Arch 163 - Introduction to Design I (1-12-5) Introduction to an array of basic principles and elements of design. Emphasis on design methods, sensitivity to context, manipulation of form and space, and representation skills. General design fundamentals presented in the lecture hour.

Arch 164 - Introduction to Design II (1-12-5) Prerequisite: Arch 163. A continuation of Arch 163.

Arch 241 - Architectural Construction I (3-0-3) Prerequisite: Arch 155. Introduction to the construction process and its role in architecture. Materials and methods of wood, heavy timber and masonry construction presented. Emphasis on process, compatibility of materials and drawings as a communication tool in construction.

Arch 242 - Architectural Construction II (3-0-3) Prerequisite: Arch 241. A continuation of Arch 241 that relates construction to architectural design. The study of materials and methods of construction concentrates on steel, precast and poured-in-place concrete. Emphasis on criteria for selection of materials and systems, materials research, standards and test methods, and forces of deterioration.

Arch 251 - History of Architecture I (3-0-3) Introduces architectural history, theory and design, providing a conceptual framework for looking at the built environment. A critical study of selected historical and contemporary buildings presented in class and documented in readings.

Arch 252 - History of Architecture II (3-0-3) Prerequisite: Arch 251. A survey of the social, political, technological, functional, and aesthetic concerns of architecture and urban forms from their earliest beginnings through the Middle Ages around the Mediterranean basin and Western Europe.

Arch 263 - Architecture Studio I (1-12-5) Prerequisite: Arch 164. Utilizing knowledge and skills gained in Introduction to Design I and II, students learn about architectural design. Examination of the technological, social and environmental issues as they relate to architectural design. Lecture hour used to explore in-depth aspects of architecture.

Arch 264 - Architecture Studio II (1-12-5) Prerequisite: Arch 263. A continuation of Arch 263. Lecture hour used to explore in-depth aspects of architectural design.

Arch 282 - Structures I (3-0-3) Prerequisite: Phys 102, Math 113. Introduces structural statics through timber and steel design. Influences of materials and structural system choice analyzed relative to their impact on building design. Responsibilities of the architect during the structural design phase are introduced.

Arch 283 - Special Topics (3) Investigation of problem of special interest in architecture.

Arch 310 - Co-op Work Experience I (3) Prerequisites: completion of the third year studio class, approval of the school and permission of the Office of Cooperative Education and Internships. Students gain major-related work experience and reinforcement of their academic program. A designated faculty member monitors and evaluates the student's work and project. Requirements include mandatory participation in seminars and completion of a report and/or project. Apply in third year.

Arch 312 - Environmental Education I (2-3-3) Prerequisite: Arch 264. Involves architecture students in working with grade school or

high school students in the solution of a joint environmental design project. Participants first work toward developing their own understanding and sensitivity of the manmade environment. Emphasis on learner-directed and discovery-guided inquiry, and educational methods to increase awareness of the physical settings created for human activities. Projects developed in nearby schools which focus on the interaction of individuals and small groups with the environment.

Arch 316 - Computer Applications to Architecture (2-3-3)Prerequisite: CIS 104. Introduces both philosophical and technical approaches to the use of the computer in architectural design and analysis. Explores the use of existing computer programs for spatial allocation, energy analysis, life cycle costing, problem analysis, and computer simulation. Projects include development of computer programs applicable to architecture.

Arch 317 - Advanced Architectural Graphics (2-3-3)Prerequisite: Arch 155, Arch 264. Gives students advanced techniques for architectural expression, including Chinese ink wash and air brush techniques. Emphasis on how drawing may be used to reveal the inner qualities of design. A basic knowledge of drawing methods, media, materials, and projection techniques is assumed.

Arch 318 - New York City Lab (1-6-3)Prerequisite: Arch 364. Explores the architectural and environmental development of New York City during the past 200 years in an organized series of field trips. Each week's trip encompasses a section and/or representative aspect of the city's evolution.

Arch 328 - Urban Values (2-3-3)Prerequisites: Arch 363. A survey of urban planning practice and historical, contemporary, and theoretical urban design approaches. Considers the physical environment as a response to human values, and explores how nature, the city, and the user influence the form and content. Case studies include cities, towns, and specialized recreation and retirement communities. Laboratory work includes field trips, demonstration exercises, and analysis of case studies.

Arch 331 - Landscape Architecture (3-0-3)An overview of the opportunities and constraints of landscape designs. Emphasis on developing a practical understanding of the potentials of earth, water and plants in architecture. Students given an overview of social and ecological determinants of relations between land and buildings.

Arch 342 - Architecture Construction III (3-0-3)Prerequisite: Arch 242. Develops the architect's understanding of the relationship between building material selection, building codes, testing, construction procedure, and life safety.

Arch 363 - Architecture Studio III (1-12-5)Prerequisite: Arch 264. A continuation of Arch 264. Lecture hour explores in depth the nature of technology, environment, and social order as they relate to studio work. Students will be required to purchase course materials.

Arch 364 - Architecture Studio IV (1-12-5)Prerequisites: Arch 363. A continuation of Arch 363. Lecture hour explores in depth the nature of technology, environment, and social order as they relate to studio work. Students will be required to purchase course materials.

Arch 381 - History of Architecture III (3-0-3)Prerequisite: Arch 252. Continuation of Arch 251 covering the period from the 15th Century to 1900. Among its emphases are theoretical debates, technological developments, and the impact of the industrial revolution and modernity on architecture and urban forms. While the geographical focus on Western Europe and North America, case studies from other contexts are also introduced.

Arch 382 - History of Architecture IV (3-0-3)Prerequisite: Arch 381. The last in the sequence of history surveys, this course covers the architecture of the twentieth century. The issues discussed include reactions and responses to modernism, re-evaluations of history, universalism and regionalism, utopias and anti-utopias. While the focus is on European and American architecture, developments in other parts of the world are also introduced.

Arch 383 - Structures II (3-0-3)Prerequisite: Arch 282. Methods and details of timber and steel design summarized. Structural design taught in the context of architectural design and cost constraints.

Arch 384 - Structures III (3-0-3)Prerequisite: Arch 383. Continuing with the content of Structures I and II, develop a systematic overview of important differences between wood, steel and concrete structural systems. Learn methods and procedures for selecting between alternative structural systems. Advanced topics such as complex structural behavior, prestressed concrete and new structural technologies are introduced.

Arch 386 - Building Performance (3-0-3)Prerequisites: Phys 102, Phys 103. Develop an understanding of the physical concepts of heat, air movement, and thermal mass for use in architectural design. Approaches to dynamic analysis and energy conservation are examined.

Arch 387 - Environmental Control Systems (3-0-3)Prerequisite: Arch 386. A framework for making informed selections of building systems and equipment. Students provide the necessary background to analyze the advantages and disadvantages of alternative system designs for mechanical, electrical, plumbing, and transportation systems in buildings. An introduction to working with consulting engineers and conducting life-cycle costing of building systems.

Arch 403 - The American Home and Household I (3-0-3)Prerequisite: junior or senior standing. A cultural, architectural analysis of American homes and households throughout history. Included are the Puritan society and Colonial home, the Victorian home and family, the frontier homestead, 19th century utopian communes, immigrants, the working class poor and urban tenements, war housing, and suburban homes. Students explore the meaning, use and design of each domestic setting from the point of view of society, the family and the individual, considering differences based on race, sex and class.

Arch 404 - The American Home and Household II (3-0-3)Prerequisite: junior or senior standing. Analyzes the architecture of 20th century American homes and households, hotels, apartment houses, war housing, suburban homes, public projects, collectives, communes, self-help housing, and housing concepts for the future. Psychological, sociological, and cultural perspectives are considered insofar as they affect the architecture of the home.

Arch 408 - Advanced Landscape Architecture (2-3-2)Prerequisite: Arch 331. Introduces the design, construction and management of contemporary landscape projects through case studies, field trips, and personal contact with prominent practicing landscape architects. A historical perspective of landscape architecture is used as a context for discussion.

Arch 410 - Co-op Work Experience II (3)Prerequisites: Arch 310 or approval of the school and permission of the Office of Cooperative Education and Internships. Provides major-related work experience. A designated faculty member monitors and evaluates the student's work and project. Requirements include mandatory participation in seminars and completion of a report and/or project.

Arch 419 - Architectural Photography (2-3-3)Prerequisite: Arch 364. Gives a wide range of photographic solutions for presentations and portfolios. Lectures consist of orientation on general topics, including light and space, using relevant text selections and slide presentations for reinforcement. Includes basic demonstrations of darkroom techniques and unorthodox methods to encourage experimentation.

Arch 422 - Mythical House (3-0-3)Prerequisites: Arch 172, Arch 252, Arch 363. Shows that the house develops not only in response to reasoning, laws of physics, and biological needs, but also in response to magic, ritual, culture, personality, fantasy, and dreams.

Arch 463 - Architecture Studio V (1-12-5)Prerequisite: Arch 364. A continuation of Arch 364. Lecture hour explores in depth the nature of technology, environment, and social order as they relate to studio work.

Arch 464 - Architecture Studio VI (1-12-5)Prerequisite: Arch463. A continuation of Arch463. Lecture hour explores in depth the nature of technology, environment, and social order as they relate to studio work.

Arch 472 - Architectural Programming and Project Development (3-0-3)Prerequisite: Arch 264. Covers the essentials for programming a building and understanding the full scope of project development that precedes and follows the programming phase. Identify major stakeholders in the building design and production process and examine their roles. Lectures and assignments include: user requirements and client values, methods of pro forma analysis for project development and approval, and how the development process changes over time.

Arch 483/483H - Special Topics (3)Group investigation of problem of special interest in architecture.

Arch 491 - Independent Study (1)null

Arch 492 - Independent Study (2)null

Arch 493 - Independent Study (3)null

Arch 530 - Methodologies of Architectural History, Theory and Criticism (3-0-3)Prerequisites: Arch 382. A seminar examining the salient methodologies of architectural history, theory and criticism. Structured around a series of critical texts, with each set of core readings intended to provide a basis for analyzing and assessing the approach in question.

Arch 531A - History of Renaissance Architecture (3-0-3)Prerequisites: Arch 382. An examination of the development of

Renaissance architecture and urban design in Italy and elsewhere in Europe. The re-emergence of the classical tradition is considered within the context of social, political and economic developments as well as formal intentions.

Arch 531B - History of Baroque Architecture (3-0-3)Prerequisites: Arch 382. An investigation of architectural development from the 17th and 18th centuries in Europe and Latin America, including consideration of stylistic variations, social and political factors, and trends in garden and urban design.

Arch 531C - History of Modern Architecture (3-0-3)Prerequisites: Arch 382. A study of major tendencies of architectural theory and practice from the mid-19th to the mid-20th centuries. Formal and stylistic transformation is considered in relation to theoretical intentions as well as social, cultural, and technical developments.

Arch 531D - History of American Architecture (3-0-3)Prerequisites: Arch 382. An investigation of the guiding ideals and dominant stylistic trends in American architecture and planning from colonial times to the mid-20th century. Critical shifts in conception and scope of architectural production considered in relation to the prevailing cultural, socio-economic, and technical contexts out of which they evolved.

Arch 531E - History of Non-Western Architecture (3-0-3)Prerequisites: Arch 382. An examination of major architectural traditions of China, Japan, Southeastern Asia, India, and the Middle East. Each area is considered with reference to a conceptual, iconographic and stylistic paradigm that evolved from a particular historical context.

Arch 531F - Thresholds of Architectural Theory (3-0-3)Prerequisites: Arch 382. A seminar that investigates key thresholds of Western architectural theory, from Vitruvius to Robert Venturi, with emphasis on examining the corresponding critical theoretical texts and related didactic buildings and projects.

Arch 531H - Aspects of Urban Form (3-0-3)Prerequisites: Arch 382. An examination of the major forms and patterns of urban development from classical antiquity to the 20th century, considered in relation to the changing conceptions of the city as well as cultural, socio-economic, and political development.

Arch 532 - Problems and Methods in Architectural Preservation (3-0-3)Prerequisites: Arch 382. Theory and practice of preservation planning, with emphasis on current concepts, problems and techniques of area preservation in the United States. Exploration of the successive guiding ideals and approaches to historic preservation in America, together with their European parallels and antecedents. Discussion of theories of continuity and change in the urban environment and of planning concepts and techniques that further preservation planning objectives in relation to programs for community development and neighborhood conservation.

Arch 533 - Case Studies in Architectural Creativity (3-0-3)Prerequisite: Arch 364. Considers creativity in architecture from psychological, philosophical and autobiographical perspectives. The buildings, writings and lives of contemporary architects are discussed in the context of general theories of creativity. Each student chooses an individual architect noted for creative accomplishments and prepares a case study of his or her life.

Arch 534 - History of Architectural Technology (3-0-3)Prerequisites: Arch 382. Survey of the development of building methods and materials. Impact of structural and environmental technology on architectural form and the design process. The role of technology in contemporary architectural theory and practice, including the modern movement, is emphasized.

Arch 535 - History of Architectural Ideas (3-0-3)Prerequisite: Arch 382. Discusses seminal architectural ideas in the western world from Vitruvius to the present day. Read books written by leading architectural theorists and analyze them in detail.

Arch 536 - Landscape and American Culture (3-0-3)Prerequisite: Arch 331. As in architecture, the parallel discipline of landscape architecture involves artistic intention set in conjunction with utilitarian concerns. As such, designs on the land include the integration of the arts and sciences of human culture with nature. Discusses landscape as a manifestation of American culture.

Arch 537 - Advanced Structures (3-0-3)Prerequisite: Arch 384. Covers advanced material in structures related to steel and wood design including: steel industrial buildings, rigid frames and earthquake design, wood structures under axial loads, and combined bending and axial loads.

Arch 538 - Sustainable Architecture (3-0-3)Follows two precepts: accepting responsibility for the consequences of design decisions upon human well-being, and the long-term viability of natural systems. Topics include sustainable site design and development, environmentally sensitive building materials, lifecycle cost benefit analysis of building systems, and adaptive reuse.

Arch 539 - Advanced Construction (3-0-3)Pre-requisite: Arch 242. Explores the relationship between an architect's design intention and the construction document. Design a small building or addition and complete construction drawings of the design. Addresses problems and procedures encountered by an architect during the construction documents phase.

Arch 540 - Acoustics (3-0-3)Prerequisites: Arch 241, Arch 242, Arch 342. Architectural acoustics: how we hear, physics of sound and materials, aesthetics of design and the processes of construction. Audible sounds, their interaction, perception of echo and directional hearing are applied to interior and exterior building transmission, room acoustics, and setting acceptable acoustical environments.

Arch 543 - Lighting (2-2-3)Prerequisites: Arch 386 and Arch 387 or equivalents. Explores, through modeling and calculation, the means by which architectural form and detail influence the luminous environment. Perceptual responses such as visual comfort and delight are examined. Topics include daylighting footprints, model design and testing, and computer-assisted light level analysis. Areas of investigation include the relationship between daylight and electric light in architecture; the variations of light with time; analysis of seasonal and weather differences; role of task in lighting strategies; and means of control for light quantity and quality.

Arch 545 - Case Studies in Architectural Technology (3-0-3)Prerequisite: senior standing. Technological systems involved in the construction and use of buildings. Students conduct in-depth investigation of technology-related problems in architecture and construction. Case study method is used. Construction documents and reports are analyzed. Field visits are required.

Arch 546 - Designing and Optimizing the Building Enclosure (3-0-3)Prerequisites: Arch 386, CIS 104. Considers the "building envelope,?? the boundary dividing the inside of a structure from the outside environment. Study and design optimal enclosures considering energy exchange, the relationship between energy and light, and life cycle costs.

Arch 547 - Special Topics in Computer Applications (2-2-3)Prerequisite: senior standing. Evaluation, utilization, and development of computer programs for analysis, simulation and information management. Programs range from energy analysis, building structures analysis, and mechanical systems design to spatial allocation, graphics and computer-aided design. Different theories of information transformation and delivery used in terms of architectural applications. Course hardware ranges from computer-aided design and drafting systems, through micro and mini, to mainframe computers.

Arch 549 - Life Safety Issues in Contemporary Buildings (3-0-3)Prerequisites: Arch 386, Arch 387. A variety of life safety and comfort situations studied in terms of specific building types. Topics include building evacuation, compartmentalization, fire fighting and suppression, evaluation and testing of new building materials and systems, systems control and management. Special emphasis is on such building types as multi-use, high-density, schools, hospitals, and other institutional categories.

Arch 550 - Building Economics (3-0-3)Prerequisite: senior standing. Economic issues and methods of analysis influencing the building process and product are presented. The focus is on relations between architectural decisions and economic consequences. Students use computer models to manage building cost data and conduct life cycle costing.

Arch 552 - Real Estate Analysis for Architects (3-0-3)Prerequisite: completion of the third year. Introduction to the economic, financial and political aspects of real estate and their effect on architectural decision-making. Topics include needs assessment, real estate appraisal, financial instruments, regulations and real estate, design as value-adding, and the effect of tax policies on real estate development.

Arch 556 - Systems Approach to Design and Construction (3-0-3)Prerequisite: completion of the third year. Lectures, case studies and student projects on understanding human aspiration and needs through design. Topics include land, finance, management, technology, and labor.

Arch 557 - Problems in Modern Housing (3-0-3)Prerequisite: Arch 382 Historical approach places housing in its social, economic, and political context. Attempts to provide decent, affordable and well-designed housing for broad segments of society are examined. Dwelling is examined through analysis of proto-typical design solutions in urban environments.

Arch 558 - Professional Architectural Practice (3-0-3)Prerequisite: Arch 364. A forum for examination of the structure and practices of the profession of architecture. The formal and informal relationships between architects, and between architects and clients, government officials, and consultants are studied. Basic principles of office management for the small and large architectural firm are introduced.

Arch 559 - Social Issues in Housing (3-0-3)Lecture/seminar explores the historical, economic, social, technological, and political basis for current American housing policy and practice. Examines government, community-based and private sector attempts, both failed and successful, at providing decent, affordable, and well-designed housing for broad segments of society. Student teams

analyze and discuss, in a series of classroom debates, the housing and planning implications of controversial social problems?from homelessness and racial segregation to caring for the elderly and people with HIV/AIDS?with an emphasis on the role of the architect.

Arch 563 - Architecture Studio VII (1-12-5)Prerequisites: Arch464. All 100-, 200-, and 300-level architecture core courses must be completed. A continuation of Arch464. Lecture hour explores in depth the nature of technology, environment, and social order as they relate to studio work.

Arch 564 - Architecture Studio (1-12-5)Prerequisite: Arch 563. All 100-, 200-, and 300-level architecture core courses must be completed. A continuation of Arch 563.

Arch 565 - Comprehensive Studio Lab (0-3-1)Prerequisites: Arch464. Corequisite: Arch 563 or Arch 564. Held in design studio each week, the lab consists of presentations by the instructor on relevant technical and life safety -issues and student exercises applying these principles to their current design studio project or to existing buildings.

Arch 566 - Senior Thesis (0-15-5)Prerequisite: Arch 563. An independent study option, which may be chosen by the student with the approval of the school, and in place of Arch 564.

Arch 571 - Everyday Life in the Public Realm (3-0-3)A significant portion of everyday life takes place in the public realm of streets, sidewalks, parks, transit stations, government buildings, commercial establishments, and cultural institutions. Focuses on recent descriptions and critiques of public space and proposals for change.

Arch 572 - Architecture and Social Change (3-0-3)Prerequisite: senior standing. Architectural form is analyzed in relation to political, economic and technological change, and change in social values. Buildings and other designed environments such as parks, streets and neighborhoods are studied relative to the social processes and institutions that generate and transform them. The role of the design professions in initiating or supporting change also is considered

Arch 573 - Technologies for Community and Urban Design (3-0-3)Prerequisite: senior standing. Advanced and traditional technologies analyzed with regard to their role in community and city design, construction and reconstruction. Emphasis on technological systems influencing location, configuration and use. Examples are infrastructures, communication systems and construction technologies. Develops skills in using methods to evaluate alternative technologies relative to their social, economic and physical promise, problems and feasibility.

Arch 574 - Case Studies in Community and Urban Design (3-0-3)Prerequisite: senior standing. In-depth investigation of specific real-world problems of urban or community design carried out using case method approach. Current practices in the U.S. and other countries studied using interviews with designers, developers, community groups and government agencies. Site visits, reports and other documents provide important sources of information. Final report with supporting documentation required.

Arch 576 - The Architecture of Utopia (3-0-3)Prerequisite: senior standing. Seminar for the review of utopian projects that have attempted to embody and strengthen social ideas through transformations in the structuring of space. Architectural implications of different literary and philosophical utopias analyzed with an emphasis on those experimental proposals which were realized, in whole or in part, in built form.

Arch 583/583H - Special Topics (3)Group investigation of problem of special interest in architecture.

Arch 584 - Video and Animation (3-0-3)Prerequisite: Arch 363. Presents the concepts of 3-D surface modeling, rendering, key frame animation, and video production in the context of the design process using the computer program ALIAS STUDIO. Emphasizes the underlying geometric principles of surface modeling, the components of color theory and texture mapping, the principles of key frame animation, and video production. The project for the semester is a short animated video. Also discusses scene Description Language programming.

Arch 585 - Imaginary Worlds: Architecture in Motion Pictures (3-0-3)Prerequisites: Arch 363, Arch 381. Like childhood photographs in family albums, movies are part of our collective memories and become a unique way of "remembering?? an era or place even one that has never existed or could exist. The study of imaginary worlds in motion pictures provides students with opportunities to gain an awareness of architecture and study it from different perspectives. Movies studied will be limited to those that postulate new, or unique, environments rather than those films that faithfully document reality. Discussions will focus on architectural issues raised by the movies studied as well as those found in critical essays.

Arch 588 - Architoons (3-0-3)Prerequisite: Arch 364. Through the medium of film, applies literary devices to architectural contexts,

including caricature, parody, lampoon, satire and farce. Studies historical and contemporary animations and short films for their treatment of meaning, story line and sequence, timing, environmental and psychological mood, atmosphere and emotion. Using 3-D modeling and animation software, each student produces an animated short subject illustrating an architectural principle or providing a humorous look at architectural history and theory.

Arch 591 - Independent Study (1)null

Arch 592 - Independent Study (2)null

Arch 593 - Independent Study (3)null

GRADUATE COURSES:

Arch 500G - Computer Programming and Graphics Problems (2 credits)Introductory computer science with applications in computer graphics for architecture. Emphasizes programming methodology using a high-level language as the vehicle to illustrate concepts. Basic concepts of computer systems, software engineering, algorithm design, programming languages, and data abstraction, with applications.

Arch 501G - Architectural Design I (5 credits)Prerequisite: graduate level standing. Core Studio. Fundamentals of architectural design. Sequence of projects explore two- and three-dimensional design. Choice of form and aesthetics is related to spatial resolution of function and context. Design as a representational medium is emphasized. Taken concurrently with Arch 555G.

Arch 502G - Architectural Design II (5 credits)Prerequisites: Arch 501G, Arch 521G, Arch 528G, Arch 555G. Core Studio. Extends the knowledge of design, basic concepts and ideas introduced in Arch 501G. Emphasis is on developing technical drawing, and model-making skills. Also covered are two- and three-dimensional composition. Links to the history and theory sequence are made.

Arch 503G - Architectural Design III (5 credits)Prerequisites: Arch 502G, Arch 511G, Arch 522G, Arch 529G, Core Studio. Intermediate design studio. Introduction to structure. Properties of materials both physical and in the abstract. Builds on knowledge gained from construction and structures courses, spatial demands and design possibilities of different structural systems. Design of structure type, model and context, and comparisons of building typology for rational structure. Drawing and its role in design thinking.

Arch 504G - Architectural Design IV (5 credits)Prerequisites: Arch 503G, Arch 512G, Arch 523G. Arch 500G, Core Studio. Second semester intermediate design studio. Design of buildings and integration of systems, physical and conceptual. Design methodology generates new information on buildings as coherent assemblies of systems. Also covers analysis and synthesis of form and introduction to applications of computer-assisted design (CAD). Preparation of design portfolio will complete core studio sequence.

Arch 505G, Arch 506G, Arch 507G - Advanced Design Options I, II, III (6 credits each)Prerequisites: completion of all core courses or their equivalent. Required vertical studio electives; must be taken sequentially. Covers range of advanced design issues in depth: integration of organizational, social, technical, spatial, and aesthetic issues within consistently articulated applied design solutions. [abcd](#) [www](#)

Arch 511G - Structures I (3 credits)Prerequisites: graduate level standing, college level physics and calculus or equivalent, Arch 521G. Introduces structural statics through timber and steel design. Analysis and selection of building materials and structural systems related to their impact on building design.

Arch 512G - Structures II (3 credits)Prerequisites: Arch 511G, Arch 522G. Builds on information presented in Arch 511G. Emphasizes details and methods of concrete design, mixing, pouring and testing. Methods and details of steel design are summarized.

Arch 513G - Structures III (3 credits)Prerequisite: Arch 512G. Review of methods and procedures for choosing structural systems. Overview of differences among wood, steel and concrete systems. Students are introduced to complex structural behavior, prestressed concrete and new structural technology.

Arch 521G - Construction I (3 credits)Prerequisite: graduate level standing. Introduction to the construction process and how it relates to architecture. Compatibility of materials and methods of construction are studied with respect to wood, heavy timber, steel and masonry construction. Emphasis is placed on materials compatibility, construction technology, and the role of architectural documents in the construction process.

Arch 522G - Construction II (3 credits)Prerequisite: Arch 521G. Continuation of 521G. Construction practices and details of steel,

precast and poured-in-place concrete construction. Review of testing methods, procedures for setting standards, forces of determination, and new materials research. Emphasis is on materials and systems selection criteria.

Arch 523G - Building Performance (3 credits) Prerequisites: Arch 522G, college level physics or equivalent. Impact on building design of heat, air movement, and thermal mass in an array of climatic conditions. Also covered are dynamic thermal and passive solar analysis for energy-conscious architectural design.

Arch 524G - Environmental Control Systems (3 credits) Prerequisite: Arch 523G. Analysis of different configurations of building equipment systems related to building design and life cycle costs. Relationships among mechanical, electrical, plumbing and transport systems are examined. The role of the architect and other professionals in equipment design and selection are studied, with an emphasis on criteria for system selection.

Arch 528G - History of Architecture I (3 credits) Prerequisite: graduate level standing. Introduction to the history of architecture. Emphasis on classical architecture from antiquity to the modern period. Evolution of the various themes and theories that underlie western architecture is presented chronologically.

Arch 529G - History of Architecture II (3 credits) Prerequisite: Arch 528G. Continuation of Arch 528G. Introduces concepts of modernism and brings the history of western architecture to the contemporary period.

Arch 555G - Architectural Graphics (3 credits) Prerequisite: graduate level standing. Documentary, descriptive and denotative media are introduced. Also covers methods of representation, delineation and reproduction. Skills are developed in technical drawing, perspective construction, projections, and format design. Taken concurrently with Arch 501G.

Arch 569G - Building and Development (3 credits) Familiarization with the larger process of building production, of which architecture is one important part. Focus on the role of the architect in the areas of current building development: an examination of how redefinition or change might improve the process. Lectures deal with all factors of the building process and interviews with the various actors involved in designing, approving, financing and making buildings. Students have various assignments including a major term project.

Arch 579G - Professional Architectural Practice (3 credits) Prerequisite: completion of M.Arch. core sequence. Review of the formal, informal, legal, and ethical obligations of the professional architect. Traditional relationships among the architect, clients, engineers and other participants in the design and building industry are studied. Principles of office management and problems of liability are introduced. Also fulfills core requirement of dual degree option for M.Arch./Master of Science in Management.

Arch 619 - Architectural Photography (3 credits) Prerequisites: Arch 501G, Arch 502G, Arch 503G. Photography for architectural presentations and portfolios. Lectures include orientation on light and space, slide presentations, and the use of text to reinforce photographic material. Demonstrations include basic darkroom techniques, and methods to encourage experimentation in photography.

Arch 630 - Methodology of Architectural History, Theory and Criticism (3 credits) Prerequisites: Arch 528G, Arch 529G. This seminar is structured around notable readings on architectural history, theory and criticism to provide students with a sound basis for critical analysis and assessment. It is recommended for students who select history and theory as their area of concentration.

Arch 631A - History of Renaissance Architecture (3 credits) Prerequisites: Arch 528G, Arch 529G. Development of architecture and urban design in Italy and elsewhere in Europe during the Renaissance: re-emergence of the classical Greek and Roman architectural tradition; social, political and economic developments; formal intentions and transformations in the 16th and 17th centuries.

Arch 631B - History of Baroque Architecture (3 credits) Prerequisites: Arch 528G, Arch 529G. The emergence of baroque architecture and urban design in Rome in the 17th century; analysis of the works of Bernini, Borromini, Cortona and their contemporaries and successors through 1750. Development of baroque architecture elsewhere in Italy and Europe; late baroque and rococo; the advent of neo-classicism.

Arch 631C - History of Modern Architecture (3 credits) Prerequisites: Arch 528G, Arch 529G. Major tendencies in architectural theory and practice from the mid-19th to the mid-20th centuries. Formal and stylistic transformation considered in relation to theory, social, cultural, and technical developments.

Arch 631D - History of American Architecture (3 credits) Prerequisites: Arch 528G, Arch 529G. Aesthetic, social, cultural and technical developments in American architecture and planning, from colonial times to the mid-20th century.

Arch 631E - History of Non-Western Architecture (3 credits)Prerequisites: Arch 528G, Arch 529G. Examination of major architectural traditions and styles of China, Japan, Southeast Asia, India and the Middle East.

Arch 631F - Thresholds of Architectural Theory (3 credits)Prerequisites: Arch 528G, Arch 529G. Seminar on Western architectural theory dating from Vitruvius to the present time. Examines critical texts and studies related building and projects.

Arch 631H - History and Theory of Infrastructure (3 credits)Prerequisites: Arch 528G, Arch 529G. The historical role of infrastructure in the formation of cities and the relation of planning theories to urban culture. Case studies are used to develop effective ways of learning urban design; method and substance are equally emphasized. Concentration on the social, economic, political, technological and topographic factors that affect urban form; analysis of urban design schemata and their relation to patterns of use; and the critical appraisal of planning ideologies and strategies. Same as MIP 631.

Arch 632 - Problems and Methods in Architectural Preservation (3 credits)Prerequisites: Arch 528G, Arch 529G. Theory and practice of preservation planning. Compares American and European preservation concepts, problems and techniques. Also covers theories on continuity and change in urban environments, and preservation-planning for community development and neighborhood conservation.

Arch 633 - Case Studies in Architectural Creativity (3 credits)Prerequisite: Arch 528G, Arch 529G. Considers creativity in architecture from psychological, philosophical and autobiographical perspectives. The buildings writings and lives of contemporary architects are discussed in the context of general theories of creativity. Each student chooses an individual architect noted for creative accomplishments and prepares a case study of his or her life.

Arch 634 - History of Architectural Technology (3 credits)Prerequisites: Arch 528G, Arch 529G. Survey of the development of building methods and materials. Impact of structural and environmental technology on architectural form and the design process. The role of technology in contemporary architectural theory and practice including the modern movement is emphasized. Recommended for students who select building science as their area of concentration.

Arch 640 - Acoustics (3 credits)Prerequisites: completion of core sequence or equivalent. Architectural acoustics: how we hear, physics of sound and materials, aesthetics of design and the processes of construction. Audible sounds, their interaction, perception of echo and directional hearing are applied to interior and exterior building transmission, room acoustics, and setting acceptable acoustical environments.

Arch 641 - Experiments in Structural Form (3 credits)Prerequisites: completion of core sequence or equivalent. Architectural form through model design, construction and testing of minimum structures, including elements of soap film study, orthogonal and diagonal grids, design of tension grids through deflection loading, photoelastic models and calculation. Also compares geometric systems, patterning and proportion, symmetry, asymmetry, relative size, nesting, linearity and spiral orders, rectilinear patterns, and randomness in architectural structure and form.

Arch 643 - Lighting (3 credits)Prerequisites: Arch 501G, Arch 502G, Arch 503G, Arch 523G, Arch 524G. Through modeling and calculation, influence of the luminous environment on architectural form and detail. Perceptions of visual comfort and daylight are examined. Topics include daylighting footprints, model design and testing, and computer-assisted, light-level analysis. Relationship between daylight and artificial light in architecture, variations of light with time, analysis of seasonal and weather differences, role of task in lighting strategies, and means of control for light quantity and quality.

Arch 644 - Systems Approach to Design and Construction (3 credits)Prerequisite: completion of core sequence. Lectures, case studies and student projects on understanding human aspirations and needs through design. Topics include land, finance, management, technology and labor.

Arch 645 - Case Studies in Architectural Technology (3 credits)Prerequisite: completion of core sequence. Case-study method used for in-depth investigation of the relationship among various technological systems in a building and technologically-related problems in architecture and construction.

Arch 646 - Designing and Optimizing the Building Enclosure (3 credits)Prerequisite: completion of core sequence. Considers the "building envelope," the boundary dividing the inside of a structure from the outside environment. Students study and design optimal enclosures considering energy exchange, the relationship between energy and lighting, and life cycle costs.

Arch 647 - Special Topics in Computer Applications (3 credits)Prerequisite: completion of core sequence. Evaluation and use of computer graphics hardware and software for architectural applications. Focus is on computers as tools, operating systems and

methods of data manipulation. Two- and three-dimensional modeling software are discussed, and assignments using such software are given to provide understanding of the modeling of built environments.

Arch 649 - Life Safety Issues in Contemporary Buildings (3 credits) Prerequisite: completion of core sequence. A variety of life safety and comfort situations are studied in different building types. Topics include building evacuation, compartmentalizing, fire fighting and suppression, evaluation and testing of new building materials and systems, systems control and management. Special attention is placed on multi-use, high-density buildings.

Arch 650 - Economy of Building (3 credits) Prerequisite: completion of core sequence or equivalent. Economic consequences of design decisions. Topics include: relationship among economy, efficiency and quality; life-cycle cost of design; improving the economy of building processes and products through innovation; and environmental concerns. This course is required for the dual degree M.Arch./Master of Science in Management program. It can also be used as an elective in the M.Arch. program.

Arch 651 - Real Estate Analysis for Architects (3 credits) Prerequisite: completion of core sequence. Introduction to the economic, financial and political aspects of real estate and their effect on architectural decision-making. Topics include: needs assessment, real estate appraisal, financial instruments, regulations and real estate, design as value-adding, and the effect of tax policies on real estate development. This course is required for the dual degree M.Arch./Master of Science in Management program. It can also be used as an elective in the M.Arch. program.

Arch 652 - Architectural Project Management (3 credits) Prerequisites: completion of core sequence and Arch 579G. Management of architectural projects: project costs, timing, personnel, documentation, professional ethics and resource management. This course is required for the dual degree M.Arch./Master of Science in Management program. It may be used as an elective in the M.Arch. program.

Arch 661 - Directed Studies of Architecture (3 credits) Prerequisites: completion of core and two elective courses; and approval from the graduate advisor. Independent, in-depth research on an analytical, theoretical or technical area of architecture. Student prepares formal research proposal with permission of faculty advisor and approval of graduate advisor. Required as pre-thesis research. See also course description for MARC 701.

Arch 662 - Special Topics in Architecture (3 credits) Topics vary each semester. Refer to the School of Architecture bulletin during university registration periods for a list of current topics and possible prerequisites.

Arch 663 - Introduction to Sustainable Architecture (3 credits) Prerequisite: Arch 523G. Environment design of buildings. The five characteristics of green buildings: sustainable sites, water efficiency, energy and atmosphere, materials and resources, and indoor environmental quality. The US Green Building Council's Green Building Rating System, review of several major buildings of exemplary design.

Arch 664 - Indoor Environmental Quality in Sustainable Design Buildings (3 credits) Prerequisite: Arch 523G. Supportive ambient conditions, including thermal comfort and acceptable indoor air quality, visual comfort, and appropriate acoustical quality, overall physical and psychological well-being for workplace quality, performance and productivity.

Arch 665 - Sustainable Design of Energy Efficient Buildings (3 credits) Prerequisite: Arch 523G. Evaluation of heating and cooling loads, impact on fuel consumption, energy software analysis for design and efficiency. Technology of passive solar design and building integrated photovoltaics.

Arch 666 - Sustainable Design with Efficient Materials and Resources (3 credits) Prerequisite: Arch 523G. Environmentally sensitive site design; issues of wildlife habitat, erosion, ground water recharge, and threats to water quality of surface water bodies and aquifers. Water reclamation, materials and energy conservation, waste reduction and recycling.

Arch 672 - Architecture and Social Change (3 credits) Prerequisite: graduate level standing. Analysis of architectural form with respect to political, economic and technological change. The built environment is studied in relation to society and culture. The role of design professions in initiating or supporting change is also considered.

Arch 673 - Infrastructure Planning in Practice (3 credits) Infrastructure planning principles, methods and tools. Through selected examples, acquaintance with infrastructure planning theories and models, quantitative methods of research and analysis, information management, decision making, and implementation techniques. Same as MIP 673.

Arch 674 - Infrastructure and Architecture (3 credits) Examination of areas of overlap and continuity between architecture, landscape architecture, urban design, building science and infrastructure. Topics include the typology, programming and design of

public facilities; the housing fabric; the relation between built form, urban space and infrastructure. Same as MIP 674.

Arch 675 - Elements of Infrastructure Planning (3 credits)Introductory survey of the basic principles, operation and design of physical infrastructure systems including roads, public transportation, community facilities, public open space, surface drainage, and electric, gas, water, waste disposal, and telecommunications services. Same as MIP 675.

Arch 676 - The Architecture of Utopia (3 credits)Prerequisite: graduate level standing. Seminar looks at several ideas of utopia from literature and philosophy and how they embody transformations in the structure of space, and their architectural implications.

Arch 678 - Graduate Problems in Modern Housing (3 credits)Prerequisite: graduate level standing. Students learn to analyze political, technical and economic aspects of contemporary housing policy and practice. Attempts to provide well-designed, affordable housing responsive to the needs of large numbers of people are examined. Examples of housing from the mid-19th century to the present day are outlined.

Arch 680 - Graduate Co-op Work Experience I (3 additive credits)Prerequisites: completion of core sequence, permission from graduate advisor and Division of Career Development Services. Students gain work experience and reinforcement of their academic programs. An architecture faculty Co-op advisor monitors and evaluates student work and project. Co-op work experiences may be acceptable equivalents for apprenticeships mandated by the New Jersey State Board of Architects and for eligibility to take the architecture licensing examination. This course is required for participation in the Housing Scholars Program. Course does not fulfill degree requirements.

Arch 681/682 - Graduate Co-op Work Experience II and III (3 additive credits)Prerequisites: completion of core sequence, permission of graduate advisor and Division of Career Development Services. Used for extended summer-fall (681) or spring-summer (682) work experience. Does not fulfill degree requirements.

Arch 686 - Research Methods for Environmental Design (3 credits)Introduction to methods of inquiry useful to professionals planning and designing buildings, communities and cities. Skills developed in problem definition and phenomena: measurement, modeling, testing and evaluation. Open to undergraduates with permission of instructor.

Arch 770 - Development of the American City (3 credits)Prerequisite: Enrollment in the Urban Systems PhD program or permission of the instructor. Introduction to research in urban history, focusing on the American city. Key texts that deal with the development of the American city will be studied in depth, with particular emphasis on the approaches, methodologies, and sources. Each student will conduct bibliographic research on a city or urban sector from a defined perspective.

Arch 771 - Pathology of Urban Systems (3 credits)Prerequisite: Enrollment in the Urban System PhD program or permission of the instructor. Definition of pathology of urban systems as large-scale disasters that have resulted in major destruction of the urban fabric and called for radical re-planning projects. Investigation of historic case studies. The aftermath of natural and man-made disasters including war; contemporary case studies.

MARC 701 - Master's Thesis (6 credits)Prerequisites: Arch 506G, Arch 661, and approval from graduate advisor. Alternative to Arch 507G. Under the supervision of a faculty advisor, independent study of issues in the student's area of concentration developed during Arch 661.

MSAS 701 - Master of Science in Architectural Studies Thesis (6 credits)Prerequisites: completion of required courses, electives, Arch 661 and approval from MSAS advisor. Under supervision of a thesis advisor, independent, in-depth examination of a subject in the student's area of concentration developed during Arch 661.

Art : Offered by the New Jersey School of Architecture

UNDERGRADUATE COURSES:

R080:102 - Design Fundamentals (3)For more details go to [Rutgers Catalog](#).

R080:103 - 3-D Design Fundamentals (3)For more details go to [Rutgers Catalog](#).

R080:121 - Introduction to Drawing (3)For more details go to [Rutgers Catalog](#).

R080:231 - Graphic Design I (3)For more details go to [Rutgers Catalog](#).

R080:245 - Introduction to Computer Art (3)For more details go to [Rutgers Catalog](#).

R080:251 - Introduction to Painting (3)For more details go to [Rutgers Catalog](#).

R080:261 - Introduction to Photography (3)For more details go to [Rutgers Catalog](#).

R080:273 - Introduction to Printmaking (3)For more details go to [Rutgers Catalog](#).

R080:362 - Photography Workshop (3)For more details go to [Rutgers Catalog](#).

R080:370 - Computers in Graphic Design (3)For more details go to [Rutgers Catalog](#).

R080:373 - Advanced Printmaking (3)For more details go to [Rutgers Catalog](#).

R080:378 - Printmaking Book Arts Workshop (3)For more details go to [Rutgers Catalog](#).

R082:101 - Art Appreciation: Arts Past (3)For more details go to [Rutgers Catalog](#).

R082:102 - Art Appreciation: Arts Present (3)For more details go to [Rutgers Catalog](#).

BioInformatics:

UNDERGRADUATE COURSES:

BNFO 235 - Programming for Bioinformatics (3/0/3) The ability to use existing programs and to write small programs to access bioinformatics information or to combine and manipulate various existing bioinformatics programs has become a valuable part of the skill set of anyone working with biomolecular or genetic data. This course provides an understanding of the architecture of bioinformatics toolkits and experience in writing small bioinformatics programs using one or more of the scripting ("glue") languages frequently employed for such tasks. **Effective From: Fall 2006**

BNFO 240 - Principles of Bioinformatics II (3-0-3) Prerequisites: Math 211, R120:301, CS 114 or permission of the instructor. This course provides an introduction to the field of bioinformatics. It includes a description of the molecular basis of genomics and proteomics, the computer-based and mathematical methods used in bioinformatics, and the application of these methods toward understanding biological systems at the cellular and molecular level. It also includes a description of the application of bioinformatics to drug discovery. **Effective From: Fall 2006**

BNFO 491H - Honors Computer Science Project (3-0-3) Prerequisites: CS 490, senior standing in the Honors College and project proposal approval. A course similar to CS 491, with a project of greater depth and scope. **Effective From: Fall 2006** ([Archived Versions](#))

Biology: Offered by the Federated Department of Biological Sciences at NJIT and Rutgers-Newark

UNDERGRADUATE COURSES:

Biol 410 - Senior Project (3-0-3) Prerequisite: senior standing in biology. Complete a research project under the individual guidance of a faculty member affiliated with the program.

R120:101 - General Biology (4,4) For more details go to [Rutgers Catalog](#).

R120:104 - Human Health and Disease (3) For more details go to [Rutgers Catalog](#).

R120:109 - Basic Plant Science (3) For more details go to [Rutgers Catalog](#).

R120:110 - Basic Plant Science Laboratory (1) For more details go to [Rutgers Catalog](#).

R120:203 - Plant Biology (3) For more details go to [Rutgers Catalog](#).

R120:204 - Economic Botany (3) For more details go to [Rutgers Catalog](#).

R120:205 - Environmental Issues (3) For more details go to [Rutgers Catalog](#).

R120:206 - General Horticulture (3) For more details go to [Rutgers Catalog](#).

R120:207 - Horticulture Laboratory (1) For more details go to [Rutgers Catalog](#).

R120:208 - Human Sexuality (3) For more details go to [Rutgers Catalog](#).

R120:211 - Plant Kingdom (4) For more details go to [Rutgers Catalog](#).

R120:230 - Biology of Seed Plants (4) For more details go to [Rutgers Catalog](#).

R120:235 - Microbiology (3) For more details go to [Rutgers Catalog](#).

R120:241 - Anatomy and Physiology (4,4) For more details go to [Rutgers Catalog](#).

R120:301 - Foundations of Biology: Cell and Molecular Biology (4) For more details go to [Rutgers Catalog](#).

R120:311 - Taxonomy of Vascular Plants (4) For more details go to [Rutgers Catalog](#).

R120:320 - Comparative Anatomy of Vertebrates (4) For more details go to [Rutgers Catalog](#).

R120:322 - Evolution (3) For more details go to [Rutgers Catalog](#).

R120:325 - Animal Parasites (3) For more details go to [Rutgers Catalog](#).

R120:326 - Laboratory Exercises in Parasitology (1) For more details go to [Rutgers Catalog](#).

- R120:327 - Biology of Invertebrates (4)**For more details go to [Rutgers Catalog](#).
- R120:328 - Ornithology (3)**For more details go to [Rutgers Catalog](#).

- R120:380 - Animal Ecology (3)**For more details go to [Rutgers Catalog](#).
- R120:381 - Field Studies in Animal Ecology (2)**For more details go to [Rutgers Catalog](#).
- R120:382 - Animal Behavior (3)**For more details go to [Rutgers Catalog](#).
- R120:403 - Biological Ultrastructure (3)**For more details go to [Rutgers Catalog](#).
- R120:404 - Light and Electron Microscopy (4)**For more details go to [Rutgers Catalog](#).
- R120:413 - Mycology (4)**For more details go to [Rutgers Catalog](#).
- R120:414 - Phycology (4)**For more details go to [Rutgers Catalog](#).
- R120:415 - Paleobotany (4)**For more details go to [Rutgers Catalog](#).
- R120:430 - Plant Growth and Development (4)**For more details go to [Rutgers Catalog](#).
- R120:435 - Microbial Physiology and Metabolism (3)**For more details go to [Rutgers Catalog](#).
- R120:443 - Immunology (3)**For more details go to [Rutgers Catalog](#).
- R120:445 - Endocrinology (3)**For more details go to [Rutgers Catalog](#).
- R120:451 - Laboratory in Cellular and Molecular Biology I: Cellular Biophysics (4)**For more details go to [Rutgers Catalog](#).

R120:452 - Laboratory in Cellular and Molecular Biology II: Molecular Biotechniques (4)For more details go to [Rutgers Catalog](#).

R120:455 - Molecular Cell Biology (3)For more details go to [Rutgers Catalog](#).

R120:456 - Virology (3)For more details go to [Rutgers Catalog](#).

R120:470 - Field Ecology (3)For more details go to [Rutgers Catalog](#).

R120:471 - Ecological Physiology (3)For more details go to [Rutgers Catalog](#).

R120:472 - Environmental Assessment (3)For more details go to [Rutgers Catalog](#).

R120:473 - Ecology of Microorganisms (3)For more details go to [Rutgers Catalog](#).

R120:481 - Marine Biology (4)For more details go to [Rutgers Catalog](#).

R120:486 - Tropical Field Biology (2)For more details go to [Rutgers Catalog](#).

R120:491 - Problems in Biology (BA,BA)For more details go to [Rutgers Catalog](#).

GRADUATE COURSES:

Biol 638 - Computational Ecology (3-0-3)An overview of computational approaches to the study of mathematical models in ecology. Topics include one-, two-, and multi-species models, life history analysis, spatial dynamics, epidemiology. The course is taught as a hands-on computer lab in which students explore models, perform simulations and solve problems. **Effective From: Spring 2006**

Biol 791 - Biology Seminar (0)This seminar includes student and faculty presentations on current papers, student presentations related to their research and occasional outside speakers. It will acquaint students with possible topics for dissertation search, and provide an opportunity to present and receive feedback on current work.

Biol 794 - Computational Biology Colloquium (1 credit)Prerequisite: graduate standing. Students and outside speakers present and discuss current research activities in computational biology and related scientific areas.

R120:501 - Neuroanatomy (3 credits)For more details go to [Rutgers Catalog](#).

R120:503 - Plant Morphology (3 credits)For more details go to [Rutgers Catalog](#).

R120:504 - Plant Physiology (3 credits)For more details go to [Rutgers Catalog](#).

R120:505 - Biostatistics and Computer Methodology (3 credits)For more details go to [Rutgers Catalog](#).

R120:506 - Quantitative Plant Ecology (3 credits)For more details go to [Rutgers Catalog](#).

R120:509 - Advanced Problems in Biology (1 to 6 credits by arrangement)For more details go to [Rutgers Catalog](#).

R120:512 - Mammalian Physiology (3 credits)For more details go to [Rutgers Catalog](#).

R120:515 - Molecular Biology of Eukaryotes (3 credits)For more details go to [Rutgers Catalog](#).

R120:517 - Developmental Neurobiology (3 credits)For more details go to [Rutgers Catalog](#).

R120:518 - Nucleic Acids (3 credits)For more details go to [Rutgers Catalog](#).

R120:519 - Microbial Metabolism (3 credits)For more details go to [Rutgers Catalog](#).

- R120:523 - Biogeography (3 credits)**For more details go to [Rutgers Catalog](#).
- R120:526 - Cell Biology (3 credits)**For more details go to [Rutgers Catalog](#).
- R120:530 - Biophysical Membrane Physiology (4 credits)**For more details go to [Rutgers Catalog](#).
- R120:532 - Evolution (3 credits)**For more details go to [Rutgers Catalog](#).
- R120:536 - Multivariate Biostatistics (3 credits)**For more details go to [Rutgers Catalog](#).
- R120:538 - Topics in Molecular Genetics (3 credits)**For more details go to [Rutgers Catalog](#).
- R120:551 - Biology of Pollution (3 credits)**For more details go to [Rutgers Catalog](#).
- R120:552 - Paleobotany (4 credits)**For more details go to [Rutgers Catalog](#).
- R120:561 - Quantitative and Analytical Light Microscopy (4 credits)**For more details go to [Rutgers Catalog](#).
- R120:563 - Developmental Plant Physiology (3 credits)**For more details go to [Rutgers Catalog](#).
- R120:564 - Techniques in Developmental Botany (2 credits)**For more details go to [Rutgers Catalog](#).
- R120:565 - Medical Mycology (3 credits)**For more details go to [Rutgers Catalog](#).
- R120:566 - Neurophysiology and Behavior (3 credits)**For more details go to [Rutgers Catalog](#).
- R120:568 - Neuroendocrinology and Behavior Laboratory (3 credits)**For more details go to [Rutgers Catalog](#).
- R120:571 - Biochemistry (4 credits)**For more details go to [Rutgers Catalog](#).
- R120:584 - Plant Responses to the Environment (3 credits)**For more details go to [Rutgers Catalog](#).
- R120:585 - Behavioral Ecology (3 credits)**For more details go to [Rutgers Catalog](#).
- R120:586 - Landscape Ecology (3 credits)**For more details go to [Rutgers Catalog](#).
- R120:587 - Systems Ecology: Ecosystems in the Landscape (3 credits)**For more details go to [Rutgers Catalog](#).
- R120:588 - Topics in Advanced Ecology (3 credits)**For more details go to [Rutgers Catalog](#).
- R120:589 - Chemical Bases of Neural Function (3 credits)**For more details go to [Rutgers Catalog](#).
- R120:593 - Physiological Ecology (3 credits)**For more details go to [Rutgers Catalog](#).
- R120:594 - Systematics (3 credits)**For more details go to [Rutgers Catalog](#).

- R120:616 - Topics in Biology (1 to 3 credits by arrangement)**For more details go to [Rutgers Catalog](#).

R120:640 - Topics in Immunology (3 credits)For more details go to [Rutgers Catalog](#).

R120:697 - Neuroendocrinology (3 credits)For more details go to [Rutgers Catalog](#).

Biomedical Engineering: Offered by the Department of Biomedical Engineering

UNDERGRADUATE COURSES:

BME 101 - Introduction to Biomedical Engineering (1-0-0) This course is open only to freshmen and new transfer students. Faculty members describe their research in biomedical engineering.

BME 102 - Survey of Human Physiology (1-0-1) This course is open only to freshmen and new transfer students. An overview of human physiology is taught as an introduction to subsequent core courses in the Biomedical Engineering curriculum.

BME 105 - Introduction to Human Physiology I (2-0-2) This course is open only to freshmen and transfer students. An overview of human physiology is presented as an introduction to subsequent core courses in the Biomedical Engineering curriculum. Not intended to be an exhaustive review of physiology, the course will instead emphasize key examples that highlight understanding of the interaction between the biomedical and engineering worlds. This course is the first of two freshman courses; this one will focus on cellular and neural-system basic physiology. **Effective From: Fall 2006**

BME 106 - Introduction to Human Physiology II (1-0-1) Prerequisite: BME 105. This course is open only to freshmen and transfer students. An overview of human physiology is presented as an introduction to subsequent core courses in the Biomedical Engineering curriculum. Not intended to be an exhaustive review of physiology, the course will instead emphasize key examples that highlight understanding of the interaction between the biomedical and engineering worlds. This course is the first of two freshman courses; this one will focus on basic physiology of respiratory and cardiovascular systems. **Effective From: Spring 2007**

BME 301 - Electrical Fundamentals of Biomedical Engineering (1-3-4) Prerequisites: Math 111, Math 112, Phys 111, Phys 121. Course lectures and laboratories will address important issues covering bio-electric signals, biomedical instrumentation, computer software, hardware and interfacing, medical imaging and image processing. Laboratory work will provide hands-on experience in all of these topics and more. The course will also address issues in design and manufacture of medical devices, scientific research, and clinical practice. This course is offered in Studio format that involves the integration of lectures and labs into one highly participatory structure.

BME 302 - Mechanical Fundamentals of Biomedical Engineering (1-3-4) Prerequisites: Math 111, Math 112, Phys 111, Phys 121. BME 301 is not a prerequisite. The format is identical to that of BME 301. Course lectures and laboratories will address important issues covering the mechanical fundamentals that are important bases for later learning experiences. This course introduces the students to biomaterials (tissues), biomechanics (forces and motion), biofluids and biostatistics, and then integrates them with a final design project on neuromuscular engineering.

BME 303 - Biological and Chemical Foundations of Biomedical Engineering (3-0-3) Prerequisites: General Chemistry; General Physics and Chem 337. This course covers organic chemistry, biochemistry and cellular mechanics in sufficient depth to give biomedical engineering students a strong enough background for them to understand the introductory aspects of biomedical engineering, which focus on the application of engineering principles to medicine and surgery.

BME 310 - Biomedical Computing (3-0-3) Prerequisites: BME 301 and Math 112. This course covers the application of digital signal processing to biomedical problems. Labview, a graphical programming language common in engineering, is used for both signal acquisition and processing. Applications include analysis of the electrocardiogram and other electrical signals generated by the body.

BME 314 - Biomedical Signals and Systems (3-0-3) Prerequisites: Math 222 and BME 310. This course covers the mathematical tools required to analyze the signals and systems found in biomedical engineering. Tools such as the Laplace and Fourier Transforms, time-frequency analysis are introduced. Applications include signals and noise, mathematics of imaging and derivation of useful physiological parameters from input signals.

BME 333 - Biomedical Signals and Systems (3-0-3) Prerequisites: BME 310 and Math 222. BME Tools such as the Laplace and Fourier Transforms, time-frequency analysis are introduced. Applications include signals and noise, processing of the ECG,

mathematics of imaging and derivation of useful physiological parameters from input signals. **Effective From: Fall 2006**

BME 372 - Biomedical Electronics (3-0-3) Prerequisite: BME 301. The first of a two-semester sequence. It covers the design of electronic circuits for Biomedical applications. This course covers basic operational amplifier circuits as well as the operation of semiconductor diodes and transistors. An introduction to digital logic circuits is also provided. Pspice computer simulation as well as hands-on breadboarding of electronic circuits are used throughout the course to supplement the lectures.

BME 373 - Biomedical Electronics II (3-0-3) Prerequisite: BME 372. A continuation of BME 372 emphasizing biomedical applications of oscillators, active filters, and wave-shaping circuits.

BME 381 - Engineering Models in Physiology I (3-2-3) Prerequisites: Math 112, Phys 121 and BME 102. Mathematical models of organs and organ systems are described from an engineering viewpoint. Anatomy and physiology are quantified. No biology course is required. Heart and circulation, gas exchange in the lungs, electrical properties of excitable membranes, renal countercurrent mechanism and muscle mechanics are among the topics covered. Emphasis will be placed on feedback control, mathematical modeling and numerical simulation. **Effective From: Spring 2006**

BME 382 - Engineering Models in Physiology II (3-2-3) Prerequisites: Math 112, Phys 121 and BME 102. BME 381 is not a prerequisite. Mathematical models of organs and organ systems are described from an engineering viewpoint. Anatomy and physiology are quantified. No biology course is required. Heart and circulation, gas exchange in the lungs, electrical properties of excitable membranes, renal countercurrent mechanism and muscle mechanics are among the topics covered. **Effective From: Spring 2006**

BME 402 - Biophotonics (0-3-3) Prerequisites: Physics 121. A laboratory/studio style course in which the applications of light and electrical energy are explored to study the body's normal surface characteristics and to diagnose medical problems related to aberrations of the surface. Interaction of light with biological tissues. Measurement of tissue absorption and scattering. Fiber optics and endoscopy. Basics of laser surgery. Simulation of light propagation in tissues. Same as OPSE 310.

BME 410 - Co-op Work Experience (3 additive credits) Prerequisites: completion of sophomore year, approval of department, and permission of the Office of Cooperative Education and Internships. Students gain major-related work experience and reinforcement of their academic program. Work assignments facilitated by the co-op office and approved by the department. Mandatory participation in seminars and completion of a report.

BME 420 - Biomaterials and Compatibility (3-0-3) Prerequisites: Physics 121, Chemistry 126, Mech 320. An introduction to the field of biomaterials. The goal of this course is to understand material selection and the limitations imposed by current materials on device performance. The first part of the course will provide an overview of the current medical devices/implants with respect to their clinical relevance. Subsequently, the structure and properties of metals, ceramics, and polymers will be discussed. Properties include mechanical behavior, thermal, and surface characteristics. The second part of the course will discuss biocompatibility and implant design. Immunological and various histological responses will be described. Material properties of hard and soft tissues, their response to implants and the material selection for such tissues will be discussed.

BME 422 - Biomaterials Characterization (3-0-3) The quantum mechanical origins of spectroscopy, the relationship of spectroscopic behavior to thermal characteristics of a material, and the differences in approach to the chemical and physical characterization of synthetic and biological polymers are discussed. **Effective From: Spring 2007**

BME 427 - Biotransport (3-0-3) Prerequisite: Math 222. Introduction to basic concepts in thermodynamics and transport phenomena as applied to biological systems. The structure and composition of the body will be covered followed by an exploration of the properties of the blood and its flow in the cardiovascular system, and the body as a heat source and as a series of compartments involved in the mass transfer of materials (such as those in the kidneys and lungs). Design of artificial kidneys and heart-lung machines is also explored.

BME 430 - Fundamentals of Tissue Engineering (3-0-3) This course is an introduction to the field of tissue engineering as a therapeutic approach to treating damaged or diseased tissues in the biotechnology industry. In essence, new and functional living tissue can be fabricated by delivering cells, scaffolds, DNA, proteins, and/or protein fragments at surgery. This course will cover the advances in the fields of cell biology, molecular biology, material science and their relationship towards developing novel "tissue engineered" therapies. **Effective From: Fall 2006**

BME 451 - Biomechanics I (3-0-3) Tensor analysis. Kinematics of continuous media. Stress. The elastic solid. Newtonian fluid. Conservation principles of mass, momentum and energy. Viscometric flows. Formulation of constitutive equations. Applications to the modeling of bone and other living tissues. **Effective From: Fall 2006**

BME 452 - Biomechanics II (3-0-3)Continuation of BME 451, Biomechanics I. The primary emphasis of this course is on physiological flows in the human body. Constitutive relations. Blood rheology. Flow in the microcirculation. Bernoulli's equation. Boundary layer theory. Lubrication theory. Pulse propagation and blood flow in the large arteries. **Effective From: Spring 2007**

BME 467 - Pathophysiology of the Heart (3-0-3)Prerequisites: BME 301, BME 302 and BME 303. This course addresses heart disease as an example of how biomedical engineering contributes to the diagnosis and management of patients. Topics include how the normal heart works and how diseases can disrupt normal heart function. Techniques used to measure cardiac function as well as treatments for common heart diseases such as acute myocardial infarction, heart failure and chronic ischemic heart disease are discussed. Student presentations are a major part of this course. Each student will be assigned a recent research paper in cardiology.

BME 469 - Introduction to Human Physiology (3-0-3)This course is not open to Biomedical Engineering students. Available to non-biomedical engineering students who have an interest in going on to medical, dental or allied health careers. An introduction to mammalian physiology, particularly the heart, circulation, lungs and kidneys.

BME 474 - Biomechanics of Living Tissues: Solids (3-0-3)Prerequisites: Math 222 and Mech 327. Measurements of deformation and strain resulting from stress on bone, muscle, spinal discs, cartilage, skin, blood vessels, etc.. Fiber reinforcement in tissues (anisotropy) and viscoelastic properties of tissues. Review of methods for testing and describing mechanical behavior of tissues. Long term adaptation of living tissues to mechanical environment (growth and atrophy). Overview of mechanics at the cellular level.

BME 476 - Physiological Mechanics of Fluids (3-0-3)Prerequisites: Math 222 and BME 302. Newtonian and non-Newtonian fluid mechanics. Pulsatile flow, vortex control of valve motion, and regurgitation will be described. The thixotropic nature of blood. Shear-rate and time-dependent viscosity of blood. Other biological fluids such as mucous and spinal fluid will also be covered. Overview of airway flow in the lung and the effects of aerosols.

BME 479 - BioMicroElectroMechanical Systems (3-0-3)Prerequisites: Knowledge of mechanics, optics, electromagnetism and general chemistry. Micro- and nanosystems used in advanced analytical techniques for microfluidic devices, implantable chips, non-invasive biomedical sensors, DNA chips and microelectronic array systems. Microelectronic processing design for micromachining and piezoelectric materials for biomedical applications. Biomedical sensors and actuators. BioMEMS active ultrasonic transducers for medical imaging, for micro-valves and for implantable medication delivery systems are studied.

BME 489 - Medical Instrumentation (3-0-3)Prerequisites: BME 373, BME 310 and ECE 251. The hardware and instrumentation needed to measure variables from different physiological systems. Electrodes, sensors and transducers. Bioelectric amplifiers. Hardware for measurement of the ECG, EEG, EMG, respiratory system, nervous system. Clinical laboratory instruments. Medical ultrasound. Electrical safety. Computers in biomedical instrumentation.

BME 491 - Research and Independent Study I (1-0-1)Needs permission of professor. Senior standing. Planning and execution of engineering projects. Intellectual property: publications and priority documents; invention disclosures and patents. Safety: engineering codes and standards. Engineering ethics. Professional organizations. Professional registration. Preparation of a technical proposal for a senior project and its approval are required.

BME 492 - Research and Independent Study II (1-2-3)Needs permission of professor. A biomedical engineering design project, selected by the student, which has been approved in BME 491. Involves information from the professional literature, research, design and prototype testing. An oral presentation and a written report are required.

BME 495 - Capstone Design I (1-0-1)Prerequisites: Senior standing or permission of the instructor To provide students with the guidance to choose a capstone design topic and advisor and to prepare the design proposal. The course introduces the student to the definition of design as well as introducing issues of intellectual property, bioethics and safety, and professional societies.

BME 496 - Capstone Design 2 (2-3-3)Prerequisites: BME 495 Implementation of the project approved in BME 491. This portion of the project includes library research, time and cost planning, oral and written reports, as well as construction, troubleshooting and demonstration of a working prototype.

GRADUATE COURSES:

BME 593 - Graduate Co-op Work Experience IV (0 credits) Prerequisites: One immediately prior 3-credit registration for graduate co-op work experience with the same employer. Requires approval of departmental co-op advisor and the Division of Career Development Services. Must have accompanying registration in a minimum of 3 credits of course work. **Effective From: Fall 2006**

BME 601 - Seminar (3 credits) Required every semester of all master's students in biomedical engineering who receive departmental or research-based support and all doctoral students. To receive a satisfactory grade, students must attend at least five seminars per semester, as approved by the seminar supervisor.

BME 627 - Introduction to Biomedical Engineering (3 credits) Prerequisite: undergraduate courses in thermodynamics and differential equations. Introduction to the structure and composition of the body followed by an exploration of the properties of the blood and its flow in the cardiovascular system; the body as a heat source and as a series of compartments involved in the mass transfer of materials (such as those in the kidneys and lungs). Design of artificial kidneys and heart-lung machines is also explored. Same as ChE 627.

BME 651 - Principles of Tissue Engineering (3-0-3) Tissue Engineering is a therapeutic approach to treating damaged or diseased tissues in the biotechnology industry. In essence, new and functional living tissue can be fabricated using living cells combined with a scaffolding material to guide tissue development. Such scaffolds can be synthetic, natural, or a combination of both. This course will cover the advances in the fields of cell biology, molecular biology, and materials science towards developing novel "tissue engineered" materials. **Effective From: Spring 2005**

BME 667 - Systems Studies in Biomedical Engineering (3 credits) Prerequisite: undergraduate or graduate course in linear systems. Basic techniques of simulation including digital simulation languages. Physiologic systems of current interest using systems analysis techniques leading to formulation of mathematical, digital computer, or electric circuit models. Systems examined include the circulatory, respiratory or hormonal control systems. Basic techniques of signal processing are explored which are necessary to analyze data from physiologic systems. Same as ECE 667.

BME 670 - Introduction to Biomechanical Engineering (3 credits) Prerequisites: undergraduate thermodynamics, statics, and dynamics. Introduction to biomechanical engineering of physiological systems; fluid flow, structural, motion, transport, and material aspects; energy balance of the body, and the overall interaction of the body with the environment. Same as ME 670.

BME 671 - Biomechanics of Human Structure and Motion (3 credits) Prerequisites: undergraduate statics, kinematics, and dynamics. Principles of engineering mechanics and materials science applied to human structural and kinematic systems and to the design of prosthetic devices. Topics include anatomy; human force systems; human motion; bioengineering materials; and design of implants, supports, braces, and replacements limbs.

BME 672 - Biomaterials (3 credits) Prerequisite: Mech 232 (see undergraduate catalog for description) or the equivalent. Materials and processes used to develop devices that are implanted in the human body; clinical aspects of biomechanical engineering; federal government requirements for design and testing of human implant devices; biocompatibility, metal implant devices, material design parameters, plastic and ceramic devices, sterilization techniques, and their effect on biocompatibility.

BME 673 - Biorobotics (3 credits) A studio-based course with several projects that serve as the primary learning scaffold. Projects will be supplemented by lectures and readings. Topics include biomimetic design (why nature and humans design differently), sensors (touch, stereo and position), actuators (muscles, smart materials), and intelligent (neural and computer controlled) systems.

BME 674 - Biomechatronics (3 credits) A design approach to biomechanical devices. The integration of biologically-inspired design with computational and electromechanical technologies. An exploration of electromechanical manipulators, haptic interfaces and walking machines as approaches to the design of prostheses and virtual technologies.

BME 675 - Principles of Tissue Engineering (3 credits) Prerequisite: Undergraduate or graduate course in biomaterials or materials science (BME 672 or MTSE 320 or equivalent). This course is an introduction to the field of tissue engineering. It is rapidly emerging as a therapeutic approach to treating damaged or diseased tissues in the field of medicine. In essence, new and functional living tissue can be fabricated using living cells combined with a scaffolding material to guide tissue development. Such scaffolds can be synthetic, natural or a combination of both. This course will cover the advances in the fields of cell biology, molecular biology, material science and their relationship towards developing novel tissue engineered materials.

BME 681 - Medical Imaging (3 credits) The basic principles of medical imaging: physical basis, signal acquisition, image formation and image processing. Image modalities include x-rays, computed tomography (CT), magnetic resonance imaging (MRI), ultrasound, positron image tomography (PET), and functional MRI (fMRI).

BME 683 - BioMicroElectroMechanical Systems (3 credits) Prerequisites: Knowledge of mechanics, optics, electromagnetism and general chemistry. Micro- and nanosystems used in advanced analytical techniques for microfluidic devices, implantable chips, non-invasive biomedical sensors, DNA chips and microelectronic array systems. Microelectronic processing design for micromachining and piezoelectric materials for biomedical applications. Biomedical sensors and actuators. BioMEMS active ultrasonic transducers for medical imaging, for micro-valves and for implantable medication delivery systems are studied.

BME 685 - Neural Engineering (3 credits) Neural Engineering focuses on understanding how the brain functions using engineering principles. The course discusses different instrumentation and signal processing algorithms to study how the brain functions, how to detect different pathologies and new applications for research. Topics include; basic overview of neurology, vector populations, neural networks, vision research, functional MRI, functional electrical stimulation, neural prosthetics, and other advanced research topics studying neurology.

BME 687 - Design of Medical Instrumentation (3 credits) Prerequisite: undergraduate course in electronics. Principles and practice of medical instrumentation. Instrument components and medical instrument systems design. Examples taken from electrocardiography, clinical chemistry, medical imaging. Microprocessor-based systems emphasized.

BME 698 - Selected Topics (3 credits) Selected topics for Biomedical Engineering.

BME 700 - Master's Project (3 credits) Prerequisite: written approval of project advisor. An extensive paper involving design, construction, and analysis, or theoretical investigation. Joint projects with industry or governmental agencies may be acceptable. Work is carried out under the supervision of a member of the department faculty.

BME 701 - Master's Thesis (6 credits) Prerequisite: written permission from thesis advisor. Projects include design, construction, experimental or theoretical investigation of the engineering applications to the diagnosis and/or treatment of disease. Research may be in cooperation with industry or medical institutions. Completed work should be of sufficient quality to be acceptable for publication. Oral presentations are required.

BME 710 - Foundations of Biomedical Research (3 credits) This course provides an overview of biomedical research issues as they relate to biomedical engineering. The course provides students with a working knowledge of the fundamental tools of: 1) a critical literature review, 2) research design, 3) bioethics, 4) statistical analysis of data, 5) protection of animal and human subjects, 6) patent protection and 7) FDA regulations.

BME 725 - Independent Study I (3 credits) Prerequisite: departmental approval. Program of study prescribed and approved by student's faculty coordinator. This special course covers areas of study in which one or more students may be interested but is not of sufficiently broad interest to warrant a regular course offering. Master's degree students cannot count BME 725 as degree credit but can count these credits to qualify for full-time status.

BME 726 - Independent Study II (3 credits) Prerequisite: departmental approval. Program of study prescribed and approved by student's faculty coordinator. This special course covers areas of study in which one or more students may be interested but is not of sufficiently broad interest to warrant a regular course offering. Master's degree students cannot count BME 725 as degree credit but can count these credits to qualify for full-time status. This course is not available to master's students.

BME 788 - Selected Topics (3 credits) Selected topics for Biomedical Engineering. ([Archived Versions](#))

BME 790 - Doctoral Dissertation (Credits as designated) Required of all students working toward the Ph.D. in Biomedical Engineering. A minimum of 36 credits is required. The student must register for at least 6 credits of dissertation per semester; registration for additional credits may be permitted beyond the 6, with the approval of the advisor, up to a maximum of 12 credits per semester. If the student is still actively engaged in the research after completion of 36 credits, continued registration of 3 credits per semester is required.

BME 792 - Pre-Doctoral Research (3 credits) Prerequisite: permission of the department. For students admitted to the program leading to the Ph.D. in Computer Engineering or Electrical Engineering. Research carried on under the supervision of a designated member of the department faculty. If the student's research activity culminates in doctoral research in the same area, up to a maximum of 6 credits may be applied toward the 36 credits required under BME 790 after the student fulfills requirements of doctoral candidacy.

UMDNJ 313 - Membranes and Transport (null) For more details go to [UMDNJ website](#).

UMDNJ 501 - General Pathology (null) For more details go to [UMDNJ website](#).

UMDNJ 5040 - Biostatistics (null)For more details go to [UMDNJ website](#).

UMDNJ 507 - Introduction to Animal Experiments (null)For more details go to [UMDNJ website](#).

UMDNJ 602 - Principles of Pharmacology (null)For more details go to [UMDNJ website](#).

UMDNJ 605 - Advanced Biometrics (null)For more details go to [UMDNJ website](#).

UMDNJ 610 - Topics in Biochemical Pharmacology (null)For more details go to [UMDNJ website](#).

UMDNJ 612 - Clinical Pharmacology (null)For more details go to [UMDNJ website](#).

UMDNJ 701 - Human Physiology (null)For more details go to [UMDNJ website](#).

UMDNJ 703 - General Endocrinology (null)For more details go to [UMDNJ website](#).

UMDNJ 704 - Neuroscience (null)For more details go to [UMDNJ website](#).

UMDNJ 705 - Cardiorespiratory Physiology (null)For more details go to [UMDNJ website](#).

UMDNJ 715 - Neurophysiology Seminar (null)For more details go to [UMDNJ website](#).

UMDNJ 716 - Microcirculatory Physiology (null)For more details go to [UMDNJ website](#).

Biomedical Informatics: Administered by: UMDNJ-SHRP and NJIT Office of Graduate Studies.

GRADUATE COURSES:

BINF 600/BINF 5100 - Introduction to Biomedical Informatics (3 credits) Introduction to mainframe and microcomputer interactive computing environments: overview of computer applications for medical records; clinical, laboratory, pharmacy, education, and medical database management; patient care and hospital information systems using software for spreadsheets, database management, telecommunication, and literature retrieval. Also covers a decentralized hospital computer program, and computer-stored ambulatory record systems. Programming environment in relation to existing databases is discussed. Students complete small hands-on projects.

BINF 601/BINF 5005 - Health Care Information Systems (3 credits) General systems theory applied to health care systems and information technology. Computer-based information system operation and management functions in the context of various professional settings, and the impact of information technology on health care management. Demonstrations of current health information systems emphasizing design, system components, data structures and database management. Costs and benefits of current applications, justification, specification and evaluation of computer systems, and the capacity for future modification and development of existing systems in various health care settings.

BINF 602/BINF 5020 - Biomedical Modeling and Decision-Making Systems (3 credits) Introduction to use of differential equations and relevant mathematical concepts to describe health care and physiological systems. Methods and resources of computer simulation and modeling for analyzing and solving medical and health-care problems related to both organization and treatment, including decisions for effective information transfer, productivity and resource utilization, as well as physiological systems such as drug dosage, pulmonary transport, cardiac output, kidney function, and others.

BINF 603/BINF 5030 - Visualization in Biomedical Sciences (3 credits) Fundamentals of biomedical signal and image processing including image digitization, display, and processing algorithms with emphasis on computer systems, processing methodologies, and display of images. Visualization procedures, tools and technologies for 3-D representation of images, animation and image manipulation are provided.

BINF 612/BINF 5125 - Clinical Problem Solving and Decision Making (3 credits) An overview of computer methodology for clinical decision making. Application of decision trees for clinical and health care problems, estimation and revision of probabilities. Artificial intelligence, expert systems and decision-making techniques and their implementation as decision support systems in clinical and HIS settings. Examination of quantitative and symbolic approaches to medical decision making including application of statistical methods (discriminant and Bayesian statistics), decision analysis and utility theory.

BINF 613/BINF 5130 - Health Care Decision Support Systems (3 credits) Overview of methods of decision support in health sciences, including artificial intelligence, Bayesian methods, classical multivariate analysis, dynamic screening (Markov) models, and theoretical and empirical limitations of these decision methods. Discussion of literature on human perception and judgment as well as practice on database management software and expert system tools to design decision support prototype systems for clinical, health care finance and patient management systems.

BINF 614/BINF 5135 - Clinical Systems Interface Design (3 credits) Prerequisites: BINF 5100, BINF 5005 and BINF 4000 or equivalent. Practice of principles of interface design, data exchange, program-to-program communication, and knowledge-based systems using Windows-based GUI design packages. Exposure to application development tools with expert system shell capabilities and system integration tools with good communication interfacing between various hardware platforms from PCs to minicomputers and mainframes. Exploration of a wide array of user interface system design and development techniques. Term project using the GUI package required.

BINF 615/BINF 5150 - Seminar: Biomedical Teaching Systems Design (1 credits) Based on knowledge gained from courses in biomedical informatics, students engage in serious discussion and analysis of the various aspects of computer-based instructional systems. Examples of technologies covered include: microcomputer courseware, CD-ROM, CD-I, DVI, instructional television,

interactive microcomputer and videodisc systems, multimedia intelligent tutoring and expert systems, and instructional games and simulations.

BINF 621/BINF 5210 - Research Methods in Health Sciences (3 credits) Use of computer as a tool for scientific inquiry including techniques for searching computer databases of research literature, and formulating problems and hypotheses for statistical analysis of educational, health services, laboratory and clinical data. Use of computers in management and analysis of health science data. Laboratory instruction in use and application of software packages for micro- and mainframe computers. Issues in the design, organization and operation of randomized controlled clinical trials and intervention studies, and analysis of qualitative and quantitative data.

BINF 622/BINF 5220 - Topics in Bioinformatics (3 credits) Prerequisites: BINF 5005 or BINF 5010, and Chem 673 or equivalent. An extensive review of computational biology necessary to understand research and developments in bioinformatics. Topics include: covalent bonding, quantum mechanical basis of bond formation, 3-D structure of molecules, reaction mechanisms, catalysis, polymers, enzymes, thermodynamics and kinetics, metabolic pathways, and sequence and structure of macromolecules. Extensive use of computer approaches and computer graphical techniques to enhance interpretation of results.

BINF 623/BINF 5230 - Advances in Molecular and Cellular Genetics (3 credits) Prerequisites: BINF 5005 or BINF 5010, and Chem 673 or equivalent. Extensive use of computer approaches to cover the following important areas: cell structure, intracellular sorting and signaling; structure and function of proteins; and nucleic acid; enzymology, membrane structure and function; DNA-replication, transcription and recombinant DNA molecules; genetic mutation, cell fusion, chromosomal mapping and gene transfer; and immunological principles applied to genetics.

BINF 631/BINF 5311 - Intelligent Instructional Systems (3 credits) Current developments and trends in instructional technology applied to knowledge and learning in health science: processes of perception, learning, motivation, problem-solving and decision making in relation to the design of intelligent tutoring and educational expert systems. The students will work with knowledge engineering, expert system and authoring tools to develop intelligent tutorials and expert system models on selected/assigned topics.

BINF 632/BINF 5312 - Interactive Learning Systems for the Health Sciences (3 credits) Introduction to use of interactive videodisc and CD-ROM technology for health sciences instructional software. Students try existing interactive software and videodiscs on biomedical subjects, and then design, edit and evaluate an interactive videodisc learning module of their own.

BINF 700/BINF 6000 - Directed Research/Project (6 credits) null

BINF 7910 - Research and Developments in Medical Informatics: Colloquium (1 credits) This is a required course for all doctoral students. These seminar series prepare students for advanced research in biomedical informatics. Invited lecturers, experts in their various research domains, present major advances in biomedical informatics research. The lecturers are from within and outside the UMDNJ academic community as well as the health industry in general and affiliated industries.

Biostatistics: Offered by the UMDNJ-New Jersey Medical School

GRADUATE COURSES:

BIO 613 - Life Tables and Survival Analysis (3 credits) Prerequisites: biostatistics core course; a thorough knowledge of pre-calculus mathematics is assumed; calculus is strongly recommended but not required. Introduction to theory and applications. Recognition of situations that call for life table methods. Selection and application of methods and analysis. Explanation and interpretation of analyses.

BIO 614 - Categorical Data Analysis (3 credits) Prerequisites: biostatistics core course or equivalent. A practical introduction to methods for analysis of frequency tabulations commonly used in public health research. Exercises are based on public health literature. Evaluate relationships between categorical factors by which frequency data are cross-classified. Apply principles of study design and sample size planning. Provide statistically valid interpretation of results from categorical data analysis. A statistical computer package such as SAS, STATA or SPSS is used for computation.

BIO 618 - Nonparametric Statistical Methods (3 credits) Prerequisites: biostatistics core course or equivalent. Choose and apply the most appropriate parametric or nonparametric test or procedure for analyzing a given set of research data, taking into consideration the manner in which the sample was drawn, the nature of the population from which it was drawn, and the kind of measurement or scaling that was employed to define the variables in the study.

BIO 619 - Biostatistical Consulting (2 credits) Prerequisites: biostatistics, epidemiology, and health information systems core courses. Provides skills needed for statistical consulting in public health.

CDS 201 - Career Development Seminar (1-0-0) This eight-week course is a requirement for all Career Advancement Program (CAP) sophomore students and is open to all students with higher than first-year standing who have an interest in career exploration and development. Learn effective job search strategies, how to explore and develop career objectives, prepare resumes and cover letters, how to research organizations, and improve interviewing skills. Through discussion, group exercises and actual interview practice sessions, become better prepared to begin the career development and job search process. Guest lecturers from the private and public sectors add a real-world perspective to the classroom experience.

Chemical Engineering : Offered by the Otto H. York Department of Chemical Engineering.

UNDERGRADUATE COURSES:

ChE 101 - Introduction to Chemical Engineering (1-0-0) Prerequisites: None. An introduction to the field of chemical engineering and to the Otto H. York Department of Chemical Engineering. Topics include the curriculum, tours of department teaching laboratories and computing facilities, undergraduate research opportunities, cooperative employment, and student professional societies. Also included are visits by alumni who discuss their careers after graduation from the department.

ChE 210 - Chemical Process Calculations I (2-1-2) Prerequisites: Chem 126 (or Chem 123), Math 112. Corequisite: CIS 101. Analysis of chemical processes is introduced, emphasizing steady and unsteady-state mass and species balances. This course uses primarily chemistry and algebra to determine, for a wide variety of processes and applications, the flow and concentrations of different chemical species. **Effective From: Fall 2005**

ChE 221 - Material Balances (4-0-4) Prerequisites: Chem 126 or Chem 123, and Math 112. Co-requisites: CIS 101, FED 101. An introduction to the analysis of chemical processes with special emphasis on steady state mass balances. The course introduces mass balances in unsteady state. **Effective Until: Spring 2005**

ChE 230 - Chemical Engineering Thermodynamics I (3-1-3) Prerequisites: Chem 126, (or Chem 123), Math 112, Phys 111, (or Phys 106). Corequisite Math 211 (or Math 213). The Fundamentals of thermodynamics are applied to chemical engineering processes. Thermophysical properties and their engineering correlations are covered. Applications include chemical engineering and related fields such as environmental and biomedical engineering. **Effective From: Fall 2005**

ChE 232 - Chemical Engineering Thermodynamics I (2-2-3) Prerequisite: ChE 221. Corequisite: Chem 231. A course emphasizing the concepts of energy balances and energy balance calculations. Uses engineering correlations and thermodynamics to estimate properties used in batch and flow systems.

ChE 240 - Chemical Process Calculations II (3-1-3) Prerequisites: ChE 210, ChE 230, Math 211 (or Math 213). Corequisite: Math 222. This course covers the basic principles of energy balances for a variety of engineering systems. Combined with material from other sophomore courses, simple designs of chemical processes are considered. The course also introduces chemical process simulation software. **Effective From: Fall 2005**

ChE 260 - Fluid Flow (3-0-3) Prerequisite: ChE 230. Corequisite: ChE 240, Math 222. This course considers the principles of molecular and turbulent transport of momentum, particularly as they apply to pressure drop calculations in piping systems, packed columns, and other flow devices. Flow around submerged objects is also considered. **Effective From: Fall 2005**

ChE 310 - Co-op Work Experience I (3 additive credits) Prerequisites: completion of the sophomore year, approval of the department, and permission of the Office of Cooperative Education and Internships. Students gain major-related work experience and reinforcement of their academic program. Work assignments facilitated and approved by the co-op office. Mandatory participation in seminars and completion of a report. Cannot be used for degree credit.

ChE 311 - Co-op Work Experience II (3 additive credits) Prerequisites: ChE 310. Continuation of ChE 310. Cannot be used for degree credit.

ChE 342 - Chemical Engineering Thermodynamics II (3-0-3) Prerequisites: ChE 230, Math 211 (or Math 213), Chem 236. The principles and methods developed in Chemical Engineering Thermodynamics I are extended to multicomponent systems, and used to treat phase and chemical equilibrium as well as such applications as chemical reactors and refrigeration systems. **Effective From: Fall 2005**

ChE 349 - Kinetics and Reactor Design (3-0-3) Prerequisites: ChE 342, ChE 370, Math 222, Chem 236. Derive and solve species and energy balances for single chemical reactors; introduces heterogeneous catalysis, non-ideal reactors as ideal reactor combinations, and special topics such as polymeric or biochemical reactions. **Effective From: Fall 2005**

ChE 360 - Separation Processes I (2-1-2) Prerequisites: ChE 342, ChE 370. This is the first course in separations, examines traditional methods and technologies by which chemical engineers separate and purify mixtures. Emphasis here is on strippers, absorbers, distillations, and extractions. **Effective From: Fall 2005**

ChE 363 - Transport Operations I (3-0-3) Prerequisites: ChE 232, Phys 111, CIS 101, and FED 101. Corequisite: Math 222. Considers principles of the molecular and turbulent transport of momentum, particularly as they apply to pressure drop calculations in piping systems, packed columns, and other flow devices. Also considered is flow around submerged objects.

ChE 364 - Transport Operations II (3-0-3) Prerequisites: ChE 232, Math 222. Corequisite: ChE 363. The principles of molecular and turbulent transport of energy are considered, particularly as they apply to design of heat exchangers. Also considered is radiant heat transfer.

ChE 365 - Techniques for Process Simulation (2-0-2) Prerequisites: ChE 240, CIS 101, Math 222. This course reviews chemical engineering applications of Laplace transforms, partial fractions, and linear algebra in preparation for the ChE course in process control. It introduces dedicated software for chemical process simulation and control used in the senior capstone courses. **Effective From: Fall 2005**

ChE 367 - Diffusional Systems (3-0-3) Prerequisites: ChE 363, Math 222. Covers principles of molecular and turbulent transport of mass, particularly as they apply to design of packed columns, and other mass transfer devices.

ChE 370 - Heat and Mass Transfer (4-0-4) Prerequisites: ChE 240, ChE 260, Math 222. The principles of heat and mass transfer in chemical engineering systems are covered. Steady and unsteady heat transfer is examined, with emphasis on the heat exchanger design. Mass transfer by steady and unsteady molecular diffusion, and turbulent convective mass transfer is studied. **Effective From: Fall 2005**

ChE 375 - Structure, Properties and Processing of Materials (3-0-3) Prerequisites: Chem 236, (or Chem 235), Mech 320 (can be taken as co-requisite). Tailoring materials properties by engineering their microscopic/macroscale structures via processing is central to product design and development in the chemical industry. This course introduces the principles of materials engineering from the perspective of structure-property-processing relationships. Instead of covering different types of materials separately, this course will use the principles common to engineering of all important materials as an underlying theme. These are atomic/molecular structure, nanoscale, morphology, principles of phase transformation, structure development during processing, and property dependence on structure. All these topics will be introduced through the paradigm of comparing metals, ceramics and polymers. Besides single component systems, advanced materials such as multiphase and/or multicomponent systems (e.g. composites and gels) and nanomaterials will be discussed based on these principles. An integral part of this course will be the criteria for selection of materials for the chemical process industry. **Effective From: Fall 2004**

ChE 380 - Introduction to Biotechnology (3-0-3) Prerequisites: Chem 123 or Chem 126. Basic principles of molecular biotechnology with selected examples of applications. **Effective From: Fall 2004**

ChE 396 - Chemical Engineering Laboratory I (0-5-3) Prerequisites: ChE 370, Eng 352. Corequisite: Math 225A. In this first course in chemical engineering capstone laboratory, experiments are conducted in the areas of fluid mechanics and heat transfer. Bench and pilot-scale equipment is used. Oral and written reports are prepared by the students. **Effective From: Fall 2005**

ChE 402 - Applied Optics in Chemical Engineering (3-0-3) Prerequisites: Junior or senior standing in chemical engineering. Combined laboratory and lecture course emphasizing photonics and laser applications in chemical engineering.

ChE 427 - Biotransport (3-0-3) Prerequisites: ChE 232 and Math 222. Introduction to basic concepts of transport phenomena as applied to biological systems. Topics include the structure and composition of the human body, the properties of the blood and its flow in the cardiovascular system, and the body as a heat source and as a series of compartments involved in the mass transfer of materials (such as those in the kidneys and lungs). Students learn to analyze solute transport in biological systems and apply it to the design of biomedical devices. **Effective From: Spring 2004**

ChE 444 - Introduction to Polymer Engineering (3-0-3) Prerequisites: ChE 349, ChE 363, ChE 364. Introduction to the basic concepts of polymer engineering. Topics covered include rheology, heat transfer, and kinetics of polymerization reactors.

ChE 460 - Separation Processes II (2-1-2) Prerequisites: ChE 360. This second course in separations examines non-traditional methods and technologies such as fixed-bed processes, membranes, crystallization, and mechanical separations. **Effective From: Fall 2005**

ChE 461 - Fate and Transport of Pollutants in the Environment (3-0-3) Prerequisites: Math 222, Chem 235 or Chem 360, ChE 363 or CE 320. The overall objective of this course is to introduce students to concepts, mechanisms, and models used to describe the transport of chemicals in the environment. Two of the most important parameters in mass transport are the driving force or concentration gradient and the transport mechanism. Methods for defining these parameters are discussed during the first six weeks of the class. Concepts and models presented in the first six weeks are applied to air-water, sediment-water, and soil-air interfaces during the rest of the term. The semester ends with a group project, where students are asked to apply material from the course to resolve a comprehensive problem.

ChE 466 - Pollution Control in Chemical Processes (3-0-3) Prerequisites: ChE 349, ChE 367. A course applying chemical engineering principles to the appropriate treatment of gaseous and liquid effluents from manufacturing and utility plants. The course will take into consideration toxicity, safety, and economic constraints. A case study approach is used to evaluate processes and pinpoint pollution sources. Quantitative designs and calculations will be required.

ChE 468 - Air Pollution Control Principles (3-0-3) Prerequisites: ChE 367, ChE 349. A course focusing on the sources and control of air pollution. The course emphasizes design of modern air pollution control equipment and associated economics.

ChE 471 - Equilibrium Stage Processes (3-0-3) Prerequisite: ChE 342, ChE 364. Corequisite: ChE 367. Covers the design of distillation columns, extraction columns, leaching, and other stagewise separation processes.

ChE 472 - Process and Plant Design (4-0-4) Prerequisites: ChE 349, ChE 375, ChE 380, ChE 460, IE 492. A capstone course in the chemical engineering program. This class is divided into three- or four-person groups. Each group must complete an open-ended process design problem, including equipment specification and economics. **Effective From: Fall 2005**

ChE 472H* - Process and Plant Design Honors (4-0-4) Same as ChE 472, with special projects for Honors students.

ChE 473 - Mathematical Methods in Chemical Engineering (3-0-3) Prerequisites: Math 222, ChE 349, ChE 364, ChE 367. An introduction to the use of differential equations to solve chemical engineering problems.

ChE 476 - Introduction to Biochemical Engineering (3-0-3) Prerequisites: Chem 244, ChE 349. The application of chemical engineering to biochemical processes. Topics include enzyme reactions, dynamics of microbial populations, fermentation equipment, bioreactor design, and sterilization.

ChE 477 - Process Dynamics and Control (4-0-4) Prerequisites: ChE 349, ChE 363, ChE 364. Mathematical description of transient and steady state behavior of chemical engineering processes. Study of the open-loop response of output process variables to varying inputs. Theory and applications of chemical process control.

ChE 485 - Chemical Engineering Laboratory I (1-6-4) Prerequisites: Chem 235A, ChE 363, ChE 364, Math 225. Engineering experimentation and data analysis. Experiments are conducted in the areas of fluid mechanics and heat transfer. Bench and pilot-scale equipment is used. Results are presented in both oral and written reports.

ChE 486 - Chemical Engineering Laboratory II (0-8-4) Prerequisites: ChE 349, ChE 367, ChE 471, ChE 485. Corequisite: ChE 477. Engineering experimentation and data analysis. Experiments are conducted in the areas of distillation, extraction, and chemical/biochemical reactions. Bench and pilot-scale equipment is used. Results are presented in both oral and written reports.

ChE 486H - Chemical Engineering Laboratory II Honors (0-8-4) Same as ChE 486, with special projects for Honors students.

ChE 489 - Process Dynamics and Control (2-2-3) Prerequisites: ChE 349, ChE 365. This course is an introduction to chemical process dynamics and control. Topics include analysis of the dynamics of open-loop systems, the design of control systems, and the dynamics of closed-loop systems. Control techniques and methodologies, used by practicing chemical engineers, are emphasized. **Effective From: Fall 2005**

ChE 490 - Special Topics in Chemical Engineering (3-0-3) Prerequisites: ChE 349, ChE 367. Topics of current interest in chemical engineering, such as supercritical fluid extraction, combustion research, environmental problems, biotechnology, technologies in hazardous and toxic substance management, etc. As interests develop, other topics will be considered.

ChE 491 - Research and Independent Study I (3-0-3) Prerequisites: senior standing in chemical engineering, agreement of a department faculty advisor, and approval of the associate chairperson for undergraduate studies. Normally a GPA greater than 3.0 is required to participate in the course. Provides the student with an opportunity to work on a research project under the individual guidance of a member of the department. A written report is required for course completion.

ChE 491H - Research and Independent Study I Honors (3-0-3) Same as ChE 491, with special projects for Honors students.

ChE 492 - Research and Independent Study II (3-0-3) Prerequisite: ChE 491. A continuation of ChE 491.

ChE 492H - Research and Independent Study II Honors (3-0-3) Prerequisite: ChE 491H. Same as ChE 492, with special projects for Honors students.

ChE 496 - Chemical Engineering Laboratory II (0-6-3) Prerequisites: ChE 349, ChE 360, ChE 380, ChE 396, Chem 339, Math 225A. Corequisites: ChE 460, ChE 489. In this second course in chemical engineering capstone laboratory, experiments are conducted in the areas of mass transfer, separations, reaction engineering, and process dynamics and control. Bench and pilot-scale equipment is used. Oral and written reports are prepared by the students. **Effective From: Fall 2005**

GRADUATE COURSES:

ChE 501 - Fundamentals of Chemical Engineering I (6 credits) Prerequisites: Math 222 or equivalent, Chem 231 or equivalent (see undergraduate catalog descriptions). An intensive course in basic chemical engineering science intended for students in the bridge program. Topics include material and energy balances, thermodynamics, kinetics and reactor design, and staged separation processes. May not be taken for degree credit in any chemical engineering program.

ChE 502 - Fundamentals of Chemical Engineering II (4 credits) Prerequisites: Math 222 or equivalent (see undergraduate catalog for description), ChE 501 or equivalent. A continuation of ChE 501. An intensive course in basic chemical engineering science intended for students in the bridge program. Topics include fluid mechanics, heat transfer and diffusion-controlled processes. May not be taken for degree credit in any chemical engineering program.

ChE 503 - Introduction to Polymer Science and Engineering (3 credits) Prerequisite: Undergraduate degree in science or engineering. The course is intended for students whose prior undergraduate degree did not include study of polymer science or engineering. The course provides introductory concepts in four main areas: fundamentals of polymeric material including structural and chemical aspects; synthesis reactions of polymers; polymer properties including an introduction to viscoelastic behavior; and polymer technology including processing and shaping methods for specific products.

ChE 551 - Principles of Mass Transfer (3 credits) Prerequisites: undergraduate thermodynamics and integral calculus. An introductory course in basic concepts of mass transfer. Special emphasis is placed on mass transfer concepts applicable to stage and continuous operations. Topics covered include evaporation, gas absorption, and distillation. Cannot be used for degree credit in Chemical Engineering. **Effective Until: Spring 2005**

ChE 590 - Graduate Co-op Work Experience I (3 additive credits) Prerequisite: permission from department and Division of Career Development Services. Cooperative education internship provides on-the-job reinforcement of the academic program by placement in major-related work situations. Work assignment developed or approved by the co-op office and evaluated by the department. Cannot be used for degree credit.

ChE 591 - Graduate Co-op Work Experience II (3 additive credits) Prerequisite: permission from department and Division of Career Development Services.

ChE 592 - Graduate Co-op Work Experience III (3 additive credits) Prerequisite: permission from department and Division of Career Development Services.

ChE 593 - Graduate Co-op Work Experience IV (0 credits) Prerequisites: One immediately prior 3-credit registration for graduate co-op work experience with the same employer. Requires approval of departmental co-op advisor and the Division of Career Development Services. Must have accompanying registration in a minimum of 3 credits of course work. **Effective From: Fall 2006**

ChE 599 - Methods for Teaching Assistants and Graduate Assistants (3 credits) Prerequisite: graduate standing. Required for all chemical engineering teaching assistants and graduate assistants. Covers techniques of teaching, interaction with students, and safety. Does not count as degree credit.

ChE 602 - Selected Topics in Chemical Engineering I (3 credits) Prerequisite: graduate standing and permission of the instructor. Topics of current interest in chemical engineering.

ChE 603 - Separation Process Principles (3-0-3) Prerequisites: ChE 342, ChE 349, ChE 363, ChE 364, ChE 367, ChE 471. The course covers the basic principles of separation with or without chemical reaction in phase equilibrium-based, external field-driven and membrane-based separation processes. **Effective From: Fall 2004**

ChE 604 - Membrane Separation Processes (3-0-3) Prerequisites: ChE 342, ChE 349, ChE 363, ChE 364, ChE 367, ChE 471. This course covers the science, technology, engineering analysis and design of membrane separation processes, membrane reactors, membrane-based equilibrium separation processes and hybrid membrane processes. **Effective From: Spring 2005**

ChE 611 - Thermodynamics (3 credits) Prerequisites: undergraduate courses in physical chemistry and thermodynamics, or equivalent. Principles of thermodynamics developed quantitatively to include thermodynamic functions and their application to chemical engineering processes.

ChE 612 - Kinetics of Reactions and Reactor Design (3 credits) Prerequisite: undergraduate course in chemical engineering kinetics, or equivalent. Elements of optimum design introduced for reactor types, series and parallel reactor systems, multiple reactions, and temperature effects. Introduction to non-ideal reactor design. Study of various models for catalytic and non-catalytic solid-fluid reactions.

ChE 624 - Transport Phenomena I (3 credits) Prerequisites: undergraduate courses in fluid mechanics, heat transfer, and mass transfer. A unified treatment of molecular and turbulent momentum, energy, and mass transport. Emphasis is on the mathematical description of physical mechanisms in momentum and energy transport.

ChE 625 - Microlevel Modeling in Particle Technology (3 credits) Presents methodologies for analyzing the macroscopic properties of particulate systems in terms of the underlying microlevel processes. Significant components are the mathematical modeling of particulate systems at the microlevel, analytical and numerical methods for predicting macroscopic properties from microlevel models, and comparison of theoretical predictions with experimental results. Demonstrates the importance of the interaction of these three components in the scientific process. The first part concerns the flow of dry particles where any interstitial fluid can be ignored. The second part considers the flow of particles suspended in an interstitial fluid. Also includes a class project involving development of simulations. Same as ME 624.

ChE 626 - Mathematical Methods in Chemical Engineering (3 credits) Prerequisite: undergraduate course in differential equations. The purpose of the course is to emphasize the importance of mathematics to chemical engineering practice. Applications of non-linear regression, series solution of ordinary differential equations, Sturm-Liouville problems in partial differential equations, and numerical methods. It is suggested that students take this course before taking ChE 624.

ChE 627 - Introduction to Biomedical Engineering (3 credits) Prerequisites: undergraduate courses in thermodynamics and differential equations. Introduction to the structure and composition of the body followed by an exploration of the properties of blood and its flow in the cardiovascular system; the body as a heat source and as a series of compartments involved in mass transfer of materials (such as those in the kidneys and lungs). Design of artificial kidneys and heart-lung machines is also explored. Same as BME 627.

ChE 628 - Biochemical Engineering (3 credits) Prerequisite: undergraduate degree in chemical engineering. The application of chemical engineering to biological processes, biochemical reaction systems, and their technological use. Special attention given to problems in momentum, energy, and mass transport, as well as chemical reaction kinetics in biological systems.

ChE 629 - Biological Engineering Analysis (3 credits) Prerequisite: undergraduate degree in chemical engineering. Emphasis is on chemical engineering reactor design employing microbial populations. The dynamics of microbial interactions are described mathematically, as are cell attachment and reactor stability.

ChE 634 - Chemical Process Dynamics and Control (3 credits) Prerequisite: undergraduate chemical engineering course in process dynamics and control. Mathematical principles of process dynamics and control; derivation and solution of differential equations describing the behavior of typical chemical engineering processing units; and mathematical analysis and design of control systems. Digital and sampled data control systems also discussed.

ChE 645 - Fundamentals of Rheology (3 credits) Prerequisite: ChE 626 or permission of the instructor. Rheology of polymer melts and polymer solutions. Various types of time-dependent and time-independent non-Newtonian fluids are classified. Experimental techniques used to characterize these materials are discussed. **Effective Until: Spring 2005**

ChE 654 - Corrosion (3-0-3)Prerequisite: Undergraduate courses in Chemistry. Fundamental principles including thermodynamics and kinetics of corrosion; forms of corrosion (e.g. galvanic, crevice and stress); methods of corrosion measurement; high temperature corrosion; and special case histories. **Effective From: Fall 2004**

ChE 656 - Catalysis (3 credits)Prerequisite: ChE 612. Introduction of mass transfer and physical characterization of catalysts: the effectiveness factor; absorption; surface reaction; catalytic reactor design.

ChE 662 - Chemical Processing of Electronic Materials (3 credits)Prerequisite: undergraduate degree in chemical engineering. Processes necessary for manufacturing electronic materials into semiconductor devices and systems including single crystal growth, chemical vapor deposition, ion implantation, dry etching, and other considerations.

ChE 664 - Experiments and Simulations in Particle Technology (3 credits)Prerequisites: graduate standing and consent of the instructor. Covers particle size analysis using sieves as well as laser diffraction technique, size reduction with ball mill, measurement of powder flow properties and internal angle of friction, measurement of angle of repose, design of mass flow hoppers using Jenike direct shear tester, measurement of minimum sintering temperature of powders, particle sedimentation, powder mixing, dry particle coating, and fluidized beds. Simulations involve various dry and fluid based particle systems, focusing on particle-particle and fluid-particle interactions. Same as ME 664.

ChE 671 - Chemical Process Safety (3 credits)Prerequisite: graduate standing. Chemical and physical principles in chemical process safety and fire and explosion hazard evaluation. Emphasis is on materials, their reactions, and effect on surroundings. Course intended for students in the master's program in occupational safety and health engineering, and may not be taken for credit by ChE graduate students. **Effective Until: Spring 2005**

ChE 675 - Statistical Thermodynamics (3 credits)Prerequisite: ChE 611 or permission of instructor. Application of equilibrium statistical mechanics to chemical engineering problems. Basic postulates and relationships of statistical thermodynamics, including the ideal gas, ideal crystal, and virial equation; statistical theories of fluid mixtures and other advanced topics.

ChE 681 - Polymerization-Principles and Practice (3 credits)Prerequisite: Undergraduate courses in physical or organic chemistry or ChE 503 or equivalent. The course focuses on the structural and synthetic aspects of polymers and examines in detail a number of bench and industrial scale polymerization methods. In addition to kinetics and mechanisms of commercially important polymerization systems, the course examines reactive modification of synthetic and natural polymers and provides an introduction to applicable characterization methods.

ChE 682 - Polymer Structures and Properties (3 credits)Prerequisite: Undergraduate physical chemistry, a materials related course or ChE 503 or equivalent. The course provides an overview of polymer structures and properties and their relationships from the molecular viewpoint to phenomenological descriptions. Topics include thermodynamics of a single molecule, dynamic theory and viscoelasticity of polymers, polymer solids and mechanical properties, rubbers, polymer blends and composites, biological polymers, and special applications. New areas and innovative applications of polymers will be introduced.

ChE 683 - Polymer Processing (3 credits)Prerequisite: Undergraduate courses in transport phenomena, fluid flow, or heat transfer or approval of graduate advisor. The course provides a systematic approach to the physical phenomena occurring in polymer processing machinery. The synthesis of the elementary steps of polymer processing are shown in relation to the development of extrusion die flow and extrusion products and injection mold flows and molded products. Structural and residual stresses are examined.

ChE 684 - Materials and Process Selection for Polymer Product Design (3 credits)Prerequisites or corequisites: ChE 681, ChE 682, ChE 683 or approval of graduate advisor. The course provides methodologies for designing polymer-based products by considering materials and processing methods. Methods for selecting homopolymers, polymer blends and composites for specific applications will be presented in terms of properties, processability, manufacturing methods and economics. Process/structure/property correlations are presented as well as approaches to product design including CAD, prototyping, and strength and failure criteria. Case studies from biomedical, packaging and other applications are discussed.

ChE 685 - Industrial Waste Control I (3 credits)Prerequisite: undergraduate degree in chemical engineering or permission of the instructor. Physical/chemical treatment of industrial wastewaters: ionic equilibria; surface characterization; thermodynamic applications; transport phenomena; and sludge treatment.

ChE 686 - Industrial Waste Control II (3 credits)Prerequisite: undergraduate degree in chemical engineering or permission of the instructor. Biological treatment of industrial wastewaters: biological mechanisms; kinetics; vapor-liquid equilibria; and settling phenomena.

ChE 687 - Industrial Gas Cleaning (3 credits) Prerequisite: undergraduate degree in chemical engineering, or permission of the instructor. Review of available tools for cleaning atmospheric effluents from manufacturing facilities and power plants; use of a systems approach to minimize gas cleaning costs; alternatives involving combinations of process modification and effluent clean-up; methods for estimating key design parameters for cyclones, baghouses, electrostatic precipitators and scrubbers. Applications of design parameters through the solution of extensive problem-sets.

ChE 701 - Master's Thesis (6 credits) Prerequisite: matriculation for the master's degree in chemical engineering. Approval of thesis advisor is necessary for registration. Original research under the guidance of a departmental advisor. The final product must be a written thesis approved by at least three faculty members: the primary advisor, another from the department, and one other faculty member. A student must continue to register for at least 3 credits per semester until at least 6 credits have been completed and a written thesis is approved. Only a total of 6 credits will count toward the degree.

ChE 702 - Selected Topics in Chemical Engineering II (3 credits) Prerequisite: graduate standing and permission of the instructor. Topics of current interest in chemical engineering.

ChE 705 - Independent Study (3 credits) Prerequisites: permission from the graduate advisor (not dissertation advisor) in chemical engineering, as well as courses prescribed by a supervising faculty member (who is not the student's dissertation advisor). This special course covers areas of study in which one or more students may be interested, but which isn't of sufficiently broad interest to warrant a regular course offering. Students may not register for this course more than once with the same supervising faculty member.

ChE 711 - Phase Equilibrium (3 credits) Prerequisite: ChE 611 or equivalent. Low-pressure and high-pressure vapor-liquid equilibrium and liquid-liquid equilibrium. Among the topics covered are experimental methods, consistency tests of the data, expressions for the dependence of the activity coefficient on composition and temperature, and prediction of multicomponent vapor-liquid and liquid-liquid equilibrium from binary data. Prediction methods of vapor and liquid phase nonidealities, based on equations of state and solution theories, are discussed.

ChE 721 - Combustion Reaction Engineering (3-0-3) Prerequisites: Undergraduate degree in Chemical or Mechanical Engineering. Topics related to the engineering of combustion systems will be discussed. These include laminar flames, turbulent combustion, ideal reactor modeling of complex combustion systems, combustion chemistry, heterogeneous combustion and incineration. **Effective From: Fall 2004**

ChE 725 - Transport Phenomena II (3 credits) Prerequisite: ChE 624 or equivalent. Transport in laminar and turbulent flow: in solids, between phases, and macroscopic transport in flow systems.

ChE 740 - Biological Treatment of Hazardous Chemical Wastes (3 credits) Prerequisite: ChE 686 or the permission of the instructor. A doctoral level seminar on the limitations of biological treatment for hazardous wastes that looks at the fundamental processes taking place.

ChE 790 - Doctoral Dissertation (Credits as designated) Required of all students for the degree of Doctor of Philosophy. A minimum of 36 credits is required. Approval of dissertation advisor is necessary for registration. Students must register for at least 6 credits of dissertation per semester until 36 credits are reached and then for 3 credits each semester thereafter until a written dissertation is approved.

ChE 791 - Graduate Seminar (Non-credit) Required of all chemical engineering students receiving departmental or research-based awards and all doctoral students. The student must register each semester until completion of the degree. Outside speakers and department members present their research for general discussion.

Chemistry: Offered by the Department of Chemistry and Environmental Science

UNDERGRADUATE COURSES:

Chem 105 - Applied Chemical Principles (3-2-4) Prerequisite: high school algebra or equivalent. The fundamentals and relation of chemistry to living in today's society. Suitable laboratory experiments illustrate the course material. Not open to engineering or science students, or students who have completed a college level chemistry course.

Chem 108 - College Chemistry I (3-1-3) Prerequisites: a one-year college prep high school chemistry course, high school math including algebra and trigonometry. Delivered as a telecourse, the course provides the first of a two-semester sequence of college chemistry for high school students and other distance learners seeking college credit and/or preparation for the AP Examination. Matriculated undergraduates may not receive credit for this course.

Chem 109 - College Chemistry II (3-1-3) Prerequisite: Chem 108. A continuation of Chem 108.

Chem 121 - Fundamentals of Chemistry I (3-0-3) Prerequisites: high school math including algebra and trigonometry; chemistry placement examination required. The first semester of a three-semester sequence in chemistry, designed for underprepared students. Introduces the basic concepts of chemistry, including chemical reactions, electronic structure, gases and thermochemistry. Enrollment in Chem 121, 122, 123 is determined by a placement exam prior to initial registration. This sequence takes the place of Chem 125, 126. However, 3 credits of Chem 121, 122, 123 are additive only. The remaining 6 credits count toward degree requirements.

Chem 122 - Fundamentals of Chemistry II (3-0-3) Prerequisite: Chem 121. Continuation of the Chem 121 sequence. This course introduces the student to the basic concepts of chemistry, including molecular structure, solutions and solids, and equilibrium.

Chem 123 - Fundamentals of Chemistry III (3-0-3) Prerequisite: Chem 122. Continuation of the Chem 121 sequence. Introduces the student to the basic concepts of chemistry, including equilibrium in solution, kinetics and thermo-dynamics. Students should also register for Chem 124.

Chem 124 - General Chemistry Laboratory (0-2-1) Corequisite: Chem 123 or Chem 126. Chemical principles studied in the Chem 125 and 126 or Chem 121, 122 and 123 sequence are illustrated and reinforced by performance of laboratory experiments.

Chem 124H - General Chemistry II Honors Laboratory (0-2-1) Corequisite: Chem 126H. The laboratory consists of special research projects and other developmental labs.

Chem 125 - General Chemistry I (3-0-3) Prerequisites: high school math including algebra and trigonometry; chemistry placement examination required. The first semester of a two-semester sequence in chemistry. Introduces the basic concepts of chemistry, including chemical reactions and bonding, electronic and molecular structure, gases and thermochemistry.

Chem 125H - General Chemistry I Honors (3-0-3) Admission is by invitation only. An honors chemistry course which parallels Chem 125 but is more comprehensive and rigorous. Field trips, molecular model building, laboratory projects, journal reading assignments and reports, and supplementary problems are required -aspects of the program.

Chem 126 - General Chemistry II (3-0-3) Prerequisite: Chem 125 or equivalent. The second semester of a two-semester sequence in chemistry. Introduces the basic concepts of chemistry, including equilibrium, chemical kinetics, thermodynamics, and electrochemistry. Students should also register for Chem 124.

Chem 126H - General Chemistry II Honors (3-0-3) Prerequisite: Chem 125H. A continuation of Chem 125H, which parallels the course content of Chem 126. An individual research project is completed. Chem 124H must be taken concurrently.

Chem 221 - Analytical Chemical Methods (0-4-2) Prerequisite: Chem 123 or Chem 126, Chem 124. Laboratory introducing quantitative chemical analyses by gravimetry, titration, spectroscopy, chromatography, and potentiometry.

Chem 222 - Analytical Chemistry (3-0-3) Prerequisite: Chem 123 or Chem 126, Chem 124. Lecture course introducing concepts of chemical analyses by gravimetry, titration, spectroscopy, chromatography, and potentiometry.

Chem 231 - Physical Chemistry I (3-0-3) Prerequisites: Chem 123 or Chem 126, Phys 111. Corequisite: Math 211. The topics covered include the properties of ideal and non-ideal gases and liquids, solutions, thermochemistry, thermodynamics, the phase rule, and phase equilibria.

Chem 235 - Physical Chemistry II (3-0-3) Prerequisite: Chem 231. A continuation of Chem 231. The topics include homogeneous and heterogeneous chemical equilibria, ionic equilibria, electrochemistry, kinetic theory of gases, transport phenomena, kinetics, and irreversible processes.

Chem 235A - Physical Chemistry II Laboratory (0-4-2) Prerequisite: Chem 221, Chem 235. Corequisite: Math 225 (special section for chemical engineering and chemistry majors). Laboratory experiments apply and extend the basic knowledge of physical chemistry acquired in the lecture. Reports and presentations are an essential part of the course.

Chem 236 - Physical Chemistry for Chemical Engineers (4-1-4) Prerequisites: Chem 126 General Chemistry Laboratory, ChE 230 Chemical Engineering Thermodynamics or ChE 232. This course will introduce the chemical engineering students to the concepts of order, disorder, chemical equilibrium and phase equilibrium. Credit for this course will not be given if credit for Chem 235 has been given. **Effective From: Fall 2005**

Chem 243 - Organic Chemistry I (3-0-3) Prerequisite: Chem 123 or Chem 126. The preparation and properties of the various classes of organic compounds are discussed, with attention given to industrial sources such as coal and petroleum. Also covers the commercial utilization of these materials in the synthesis of useful products used in areas such as foods, cosmetics, textiles, plastics, and pharmaceuticals.

Chem 244 - Organic Chemistry II (3-0-3) Prerequisite: Chem 243. A continuation of Chem 243.

Chem 244A - Organic Chemistry II Laboratory (0-4-2) Prerequisite: Chem 124. Corequisite: Chem 244. Synthesis and characterization of organic compounds are performed in a unique multi-scale manner: micro, macro and a kilo scale.

Chem 245 - Organic Chemistry for Chemical Engineers (4-1-4) Prerequisite: Chem 126. This course is a one-semester course (opposed to classic two-semester sequence) to provide chemical engineering students with a basic understanding of organic compounds and their reactions. **Effective From: Fall 2005**

Chem 301 - Chemical Technology (2-2-3) Prerequisites: high school algebra and trigonometry or equivalent. Designed for engineering technology majors. Not open to students who have completed a college level chemistry course. Covers principles of chemistry, with a focus on chemical energetics and chemistry of materials. Suitable laboratory experiments illustrate the course material.

Chem 310 - Co-op Work Experience I (3 additive credits) Prerequisites: completion of the sophomore year, approval of the department, and permission of the Office of Cooperative Education and Internships. Students gain major-related work experience and reinforcement of their academic program. Work assignments facilitated and approved by the co-op office. Mandatory participation in seminars and completion of a report. Cannot be used for degree credit.

Chem 311 - Co-op Work Experience II (3 additive credits) Prerequisites: ChE 310. Continuation of ChE 310. Cannot be used for degree credit.

Chem 336 - Physical Chemistry III (3-0-3) Prerequisite: Chem 235. An introduction to quantum mechanics, statistical mechanics, spectroscopy, and solid state.

Chem 337 - Physical Chemistry for Biological Science (3-0-3) The course covers fundamental principles of physical chemistry related to biochemical processes such as metabolism and other biochemistry. Descriptions and example applications use DNA, proteins, amino acids, including properties of hydrophobic interactions. Thermochemistry of biochemical systems including chemical energy (enthalpy of reaction) along with chemical activities and non-ideal behavior are illustrated. The importance of entropy in control of biochemical reactions is also covered. Ionic systems and redox reactions and acids and bases in biological systems are

presented. The course also illustrates a number of biochemical analytical methods. **Effective From: Spring 2003**

Chem 338 - Analytical/Organic Chem Lab for Chemical Engineers (0-4-2) Prerequisite: Chem 124 and Chem 245. This course will offer the ChE students experience in organic and analytical laboratory experiments. These experiments will reinforce concepts learned in the organic chemistry lecture classes. This laboratory course will also provide exposure to analytical and other techniques useful in the chemistry and chemical engineering laboratories. **Effective From: Fall 2005**

Chem 339 - Analytical/Physical Chem Lab for Chemical Engineers (0-4-2) Prerequisites: Chem 245, Chem 236, Chem 338 or equivalent. Co-requisite: Math 225A. This course will offer students an introduction to physical and analytical chemistry laboratory techniques. The application of principles learned in lecture will be reinforced by the experiments done in this lab. They will also provide exposure to analytical and other techniques used in chemistry and chemical engineering. **Effective From: Fall 2005**

Chem 340 - Chemistry and Engineering of Materials (3-0-3) Prerequisites: Chem 235, Chem 244. Emphasizes processing/property relationships for a variety of engineering materials, including polymers, metals, ceramics, composites, semiconductors, optical fibers, and biomaterials. Introduces concepts of chemical structure, bonding and crystallinity. Covers important chemical, physical, electrical, and mechanical properties and corrosion and materials degradation. Also includes materials selection in the chemical process industries.

Chem 350 - Industrial Chemistry (3-0-3) Prerequisite: Chem 244. Applications of chemistry to the development of products from basic research and development through scale-up and marketing. Covers inorganic and organic processes, environmental considerations, industrial catalysis, and cost calculations.

Chem 360 - Environmental Chemistry I (3-0-3) Prerequisites: Chem 126 and 124 or equivalent. Chemistry of the environment is covered with emphasis on water chemistry. The course includes treatment of chemical bonding, basic thermodynamics, chemical equilibrium, kinetics, and the chemistry of ideal and non-ideal solutions. Water chemistry is covered, including acid/base equilibria, alkalinity, buffers, precipitation, and the sources of fates of water pollutants. **Effective From: Spring 2006**

Chem 361 - Environmental Chemistry II (3-0-3) Prerequisites: Chem 126 and 124 or equivalent. Chemistry of the environment is covered with emphasis on atmospheric and geo-chemistry. Organic and biochemical processes in the environment are treated. The applications of chemical principles to industrial ecology, green chemistry, pollution prevention and sustainability are discussed. **Effective From: Spring 2006**

Chem 365 - Environmental Organic Chemistry (3-0-3) An introduction to organic chemistry intended for students studying environmental science or environmental engineering. Covers the traditional functional groups, but focuses on their environmental impact and industrial synthesis. Not open to students who have taken organic chemistry.

Chem 412 - Inorganic Chemistry (3-0-3) Prerequisite: Chem 231. A lecture-recitation-laboratory course in practical inorganic chemistry. Covers the chemistry of most of the elements and their compounds. Preparation in the laboratory is followed by purification and characterization.

Chem 440 - Fundamentals of Polymers (3-0-3) Prerequisites: Chem 235, Chem 244. An introduction to the important fundamental aspects of polymers including preparation, structure, physical states and transitions, molecular weight distributions, viscous flow, and mechanical properties.

Chem 443 - Introductory Polymer Laboratory (1-4-3) Prerequisite: Chem 440. Practical methods useful in the preparation and characterization of macromolecules, including radical, ionic, emulsion, and condensation polymerization. Various methods useful in characterizing polymers, such as solution and bulk viscosity, light scattering, osmometry, thermal analysis, and various spectroscopic techniques. Melt spinning and extrusion of polymers along with mechanical properties.

Chem 448 - Preparation and Analysis of Organic Compounds (0-4-2) Prerequisites: Chem 244 and Chem 244A. The application of laboratory techniques learned in Chem 344A laboratory to the synthesis and characterization of organic compounds.

Chem 473 - Biochemistry (3-0-3) Prerequisite: Chem 244 or Chem 245. Covers the fundamentals of biochemistry including buffers, blood, proteins, enzymes, carbohydrates, fats, and nucleic acids. Emphasis on the relationship of biochemistry to biotechnology and medicine.

Chem 475 - Biochemistry Lab I (0-4-2) This course will offer the chemistry and related (chemical engineering, biology, bioinformatics, bioengineering) students fundamental laboratory approaches for biochemistry and biotechnology. These experiments will reinforce concepts learned in biochemistry lecture classes. **Effective From: Spring 2006**

Chem 480 - Instrumental Analysis (0-4-2)Prerequisite: Chem 221, Chem 222 or equivalent, R160:207. Laboratory exploring the principles of operation of modern instruments for chemical analysis. Ultra-violet and infrared spectroscopy, mass spectrometry, gas chromatography, high performance liquid chromatography, voltametry, and potentiometry are among the instruments utilized. Apply calibration methods, statistical data treatment, and sample preparation techniques are applied.

Chem 484 - Modern Analytical Chemistry (1-4-3)Prerequisite: Chem 235. Basic principles and techniques of quantitative analysis, with emphasis on application of modern analytical instrumentation. Atomic and molecular spectroscopy, chromatography, and electrochemical methods are studied and applied in the laboratory. Calibration, sampling methodology and sample preparation are also treated.

Chem 490 - Special Topics in Chemistry (3-0-3)Prerequisite: depends upon the nature of the course given. Course is offered in specific areas as interest develops.

Chem 491 - Research and Independent Study I (3-0-3)Prerequisite: senior standing in chemistry or chemical engineering. Provides an opportunity to work on a research project under the individual guidance of a member of the department.

Chem 491H - Honors Research and Independent Study I (3-0-3)Same as Chem 491, with special projects for Honors students.

Chem 492 - Research and Independent Study II (3-0-3)Prerequisite: Chem 491. A continuation of Chem 491.

Chem 492H - Research and Independent Study II ? Honors (3-0-3)Prerequisite: Chem 491H. Same as Chem 492, with special projects for Honors students.

R160:108 - Organic Biochemistry (3)For more details go to [Rutgers Catalog](#).

R160:207 - Structure And Bonding (3)For more details go to [Rutgers Catalog](#).

R160:227 - Experimental Analytical Chemistry (3)For more details go to [Rutgers Catalog](#).

R160:333 - Organic Chemistry Laboratory (2)For more details go to [Rutgers Catalog](#).

R160:345/346 - Physical Chemistry (3,3)For more details go to [Rutgers Catalog](#).

R160:413 - Inorganic Chemistry (3)For more details go to [Rutgers Catalog](#).

GRADUATE COURSES:

Chem 552 - Laser Chemistry and Technology (3 credits)Prerequisites: one year of chemistry, one year of physics, and calculus. An introduction to the underlying chemical and physical principles of lasers, their operation and uses and the related optoelectronic technology. Analysis of classes of laser; pumping mechanisms; detection of light; absorption and emission of radiation and current industrial and state-of-the-art uses.

Chem 593 - Graduate Co-op Work Experience IV (0 credits)Prerequisites: One immediately prior 3-credit registration for graduate co-op work experience with the same employer. Requires approval of departmental co-op advisor and the Division of Career Development Services. Must have accompanying registration in a minimum of 3 credits of course work. **Effective From: Fall 2006**

Chem 599 - Methods for Teaching Assistants and Graduate Assistants (3 credits)Prerequisite: graduate standing. Required for all chemistry teaching assistants and graduate assistants. Covers techniques of teaching, interaction with students, and safety. Does not count as degree credit.

Chem 601 - Special Topics in Chemistry I (3 credits)Prerequisite: graduate standing and permission of the instructor. Topics of current interest in chemistry.

Chem 602 - Advanced Organic Chemistry II: Reactions (3 credits)Prerequisite: undergraduate organic chemistry. The study of organic syntheses including principles underlying chemical reactions; chemical thermodynamics, structural theory, rates of reaction, mechanisms and stereochemistry; IR, UV, and NMR spectroscopy; organic synthesis; formation of aliphatic carbon-carbon bonds; pericyclic reactions; carbon-nitrogen bonds; electrophilic and nucleophilic aromatic substitution, molecular rearrangements;

photochemical and free-radical reactions; oxidation and reduction; and organometallic reagents containing phosphorous, boron, sulfur, and silicon.

Chem 603 - Advanced Organic Chemistry Laboratory (3 credits) Prerequisite: undergraduate organic chemistry. More advanced syntheses than those normally carried out in the undergraduate laboratory are emphasized including current analytical techniques and methods of separation. Both small and large scale preparations are assigned.

Chem 605 - Advanced Organic Chemistry I: Structure (3 credits) Prerequisite: undergraduate organic chemistry. Structure of organic molecules. Topics include atomic and molecular structure, stereochemistry, reactive intermediates (cations, anions, radicals, and carbenes), orbital symmetry, and spectroscopy.

Chem 606 - Physical Organic Chemistry (3 credits) Prerequisite: Chem 502 or equivalent. Emphasis is placed on the physical aspects of the subject. Determination of reaction mechanisms, equilibria, and kinetics using simple molecular orbital theory and absolute reaction rate theory.

Chem 610 - Advanced Inorganic Chemistry (3 credits) Prerequisite: undergraduate physical chemistry or permission of the instructor. Theories of observed chemical and physical properties of the elements and their compounds; prediction of reactivity and properties of proposed new compounds.

Chem 611 - Solid-State Inorganic Chemistry (3 credits) Prerequisite: undergraduate physical chemistry or physics. Structure, physical and chemical properties of solid-state materials, and their formation.

Chem 617 - Mass Spectrometry and Interpretation of Mass Spectra (3 credits) Prerequisite: CHEM125 and CHEM126 or equivalent. Historical background, fundamentals and mechanics of operation for components incorporated into modern Mass Spectrometers: vacuum system, ion sources, mass filter, ion detection, plus computer operation and data collection. Explanation and interpretation of mass spectra and fragmentation patterns are a fundamental theme throughout the course. Lecture material includes principles of operation and appropriate applications for modern types of mass spectrometers: magnetic sector, quadrupole, time of flight, ion trap, FT-ICR. Theory and applications of electron impact, chemical, electrospray, and other ionization techniques including atmospheric sampling are covered. High resolution analysis using magnetic sector and FT - ion cyclotron instruments. Analytical applications in environmental, petroleum and biochemical analysis and applications and coupling of mass spectrometry with other instruments (GC, LC, AES,) are illustrated.

Chem 626 - Chemistry of Contemporary Materials (3 credits) Prerequisite: one year of general chemistry. An introduction to the structure and chemical, electrical, and mechanical properties of metallic, ceramic, and polymeric materials and their use in science and engineering.

Chem 629 - Heterogeneous Catalysis (3 credits) Prerequisites: Undergraduate course in Organic Chemistry or Physical Chemistry or the equivalent. Basic principles of catalysis, catalyst preparation, and catalyst action; mechanisms and applications. Methods of catalyst preparation; effect on absorption, transport phenomenon, and reaction mechanisms and review of industrial examples.

Chem 640 - Polymer Chemistry (3 credits) Prerequisites: undergraduate organic and physical chemistry. Kinetics of polymerization; properties of polymer solutions; characterization of molecular size and shape.

Chem 641 - Polymer Properties (3 credits) Prerequisite: undergraduate organic and physical chemistry. Forces between polymer molecules and their relation to crystal structure; fundamentals of rheology and viscoelastic properties of polymers; polymer crosslinking, reinforcement, and aging from a chemical viewpoint.

Chem 643 - Polymer Laboratory I (3 credits) Prerequisites: Chem 440

Chem 644 - Fundamentals of Adhesion (3 credits) Prerequisite: Undergraduate organic and physical chemistry. Adhesion phenomena; intermolecular and interatomic forces; surface chemistry; absorption of polymers on surfaces; mechanisms of adhesion; bulk properties of adhesives; and rheology of polymers used as adhesives.

Chem 645 - Polymer Laboratory II (3 credits) Prerequisite: Chem 643. Experiments illustrating contemporary methods of polymer characterization including osmometry, viscometry, laser light scattering, vapor pressure osmometry, differential thermal analysis, dilatometry, x-ray diffraction, birefringence, polymer fractionation/gel permeation chromatography, extrusion, swelling crosslinking, molding, viscoelasticity, and infrared, ultraviolet, and NMR spectroscopy.

Chem 654 - Corrosion (3 credits) Prerequisite: one year of general chemistry. Fundamental principles including thermodynamics

and kinetics of corrosion; forms of corrosion (e.g., galvanic crevice and stress); methods of corrosion measurement; high temperature corrosion; and special case histories.

Chem 655 - Electrochemistry: Principles and Applications (3 credits) Prerequisites: one year of general chemistry and a course in physical chemistry or equivalent. Principles governing electrochemical methods such as conductance, emf, polarography, cyclic voltammetry, chronopotentiometry, coulometry, and their application to electric energy storage and conversion, corrosion, electroplating, pollution monitoring, electrochemical sensors, and electrochemical synthesis.

Chem 658 - Advanced Physical Chemistry (3 credits) Prerequisite: one year of undergraduate physical chemistry. Principles and applications of quantum chemistry; the wave equation, its properties and mathematics; the Schrodinger equation and wave functions; the harmonic oscillator; variational and perturbational methods; atomic theory, structure, and properties; simple molecules, LCAO and valence bond theories; semi-empirical methods; time dependence, and introduction to electronic and vibration-rotation spectroscopy.

Chem 659 - Atomic and Molecular Structure (3 credits) Prerequisite: Chem 658 or equivalent. Application of quantum chemistry and molecular structure; techniques for calculation of physical properties of molecules; and use of state-of-the-art computer graphics.

Chem 661 - Instrumental Analysis Laboratory (3 credits) Prerequisites: one year of undergraduate physical chemistry. Instruments for chemical analysis are discussed in class and used in the laboratory; basic theory; sample preparation; use of instruments and interpretation of data are covered for spectroscopy including UV/VIS, FTIR, AA, and NMR; HPLC, GC, ion chromatography, mass spectrometry. Applications to food science, pharmaceuticals, polymers, and other chemical areas. 1 hr. lecture, 3 hrs. lab.

Chem 662 - Air Pollution Analysis (3 credits) Prerequisite: undergraduate physical chemistry. Chemical and physical principles of gaseous species and trace level measurement techniques for airborne vapors and particulates. Emphasis on analyzing real air samples at the parts-per-billion level, meteorological dispersion and life times of pollutants are covered. Laboratory work in air pollution sampling methods for vapor and particulate species. Determination of primary air pollutants using wet chemical and instrumental techniques.

Chem 664 - Advanced Analytical Chemistry (3 credits) Prerequisite: undergraduate physical chemistry. The principles of chemical analysis as they apply to chromatography, electrochemistry, and spectroscopy. Sampling considerations, separations, and sample preparation steps. This course is a useful adjunct to Chem 661, where these analytical techniques are considered in a more practical way.

Chem 670 - Environmental Toxicology for Engineers and Scientists (3 credits) Prerequisite: Chem 673 or equivalent. Toxicology at the molecular level, including methods of evaluation and quantification, as well as mechanisms of absorption, distribution, metabolism, and excretion of toxicants. Discussions of systemic toxicology (e.g., liver, kidneys, nervous system) and survey of toxic agents. Particular emphasis placed on environmental toxicology including air, water and soil pollutants, food additives, and contaminants.

Chem 671 - Industrial Toxicology Workshop (3 credits) Prerequisite: Chem 670 or equivalent. A case study approach that applies basic theory and methods of toxicology to real-life problems related to hazardous materials transport, toxic commercial products and by-products, chemical industrial fires, unsafe landfills and illegal dumping.

Chem 673 - Biochemistry (3 credits) Prerequisites: undergraduate organic and physical chemistry, or suitable background in these subjects. Fundamentals of biochemistry related to physical organic chemistry for students who have an interest in biomedical engineering, chemistry, chemical engineering, or environmental science.

Chem 677 - Introduction to Medicinal Chemistry (3-0-3) The course introduces Medicinal Chemistry with mechanisms of drug action and the classification of drugs into the various categories of activity from a pharmaceutical viewpoint that encompasses chemical, biological and pharmacological parameters. Course includes material on: Chemistry, Structure Activity, Structure-Activity Relationships, Synthetic Pathways and Metabolic Pathways. **Effective From: Fall 2004**

Chem 700 - Master's Project (3 credits) Prerequisite: matriculation for the master's degree. An extensive report involving an experimental, theoretical, or literature investigation is required. The literature investigation should result in a critical review of a specific area. Approval to register for the master's project must be obtained from the project advisor. Students must continue to register for at least 3 credits each semester until the project is completed and a written report is accepted. Only a total of 3 credits will count toward the degree.

Chem 701 - Master's Thesis (6 credits) Prerequisite: matriculation for the master's degree in applied chemistry. Approval of thesis advisor is necessary for registration. Original research under the guidance of a departmental advisor. The final product must be a

written thesis approved by at least three faculty members: the primary advisor, another from the department, and one other faculty member. Once registration for thesis has begun, a student must continue to register for a minimum of 3 credits per semester until at least 6 credits have been completed and a written thesis is approved. Only a total of 6 credits will count toward the degree.

Chem 702 - Special Topics in Chemistry II (3 credits) Prerequisite: Graduate standing. Topics of current interest in chemistry.

Chem 717 - Mass Spectrometry and Mass Spectral Interpretation (3 credits) Prerequisites: CHEM125 and CHEM126 or equivalent. Chem 717 and Evsc 617 are comprised of Chem/Evsc 617 plus a research project: Research projects usually comprise experimental and mass spectrometry interpretation studies. These can be performed at NJIT or in the students corporate mass spectrometry facility. Projects may also include theory, data interpretation or literature reviews pertinent to a current active area in mass spectrometry research. Projects should be approved or in consult with the instructors.

Chem 725 - Independent Study I (3 credits) Prerequisites: permission from the graduate advisor (not thesis advisor) in chemistry, as well as courses prescribed by a supervising faculty member (who is not the student's thesis advisor). This special course covers areas of study in which one or more students may be interested, but which isn't of sufficiently broad interest to warrant a regular course offering. Students may not register for this course more than once with the same supervising faculty member.

Chem 726 - Independent Study II (3 credits) Prerequisite: written permission from the Associate Chairperson for Environmental Science plus courses prescribed by the supervising faculty member (who is not the student's thesis advisor). This special course covers areas of study in which one or more students may be interested, but which are not sufficiently broad to warrant a regular course offering. Students may not register for this course more than once with the same supervising faculty member.

Chem 727 - Independent Study III (3 credits) Prerequisite: written permission from the Associate Chairperson for Environmental Science plus courses prescribed by the supervising faculty member (who is not the student's thesis advisor). This special course covers areas of study in which one or more students may be interested, but which are not sufficiently broad to warrant a regular course offering. Students may not register for this course more than once with the same supervising faculty member.

Chem 734 - Thermochemical Kinetics-Detailed Mechanistic Modeling (3 credits) Prerequisite: graduate level course in either kinetics or reactor design, or permission of instructor. Quantitative estimation of thermochemical data and chemical reactions in the vapor phase, and to some extent in the liquid phase; theories of transition state, RRKM, and Quantum RRK; and detailed chemical modeling concepts for reactor design. Applied computer project is required.

Chem 735 - Combustion (3 credits) Prerequisite: thermodynamics and kinetics or equivalent, or permission of instructor. Thermodynamic properties of stable molecules and free radical species in combustion and oxidation of aliphatic hydrocarbons; reactions occurring in high temperature combustion systems; and related kinetic principles.

Chem 791 - Graduate Seminar (Non-credit) Required of all chemistry graduate students receiving departmental or research-based awards and all doctoral students. The student must register each semester until completion of the degree. Outside speakers and department members present their research for general discussion.

Civil Engineering : Offered by the Department of Civil and Environmental Engineering

UNDERGRADUATE COURSES:

CE 200 - Surveying (3-0-3) Prerequisite: Math 111. Angle and distance measurement; leveling; topographic mapping; traverse and area computations; horizontal and vertical curves; cross sections; triangulation; state plane coordinates; global positioning system. Emphasis on the use of the computer for solving typical field and office problems. Lab should be taken concurrently.

CE 200A - Surveying Laboratory (0-3-1) Corequisite: CE 200. Field exercises in conjunction with the classroom exercises in CE 200 utilizing classical and electronic instruments and COGO/CAD software.

CE 200B - Surveying Laboratory (0-3-1) For geoscience engineering majors. Field exercises using survey instruments including tapes, levels, theodolites, and total stations. Covers principles of topographic mapping, traverses, triangulation, and computer data reduction.

CE 210 - Construction Materials and Procedures (3-0-3) Prerequisites: HSS 101. Introduction to construction management organization, contracts, construction safety, engineering economics, and engineering ethics. Studies current practices of heavy construction including soil and rock excavation productivity, and building construction materials and procedures. Field trips to construction sites provide opportunities to directly view many of the practices.

CE 260 - Civil Engineering Methods (3-0-3) Prerequisite: HSS 101 and FED 101. Provides students with in-depth experience in computer applications in civil engineering and with written and oral communication.

CE 307 - Geometric Design for Highways (3-0-3) Prerequisite: CE 200, CE 200A. Highway design based on a study of traffic distribution, volume, and speed with consideration for the predictable future. Analysis of elements of at-grade intersections and interchanges and the geometrics of highway design and intersection layout with advanced curve work including compound and transition curves.

CE 311 - Co-op Work Experience I (3) Prerequisites: completion of the sophomore year, approval of the department, and permission of the Office of Cooperative Education and Internships. Students gain major-related work experience and reinforcement of their academic program. Work assignments facilitated and approved by the co-op office. Mandatory participation in seminars and completion of a report.

CE 320 - Fluid Mechanics (4-0-4) Prerequisites: Mech 235. Corequisite: Mech 236. This course is designed to present the fundamental laws relating to the static and dynamic behavior of fluids. The emphasis is placed on applications dealing with the flow of water and other incompressible fluids. These include flow in pipe systems and natural channels.

CE 320A - Hydraulics Laboratory (0-3-1) Prerequisite or corequisite: CE 320. Explores the principles of fluid mechanics through laboratory experiments. Investigates various hydraulic phenomena with both physical and computer models. Demonstrates basic civil engineering design principles for pipe networks, open channel systems, and ground water regimes.

CE 321 - Water Resources Engineering (3-0-3) Prerequisite: CE 200, CE 200A, Math 225. Training in methods of developing water supplies and the means to treat supplies for consumptive use. Covers hydrologic techniques such as surface and ground water yield, hydrograph and routing analyses, and probabilistic methods related to hydrologic studies.

CE 322 - Hydraulic Engineering (3-0-3) Prerequisites: CE 320, CE 321. The objective is to provide the tools required to design water distribution systems, storm drains, and sanitary sewers. Examines related hydrologic and hydraulic techniques.

CE 332 - Structural Analysis (3-0-3) Prerequisites: Mech 237. A working knowledge of free body diagrams, equilibrium conditions for force systems and moments. The primary objective is an understanding of the various methods of analyzing determinate and

indeterminate beams, frames, and trusses encountered in practice.

CE 333 - Reinforced Concrete Design (3-0-3) Prerequisites: CE 332. The student must have a working knowledge of structural analysis including determinate and indeterminate beams and frames. Primary objectives include the following: to acquaint the student with the properties of concrete and steel and with the behavior of reinforced concrete as a structural material; also, to develop methods for the design of reinforced concrete structural members such as beams, slabs, footings, and columns. Both ultimate strength design and working stress method will be studied.

CE 341 - Soil Mechanics (3-0-3) Prerequisite: Mech 237 or equivalent. Corequisite: CE341A. A study of soil types and properties is made with the objective of developing a basic understanding of soil behavior. The methods of subsurface investigation and compaction are presented. Fundamentals pertaining to permeability, seepage, consolidation, and shear strength are introduced. Settlement analysis is also presented. Lab must be taken concurrently.

CE 341A - Soil Mechanics Laboratory (0-3-1) Corequisite: CE 341. Students perform basic experiments in soil mechanics.

CE 342 - Geology (3-0-3) Prerequisite: consult the advisor. Studies science of geology with emphasis on physical geological processes. Stresses the principle of uniformity of process in the context of rock and soil formation, transformation, deformation, and mass movement. Includes aspects of historical geology and geomorphology.

CE 343 - Geology with Laboratory (3-3-4) Covers the material given in CE 342 with the addition of a laboratory component. It provides a more in-depth understanding of geology through rock and mineral identification, laboratory experiments, field trips, and selected case studies.

CE 350 - Transportation Engineering (3-0-3) Prerequisite: CE 200, CE 200A. A study of the principal modes of transportation, with emphasis on the planning, design and construction of facilities for modern transportation systems.

CE 406 - Remote Sensing (3-0-3) Prerequisite: Phys 234. Principles of remote sensing are covered including general concepts, data acquisition procedures, data analysis and role of remote sensing in terrain investigations for civil engineering practices.

CE 410 - Construction Scheduling and Estimating (3-0-3) Prerequisites: CE 210. Quantity take off, cost estimate and CPM computer analysis of typical building or highway projects. A study is made of construction project organization, contract requirements and management control techniques with an introduction to computer applications.

CE 412 - Construction Codes and Specifications (3-0-3) Prerequisite: CE 210. Code and specification aspects of engineered construction. Topics include professional ethics, contracts, specifications, bidding procedures, building codes such as B.O.C.A. and New Jersey Uniform Construction Code, Energy Code Provisions, construction safety, and the impact of the EPA on construction.

CE 413 - Co-op Work Experience II (3) Prerequisites: CE 311 or equivalent, approval of the department, and permission of the Office of Cooperative Education and Internships. Provides major-related work experience. Mandatory participation in seminars and completion of requirements including a report and/or project.

CE 414 - Engineered Construction (3-0-3) Prerequisites: CE 210, CE 332, CE 341. Design, erection, and maintenance of temporary structures and procedures used to construct an engineering project. Business practices, codes, design philosophies, construction methods, hardware, inspection, safety, and cost as they pertain to engineered construction projects.

CE 431 - Construction Materials Lab (0-3-1) Prerequisites: Mech 237, CE 210. This course provides an understanding of the basic properties of construction materials, and presents current field and laboratory standards and testing requirements for these materials. Students select a material or component assembly for testing, design a testing procedure, and present their results.

CE 432 - Steel Design (3-0-3) Prerequisites: CE 332. A working knowledge of structural analysis including determinate and indeterminate beams and frames is essential. The development of current design procedures for structural steel elements and their use in multistory buildings, bridges, and industrial buildings.

CE 443 - Foundation Design (3-0-3) Prerequisites: CE 341, CE 341A. Site investigation, selection of foundation types and basis for design, allowable loads, and permissible settlements of shallow and deep foundations. Computations of earth pressure and design of retaining walls.

CE 450 - Urban Planning (3-0-3) Prerequisite: junior engineering standing. Introduction to urban planning, its principles, techniques, and use. Topics include development of cities, planning of new towns, redevelopment of central cities, and land use and

transportation planning.

CE 461 - Professional Practice in CEE (3-0-3) Develop an understanding of the process to become a licensed professional engineer and familiarize the students with the professional practice of engineering including codes of ethics and professional business practices and to provide an adequate background for the Fundamentals of Engineering. **Effective From: Fall 2006**

CE 490 - Civil Engineering Projects (3-0-3) Prerequisites: senior standing in civil engineering and approval of the department. Work on an individually selected project, guided by the department faculty advisor. The project may include planning, research (library or laboratory), engineering reports, statistical or analytical investigations, and designs. Any of these may follow class-inspired direction or the student may select his or her own topic. The project must be completed and professionally presented by assigned due dates for appropriate review and recording of accomplishment.

CE 490H - Honors Civil Engineering Projects (3-0-3) Prerequisites: senior standing, enrolled in Honors College, and approval of the department. Same as CE 490.

CE 491H - Honors Research Experience in Civil Engineering (3-0-3) Prerequisites: Junior standing, agreement of a department faculty advisor, and approval of the associate chairperson for undergraduate studies. This course provides the student with an opportunity to work on a research project under the individual guidance of a member of the department. A written report is required for course completion. Open to students with a GPA of 3.0 or higher.

CE 494 - Civil Engineering Design I (3-0-3) Prerequisite: senior standing in civil engineering. Simulates the submission and acceptance process normally associated with the initial design phases for a civil engineering project. Familiarizes students with the preparation of sketch plats, preliminary engineering design, and a related environmental assessment. Requirements include written submittals and oral presentations in defense of the project.

CE 494H - Honors Civil Engineering Design I (3-0-3) Prerequisites: senior standing, enrolled in Honors College. Same as CE 494.

CE 495 - Civil Engineering Design II (3-0-3) Prerequisite: senior standing in civil engineering. Provides students with the type of design experience they would receive if engaged in civil and environmental engineering design practice. Course will focus on one or more of these design areas: structural, geotechnical, transportation and planning, and sanitary and environmental engineering.

CE 495H - Honors Civil Engineering Design II (3-0-3) Prerequisites: senior standing, enrolled in Honors College. Same as CE 495.

GRADUATE COURSES:

CE 501 - Introduction to Soil Behavior (3 credits) Prerequisites: CE 320, Mech 235 and Mech 236 (see undergraduate catalog for descriptions). Open only to the students in bridge program. Permission from CEE department graduate advisor is required. Covers the necessary concepts in strength of materials, geology and soil mechanics required for the bridge program in M.S. in Environmental Engineering and Geoenvironmental Engineering option.

CE 506 - Remote Sensing of Environment (3 credits) Prerequisite: Phys 234 (see undergraduate catalog for description). Covers the principles of remote sensing, general concepts, data acquisition procedures, data analysis and role of remote sensing in terrain investigations for civil engineering practices. Data collection from airborne and satellite platforms will be emphasized. Photographic and non-photographic sensing methodologies will be covered as well as manual and computer assisted data analysis techniques for site investigations and examination of ground conditions.

CE 531 - Design of Masonry and Timber Structures (3 credits) Prerequisite: CE 332 (see undergraduate catalog for description). Study of basic properties of clay and concrete masonry units and wood. The masonry segment includes discussion of unreinforced bearing walls subjected to concentric as well as eccentric loads. Lateral-force resistance of unreinforced and reinforced masonry systems are introduced and new developments to strengthen and retrofit unreinforced masonry walls are discussed. The timber design portion includes design and behavior of wood fasteners, beams, columns, and beam-columns as well as introduction to plywood and glued laminated members.

CE 545 - Rock Mechanics I (3 credits) Prerequisite: approved undergraduate course in soil mechanics within last five years or permission of instructor. Rock mechanics including geological aspects, mechanical properties, testing, and in-situ measurements of rock properties, and a brief introduction to design of structures in rock.

CE 552 - Geometric Design of Transportation Facilities (3 credits) Prerequisite: CE 350 or equivalent (see undergraduate catalog for description). Design principles and criteria related to highways and railroads resulting from requirements of safety, vehicle

performance, driver behavior, topography, traffic, design speed, and levels of service. Elements of the horizontal and vertical alignments and facility cross-section, and their coordination in the design. Computer-aided design procedures including COGO, CADAM, Digital Terrain Modeling. Same as Tran 552.

CE 553 - Design and Construction of Asphalt Pavements (3 credits) Importance of designing proper asphalt pavements. Topics include the origin of crude, refining crude, types of asphalts, desired properties of asphalt cement, specification and tests for asphalt cement, aggregates for asphalt mixtures, aggregate analysis, gradation and blending, hot-mix asphalt (HMA) mix design, manufacture of HMA and HMA-paving, hot and cold recycling. Same as Tran 553.

CE 590 - Graduate Co-op Work Experience I (3 additive credits) Prerequisites: permission from the civil engineering department and the Division of Career Development Services. Cooperative education/internship providing on-the-job reinforcement of academic programs in civil engineering. Work assignments and projects are developed by the co-op office in consultation with the civil engineering department; and evaluated by civil engineering faculty co-op advisors.

CE 591 - Graduate Co-op Work Experience II (3 additive credits) Prerequisites: permission from the civil engineering department and the Division of Career Development Services.

CE 592 - Graduate Co-op Work Experience III (3 additive credits) Prerequisites: permission from the civil engineering department and the Division of Career Development Services.

CE 593 - Graduate Co-op Work Experience IV (0 credits) Prerequisites: One immediately prior 3-credit registration for graduate co-op work experience with the same employer. Requires approval of departmental co-op advisor and the Division of Career Development Services. Must have accompanying registration in a minimum of 3 credits of course work. **Effective From: Fall 2006**

CE 601 - Advanced Remote Sensing (3 credits) Prerequisite: a first course in remote sensing. Principles of computer processing of satellite and aircraft remote sensing data as well as image enhancement, image transformation and image classification techniques using advanced image analysis system ERDAS in the interactive mode. Multiple applications on land use/land cover, water quality assessment and terrain evaluation will be emphasized. During final weeks of the semester students will apply the acquired techniques to specific projects.

CE 602 - Geographic Information System (3 credits) Prerequisite: course or working knowledge of CADD or permission of instructor. Geographical/Land Information System (GIS/LIS) is a computerized system capable of storing, manipulating and using spatial data describing location and significant properties of the earth's surface. GIS is an interdisciplinary technology used for studying and managing land uses, land resource assessment, environmental monitoring and hazard/toxic waste control. Introduces this emerging technology and its applications. Same as MIP 652 and Tran 602.

CE 603 - Introduction to Urban Transportation Planning (3 credits) Urban travel patterns and trends; community and land activity related to transportation study techniques including survey methods, network analysis, assignment and distribution techniques. Case studies of statewide and urban areas are examined. Same as Tran 603.

CE 604 - Environmental Modeling in Remote Sensing (3 credits) Prerequisites: CE 602 and CE 605. Advanced course consisting of three main components: review of current research and literature dealing with environmental RS/GIS, applied and computer modeling of land and oceans; case studies in RS/GIS applications, emphasizing real world environmental problems presented by outside experts; and presentation of student projects.

CE 605 - Research Methods in Remote Sensing (3 credits) Prerequisites: CE 601 and Math 661. Major components of RS data acquisition systems, overview of image processing techniques with emphasis on neural network and traditional pattern recognition, principal component transformations, and data reduction. Emphasizes geometric and mapping aspects of RS/GIS techniques for linking RS images with spatial data, sources of error, and accuracy assessment techniques. Hands-on experience with existing hardware/software (ERDAS & GENESIS).

CE 610 - Construction Management (3 credits) Prerequisite: B.S. degree in CE, technology, architecture, or related field. Managerial aspects of contracting. Study of an individual firm in relation to the entire construction industry. Topics include contractor organization and management, legal aspects of construction, and financial planning.

CE 611 - Project Planning and Control (3 credits) Prerequisite: CE 610. Management tools as related to construction projects are analyzed and applied to individual projects. Emphasis is on network scheduling techniques, time-cost analysis, resource allocation and leveling, cost estimating, bidding strategy, and risk analysis.

CE 614 - Underground Construction (3 credits)Prerequisite: undergraduate course in soil mechanics. Various aspects of underground construction, including rock and soft ground tunneling; open cut construction; underpinning; control of water; drilling and blasting rock; instrumentation; and estimating underground construction costs. Case studies and a field trip to an underground construction site will be included.

CE 615 - Infrastructure and Facilities Remediation (3 credits)Prerequisites: graduate standing in civil engineering and basic knowledge of structures, and material science. Examines the methodology of inspection, field testing, evaluation and remediation of existing infrastructure and facilities, which include pipelines, tunnels, bridges, roadways, dams, and buildings. Typical materials distress and failure scenarios will be covered with remediation options through the use of case studies.

CE 616 - Construction Cost Estimating (3 credits)Prerequisite: CE 610. Full range of construction cost-estimating methods including final bid estimates for domestic building and heavy/highway projects; computerized takeoff and estimating techniques; international construction; financial and cost reporting; databases; indices; risk; competition; performance; and profit factors.

CE 618 - Applied Hydrogeology (3 credits)Prerequisites: undergraduate courses in earth science/geology, fluid mechanics, and calculus or permission of instructor. Examines ground water and contaminant movement through the subsurface environment. A basic understanding of the aquifer geology is emphasized. Hydrogeologic applications including well design, pumping tests, and computer modeling of subsurface flow, and methods to monitor and remediate contaminated groundwater are introduced.

CE 620 - Open Channel Flow (3 credits)Prerequisite: undergraduate fluid mechanics. The principles developed in fluid mechanics are applied to flow in open channels. Steady and unsteady flow, channel controls, and transitions are considered. Application is made to natural rivers and estuaries.

CE 621 - Hydrology (3 credits)Prerequisite: undergraduate fluid mechanics. The statistical nature of precipitation and runoff data is considered with emphasis on floods and droughts. The flow of groundwater is analyzed for various aquifers and conditions. Flood routing, watershed yield, and drainage problems are considered.

CE 622 - Coastal Engineering (3 credits)Prerequisites: fluid mechanics and calculus. An introductory course covering basic wave theory, sediment transport and ocean circulation. The application of these principles to various coastal engineering problems will be discussed, including beach erosion, pollution transport in coastal waters, and the design of shore protection structures.

CE 623 - Groundwater Hydrology (3 credits)Prerequisites: undergraduate fluid mechanics and computer programming, or consent of instructor. Basic principles of groundwater hydraulics; Darcian analysis of various aquifer systems; unsaturated flow into porous mediums; transport of contaminants in soil media; and mathematical models for fluid and contaminant transport.

CE 625 - Public Transportation Operations and Technology (3 credits)Prerequisite: graduate standing in a cross-listed department or instructor approval. Presentation of the technological and engineering aspects of public transportation systems. Historical development of public transportation technologies. Vehicle and right-of-way characteristics, capacity and operating strategies. Public transportation system performance. Advanced public transportation systems. Same as Tran 625.

CE 626 - Sediment Transport (3 credits)Prerequisites: CE 341or CE 501; CE 620 or consent of the instructor. Unified treatment of sediment transport over a wide range of conditions; basic theory and application to engineering problems. Sediment transport problems associated with the analysis and design aspects of hydraulic and environmental structures, including channel stability, scouring, dredging, reservoir sedimentation, and wastewater solids are presented.

CE 631 - Advanced Reinforced Concrete Design (3 credits)Prerequisite: an undergraduate course in theory and design of reinforced concrete. A review of basic concepts of elastic and ultimate strength theories and a study of the present design codes. Topics include: design of concrete building frames, two-way slabs, flat slabs, deep beams, and other structural elements using the above two theories.

CE 632 - Prestressed Concrete Design (3 credits)Prerequisite: undergraduate course in theory and design of reinforced concrete. Analysis and design of pre-tensioned and post-tensioned prestressed concrete elements for both determinate and indeterminate structures will be studied. Examples of prestressed elements used in buildings and bridges will be discussed, as well as the source and magnitude of prestress losses.

CE 634 - Structural Dynamics (3 credits)Prerequisite: undergraduate course in structural analysis. Dynamic analysis of beams, frames, and other types of structures. Practical methods developed are applied to problems such as the analysis of the effects of earthquakes on buildings and moving loads on bridges.

CE 635 - Fracture Mechanics of Engineering Materials (3 credits) Prerequisites: graduate standing in civil and/or mechanical engineering and basic knowledge of structures and mechanics of materials. Basic principles of fracture mechanics to increase understanding of cracking and fracture behavior of materials and structures. Emphasis on practical applications of fracture mechanics.

CE 636 - Stability of Structures (3 credits) Prerequisite: undergraduate course in theory of structural analysis. Topics include structural design concept; stability criteria; elastic and inelastic buckling; column buckling; lateral buckling of beams; stability of frames; stability of plates and shell; local buckling and post-buckling.

CE 637 - Short Span Bridge Design (3 credits) Prerequisite: undergraduate courses in steel design and concrete design, and some knowledge of prestressed concrete fundamentals. Design and performance of highway and railroad bridges, particularly steel and prestressed concrete structures since they are most common in the northeast; and computer applications including bridge geometry, abutment design and composite beam design.

CE 638 - Nondestructive Testing Methods in Civil Engineering (3 credits) Familiarizes the civil engineering student with nondestructive testing (NDT) techniques currently employed for evaluation and condition monitoring of civil structures and construction materials. Major emphasis in the application of NDT methodologies to steel, concrete, and timber as the construction material. Covers theories, principles, and testing methodologies associated with individual technologies from specific material point of view. Discusses advantages and limitations pertaining to the application of individual NDT technologies to construction materials.

CE 639 - Applied Finite Element Methods (3 credits) Prerequisites: CE 332 and CIS 101. Introduction to application of finite element method to problems of structural analysis and design. Review of matrix algebra and the stiffness method of structural analysis. Applications include trusses, frames, plates, shells, and problems of plane stress/strain. Application of finite element method to design.

CE 641 - Engineering Properties of Soils (3 credits) Prerequisite: approved undergraduate course in soil mechanics within last five years. An in-depth study of physical and mechanical properties of soils. Topics include clay mineralogy, shear behavior and compressibility of fine and coarse grained soil; and in-situ measuring techniques such as vane shear, core penetration and pressure meter. Laboratory work includes consolidation test and triaxial test, with emphasis on analysis, interpretation and application of data to design problems.

CE 642 - Foundation Engineering (3 credits) Prerequisites: approved undergraduate courses in soil mechanics and foundation engineering. The salient aspects of shallow foundation design such as bearing capacity and settlement analyses. Topics are relevant to the deep foundation, selection of the type and the determination of load bearing capacity from soil properties, load tests, and driving characteristics utilizing wave equation analyses. Earth pressure theory and retaining wall design.

CE 643 - Advanced Foundation Engineering (3 credits) Prerequisite: CE 642. Lateral and earth pressure computations for the design of retaining walls, bulkheads, cellular cofferdams, and sheetpiles. Also considers the design of internal bracing systems and anchors, soil nailing and reinforced earth. Slope stability of embankments and dams.

CE 644 - Geology in Engineering (3 credits) Prerequisites: undergraduate course in geology or permission of instructor. Geology has a significant influence on how we plan, design, and construct engineering works. This course examines how the geologic formations underlying a locale will ultimately determine land use, control structure design, and affect construction material availability. Included is a study of the various rock-forming processes and geologic agents that have shaped Earth's surface. The course also explores the role of geologic factors in assessing environmental impacts and natural hazards such as earthquakes, subsiding soils, and landslides. Case study applications and a field trip are included. **Effective From: Fall 2005**

CE 645 - Rock Mechanics II (3 credits) Prerequisite: CE 545 or equivalent, or permission of instructor. Applications of design problems in underground structures, subways, stability of rock slopes, blasting, and seismic effects. A design project is a course requirement.

CE 646 - Geosynthetics and Soil Improvement (3 credits) Prerequisite: CE 341 (see undergraduate catalog for description). Includes engineering properties of geosynthetics and their application in civil engineering, such as filtration, seepage, and erosion control; subgrade and slope stabilization. Soil improvement topics include preloading, electrokinetic stabilization, soil modification, admixtures and grouting.

CE 647 - Geotechnical Aspects of Solid Waste (3 credits) Prerequisites: CE 341, CE 341A or equivalents (see undergraduate catalog for descriptions). Geotechnical aspects of solid waste such as municipal landfill, dredged materials, coal and incinerator ashes, identification and classification of waste materials, geological criteria for siting, laboratory and field testing, design for

impoundment and isolation of waste, methods of stability analyses of landfill sites, techniques for stabilizing waste sites, leachate and gas collection and venting systems. Primary emphasis is on municipal wastes.

CE 648 - Flow Through Soils (3 credits)Prerequisite: CE 641. Explains the fundamentals of fluid flow through saturated and unsaturated soils and the use of computer programs for the solution of boundary value fluid flow problems in soils. The first two-thirds of the course are devoted to flow through saturated soils. The topics are mathematical description of flow through soils, solutions for steady state and transient state fluid flow and geotechnical applications. The last one-third is devoted to flow through unsaturated soils. Topics include steady state of transient state fluid flow and a presentation of how these concepts are applied to geoenvironmental problems.

CE 650 - Urban Systems Engineering (3 credits)Prerequisites:B.S. degree in engineering or in the physical or social with some computer programming background. Identifies the various urban problems subject to engineering analysis, and modern techniques for their solution, including inductive and deductive mathematical models, mathematical modeling and simulation, and decision making under uncertainty. Same as Tran 650.

CE 653 - Traffic Safety (3 credits)Prerequisite: CE 660. System behavioral principles are applied to safety aspects of highway operation and design, and improvements of existing facilities. Solutions are evaluated on the basis of cost effectiveness. Same as Tran 653.

CE 655 - Land Use Planning (3 credits)Spatial relations of human behavior patterns to land use; methods of employment and population studies are evaluated; location and spatial requirements are related to land use plans; and concepts of urban renewal and recreational planning are investigated by case studies. Same as MIP 655 and Tran 655.

CE 659 - Flexible and Rigid Pavements (3 credits)Prerequisite: CE 341 or equivalent (see undergraduate catalog for description). Types of rigid (Portland cement) and flexible (bituminous) pavements. Properties of materials, including mineral aggregates. Design methods as functions of traffic load and expected life. Importance and consequences of construction methods. Maintenance and rehabilitation of deteriorated pavements. Same as Tran 659.

CE 660 - Traffic Studies and Capacity (3 credits)Prerequisite: elementary probability and statistics. Presentation of the characteristics of the traffic stream, road users, and of vehicles, and a review of traffic flow relationships. Students are exposed to the principal methodologies followed by transportation practices to perform volume, speed, travel time, delay, accident, parking, pedestrian, transit and goods movement studies. Presentation of the principal methodologies used to perform transportation facility capacity analyses for: basic freeway sections, weaving areas, ramps and ramp junctions, multi-lane and two lane roadways, signalized and unsignalized intersections. Students get hands on experience using the highway capacity software (HCS) and SIDRA. Same as Tran 615.

CE 661 - Analysis and Design of Shell Structures (3 credits)Prerequisite: undergraduate course in structural analysis. Methods of analysis and design of shell structures for building. Topics include: domes, hyperbolic paraboloids, folded plates, and cylindrical shells. Materials considered include reinforced and prestressed concrete.

CE 700 - Civil Engineering Project (3 credits)Prerequisite: student must have sufficient experience and/or graduate courses in major field to work on the project. Subject matter to be approved by the department. Permission to register must be obtained from the project advisor. Extensive investigation, analysis, or design of civil engineering problems not covered by regular graduate course work is required. A student with an exceptional project in CE 700 may, upon his/her own initiative and with the approval of his/her advisor, substitute the work of this course as the equivalent of the first 3 credits for CE 701 Master's Thesis. Students must register for 3 credits every semester until the project is completed.

CE 701 - Master's Thesis (6 credits)The thesis is to be prepared on a subject in the student's major field approved by the department. Approval to register for thesis must be obtained from the thesis advisor. A student must register for a minimum of 3 credits per semester until completion and submittal of an approved document. Credit will be limited, however, to the 6 credits indicated for the thesis.

CE 702 - Special Topics in Civil Engineering (3 credits)Prerequisite: advisor's approval. Topics of special current interest in civil engineering.

CE 705 - Mass Transportation Systems (3 credits)Prerequisites: CE 625 and Tran 610 or IE 610. An investigation of bus, rapid transit, commuter railroad, and airplane transportation systems. Existing equipment, economics, capacity, and terminal characteristics are discussed, as well as new systems and concepts. Long- and short-range transportation systems are compared. Same as Tran 705.

CE 710 - Systems in Building Construction (3 credits) Requirements and benefits of various building construction systems. Preliminary examination of the interrelation between design and construction. Topics include lift slab and tilt-up construction, slipforming, precasting, joist systems, modular construction, and mechanical and electrical systems.

CE 711 - Methods Improvement in Construction (3 credits) Prerequisite: CE 610. Improved methods in construction; various techniques of work sampling and productivity measurement; and current innovations in the construction industry for increasing efficiency.

CE 720 - Water Resource Systems (3 credits) Prerequisites: CE 620, CE 621. A system methodology is applied to the analysis of water resource development and operation. Topics include operational hydrology, water quality criteria, streamflow requirements, resource allocation, and economics. Mathematical models are developed and employed in the evaluation of a case study.

CE 725 - Independent Study I (3 credits) Prerequisites: written permission from department chairperson plus courses to be prescribed by the supervising faculty member. Covers areas of study in which one or more students may be interested but which is not of sufficiently broad interest to warrant a regular course offering.

CE 726 - Independent Study II (3 credits) Prerequisites: written permission from department chairperson plus courses to be prescribed by the supervising faculty member. Covers areas of study in which one or more students may be interested but which is not of sufficiently broad interest to warrant a regular course offering.

CE 727 - Independent Study III (3 credits) Prerequisites: written permission from department chairperson plus courses to be prescribed by the supervising faculty member. Covers areas of study in which one or more students may be interested but which is not of sufficiently broad interest to warrant a regular course offering.

CE 730 - Plastic Analysis and Design (3 credits) Prerequisite: CE 639. Theory of plasticity applied to structural design. Study of methods of predicting strength and deformation of single and multi-story steel frames in the plastic range. Comparison of plastic and prestressed concrete.

CE 733 - Design of Metal Structures (3 credits) Prerequisites: CE 639 and CE 636. Methods of design of metal structural systems. Topics include combined action of unsymmetrical sections, torsion of open and closed sections, buckling of columns and plates with various end conditions, and design of curved and boxed girders.

CE 734 - Design of Tall Buildings and Space Structures (3 credits) Prerequisites: CE 639 and CE 636. Design of tall buildings and space structures emphasizing framing systems, and recent developments and current research related to the design of such structures.

CE 736 - Finite Element Methods in Structural and Continuum Mechanics (3 credits) Prerequisites: a working knowledge of computer programming, and Mech 630 and CE 630. Finite element approaches for analysis of plane stress problems, plates in flexure, shells, and three-dimensional solids; and choice of interpolation functions, convergence, and the capabilities of the methods.

CE 737 - Earthquake Engineering (3 credits) Prerequisite: CE 634. Practical design solutions for resisting the damaging effects of earthquake ground motions and other severe dynamic excitations. Factors which control dynamic response in elastic and inelastic ranges, and the nature of severe dynamic excitations. Theories of structural analysis and dynamics, and modern design methodologies on the behavior of structures.

CE 738 - Advanced Matrix Analysis of Structures (3 credits) Prerequisite: CE 639. Advanced topics from structural analysis, including nonlinear analysis of trusses, frames and membrane finite elements, collapse by buckling, analysis and design of fabric structures.

CE 739 - Structural Optimization (3 credits) Prerequisite: CE 639. Application of methods of mathematical programming to problems of optimal structural design. Optimal criteria methods, discrete and continuous systems, and code design will be covered.

CE 741 - Theoretical Soil Mechanics (3 credits) Prerequisite: CE 641. An advanced graduate course for Ph.D. students and interested M.S. students in Civil Engineering. Explains the fundamentals of constitutive models for soils and their use in the solution of boundary value problems. Covers the theory of elasticity and theory of plasticity as tools in developing constitutive models for soils. Introduces critical state concept for soils. The triaxial experimental behavior of soils is discussed to introduce the concept of soil flow and strength. Critical state concept and elastoplastic material concepts are incorporated in the constitutive models, models predictions will be compared with experimental results for sands and for clays. Constitutive models will be incorporated into finite element codes to analyze boundary value problems such as stability of slopes and performance of footings.

CE 742 - Geotechnology of Earthquake Engineering (3 credits) Prerequisite: CE 641. Explains the fundamentals of propagation of the earthquakes through soils to supporting structures and the use of computer programs in the solution of boundary value problems in soils. The first half is devoted to synthesis of earthquakes, mathematical formulation of the problem, measurement of applicable soil parameters, use of computer programs to solve 1-D wave propagation problems in soils with structures. The second half is devoted to soil liquefaction, soil-structure interaction, and design of machine foundations.

CE 743 - Contaminant Transport in Soils (3 credits) Prerequisites: CE 618, CE 623 and CE 648. An advanced graduate course for Ph.D. students and interested M.S. students in civil, environmental, and chemical engineering. Explains the fundamental mechanisms involved in the organic chemical flow and transport in soils. Includes new concepts and recent findings associated with leaking underground storage tanks. First half deals with flow of nonaqueous phase liquids (NAPL) through a soil-water-air system. The second half discusses the sorption and dissolution of organics in the soil-water-air system, and transport of organics in the dissolved phase.

CE 751 - Transportation Design (3 credits) Prerequisite: CE 603. Design problems for airports, terminals, and highway intersections and interchanges are undertaken. Same as Tran 751.

CE 752 - Traffic Control (3 credits) Prerequisite: CE 660. Traffic laws and ordinances; regulatory measures; traffic control devices; markings, signs and signals; timing of isolated signals; timing and coordination of arterial signal systems; operational controls; flow, speed, parking; principles of transportation system management/administration; highway lighting; and state-of-the-art surveillance and detection devices and techniques. Hands-on experience with TRAF/NETSIM and FREESIM. Same as Tran 752.

CE 753 - Airport Design and Planning (3 credits) Prerequisites: Tran 610 or EM 693 and CE 660. Planning of individual airports and statewide airport systems. Functional decision of air and landside facilities. Orientation, number and length of runways. Concepts of airport capacity. Passenger and freight terminal facility requirements. Airport access systems. FAA operating requirements. Financial, safety and security issues. Same as IE 753 and Tran 753.

CE 754 - Port Design and Planning (3 credits) Prerequisites: Tran 610 or EM 693 and CE 660. Functional design of the water and landsides for general cargo, liquid and dry bulk, and container operations. Yard and storage systems. Port capacity in an intermodal network. Economic, regulatory, and environmental issues. Same as IE 754 and Tran 754.

CE 765 - Multi-modal Freight Transportation Systems Analysis (3 credits) Prerequisites: Tran 610 or equivalent and CE 650 or EM 602 or equivalent. Quantitative methods for the analysis and planning of freight transportation services. The supply-performance-demand paradigm for freight transportation systems. Cost and performance as determined by system design and operations. Relationship of traffic and revenue to service levels and pricing. Optimal service design and redesign for transportation enterprises and operations planning. Fleet and facility investment planning. Applications to various modes. Same as EM 765 and Tran 765.

CE 790 - Doctoral Dissertation (3 credits) Required of all candidates for the degree of Doctor of Philosophy. A minimum of 36 credits is required. Students must register for at least 6 credits of dissertation per semester until 36 credits are reached. Registration for additional credits may be permitted beyond the 6, with the approval of the advisor, to a maximum of 12 credits per semester. If the dissertation is not completed after 36 credits, registration for an additional 3 credits per semester is required thereafter. Registration for 3 credits is permitted during the summer session, hours to be arranged.

CE 791 - Graduate Seminar (Non-credit) A seminar in which faculty or others present summaries of advanced topics suitable for research. Students and faculty discuss research procedures, thesis organization, and content. Students present their own research for discussion and criticism. Required of all doctoral students registered for CE 790 unless requirement is waived, in writing, by the dean of graduate studies.

UNDERGRADUATE COURSES:

R190:310 - Ancient Technology (3) For more details go to [Rutgers Catalog](#).

Computer and Information Science: CCS Departments: [Department of Computer Science](#), [Department of Information Systems](#) and the [Information Technology Program](#)

UNDERGRADUATE COURSES:

CIS 098 - Fundamentals of Computers and Programming (2-1-2) Prerequisite: recommendation of the CIS department. A fundamentals course for potential CIS majors who have little or no background in computers and programming and who need additional preparation before entering CIS 113. Topics include: the attributes of hardware and software, interacting with an operating system, information representation and binary arithmetic, document preparation with word processing software, algorithms and flow diagramming. Extensive practice in programming fundamentals in a high level language is included. (This course, by itself, will not satisfy the CIS 100-level course requirement.) **Effective Until: Summer 2006**

CIS 101* - Computer Programming and Problem Solving (2-1-2)** An introductory course in computer science, and programming in a high-level language (such as FORTRAN, C, etc.) and its use in solving engineering and scientific problems. The emphasis is on the logical analysis of a problem and the formulation of a computer program leading to its solution. Topics include basic concepts of computer systems, software engineering, algorithm design, programming languages and data abstraction, with applications. Designed for students not specializing in computer science. For students taking a minor in CIS or changing to a CIS major, a combination of department approval and CIS 105 and CIS 101 may be substituted for CIS 113. **Effective Until: Summer 2006**

CIS 101H* - Honors Computer Programming and Problem Solving (2-1-2)** Prerequisite: departmental approval and/or permission of the director of the Honors College. This course covers the same material as CIS 101 but in greater depth. Designed for students not specializing in computer science.

CIS 102 - Computer Science with Problem Solving (3-1-3) An introductory course in computer science, with applications to engineering and technology problems. Emphasis on programming methodology using a high level language as the vehicle to illustrate concepts. Topics include basic concepts of computer systems, software engineering, algorithm design, programming languages and data abstraction, with applications. **Effective Until: Summer 2006**

CIS 103* - Computer Science with Business Problems (3-1-3)** An introductory course in computer science, with applications to business and managerial decision making. Emphasis on programming methodology using the COBOL language as the vehicle to illustrate concepts. Topics include basic concepts of computer systems, software engineering, algorithm design, programming languages and abstraction, with applications. **Effective Until: Summer 2006**

CIS 104* - Computer Programming and Graphics Problems (2-1-2)** Corequisite: Math 138. An introductory course in computer science with applications in computer graphics for architecture. Emphasis on programming methodology using a high level language (such as Pascal, C, etc.) as the vehicle to illustrate the concepts. Topics include basic concepts of computer systems, software engineering, algorithm design, programming languages and data abstraction, with applications. **Effective Until: Summer 2006**

CIS 104H* - Honors Computer Programming and Graphics Problems (2-1-2)** Prerequisite: departmental approval and/or permission of the director of the Honors College. Corequisite: Math 138. This course covers the same material as CIS 104, but in greater depth.

CIS 105 - Computer Programming (1-1-1) Prerequisite: 100-level GUR course in CIS. Details of programming in one particular computer language. Problems will be coded and run on a computer. Languages include ADA, APL, C, C++, FORTRAN, LISP, MODULA-2, Pascal, PROLOG, or others. May be repeated for credit when a different language is used. Students may repeat CIS 105 with different, department approved languages, and may combine three one-credit courses (including CIS 305) to be used as a technical elective in a CIS degree program. For students taking a minor in CIS or changing to a CIS major, a combination of an approved CIS 105 and CIS 101 may be substituted for CIS 113.

CIS 110 - Introduction to Computer Science IA (3-0-3) First semester of a two course sequence, equivalent to CIS 113. Introduces

fundamentals of computer science, with emphasis on programming methodology and problem solving. Topics include basic concepts of computer systems, software engineering, algorithm design, programming languages and data abstraction, including the development environment, native types, expressions, objects, classes, decisions, iteration, GUI based programming and methods. A high level language (Java) is fully discussed and serves as the vehicle to illustrate many of the concepts. **Effective From: Fall 2005 Until: Summer 2006**

CIS 110A - CIS 110A Computer Science Lab for CIS 111 ((0-1.5-1.5))Laboratory module for the first course of the sequence equivalent to CIS 113. **Effective From: Fall 2005 Until: Summer 2006**

CIS 111 - Introduction to Computer Science IB (3-0-3)Second semester of a two course sequence, equivalent to CIS 113. Introduces fundamentals of computer science, with emphasis on programming methodology and problem solving. Topics include basic concepts of computer systems, software engineering, algorithm design, programming languages and data abstraction, including methods and classes, arrays, collections, inheritance and polymorphism, exceptions, recursion, threads, testing and debugging. A high level language (Java) is fully discussed and serves as the vehicle to illustrate many of the concepts. **Effective From: Fall 2005 Until: Summer 2006**

CIS 111A - CIS111A Computer Science Lab for CIS 111 ((0-1.5-1.5))Laboratory module for the second course of the sequence equivalent to CIS 113. **Effective From: Fall 2005 Until: Summer 2006**

CIS 112 - Introduction to Computing (3-2-5)This course is designed for talented high school students who are interested in computer science and/or are considering computer science as a major field of study for their future. Fundamentals of computer science are introduced. Emphasis is on programming methodology, problem solving, structure and representation of data. Topics include algorithm design, data abstraction, logical data structures (lists, stacks, queues, trees, etc.) physical representation of data, design and analysis of algorithms operating on the structures including internal searching, sorting, recursion and string processing. The course also covers program specifications, correctness and efficiency, and techniques for program development and debugging. **Effective Until: Summer 2006**

CIS 113* - Introduction to Computer Science (3-1-3)**Prerequisite:: CIS 098. Open only to science and liberal arts major. Fundamentals of computer science are introduced, with emphasis on programming methodology and problem solving. Topics include basic concepts of computer systems, software engineering, algorithm design, programming languages and data abstraction, with applications. A high level language (such as Pascal, C, etc.) is fully discussed and serves as the vehicle to illustrate many of the concepts. CIS majors should enroll in CIS 113. Students who receive degree credit for CIS 113 may not receive degree credit for CIS 213. **Effective Until: Summer 2006**

CIS 113H* - Honors Introduction to Computer Science I (3-1-3)**Prerequisite: Satisfactory performance on placement exam and/or departmental approval. A course similar to CIS 113, but material is covered in greater depth. Honors students contemplating a major in computer science, or who plan to take advanced electives in computer science, should take CIS 113H instead of CIS 101H. Students who receive degree credit for CIS 113H cannot receive degree credit for CIS 213. **Effective Until: Fall 2006**

CIS 114 - Introduction to Computer Science II (3-1-3)Prerequisites:; CIS 113 or completion of a required 100 level GUR course in CIS, plus an approved CIS 105. A study of advanced programming topics with logical structures of data, their physical representation, design and analysis of computer algorithms operating on the structures, and techniques for program development and debugging. Course covers program specifications, correctness and efficiency, data abstraction, basic aspects of simple data structures, internal searching and sorting, recursion and string processing. Algorithmic analysis is also discussed. Students receiving degree credit for CIS 114 cannot receive degree credit for CIS 335 or CIS 505. **Effective Until: Summer 2006**

CIS 114H - Honors Introduction to Computer Science II (3-1-3)Prerequisites: CIS 113H or department approval; A course similar to CIS 114, but material is covered in greater depth. Students receiving degree credit for CIS 114H cannot receive degree credit for CIS 335 or CIS 505. **Effective Until: Fall 2006**

CIS 150 - Web Authoring and Development (2-2-3)This course, designed for high school students, introduces the technologies and techniques of the Internet's World Wide Web. Covers basic issues of design and coding in HTML, the common language for Web development, including discussions on incorporating graphics, frames, and tables into pages. Also introduces the concepts of TCP/IP, HTTP protocols, Web architectures, and MIME types. Introduces FrontPage and Net Object Fusion. **Effective Until: Spring 2006**

CIS 151 - Advanced Web Development and Site Management (2-2-3)Prerequisites: knowledge of windows, experience with any programming language, good knowledge of the Internet and HTML language. This course, designed for high school students, will introduce advanced technologies and techniques of the Internet's World Wide Web. Covers the use of Internet development tools, the use of server scripts, CGI and non-CGI related solutions to database access, server configuration, Internet protocols, proxy

servers, security issues, and digital commerce. **Effective Until: Spring 2006**

CIS 213 - Introduction to Computer Science (3-0-3) Prerequisite: 100-level GUR course in CIS. The course covers a study of the representation of data, its structures, and algorithms. Programming topics in Pascal and assembly language are included. Designed for students not majoring in computer science. Students receiving degree credit for CIS 213 cannot receive degree credit for CIS 113.

CIS 231 - Machine and Assembly Language Programming (3-1-3) Prerequisites: CIS 113, or CIS 213, or completion of a required 100-level GUR course in CIS plus an approved CIS 105. Fundamentals of machine organization and machine language programming. Representation of computer instructions and data in machine, assembly and macro-assembly languages together with intensive practice in formulating programming, running, and debugging programs for both numerical and logical problems. Assemblers and loaders are discussed. Students receiving degree credit for CIS 231 cannot receive degree credit for CIS 510.

Effective Until: Summer 2006

CIS 240 - Principles of Bioinformatics (3-0-3) Prerequisites: Math 211, R120:301, CIS 114 or permission of the instructor. This course provides an introduction to the field of bioinformatics. It includes a description of the molecular basis of genomics and proteomics, the computer-based and mathematical methods used in bioinformatics, and the application of these methods toward understanding biological systems at the cellular and molecular level. It also includes a description of the application of bioinformatics to drug discovery. **Effective Until: Summer 2006**

CIS 241 - Foundations of Computer Science I (3-0-3) Prerequisites: CIS 114, Math 112. An introduction to the foundations of computer science with emphasis on the development of techniques for the design and proof of correctness of algorithms and the analysis of their computational complexity. Reasoning techniques based on propositional and predicate logic and relational calculus operations with applications to databases will also be introduced. Auxiliary topics such as combinatorics of finite sets, functions and relations, and graph-theory definitions and graph storage alternatives will also be examined. **Effective Until: Summer 2006**

CIS 245 - Information Technology Systems: Hardware/Software (3-0-3) This course reviews hardware/software technologies in order to enable system developers to understand tradeoffs in the design of computer architectures for effective computer systems. Also covered are operating systems and systems architecture for networked computing systems. Topics include Hardware (CPU architecture, memory, registers, addressing modes, busses, instruction sets, multi processors versus single processors, and peripheral devices), Operating systems (processes, process management, memory and file system management), and Telecommunications (basic network components, switches, multiplexers and media, installation and configuration of multi-user operating systems). **Effective From: Summer 2005 Until: Summer 2006**

CIS 251 - Computer Organization (3-0-3) Prerequisite: CIS 113. An introduction to computer system structure and organization. Topics include representation of information, circuit analysis and design, register-transfer level, processor architecture and input/output. **Effective Until: Summer 2006**

CIS 252 - Computer Organization and Architecture (3-0-3) Prerequisite: CIS 113. An introduction to the organization and architecture of computer systems, beginning with the standard Von Neumann model and then moving forward to more recent architectural concepts. Among the topics covered are digital logic, data representation, assembly language organization, memory addressing schemes, memory systems, interfacing and functional organization. **Effective Until: Summer 2006**

CIS 265 - Introduction to Information Systems (3-0-3) Prerequisite: 100-level Computer Science GUR course. Information systems is the study of how organizations use information technology. This course is an overview of the information systems discipline, the role of information systems in organizations, and the changing nature of information technology. Computer tools for analysis and presentation are used. **Effective Until: Summer 2006**

CIS 270 - Multimedia Information Systems (3-0-3) Prerequisite: Same as CIS 114. Multimedia combines text, graphics, sound, video, and animation in a single application. Preparation for creating multimedia information systems, and understanding the crucial issues involving technology, design and effectiveness of multimedia applications. Programming techniques for integrating video, sound, animation, and graphics, and design strategies for multimedia information systems. **Effective Until: Summer 2006**

CIS 280 - Programming Language Concepts (3-0-3) Prerequisite: CIS 114 or equivalent. Conceptual study of programming language syntax, semantics and implementation. Course covers language definition structure, data types and structures, control structures and data flow, run-time consideration, and interpretative languages. **Effective Until: Summer 2006**

CIS 288 - Intensive Programming Practicum (3-0-3) Prerequisite: CIS 114 or equivalent, CIS 280. The objective of this course is to raise the level of students' programming maturity by a combination of discussion of fundamental concepts and intensive practice in programming intermediate software applications. Students will use a modern development environment that offers comprehensive

project management capabilities, and an appropriate programming language to develop their programs using object oriented and generic programming techniques. The course will be organized around a number of programming projects of intermediate size chosen by the faculty to illustrate a spectrum of programming development requirements and techniques. At least one project will be an introduction to programming of modern GUI applications. In addition students will be introduced to standard and commercial API's, class libraries and template libraries. **Effective Until: Summer 2006**

CIS 305 - Community Service Internship (0-2-1) Prerequisite: CIS 350. Increasingly, computer scientists are recognizing their ethical responsibility to provide advice and assistance that will improve the ability of government and social service agencies to use computers to serve the public. This course involves approximately 40 hours of internship in a community agency, arranged through the NJIT Cares Program. The interns will use their skills to improve the effectiveness of the use of computers at the agency. Bi-weekly progress reports will be submitted, with required meetings with the course supervisor, and a final report. (CIS 305 may be combined with two approved credits of CIS 105 and used as a technical elective in a CIS degree program.) **Effective Until: Summer 2006**

CIS 310 - Co-op Work Experience I (3) Prerequisites: completion of the sophomore year, approval of the department, and permission of the Office of Cooperative Education and Internships. Students gain major-related work experience and reinforcement of their academic program. Work assignments facilitated and approved by the Co-op office. Mandatory participation in seminars and completion of a report. **Effective Until: Summer 2006**

CIS 332 - Principles of Operating Systems (3-0-3) Prerequisite: CIS 114 or equivalent. Organization of operating systems covering structure, process management and scheduling; interaction of concurrent processes; interrupts; I/O, device handling; memory and virtual memory management and file management. **Effective Until: Summer 2006**

CIS 332H - Honors Principles of Operating Systems (3-1-3) Prerequisite: CIS 114 or equivalent. A course similar to CIS 332, with a project of greater depth and scope. **Effective Until: Fall 2006**

CIS 333 - Introduction to UNIX Operating Systems (3-0-3) Prerequisite: CIS 332 or equivalent and knowledge of C language. The course covers the UNIX system kernel including initialization, scheduling, context switching, process management, memory management, device management, and the file system. The course also includes the organization of shells, editors, utilities, and programming tools of the UNIX operating system. **Effective Until: Summer 2006**

CIS 341 - Foundations of Computer Science II (3-0-0) Prerequisites: CIS 241 or MATH 226 and CIS 280. This course provides an introduction to automata theory, computability theory, and complexity theory. Theoretical models such as finite state machines, push-down stack machines, and Turing machines are developed and related to issues in programming language theory. Also, the course covers undecidability and complexity theory, including the classes P and NP. **Effective Until: Summer 2006**

CIS 341H - Honors Introduction to Logic and Automata (3-0-3) Prerequisites: completion of a 100-level GUR course in CIS; CIS 280, Math 226 or Math 326. A course similar to CIS 341, with a project of greater depth and scope. **Effective Until: Fall 2006**

CIS 350 - Computers and Society (3-0-3) Prerequisites: completion of a 100-level GUR course in CIS; one basic SS course; HSS 111. Examines the historical evolution of computer and information systems and explores their implications in the home, business, government, medicine and education. Topics include automation and job impact, privacy, and legal and ethical issues. Co-listed as STS 350. **Effective Until: Summer 2006**

CIS 350H - Honors Computers and Society (3-0-3) Prerequisites: completion of a 100-level GUR course in CIS; one basic SS course; HSS 111. A course similar to CIS 350, with a project of greater depth and scope.

CIS 352 - Parallel Computers and Programming (3-1-3) Prerequisites: CIS 251 or CoE 252, CIS 332. A course introducing parallel computers and parallel programming. General structures and design techniques of parallel computers are described. Programming paradigms and algorithm design considerations for parallel processors will be discussed. **Effective Until: Summer 2006**

CIS 353 - Advanced Computer Organization (3-0-3) Prerequisite: CIS 251 or instructor approved equivalent. This course emphasizes the basic design principles of various components in a computer, as well as how the components are organized to build a computer. Topics include: design methodology, arithmetic and logic unit design, control unit design, memory hierarchy, memory system design, input and output devices, peripheral devices, and interfacing computers using software. A software simulation package is used to help the learning process. By the end of the semester, students will have built simulated computer. **Effective Until: Summer 2006**

CIS 357 - Fundamentals of Network Security ((3-0-3)) This course offers an in depth study of network security issues, types of

computer and network attacks, and effective defenses. It provides both a theoretical foundation in the area of security and hands-on experience with various attack tools, firewalls, and intrusion detection systems. Topics include: network scanning, TCP/IP stack fingerprinting, system vulnerability analysis, buffer overflows, password cracking, session hijacking, denial of service attacks, intrusion detection. **Effective From: Fall 2005 Until: Summer 2006**

CIS 365 - Computer Applications to Commercial Problems (3-0-3) Prerequisite: CIS 280, or CIS 114 and knowledge of COBOL. Covers design and implementation of commercial application software systems. Concepts of organization and management of data and files including file operations and organization of sequential access, relative access, indexed sequential access, virtual storage access and multi-key access methods. The COBOL language is used to illustrate these concepts and to implement application systems. The design and implementation of commercially oriented computer systems. Emphasis is placed on modern computers as a tool for solving business problems. The COBOL programming language will be extensively studied and utilized in developing the programming techniques for the solution of these problems. **Effective Until: Summer 2006**

CIS 370 - Introduction to Artificial Intelligence (3-1-3) Prerequisites: CIS 114, Math 226. An exploration of concepts, approaches and techniques of artificial intelligence. Emphasizes both underlying theory and applications. Topics include knowledge representation, parsing language, search, logic, abduction, uncertainty, and learning. LISP and Prolog programming languages used extensively. Students are required to do programming assignments, complete a programming term project and review case studies. **Effective Until: Summer 2006**

CIS 370H - Honors Introduction to Artificial Intelligence (3-1-3) Prerequisites: CIS 114, Math 226. A course similar to CIS 370, with a project of greater depth and scope. **Effective Until: Fall 2006**

CIS 371 - Logic with Applications to Computer Science (3-0-3) Prerequisites: CIS 114; Math 211 and Math 226. An introduction to both the syntax and semantics (basic model theory) of first-order logic, covering one set of inference rules, sequent calculus or a tableau system and prove the completeness theorem for the proof system. You will also cover a relatively modern (and simpler) form of Incompleteness theorems and relate it to computational issues such as the halting problem, as well as issues related to automating logical reasoning. These will include Herbrand's theorem, resolution, and logic programming. **Effective Until: Summer 2006**

CIS 371H - Honors Logic with Applications to Computer Science (3-0-3) Prerequisites: CIS 114; Math 211 and 226. A course similar to CIS 371, with a project of greater depth and scope. **Effective Until: Fall 2006**

CIS 373 - World Wide Web Standards (3-0-3) Prerequisites: CIS 114 and junior standing. This course covers the standards that are emerging for formatting, accessing, displaying, transmitting and structuring information, including the standards and protocols existing and under development today. Topics include: Standards, Rationale, Pros and Cons, the Standards Process; Standards Bodies & Participating on Standards Bodies; How Companies Influence Standards; How Developers Incorporate Standards in their Programs; Planning for Emerging Standards; Company Policies Regarding Web Standards; Standards and Legal Issues. **Effective Until: Summer 2006**

CIS 375 - Applications Development for the World Wide Web (3-0-3) Prerequisite: CIS 114. A state-of-the-art computer programming language/environment, such as Java and related tools, is studied and used as a vehicle to build applications that involve graphical user-interfaces, simple graphics, multithreading, images, animation, audio, database connectivity, remote objects, and networking.

CIS 390 - Requirements Analysis and Systems Design (3-0-3) Prerequisite: CIS 114. A study of the information systems development life-cycle, from the initial stages of information requirements analysis and determination to the ultimate activities involving systems design. Theory, methodologies and strategies for information requirements analysis, including the assessment of transactions and decisions, fact-finding methodologies, structured analysis development tools, strategies of prototype development, and an overview of computer-aided software engineering (CASE) tools. Theory, methodologies and strategies for systems design, including design of user-interfaces, particularly menu-driven and keyword dialogue strategies, and issues in the proper design of computer output. **Effective Until: Summer 2006**

CIS 392 - Text Processing, Retrieval & Mining (3-0-3) Prerequisites: CIS 114 and Math 333. Text retrieval concerns the representation, organization, storage, and retrieval of text elements. Students will learn methods of text and data organization, as well as numerical data storage methods in commercial databases. Topics include techniques such as automatic indexing, query expansion, and how to use these techniques to improve retrieval effectiveness and efficiency. **Effective Until: Summer 2006**

CIS 405 - Internship in Community Service (1-0-1) Prerequisite: CIS 305 or its equivalent, approval of the department, and permission of the Office of Service Learning and Career Development Services. This course involves approximately 40 hours of internship in a community agency, arranged through the NJIT Cares Program. The interns will use their skills to improve the

effectiveness of the use of computers at the agency. Bi-weekly progress reports will be submitted, with required meetings with the course supervisor, and a final report. **Effective Until: Summer 2006**

CIS 408 - Cryptography and Internet Security (3-0-3) Prerequisite: Math 226. Covers security requirements for telecommunication over the Internet and other communication networks, various conventional and public-key encryption protocols, digital encryption standard, RSA and ElGamal cryptographic systems, digital signature algorithm and analysis of its cryptoimmunity, and access sharing schemes. Students receiving credit for CIS 408 may not enroll in CIS 608. **Effective Until: Summer 2006**

CIS 410 - Co-op Work Experience II (3 additive credits) Prerequisites: CIS 310 or its equivalent, approval of the department, and permission of the Office of Cooperative Education and Internships. Provides major-related work experience as co-op/internship. Mandatory participation in seminars and completion of requirements that include a report and/or project. **Effective Until: Summer 2006**

CIS 421 - Numerical Algorithms (3-0-3) Prerequisite: completion of a 100-level GUR course in CIS. Corequisite: Math 222. This course deals with fundamentals of numerical methods, including discussion of errors, interpolation and approximation, linear systems of equations, solution of nonlinear equations, and numerical solution of ordinary differential equations. The algorithmic approach and the efficient use of the computer are emphasized. **Effective Until: Summer 2006**

CIS 431 - Database System Design and Management (3-0-3) Prerequisite: CIS 114 or equivalent. Database system architecture; data model using the entity-relationship model; storage of databases; the hierarchical, network and relational data models; formal and commercial query languages; functional dependencies and normalization for relational database design; relation decomposition; concurrency control and transactions management. Student projects involve the use of a DBMS package. **Effective Until: Summer 2006**

CIS 431H - Honors Database System Design and Management (3-0-3) Prerequisite: CIS 114 or equivalent. A course similar to CIS 431, with a project of greater depth and scope. **Effective Until: Fall 2006**

CIS 432 - Advanced Operating Systems (3-0-3) Prerequisites: CIS 251, CIS 332. A survey of the design and implementation of distributed operating systems, both by introducing basic concepts and considering examples of current systems. Topics include: communication, synchronization, processor allocation, and distributed file systems. **Effective Until: Summer 2006**

CIS 433 - Electronic Commerce Requirements and Design (3-0-3) Prerequisites: CIS 431; CIS 390 or CIS 490. Introduces critical concepts emerging in the field of electronic commerce, such as business to consumer (B2C), business to business (B2B), supply chain management (SCM) systems, and peer to peer (P2P). The course provides concepts and practical skills for building effective, usable, and secure electronic commerce systems, offering a conceptual framework for the study of electronic commerce as well as hands-on skills for building systems for electronic commerce. **Effective Until: Summer 2006**

CIS 434 - Advanced Database Systems (3-0-3) Prerequisites: CIS 431. The course covers the basic concepts of traditional files and file processing, provides a "classic" introduction to the relational data model and its languages, and discusses database design methodology and application developments. Students are expected to learn the design of database application systems through a small project and to get some practical hands-on experience with commercial database management systems (DBMS) by writing application programs using the commercial DBMS query languages. **Effective Until: Summer 2006**

CIS 434H - Honors Advanced Database Systems (3-0-3) Prerequisites: CIS 431. A course similar to CIS 434, with a project of greater depth and scope. **Effective Until: Fall 2006**

CIS 435 - Advanced Data Structures and Algorithm Design (3-0-3) Prerequisite: CIS 114 or CIS 335, and Math 226. Advanced topics in data structures and algorithms, including mathematical induction, analysis and complexity of algorithms, and algorithms involving sequences, sets, and graphs such as searching, sorting, order statistics, sequence comparisons, graph traversals, etc. Optional topics include geometric, algebraic, and numeric algorithms. **Effective Until: Summer 2006**

CIS 435H - Honors Advanced Data Structures and Algorithm Design (3-0-3) Prerequisite: CIS 114 or CIS 335, and Math 226 and Math 333. A course similar to CIS 435, with a project of greater depth and scope. **Effective Until: Fall 2006**

CIS 438 - Interactive Computer Graphics (3-0-3) Prerequisites: completion of a 100-level course in CIS, plus knowledge of Pascal or C. This course introduces fundamental concepts of interactive graphics oriented toward computer-aided design systems. Such systems emerge in engineering, architecture, and manufacturing. Topics include computer data structures for representation of two- and three-dimensional objects and algorithms for definition, modification, and display of these objects in applications. This course will also discuss a selection of special topics in interactive graphics. **Effective Until: Summer 2006**

CIS 439 - Image Processing and Analysis (3-0-3)Prerequisites: CIS 114 and Math 333. This course is an intensive study of the fundamentals of image processing, analysis and understanding. Topics to be covered include: a brief review of the necessary mathematical tools, human visual perception, sampling and quantization, image transformation, enhancement, restoration, compression, reconstruction, image geometric transformation, matching, segmentation, feature extraction, representation and description, recognition and interpretation. **Effective Until: Summer 2006**

CIS 439H - Honors Image Processing and Analysis (3-0-3)Prerequisites: CIS 114 and Math 333. A course similar to CIS 439, with a project of greater depth and scope.

CIS 440 - Computer Vision (3-0-3)Prerequisite: Math 333. This course introduces basic concepts and methodologies of computer vision, and focuses on material that is fundamental and has a broad scope of applications. Topics include contemporary developments in all mainstream areas of computer vision e.g., Image Formation, Feature Representation, Classification and Recognition, Motion Analysis, Camera Calibration, Stereo Vision, Shape From X (shading, texture, motion, etc.), and typical applications such as Biometrics. **Effective Until: Summer 2006**

CIS 441 - Geographic Information Systems (3-0-3)Prerequisite: CIS 431. Geographic Information Systems (GIS) allow individuals and organizations to pose, explore and answer a variety of public- and private-sector questions using spatial data. In this course the student will learn to identify, manipulate and analyze spatial data using state-of-the-art software. The course is project-driven and hands-on: students will define and address real problems using real data. The course will also cover selected topics in information visualization as they relate to the use of GIS. **Effective Until: Summer 2006**

CIS 441H - Honors Geographic Information Systems (3-0-3)Prerequisite: CIS 431. A course similar to CIS 441, with a project of greater depth and scope.

CIS 447 - Human-Computer Interfaces (3-0-3)Prerequisite: CIS 390. This course covers the design and evaluation of the human-computer interface in interactive computer systems. Among the topics covered are approaches to interface design such as menus, commands, direct manipulation; screen layout strategies; metaphor models; models of human information process; evaluation approaches such as protocol for analysis, interactive monitoring, use of surveys; and requirements for documentation and help. Students are expected to design interface mockups and evaluate them. **Effective Until: Summer 2006**

CIS 448 - Ubiquitous Computing ((3-0-3))Handheld devices, mobile and wireless technologies, 'smart spaces', wearables and other technologies are creating a ubiquitous computing environment that is moving application development off the desktop. This course explores recent developments in both the technical and Human Computer Interaction(HCI) side of ubiquitous computing. To put into practice what is being learned, the class will use scenario based usability engineering techniques to design various aspects of a ubiquitous computing application to be deployed at NJIT. **Effective From: Fall 2005 Until: Summer 2006**

CIS 451 - Data Communications and Networks (3-1-3)Prerequisite: CIS 114. Fundamental concepts in data communications. Topics include: circuit and packet switching, layered network architecture, ISO Network protocols, performance analysis of data communication systems, flow control and alternate routing strategies and algorithms, various types of networks and their interconnections, network security and privacy. Additional topics include systems analysis and design, traffic engineering, planning and forecasting methodologies as applied to data communication networks. **Effective Until: Summer 2006**

CIS 455 - Computer Systems Management (3-0-3)Prerequisite: completion of a 100-level GUR course in CIS. An overview of computing centers and their organization for accomplishing specific objectives. Includes a classification of systems, analysis of cost and size, layout of equipment, methods of accessing computer facilities, equipment selection, and facilities evaluation. **Effective Until: Summer 2006**

CIS 456 - Open Systems Networking (3-0-3)Prerequisite: CIS 114. An introduction to internetworking, including an in-depth study of the architecture of network interconnections, the internet services, and the protocols needed to provide these services. Topics include: architecture of interconnected networks, internet addresses and the address resolution problem, internet protocols, the domain name system, the socket interface, the client-server model of interaction, the OSI transport and application support protocols, and the TCP/IP application protocols. **Effective Until: Summer 2006**

CIS 458 - Technologies for Network Security ((3-0-3))This course provides both an in depth theoretical study and a practical exposure to technologies which are critical in providing secure communication over the Internet. Topics include: remote access security, web security, wireless security, e-mail security, spam and spam filtering techniques, computer viruses and internet worms, honeypots and honeynets, security liability issues and compliance. **Effective From: Fall 2005 Until: Summer 2006**

CIS 461 - Systems Simulation (3-0-3)Prerequisites: completion of a 100-level GUR course in CIS; Math 333. This course introduces computer simulation as an algorithmic problem solving technique. Includes discrete simulation models, elementary theory, stochastic processes, use of simulation languages, random number generators, simulation of probabilistic processes, design of simulation experiments, validation of models, queueing systems, and applications to the design and analysis of operational systems. The GPSS language is covered in detail. **Effective Until: Summer 2006**

CIS 465 - Computer Techniques for Management Information Systems (3-0-3)Prerequisite: CIS 431. Design and programming concepts are presented for automation of management information systems. Includes the organization of files and techniques for processing information based upon organizational requirements and available hardware and software. Some case studies are presented. **Effective Until: Summer 2006**

CIS 465H - Honors Computer Techniques for Management Information Systems (3-0-3)Prerequisite: CIS 431. A course similar to CIS 465, with a project of greater depth and scope.

CIS 467H - Honors Efficient Algorithm Design (3-0-3)Prerequisite: CIS 435 or CIS 335; Math 333. The course focuses on presenting techniques for efficient sequential and parallel algorithm design. Algorithms for numerical and combinatorial problems will be discussed. The use of randomization in the solution of algorithmic problems will be explored. Applications to be considered include string matching, polynomials and FFT algorithms, sorting networks, algebraic computations and primality testing and factoring, matrix operations, randomized algorithms for sorting and selection, and data compression. **Effective Until: Fall 2006**

CIS 475 - Evaluation of Computer Applications (3-0-3)Prerequisite: a course in probability and statistics, or social science research methods. Methods for identifying usability problems and for testing the relative merits of alternative designs for interactive systems. Following a review of ** pending approval usability heuristics, students read journal articles about and practice five different methods: semi-structured interviews, protocol analysis, cognitive walkthroughs, user surveys, and controlled experiments. **Effective Until: Summer 2006**

CIS 478 - Software Tools for Solving Problems (3-0-3)Prerequisites: junior or senior standing, permission of instructor. Provides students with an opportunity to interact directly with industry and solve actual problems using various -information-systems software tools. At the beginning of the semester, company representatives present actual problems they are facing, and the students work in groups to develop a solution, which they present at the end of the term. Presentation skills, working in groups, and using software tools for problem solving are stressed. **Effective Until: Summer 2006**

CIS 480 - Theory of Languages (3-0-3)Prerequisite: CIS 280 and CIS 341. The formal treatment of programming language translation and compiler design concepts. Emphasis on theoretical aspects of parsing context-free languages, translation specifications and machine-independent code optimization. A programming project to demonstrate the concepts covered in the course is required in addition to class work and examinations. **Effective Until: Summer 2006**

CIS 482 - Data Mining (3-0-3)Prerequisite: CIS 431. The course covers the concepts and principles of advanced data mining systems design; presents methods for association and dependency analysis, classification; prediction; and clustering analysis. **Effective Until: Summer 2006**

CIS 482H - Honors Data Mining (3-0-3)Prerequisite: CIS 431. A course similar to CIS 482, with a project of greater depth and scope.

CIS 484H - Honors Principles of Component Programming (3-0-3)Prerequisite: CIS 288. A comprehensive study of the fundamental concepts and techniques of software development in a component-based environment. Topics include object-oriented Windows programming, components as objects in separate linkage units (DLL's), components in visual programming environments, introduction to CORBA, SOM, COM, and VCL technologies, components as windows or graphics objects, non-visual components, and error reporting from components.

CIS 485 - Special Topics in Computer Science I (3-0-3)Prerequisites: junior standing and/or department approval. The study of new and/or advanced topics in an area of computer science not regularly covered in any other CIS course. The precise topics to be covered in the course, along with prerequisites, will be announced in the semester prior to the offering of the course. A student may register for no more than two semesters of Special Topics. **Effective Until: Summer 2006**

CIS 486 - Special Topics in Computer Science II (3-0-3)Prerequisites: Same as for CIS 485. A continuation of CIS 485. **Effective Until: Summer 2006**

CIS 488 - Independent Study in Computer Science (3-0-3)Prerequisites: open only to students in the Honors Program who are

computer science majors and who have the prior approval of the department and the CIS faculty member who will guide the independent study. Independent studies, investigations, research, and reports on advanced topics in computer science. Students must prepare, in collaboration with their faculty mentor and in the semester prior to enrolling in this course, a detailed plan of topics and expected accomplishments for their independent study. This must have the approval of both the department and the faculty mentor. A student may register for no more than one semester of Independent Study. **Effective Until: Summer 2006**

CIS 488H - Honors Independent Study in Computer Science/Information Systems (3-0-3)Prerequisites: honors college computer science or information systems majors who have the prior approval of the department and the CIS faculty member who will guide the independent study. Independent studies, investigations, research, and reports on advanced topics in computer science. Students must prepare, in collaboration with their faculty mentor and in the semester prior to enrolling in this course, a detailed plan of topics and expected accomplishments for their independent study. This must have the approval of both the department and the faculty mentor. A student may register for no more than one semester of independent study **Effective Until: Fall 2006**

CIS 490 - Guided Design in Software Engineering (3-0-3)Prerequisite: senior standing or departmental approval. This course focuses on the methodology for developing software systems. Methods and techniques for functional requirements analysis and specifications, design, coding, testing and proving, integration and maintenance are discussed. Students will prepare a proposal for a project which includes its functional specifications and preliminary design. **Effective Until: Summer 2006**

CIS 491 - Computer Science Project (3-0-3)Prerequisites: CIS 490, senior standing and project proposal approval. An opportunity for the student to integrate the knowledge and skills gained in previous computer science work into an individual research project. The project involves investigation of current literature as well as computer implementation of either a part of a large program or the whole of a small system. The topic should be consonant with the emphasis of direction chosen by the students in their computer science studies. To register for this course, a student must have a written project proposal approved by the department. The proposal must be submitted and approved in the prior semester, usually the third week of November or April. **Effective Until: Summer 2006**

CIS 491H - Honors Computer Science Project (3-0-3)Prerequisites: CIS 490, senior standing in the Honors College and project proposal approval. A course similar to CIS 491, with a project of greater depth and scope. **Effective Until: Summer 2006**

CIS 492 - Information Systems Project (3-0-3)Prerequisites: CIS 465, senior standing, and, in a prior semester, project proposal approved by the faculty advisor. Integration of knowledge and skills gained in previous information systems courses into an individual research project. The project entails investigation of current literature and the design, implementation and evaluation of an information system. **Effective Until: Summer 2006**

CIS 492H - Honors Information Systems Project (3-0-3)Prerequisites: CIS 465, senior standing in the honors college, and, in a prior semester, project proposal approval by the faculty advisor. Similar to CIS 492, with a project of greater depth and scope. * All students at NJIT are required to complete at least one 100-level 2-credit or 3-credit CIS course. The Department of Computer and Information Science offers a set of 100 level courses to satisfy this requirement, and the student should select one based upon his or her intended major. It is imperative that students speak with their advisors prior to enrolling to determine the appropriate CIS course.

CS 444 - Pattern Recognition and Applications (3-0-3)This course introduces basic concepts and methodologies of pattern recognition and applications, and focuses on material that is fundamental and has a broad scope of application. Topics include statistical estimation, classifier design, parameter estimation and unsupervised learning, nonparametric techniques, linear discriminant functions, feature extraction, and clustering, with applications such as human face recognition, fingerprint recognition, iris recognition, and voice recognition.

GRADUATE COURSES:

CIS 500 - Introduction to Systems Analysis (3 credits)Prerequisites: statistics and differential equations. Covers a wide variety of systems oriented approaches to solving complex problems. Illustrative examples are chosen from a wide variety of applications. Mathematical tools are only introduced to the extent necessary to understand the technique and its application to the problem. Topic areas include probabilistic and decision theory models, simulation, morphological analysis, cluster analysis, structural modeling, Delphi and dynamic system models. The role for the computer in applying these techniques to complex problems will be discussed. The student will be exposed to some of the fundamental controversies concerning the appropriateness or validity of systems approaches to human problem solving. **Effective Until: Summer 2006**

CIS 505 - Programming, Data Structures, and Algorithms (3 credits)Prerequisite: knowledge of at least one procedure-oriented language such as PASCAL or C. Computer science students cannot use this course for graduate degree credit. Intensive introduction to computer science principles: a procedure-oriented language such as C++; program design techniques; introductory data structures (linked lists, stacks, sets, trees, graphs); and algorithms (sorting, searching, etc.) and their analysis. Programming assignments are included. **Effective Until: Summer 2006**

CIS 506 - Foundations of Computer Science (3 credits) Prerequisite: knowledge of C/PASCAL. Corequisite: CIS 505. Cannot be used for graduate credit towards the M.S. in Computer Science. Introduction to the concepts of iteration, asymptotic performance analysis of algorithms, recursion, recurrence relations, graphs, automata and logic, and also surveys the main data models used in computer science including trees, lists, sets, and relations. Programming assignments are given. **Effective Until: Summer 2006**

CIS 510 - Assembly Language Programming and Principles (3 credits) Prerequisite: knowledge of at least one procedure-oriented language such as PASCAL, C, or C++. Computer Science students cannot use this course for graduate degree credit. An intensive course in assembly language programming including basic machine organization, the structure of instruction sets, program linkage, macros and macro libraries. Extensive programming assignments are included. **Effective Until: Summer 2006**

CIS 515 - Advanced Computer Programming for Engineers (3 credits) Prerequisite: knowledge of at least one procedure-oriented language such as PASCAL, C, or FORTRAN. Students specializing in computer science may not take this course for credit. This course is designed for engineering students who require an extensive knowledge of programming for their project or thesis work. Topics include review of basic programming techniques, treatment of algorithm design, error analysis and debugging. As time permits, problem-oriented languages are examined. **Effective Until: Summer 2006**

CIS 540 - Fundamentals of Logic and Automata (3 credits) Prerequisite: Math 226 or equivalent (see undergraduate catalog for description). Theory of logic and automata and their influence on the design of computer systems, languages, and algorithms. Covers the application of Boolean algebra to design of finite state machines; formal systems, symbolic logic, computability, halting problem, Church's thesis, and the main ideas of the theory of computation. **Effective Until: Summer 2006**

CIS 565 - Aspects of Information Systems (3 credits) Co-requisite: CIS 431 or permission of the department. Methods and models of supporting the management process; ethical issues pertaining to the construction, deployment, and impact of information systems on organizations and society; description, analysis, and design of information systems to assist problem solving and decision-making in a business environment. **Effective Until: Summer 2006**

CIS 590 - Graduate Co-op Work Experience I (3 additive credits) Prerequisite: students must have the approval of the co-op advisor for the CIS department. Provides on-the-job reinforcement and application of concepts presented in the undergraduate computer science curriculum. Work assignments are identified by the co-op office and developed and approved by the CIS department in conjunction with the student and employer. Students must submit, for CIS department approval, a proposal detailing the nature of the intended work. A report at the conclusion of each semester's work experience is required. Credits for this course may not be applied toward degree requirements for either the bachelor's or master's in computer science. **Effective Until: Summer 2006**

CIS 591 - Graduate Co-op Work Experience II (3 additive credits) Prerequisite: students must have the approval of the co-op advisor for the CIS department. Provides on-the-job reinforcement and application of concepts presented in the undergraduate computer science curriculum. Work assignments are identified by the co-op office and developed and approved by the CIS department in conjunction with the student and employer. Students must submit, for CIS department approval, a proposal detailing the nature of the intended work. A report at the conclusion of the semester work experience is required. Credits for this course may not be applied toward degree requirements for either the bachelor's or master's in computer science. **Effective Until: Summer 2006**

CIS 592 - Graduate Co-op Work Experience III (3 additive credits) Prerequisites: graduate standing, and acceptance by the CIS department and the Division of Career Development Services. Students must have the approval of the co-op advisor for the CIS department. Provides on-the-job reinforcement and application of concepts presented in the undergraduate or graduate computer science curriculum. Work assignments are identified by the co-op office and developed and approved by the CIS department in conjunction with the student and employer. Students must submit, for CIS department approval, a proposal detailing the nature of the intended work. A report at the conclusion of the semester work experience is required. Credits for this course may not be applied toward degree requirements for either the bachelor's or master's in computer science. **Effective Until: Summer 2006**

CIS 601 - Object-Oriented Programming (3 credits) Prerequisite: basic knowledge of C++. Covers the fundamentals of object-oriented programming. Includes object-oriented concepts such as data abstractions, encapsulation, inheritance, dynamic binding, and polymorphism, and uses C++ as the vehicle for illustrating and implementing these concepts. The object-oriented paradigm is systematically employed in the design of all concepts. Effects of this methodology on software maintenance, extensibility, and reuse. Significant programming/design projects. **Effective Until: Summer 2006**

CIS 602 - Java Programming (3 credits) Prerequisite: advanced Web-based programming with an emphasis on the Java language and platform. No prior knowledge of Java is required but students are expected to have a good understanding of object-oriented programming concepts such as encapsulation, inheritance, and polymorphism, experience with C++. Basic constructs and syntax and then the core advanced features. Topics include: networking and sockets, remote method invocation (RMI), database

connectivity (JDBC), Java Beans, multi-threading and lightweight components (Swing). Common gateway interface (CGI) languages and browser scripting (JavaScript and VBScript) are discussed when used as a complement to the functionality of the Java language. Emphasis is on the Java Development Kit version 1.1 (JDK1.1), both deprecated methods and newly introduced features are discussed. **Effective Until: Summer 2006**

CIS 603 - Advanced Programming Environments and Tools (3 credits) Prerequisite: CIS 601. Introduction to Graphical User Interface (GUI) Programming in the X Windows System environment. Design and implementation of the GUI at various levels of abstraction using industry standard software tools. Trade-offs between flexibility and ease of use inherent in GUI building tools. Best suited for the advanced programmer. **Effective Until: Summer 2006**

CIS 604 - Client/Server Computing (3 credits) Prerequisites: CIS 333 and CIS 432 or instructor approval (see undergraduate catalog for descriptions). Fundamentals of client/server architecture as applied to the development of software systems. Concepts of distributed systems such as open systems, middleware, software reengineering, and distributed computing environments. Components of distributed client/server technologies such as X Windows Systems, DCE, CORBA, NFS, and ODBC. Case studies are used to illustrate how client/server techniques can be used in a variety of applications. The importance of standards and their role in client/server architecture, such as Posix, DCE, and COS. Requires creation of distributed applications. **Effective Until: Summer 2006**

CIS 605 - Discrete Event Dynamic Systems (3 credits) Prerequisite: Math 630 or EE 601 or MnE 603 or equivalent. Covers discrete event dynamic system theory and its applications in modeling, control, analysis, validation, simulation, and performance evaluation of computer systems, flexible manufacturing systems, robotic systems, intelligent supervisory control systems, and communication networks. Emphasis on Petri net and automation based approaches. **Effective Until: Summer 2006**

CIS 608 - Cryptography and Security (3-1-3) This course involves computational methods providing secure Internet communication. Among the topics covered are: Security threats in communication systems; conventional cryptography: substitution and transposition codes; distribution of secret key over the Internet; principles of public-key cryptography; RSA and other public-key cryptographic methods; and digital signature protocol. **Effective Until: Summer 2006**

CIS 610 - Data Structures and Algorithms (3 credits) Prerequisite: CIS 505 or CIS 335 or equivalents (see undergraduate catalog for description). Intensive study of the fundamentals of data structures and algorithms. Presents the definitions, representations, processing algorithms for data structures, general design and analysis techniques for algorithms. Covers a broad variety of data structures, algorithms and their applications including linked lists, various tree organizations, hash tables, strings, storage allocation, algorithms for searching and sorting, and a selected collection of other algorithms. Programs are assigned to give students experience in algorithms, data structure design and implementation. **Effective Until: Summer 2006**

CIS 611 - Introduction to Computability and Complexity (3 credits) Prerequisites: mathematics bridge requirements. Introduces the theoretical fundamentals of computing, and provides an understanding of both the inherent capabilities and limitations of computation. The main models of computation are deterministic and non-deterministic Turing machines. Auxiliary models include partial and total recursive functions, first order logic, recursive and recursively enumerable sets, and symbol systems. Covers the essentials of computational theory: first order logic, Russell's Paradox, completeness and consistency, Goedel's Theorem, Church's Thesis, countable and uncountable sets, simulation and computation, diagonalization, dove-tailing, decidable and undecidable problems, reduction, recursion theory, Rice's Theorem, Recursion Theorem, execution time measures, P and NP, polynomial-time reduction, NP-completeness and NP-hardness and formal correctness semantics of programs. **Effective Until: Summer 2006**

CIS 621 - Numerical Analysis I (3 credits) Prerequisite: Math 511 (see undergraduate catalog for description) or an introductory course in numerical methods. An introduction to computational aspects of scientific and engineering problems. Time-dependent phenomena and corresponding quantitative models. Numerical stability and conditioning. Approximation of functions. Interpolation, integration. Solution of nonlinear equations. Ordinary differential equations of the first order. Finite and iterative algorithms for solution of systems of linear equations. Emphasis on computer implementation of algorithms and application to variety of engineering problems. **Effective Until: Summer 2006**

CIS 622 - Numerical Analysis II (3 credits) Prerequisite: Math 511 (see undergraduate catalog for description) or an introductory course in numerical methods. This course covers the theory and design of computer solutions to mathematical equations. Included are iterative methods for solving systems of linear and nonlinear equations, the numerical eigenvalue-eigenvector problem, and methods for solving ordinary and partial differential equations. Emphasis is on the control of errors generated by the computer. **Effective Until: Summer 2006**

CIS 623 - Qualitative Research on Information Systems (3 credits) Prerequisites: CIS 350 (or equivalent covering basics of research in IS) or CIS 675. A review of major qualitative research methods in Information Systems research, including interviews, content analysis, participant observation (ethnography), case and field studies, group techniques, and selected other methods.

Students read and make experiential use of articles providing examples of the use of these methods in the IS journal literature.

Effective Until: Summer 2006

CIS 630 - Operating System Design (3 credits) Prerequisites: CIS 332, CIS 432 (see undergraduate catalog for descriptions) and CIS 505. An intensive study of computer operating system design including multiprogramming, time-sharing, real-time processing, job and task control, synchronization of concurrent processes and processors, resource scheduling, protection, and management of hierarchical storage. **Effective Until: Summer 2006**

CIS 631 - Data Management System Design (3 credits) Prerequisites: knowledge of C and data structures. Acquaintance with fundamental notions of relational database technology. Mathematical properties and usage of database programming languages. Methods of database design and conceptual modeling. Methods of physical storage for database information. Fundamental notions of concurrency control and recovery in database systems. **Effective Until: Summer 2006**

CIS 632 - Advanced Database System Design (3 credits) Prerequisites: CIS 631 and knowledge of C++. Covers the concepts and principles of object-oriented data modeling and database systems, parallel and distributed database systems, database machines, real time (database) systems, multimedia and text databases, and imprecise information retrieval systems. Emphasis is on advanced data modeling, query optimization, indexing techniques, concurrency control, crash recovery, distributed deadlock detection, real-time scheduling, vague retrieval and system performance. **Effective Until: Summer 2006**

CIS 633 - Distributed Systems (3 credits) Prerequisites: completion of bridge requirements. Fundamental topics concerning the design and implementation of distributed computing systems are covered, including interprocess communication, remote procedure calls, authentication, protection, distributed file systems, distributed transactions, replicated data, reliable broadcast protocols, and specifications for distributed programs. All topics will be illustrated with case studies. Optional topics may include synchronization, deadlocks, virtual time, and load balancing. **Effective Until: Summer 2006**

CIS 634 - Information Retrieval (3 credits) Prerequisites: CIS 631. Covers the concepts and principles of information retrieval systems design. Techniques essential for building text databases, document processing systems, office automation systems, and other advanced information management systems. **Effective Until: Summer 2006**

CIS 635 - Computer Programming Languages (3 credits) Prerequisites: CIS 505 and CIS 510. The theory and design of computer language systems; the formal theory of syntax and language classification; a survey of procedure and problem-oriented computer programming languages, their syntax rules, data structures, and operations; control structures and the appropriate environments and methods of their use; a survey of translator types. **Effective Until: Summer 2006**

CIS 636 - Compiling System Design (3 credits) Prerequisite: CIS 635. Compiler organization; interaction of language and compiler design. The front end scanning, parsing, and syntax-directed translation: theory, standard approaches, and techniques; front-end tools such as Lex and Yacc. Attribute grammars. Code generation, register allocation, and scheduling; interaction with the run-time environment. Introduction to static analysis and optimization. As time permits, topics in modern compilers: compiling for object-oriented languages such as C++ or Java, memory hierarchies, pipelining, parallelism. Includes a significant programming component. **Effective Until: Summer 2006**

CIS 637 - Real-Time Systems (3 credits) Prerequisites: completion of bridge requirements. Theory and principles that govern real-time systems design, and mechanisms and methodologies that enable their construction and operation. All aspects of such systems will be covered, including scheduling, device and resource management, communications, machine architecture, kernel software, language design and implementation, specification and user interfaces, and performance analysis and verification techniques. **Effective Until: Summer 2006**

CIS 640 - Recursive Function Theory (3 credits) Prerequisite: CIS 540 or equivalent. Review of basic computability theory. Topics include Church's thesis; unsolvability results; creative, productive, and simple sets; computational complexity; $P=NP$ problem; and classification of solvable problems according to their complexity. **Effective Until: Summer 2006**

CIS 641 - Formal Languages and Automata (3 credits) Prerequisite: Math 226 or equivalent (see undergraduate catalog for description). Fundamentals of automata and formal languages: hierarchy of abstract machines and languages; nondeterministic finite state machines; tape and pushdown automata; context-free and context-sensitive grammars. **Effective Until: Summer 2006**

CIS 650 - Computer Architecture (3 credits) Prerequisites: CIS 251 (see undergraduate catalog for description) and CIS 510. Exploiting instruction level parallelism (ILP) is central to designing modern computers. Presents design techniques used for such computers as IBM Power architectures, DEC Alpha, MIPS R4600, Intel P6, etc. Introduction of Instruction Set Architecture (ISA), various functional units, basic principles of pipelined computers. Modern techniques to ILP including superscalar, super-pipelining,

software pipelining, loop unrolling, and VLIW. Memory hierarchy, including instruction cache, data cache, second level cache, and memory interleaving. Advanced computer architectures, including vector, array processors, interconnection technology, and ATM network of workstations. Hands-on experience designing a simple pipelined computer on screen and using CAD tools such as Cadence or ViewLogic. **Effective Until: Summer 2006**

CIS 651 - Data Communications (3 credits) Prerequisite: Math 333 (see undergraduate catalog for description). Intensive study of the analytic tools required for the analysis and design of data communication systems. Topics include: birth-death queuing systems, Erlang's distribution, bulk-arrival and bulk-service systems, design and analysis of concentrators and multiplexers, elements of Renewal Theory, M/G/1 system, analysis of Time Division Multiplexing, priority queues, analysis of random access systems, time reversibility, open and closed queuing networks, mean value analysis, flow and congestion, control mechanisms, routing algorithms, flow models, and network topological design. **Effective Until: Summer 2006**

CIS 652 - Computer Networks-Architectures, Protocols and Standards (3 Credits) Prerequisite: A high level programming language, Math 333 (see undergraduate catalog for description), or instructor approved equivalents. Intensive study of various network architecture and protocol standards; with emphasis on the Open Systems Interconnection (OSI) model. Topics include: analog and digital transmission, circuit and packet switching, the Integrated Services Digital Network (ISDN), Frame Relay, Broadband ISDN, Cell Relay, SONET, Local Area Networks (CSMA/CD, Token Bus, Token Ring, switched and isochronous Ethernets), Metropolitan Area Networks (FDDI, FDDI-II, DQDB), wireless and satellite networks, synchronization and error control, routing and congestion control, X.25 standard. **Effective Until: Summer 2006**

CIS 653 - Microcomputers and Applications (3 credits) Prerequisite: familiarity with an assembly level and higher-level language. An investigation of the personal computer based on the WinTEI architecture. Programming and use of the various input/output devices via operating system constructs. Use of computer in stand-alone (control) applications and networked applications. Investigation of non-Intel architectures and non-Windows systems as time permits. **Effective Until: Summer 2006**

CIS 654 - Telecommunication Networks Performance Analysis (3 credits) Prerequisites: CIS 651, CIS 652, or instructor approved equivalents. Modeling and analysis of telecommunication networks; with emphasis on Local Area Networks (LANs) and Metropolitan Area Networks (MANs). Case studies will be presented and discussed, and the need for modeling and analysis will be established. Various types of LANs, and MANs will be modeled and analyzed. Problem sets and case studies will be assigned to facilitate understanding of the covered material. **Effective Until: Summer 2006**

CIS 656 - Internet and Higher Layer Protocols (3 credits) The course provides a foundation of knowledge of the Internet and its protocols. Topics include: Addressing, Routing and Forwarding, Classless Interdomain Routing, the IP and ICMP protocols, the UDP and TCP protocols, the layering models in OSI and in TCP/IP, IGMP, Routing methods (RIP, OSPF, BGP), The Domain Name System, The World Wide Web and http. In addition, students will be made familiar with use of a packet sniffer (such as tcpdump or ethereal) and with tools such as ping, nslookup and traceroute. Students will develop the detailed knowledge of packet headers needed to understand output of packet sniffers. **Effective From: Fall 2005 Until: Summer 2006**

CIS 657 - Principles of Interactive Computer Graphics (3 credits) Prerequisites: CIS 505 or familiarity with the organization of at least one computer system, and knowledge of a structured programming language such as C. Graduate-level introduction to computer graphics concepts, algorithms, and systems. Includes 2-D raster graphics, algorithms, 2-D and 3-D geometric transformations, 3-D viewing, curves and surfaces. Emphasis on PC-based graphics programming projects. Principles of interactive graphics systems in terms of the hardware, software and mathematics required for interactive image production. **Effective Until: Summer 2006**

CIS 658 - Multimedia Systems (3 credits) Prerequisite: CIS 601 (Object-Oriented Programming) or equivalent. Multimedia software systems incorporate various media, such as text, images, video and audio, to provide rich experiences for users. This is a course in the design, implementation and evaluation of multimedia systems. The course has three major content areas and goals: (1) multimedia data types-the goal being to understand the development and use of various multimedia data types; (2) usability and user modeling-the goal being to incorporate theories of human perception and cognition into the design and evaluation of multimedia systems; and (3) multimedia design and software tools-the goals being to plan and develop multimedia projects and to be aware of ways in which multimedia is being used in the public and private sectors. Both terms must be completed to receive credit toward the history requirement. **Effective Until: Summer 2006**

CIS 659 - Image Processing and Analysis (3 credits) Prerequisite: CIS 505. Fundamentals of image processing, analysis and understanding. Topics include image representation, image data compression, image enhancement and restoration, feature extraction and shape analysis, region analysis, image sequence analysis and computer vision. **Effective Until: Summer 2006**

CIS 661 - Systems Simulation (3 credits) Prerequisites: an undergraduate or graduate course in probability theory and statistics, and working knowledge of at least one higher-level language. An introduction to the simulation of systems, with emphasis on

underlying probabilistic and statistical methodologies for discrete-event simulations. Design of simulation applications, and simulation programming in a high-level language. Algorithms for the generation of pseudorandom numbers. Algorithmic methodologies for the simulation of discrete and continuous probabilistic processes. Use of statistical tools. Simulation of queuing systems. Applications of simulation to a variety of system studies. The special purpose simulation language GPSS is studied in detail. **Effective Until: Summer 2006**

CIS 662 - Model Analysis and Simulation (3 credits) Prerequisite: introductory course in simulation. Advanced topics in simulation methodology, including design of simulation experiments, variance reduction techniques, estimation procedures, validation, and analysis of simulation results. Queueing systems. Implementing a simulation with the SIMSCRIPT language. Models of continuous systems with applications to elementary socio-economic and industrial systems. Utilization of the DYNAMO II language. **Effective Until: Summer 2006**

CIS 663 - Advanced System Analysis and Design (3 credits) This course focuses on the systems analysis and design techniques employed in the development of software applications. Topics include software process and process models (e.g. Rational Unified Process), project management, structured and object oriented analysis, system design, quality systems, system and software architecture, design patterns, re-use and component-based design, change control and configuration management. Analysis and design will be covered primarily from an object oriented perspective. Students will read selected material from the literature, actively participate in discussions, labs and exercises in addition to participating in projects that involve analysis and design for real-world problems. **Effective Until: Summer 2006**

CIS 665 - Algorithmic Graph Theory (3 credits) Prerequisite: CIS 610. The elements of the theory of graphs and directed graphs with motivating examples from communication networks, data structures, etc; shortest paths, depth first search, matching algorithms, parallel algorithms, minimum spanning trees, basic complexity theory, planarity, and other topics. Programming assignments are included. **Effective Until: Summer 2006**

CIS 667 - Design Techniques for Algorithms (3 credits) Prerequisite: CIS 610. An introduction to the principles of major design techniques in algorithms. Examples from a variety of topics and problems in computer science are used to demonstrate these design techniques and their appropriate application. **Effective Until: Summer 2006**

CIS 668 - Parallel Algorithms (3 credits) Prerequisites: CIS 610 and CIS 650. This course examines a variety of parallel algorithms and architectures. Shared memory algorithms and algorithms for special architectures (tree processors, grids, systolic arrays, butterflies) are considered. The basic theory of algorithm/architecture performance will be described. **Effective Until: Summer 2006**

CIS 669 - Computational Geometry (3 credits) Prerequisite: CIS 610 or permission of the instructor. Intensive study of the fundamentals of computational geometry data structures and algorithms. Emphasis is on the design of efficient algorithms and data structures, proofs of their correctness and complexity analysis. Fundamental topics including geometric searching, convex hull computation, nearest/farthest searching, Voronoi diagrams, Euclidean minimum spanning trees, planar triangulation, planar point location, arrangement of lines. **Effective Until: Summer 2006**

CIS 670 - Artificial Intelligence (3 credits) Prerequisite: CIS 610 and CIS 631. Fundamental concepts and general techniques in artificial intelligence. Main topics include goal tree search, logic and deduction, abduction, uncertainty, fuzzy logic, knowledge representations, machine learning, vision, and action planning. The LISP programming language is used extensively. Students are required to do programming assignments, complete a programming term project, and review case studies. **Effective Until: Summer 2006**

CIS 671 - Knowledge-Based Systems (3 credits) Prerequisite: CIS 670 or equivalent. Deals with the underlying architectures of ? classical? knowledge-based systems, i.e., systems based on a knowledge representation formalism that are built by knowledge acquisition from a domain expert; and advanced database systems, especially object-oriented and deductive databases. **Effective Until: Summer 2006**

CIS 672 - Expert System Methods and Design (3 credits) Prerequisite: CIS 670. Deals with expert systems, expert system shells, programming of rule-based systems, selection of shells, verification and validation of expert systems, and knowledge acquisition techniques for extracting knowledge from domain experts. **Effective Until: Summer 2006**

CIS 673 - Software Design and Production Methodology (3 credits) Prerequisite: CIS 631. Modern techniques and methods employed in the development of large software systems, including a study of each of the major activities occurring during the lifetime of a software system, from conception to obsolescence and replacement. Topics include cost/performance evaluation, documentation requirements, system design and production techniques, system verification techniques, automated aids to system development, and project organization and management. **Effective Until: Summer 2006**

CIS 674 - Natural Language Processing (3 credits) Prerequisite: CIS 670. Deals with techniques of natural language understanding. Topics are syntax and parsing (top down and bottom up), semantics, pragmatics and use of world knowledge in language understanding. Augmented Transition Networks will be used as programming tool set. Good knowledge of LISP or PROLOG. **Effective Until: Summer 2006**

CIS 675 - Information System Evaluation (3 credits) Prerequisites: a course in statistics and CIS 677. Theoretical perspectives and methodological approaches to evaluate information systems within the context of the user and organizational environment. Topics include qualitative techniques such as protocol analysis and interviews; quantitative techniques such as sample surveys and controlled experiment; cost-benefit analysis, and analyses of data gathered by these approaches by methods such as regression, correlation, and analysis of variance. Emphasis on the application of these approaches to improve functionality, interface, and acceptance of information systems in organizations. **Effective Until: Summer 2006**

CIS 676 - Requirements Engineering (3 credits) Prerequisites: completion of bridge requirements, CIS 673 or equivalent project experience in the field. Theory, principles, and practical application of the methodologies and tools of requirements engineering. The focus is development of large software systems and the integration of multiple systems into a comprehensive, domain dependent solution. All aspects of requirements engineering will be covered, including problem analysis, requirements specification techniques and tools, and specification of functional and non-functional requirements. Related technologies like domain analysis and pre-planned systems integration are also discussed. **Effective Until: Summer 2006**

CIS 677 - Information System Principles (3 credits) Prerequisites: familiarity with the organization of a computer system and knowledge of at least one higher-level language. Reviews the role of information systems in organizations and how they relate to organizational objectives and organizational structure. Identifies basic concepts such as the systems point of view, the organization of a system, the nature of information and information flows, the impact of systems upon management and organizations, human information processing and related cognitive concepts. Introduces various types of applications that are part of information systems. The course focus is on management information systems. **Effective Until: Summer 2006**

CIS 678* - Medical Terminologies (3 credits) Describes in depth a number of medical terminologies in common use in the U.S. health care system, such as ICD-9-CM, SNOMED, HL7, MeSH, and especially the UMLS of the National Library of Medicine. Conduct hands-on work with the UMLS and write programs to extract and display information from the UMLS. Also covers European systems such as GALEN/SMK.

CIS 679 - Management of Computer and Information Systems (3 credits) Prerequisite: CIS 675. Management of the development, planning, and utilization of information systems within organizations. Focuses on the current literature in the management of information systems. Topics include the approval and decision process for the development of systems, use of steering committees and various approaches to user involvement. Utilizes a number of Harvard University case studies. Project utilizing professional literature required. **Effective Until: Summer 2006**

CIS 681 - Computer Security Auditing (3 credits) Prerequisites: CIS 601 or CIS 631 or permission of the instructor. Security control risks and issues. Information protection concepts, elements of security systems, computer crime and legal issues, controls and auditing systems, firewall configuration. **Effective Until: Summer 2006**

CIS 682 - Geometric Modeling (3 credits) Prerequisite: CIS 610. The techniques required to describe the shape of an object and to simulate dynamic processes; parametric geometry of curves, surfaces, and solids; and particular formulations for facilitating calculating geometric properties. Fundamentals of solid model construction and analysis are discussed extensively. Some applications in computer graphics, CAD, and CAM are also mentioned. **Effective Until: Summer 2006**

CIS 683 - Object-Oriented Software Development (3 credits) Prerequisites: CIS 635, experience in software design and development or explicit approval of the instructor. Advanced course in software development. Presents the object-oriented methodology for software development and examines various areas to which this methodology can be applied. Analysis, design, and implementation of object-oriented software and the effect of this methodology on code reusability, extensibility, and robustness. Examines object-oriented languages, object-oriented databases, and object-oriented user-interfaces. **Effective Until: Summer 2006**

CIS 684 - Business Process Innovation (3 credits) Prerequisites: CIS 631, CIS 673, knowledge of information systems development. Discusses a balanced approach to business process innovation (BPI) that includes both incremental improvement and re-engineering. Introduces strategy and process alignment, various types of business processes, and process mapping software. Details a BPI implementation methodology, interwoven with many case studies. Students will work on real process re-design projects using a process mapping software product. **Effective Until: Summer 2006**

CIS 686 - Pervasive Computing: An HCI Perspective (3 credits) This course examines Pervasive/Ubiquitous Computing, the trend

toward increasingly ubiquitous connected computing devices in the environment. A trend being brought about by a convergence of advanced electronic, and particularly, wireless technologies and the internet. It does this from a Human Computer Interaction perspective looking at the current and future design of various systems. **Effective From: Fall 2005 Until: Summer 2006**

CIS 688 - Programming for Interactive Environments (3 credits) Prerequisite: knowledge of C++. A thorough study of the fundamental concepts and techniques of programming for modern interactive support environments, better known as graphical user interfaces (GUIs). A balanced blend of principle and practice, incorporating a general paradigm of interactive program development and numerous examples from, and projects in, the major GUI environments. **Effective Until: Summer 2006**

CIS 696 - Network Management and Security (3 credits) Prerequisites: CIS 652 or ECE 683, and CIS 656. Thorough introduction to current network management technology and techniques, and emerging network management standards. In-depth study of the existing network security technology and the various practical techniques that have been implemented for protecting data from disclosure, for guaranteeing authenticity of messages, and for protecting systems from network-based attacks. SNMP family of standards including SNMP, SNMPv2, and RMON (Remote Monitoring), OSI systems management. Various types of security attacks (such as intruders, viruses, and worms). Conventional Encryption and Public Key Cryptology. Various security services and standards (such as Kerberos, Digital Signature Standard, Pretty Good Privacy, SNMPv2 security facility). Same as ECE 638. **Effective Until: Summer 2006**

CIS 697 - Principles of Broadband ISDN and ATM (3 credits) Prerequisite: CIS 652 or ECE 683 or equivalent. Study of the Broadband Integrated Services Digital Network (B-ISDN) architecture and services. In-depth study of the Asynchronous Transfer Mode (ATM), ATM Adaptation Layer (AAL), ATM switching architectures, SONET/SDH, ATM traffic control, broadband integrated traffic models, Operation Administration and Management (OAM) functions, TCP/IP over ATM, and ATM market. Same as ECE 639. **Effective Until: Summer 2006**

CIS 700 - Master's Project (3 credits) Prerequisite: matriculation for the master's degree. An approved project involving design, implementation, and analysis, or theoretical investigation is required of all students in the Master of Science degree program who do not take CIS 701 Master's Thesis. A project proposal must be submitted in a prior semester by an announced date and receive faculty approval. Project work is normally initiated in a computer science course with the knowledge and approval of the instructor who will become the student's project advisor.

CIS 701 - Master's Thesis (6 credits) Prerequisite: matriculation for the master's degree. An approved project involving design, implementation, and analysis or theoretical investigation may be the basis for the thesis. The work will be carried out under the supervision of a designated member of the faculty. The thesis should be of such caliber as to warrant publication in a technical or scientific journal. Approval to register for the thesis must be obtained from the thesis advisor. A student must register for a minimum of 3 credits per semester. Credit will be limited, however, to the 6 credits indicated for the thesis.

CIS 725, 726 - Independent Study in Computer Science I, II (3 credits) Prerequisites: graduate standing and department consent. **Effective Until: Summer 2006**

CIS 730 - Seminar in Database Management Topics (3 credits) Prerequisite: CIS 631. A seminar in which students pursue intensive study of specialized topics in the current literature of database management. Each topic is supported by an initial reading list covering current problems in theory and practice. Students present the results of their studies in class with faculty and invited specialists participating. Topics include, but are not limited to, advanced data modeling, object oriented databases, query languages, semantic optimization, database mapping and integration, physical database architecture, database/knowledge-base integration, distributed databases, database machines, database version control, logical and deductive databases. **Effective Until: Summer 2006**

CIS 731 - Applications of Database Systems (3 credits) Prerequisites: CIS 675 and CIS 631. Restricted to students who are specializing in computer and information systems management. Comparative study of different models of database management systems and their applications. Emphasis on the functions of the database administrator. Includes a survey of physical and logical organization of data, methods of accessing data, characteristics of different models of generalized database management systems, and case studies using these systems from various applications. Student teams design database systems for class projects. **Effective Until: Summer 2006**

CIS 732 - Design of Interactive Systems (3 credits) Prerequisite: CIS 675. Design of interactive systems and human computer interfaces. Covers the current professional literature in this field and the ?knowns? about design. Emphasizes application areas that have a great deal of cognitive variability and diverse user populations. Design interfaces for various applications. The impact of costs and operational practices upon user behavior and current research topics in interface design are covered. **Effective Until: Summer 2006**

CIS 734 - Data Mining (3 credits) Prerequisites: Permission from instructor. Covers the concepts and principles of advanced data mining systems design. Presents methods for association and dependency analysis, classification and predication, and clustering analysis. Optional topics may include Web and scientific data mining, knowledge discovery applications, and current trends in data mining. **Effective Until: Summer 2006**

CIS 735 - Computer Mediated Communication Systems (3 credits) Prerequisite: CIS 675. Seminar for students contemplating research in the following areas: designs and the impact of, computer-based systems for human communication, including electronic mail, computer conferencing, Computer-Supported Cooperative Work (CSCW), Group Decision Support Systems (GDSS), the Internet and the World Wide Web. Topics include alternative design structures, impacts of primarily text-based asynchronous group communication, and recent empirical studies. Completion of a publishable state-of-the-art written review or design of a tailored CMC system is required. **Effective Until: Summer 2006**

CIS 741 - Communication Network Design (3 credits) Prerequisites: CIS 651 and CIS 652. Basic problems of communication network design: analyzes their complexity and provides algorithms, heuristics and other techniques for their solution. **Effective Until: Summer 2006**

CIS 744 - Data Mining and Management in Bioinformatics (3 credits) Prerequisites: CIS 610 or permission of the instructor. Concepts and principles of bioinformatic data mining and management with focus on efficiency and scalability. Methods for indexing and querying biological databases, biological data mining, and algorithmic development for biomolecular and phylogenetic data analysis. Trends and advances in areas such as functional genomics and proteomics, genetic engineering, and large-scale gene expression data analysis. **Effective Until: Summer 2006**

CIS 750 - High Performance Computing (3 credits) Prerequisite: CIS 650. An in-depth study of the state of the art in high performance computing. Topics parallel computer architectures, programming paradigms, and their applications. Parallel architectures include PC clusters, shared-memory multiprocessors, distributed-memory multiprocessors, and multithreaded architectures. Parallel programming paradigms include message passing interface (MPI), its second-generation MPI-2, and multithreaded programming. Applications include computational science and high performance Web and database servers for Internet-based electronic commerce. Students program a parallel machine in class projects. First-hand experience in stable, scalable, high performance computing for Internet-based electronic commerce. **Effective Until: Summer 2006**

CIS 752 - Communication Protocol Synthesis and Analysis (3 credits) Prerequisite: CIS 652 or basic familiarity with communication protocols. An in-depth study of the state of the art of protocol engineering. Enables students to apply the techniques of protocol design to real problems in communication protocols. **Effective Until: Summer 2006**

CIS 754 - Measurement and Evaluation of Software Quality and Performance (3 credits) Prerequisites: Ph.D. core courses, CIS 630, CIS 661. A study of the tools for the measurement of software products and the use of these tools in the evaluation of software quality and performance. Structural and functional models of algorithms, programs, and systems are presented to define the quantitative and subjective characteristics of computer products. Course includes the use of hardware and software tools, the study of simulation and analytic techniques, description of workloads and benchmarks for system evaluation, problems of scale, proof of program correctness, feature value analysis, and the design and interpretation of experiments. **Effective Until: Summer 2006**

CIS 759 - Advanced Image Processing and Analysis (3 credits) Prerequisite: CIS 659. Advanced study of recent research in image processing, analysis, and understanding. Topics include all image processing techniques, high-level recognition approaches, and automated expert vision systems. **Effective Until: Summer 2006**

CIS 762 - Computerized Information Systems for Planning and Forecasting (3 credits) Prerequisite: CIS 675. Capturing and processing of subjective and empirical data for use in planning and forecasting information systems and the incorporation of these facilities into information systems designs. Emphasis on conveying understanding of the limitations of various methods and techniques to meet various planning and forecasting objectives. Use of various techniques such as the Delphi method, structural modeling, cluster analysis and regression approaches. **Effective Until: Summer 2006**

CIS 767 - Decision Support Systems (3 credits) Prerequisite: CIS 675. The design, implementation, and utilization of models and their software support systems for application in managerial decision making at the strategic, tactical, and operational levels. Topics include the perspective of decision-support systems, the management of large simulation models and documentation standards, combined hybrid simulation languages and their applications, financial modeling and financial modeling languages. Systems dynamics and its managerial applications at the strategic level; specialized modeling and analysis software packages for managerial decision making; and recent research in computer-aided tools for capturing group judgment, modeling, and decision-making are also discussed. **Effective Until: Summer 2006**

CIS 775 - Seminar in Software Engineering (3 credits) Prerequisite: CIS 673. A seminar in which students pursue intensive study of specialized topics in the current literature of software engineering. Each topic is supported by an initial reading list on current problems in theory and practice. The results of the studies are discussed in class with students, faculty and invited specialists. **Effective Until: Summer 2006**

CIS 776 - Independent Study in Information Systems (3 credits) Prerequisite: restricted to students in the doctoral program in Information Systems (or students in the joint Rutgers- NJIT PhD in management who major in CIS). Students must have an approved program of study and approval of a faculty advisor to register for this course. Normally used for work on the "state of the art literature review," preceding the thesis, which is then presented to a committee for approval. **Effective Until: Summer 2006**

CIS 777 - Seminar in Software Management and Production (3 credits) Prerequisites: Ph.D. core courses. A seminar in which students pursue intensive study of specialized topics in the current literature of software management and production. Each topic is supported by an initial reading list covering current problems in theory and practice. The results of the studies are discussed in class with students, faculty, and invited specialists participating. Topics include, but are not limited to, theory of algorithm structure, analysis of algorithms and programs, hardware technology assessment, automated tools for software production, software measurements and quality, peripheral device interfaces, data communications, computer networks, distributed processing, software verification, implementation standards, documentation standards, system security, software copyright, and project control and organization. **Effective Until: Summer 2006**

CIS 780 - Computer Vision (3 credits) Prerequisite: CIS 505. This course introduces computational models of computer vision and their implementation on computers, and focuses on material that is fundamental and has a broad scope of application. Topics include contemporary development in all mainstream areas of computer vision e.g., Image Formation, Feature Representation, Classification and Recognition, Motion Analysis, Camera Calibration, 3D Vision, Shape From X, and typical applications such as Biometrics. **Effective Until: Summer 2006**

CIS 782 - Pattern Recognition and Applications (3 credits) Prerequisite: CIS 610. Study of recent advances in development of (statistical and syntactic) pattern algorithm, approximation, and estimation techniques. Topics include statistical estimation theory, classifier design, parameter estimation and unsupervised learning, bias vs. variance, nonparametric techniques, linear discriminant functions, tree classifiers, feature extraction, and clustering. Additional topics include Support Vector machines (SVM), Bayesian Learning, Hidden Markov Models (HMM), evolutionary computation, neural networks, with applications to signal interpretation, time-series prediction, and Biometrics. **Effective Until: Summer 2006**

CIS 785 - Seminar in Computer and Information Science I (3 credits) Prerequisites: determined by nature of topic area. Advance notice of the topics to be covered is given. These seminars examine in depth a special interest area of computer and information science. It emphasizes recent work in area selected for the offering of the course. This course is for master's students and cannot apply toward master's degree credit. **Effective Until: Summer 2006**

CIS 786 - Special Topics in Computer and Information Science (3 credits) Prerequisites: same as for CIS 785. A continuation of CIS 785. **Effective Until: Summer 2006**

CIS 787 - Information Systems PhD Seminar A (1 credit) The seminar includes student presentations related to their research, faculty presentations, and occasional outside speakers. Its goal is to enable students to identify their research areas for the dissertation, and to obtain constructive feedback on their papers and research in progress. Two presentations are required of each student. Open to students in the PhD program in Information Systems. **Effective Until: Summer 2006**

CIS 788 - Information Systems PhD Seminar B (3 credits) Prerequisite: restricted to students in the doctoral program in Information Systems (or students in the joint Rutgers- NJIT PhD in management who major in CIS). The seminar includes student presentations related to their research, faculty presentations, and occasional outside speakers. Its goal is to enable students to identify their research area for the dissertation, and to obtain constructive feedback on their papers and research in progress. Students are required to engage in a research internship under the direction of a faculty member, and to make at least three presentations, including at least one for a paper to be submitted to a professional meeting or journal. **Effective Until: Summer 2006**

CIS 790 - Doctoral Dissertation (Credits as designated) Corequisite: CIS 791. Required for all doctoral students in computer science and for doctoral students in the joint NJIT/Rutgers doctoral program in management who major in computer information systems. A minimum of 36 credits is required. The student must register for at least 6 credits of dissertation while engaged in doctoral research. After 30 credits (additive to a maximum of 6 credits of CIS 792) are completed, students must register for 3 credits each semester until the dissertation is completed.

CIS 791 - Graduate Seminar (Non-credit) Corequisite (for doctoral students only): CIS 790. A seminar in which faculty, students, and invited speakers will present summaries of advanced topics in computer and information systems management. In the course

students and faculty will discuss research procedures, dissertation organization, and content. Students engaged in research will present their own problems and research progress for discussion and criticism. **Effective Until: Summer 2006**

CIS 792 - Pre-Doctoral Research (3 credits) Prerequisite: permission from department chairperson. For students admitted to the doctoral program in computer and information science who have passed the field exam or the qualifying examination. Research is carried out under the supervision of a designated faculty member. Students identify a research problem and prepare a plan to solve the problem. A maximum of 6 credits of CIS 792 may be applied to the CIS 790 requirement. **Effective Until: Summer 2006**

CIS 794 - Computer Science Colloquium (Non-credit) Prerequisite: graduate standing with major in computer science. Colloquium in which national and international experts in the various fields of computer science are invited to present and discuss the results of their recent research. **Effective Until: Summer 2006**

* pending approval

Computer Engineering: Offered by the Department of Electrical and Computer Engineering For current course offerings, please see description under Electrical Engineering

UNDERGRADUATE COURSES:

CoE 101 - Introduction to Electrical and Computer Engineering (1-0-0) Prerequisite: None. Familiarize students with various disciplines, career opportunities and curricula in electrical and computer engineering. Invited speakers include faculty and industrial representatives. **Effective Until: Summer 2003**

CoE 225 - Digital Electronics (3-1-3) Prerequisite: EE 231. Emphasizes the digital applications of electronic devices including diodes, bipolar transistors, and MOS transistors. Topics include inverters based upon bipolar and MOS devices, logic gates, programmable logic arrays, and memory circuits. Studies the design of interface circuitry in digital/analog systems, including digital/analog conversion, analog/digital conversion, and operational amplifier circuits. Students receiving credit for EE 271 and EE 372 cannot receive credit for CoE 225. **Effective Until: Fall 2003**

CoE 252 - Microprocessors (3-0-3) Prerequisites: EE 251 and CIS 101 or CIS 113. An introduction to microprocessor system organization and assembly language programming. Covers the architecture, instruction set and assembly language of a specific microprocessor. Other topics include memory organization, input/output interfacing, interrupt processing as well as exception processing. Also covers the problems associated with the design of a single board computer. Students receiving credit for CIS 453 cannot receive credit for CoE 252. Co-listed as EE 352. **Effective Until: Fall 2003**

CoE 301 - Engineers in Society (2-1-2) Prerequisites: HSS101, HSS202 or their equivalents; two from HSS 211, HSS212, HSS213 or their equivalents. The professional aspects of an engineering career are presented. Topics include ethics and responsibility, the role of the professional society, the importance of communication, and the realities of the workplace. Issues examined include intellectual property rights, privacy and databases, computer crime, computer safety, and civil liberties. Conduct field studies of working engineers. Stresses teamwork and presentation skills. Co-listed as STS 305. **Effective Until: Fall 2003**

CoE 328 - Signal Transmission (2-0-2) Prerequisites: EE 232, EE 251. Familiarization with signal transmission both within and between digital systems. Topics include the telegrapher's equations, wave propagation, lattice diagrams, transients in digital systems, crosstalk, proper termination for high-speed logic, and the transmission characteristics of various interconnecting geometries. **Effective Until: Summer 2003**

CoE 345 - Digital Test (2-0-2) Prerequisites: EE 251 or equivalent, Math 333 or equivalent. Covers theory and practice related to test technology. Topics include fault modeling, test generation, fault simulation, design for testability, fault diagnosis, built-in self-test, scan design, and many others. Surveys several industrial design for testability structures. **Effective Until: Summer 2003**

CoE 353 - Computer Organization and Architecture (3-0-3) Prerequisites: CoE 252, CoE 395. Emphasizes the hardware design of computer systems. Topics include register transfer logic, central processing unit design, microprogramming, ALU design, pipelining, vector processing, micro-coded arithmetic algorithms, I/O organization, memory organization and multiprocessing. **Effective Until: Summer 2003**

CoE 394 - Digital Systems Lab (0-3-1) Prerequisites: CoE 225, CoE 252. Experiments emphasize digital design from basic electronic circuits to complex logic. Topics include switching speed, operational amplifier circuits, basic sequential circuits, the arithmetic/logic unit, and computer memories. **Effective Until: Summer 2003**

CoE 395 - Microprocessor Lab (0-4-2) Prerequisites: EE 291 and either CoE 252 or EE 352. Applies theoretical knowledge of both the hardware and software aspects of microprocessors. Requires construction of a microprocessor based single board computer (SBC), with adequate interfacing capabilities to be able to perform some useful control tasks. Programming of the device is done in assembly language. Some of the experiments that follow the construction project deal with software while others deal with the problems of interfacing of microprocessors. **Effective Until: Summer 2003**

CoE 414 - Introduction to Computer Engineering Project (1-0-1) Prerequisite: Senior standing or permission of instructor. Computer Engineering students will develop a project proposal for the senior design project. Invited faculty and industrial speakers will present project ideas and real examples. **Effective Until: Summer 2003**

CoE 421 - Digital Data Communications (3-0-3) Prerequisites: EE 232, Math 333. Covers communications basics and some topics in digital communications most germane to data communication. Topics include signal classification, correlation, spectral analysis, energy and power spectral density, white noise, signal transmission through linear systems, sampling and quantization, and principles of digital data transmission. **Effective Until: Summer 2003**

CoE 444 - Introduction to Discrete Event Systems (3-0-3) Prerequisites: EE 251 or CIS 251 or equivalent, and Math 333 or EE 321 or equivalent. Introduces logical models, timed models, and stochastic timed models of discrete event systems. Applies petri net methodology to the modeling of computer systems, flexible manufacturing systems, communication networks, and robotics. Contrasts the approaches of _simulation, elementary queueing theory, and Markov processes. **Effective Until: Summer 2003**

CoE 453 - Advanced Computer Architecture I (3-0-3) Prerequisites: CoE 353. Focuses on advanced concepts in computer systems design, and the interaction between hardware and software components at various levels (i.e., hardware/_software codesign). Introduces common performance measures used by hardware and software designers to facilitate comparative analysis. Main topics are: advanced pipelining, good instruction sets, CISC and RISC microprocessors, introduction to parallel computing, and a brief historical survey of computer designs. **Effective Until: Summer 2003**

CoE 456 - Advanced Computer Architecture II (3-0-3) Prerequisite: CoE 453. Topics include memory allocation, single-instruction stream parallelism, parallelism by message passing, shared-resource systems, protection and security, stack-oriented systems, systolic array systems, and data-flow systems. Discusses the relationships between software and hardware levels of system implementation and -operation. **Effective Until: Summer 2003**

CoE 459 - Optical Communication Networks (3-0-3) Prerequisites: EE 232 and either EE 231 or Math 333. Focuses on digital optical networks, architecture, modulation techniques, and detection noise. Related topics are wireless communication, infrared link, and CATV. Computer simulations of network systems are done with commercial software packages. **Effective Until: Summer 2003**

CoE 473 - Wireless Communication Systems (3-0-3) Prerequisites: EE 481 or CoE 421. Introduction to wireless system design and engineering. Develops an understanding and appreciation of the wireless engineering problems such as cellular layout design, resource allocation, mobility management, capacity and performance and signaling load calculations. Introduces physical layer building blocks such as modulation, synchronization, coding, diversity, equalization, and spreading. Note: EE shows as Co-listed as with EE 473. **Effective Until: Summer 2003**

CoE 475 - Digital Image Processing (3-0-3) Prerequisites: Foundation of discrete linear systems and Fourier transform or instructor approval. An introduction to the fundamental techniques for digital image processing. Covers human visual systems, image sensing and acquisition, image sampling and quantization, 1-D and 2-D systems, image enhancement, image restoration, image degradation, features extraction, and image segmentation. **Effective Until: Summer 2003**

CoE 479 - Computer Communications Networks (3-0-3) Prerequisites: EE 321 or Math 333. Introduction to the fundamental concepts of computer communication networks. Topics include the OSI reference model, the physical, data link, network, and transport layers, TCP/IP, LANs (including token ring, token bus, and ethernet), ALOHA, routing and flow control. Co-listed as EE 479. **Effective Until: Summer 2003**

CoE 483 - Data Communications Networking Devices (3-0-3) Prerequisites: CoE 421 or EE 481. Corequisites: CoE 479 or CIS 451. Provides a working knowledge of data communication networking devices, including modems, routers, multiplexers, switches, and concentrators and are used as building blocks in the implementation, modification, or optimization of data communications networks. Emphasizes device design, functionality and physical layer protocols. **Effective Until: Summer 2003**

CoE 485 - Computer Systems Design Lab (1-4-3) Prerequisites: CoE 353, CoE 394. Preparation for putting into practice the concepts learned in CoE 353. Emphasizes hardware design and debugging. Topics include combinational and sequential logic design using CAD tools, design based upon PLA/PLD devices, computer interface design using hardware and software, and an open-ended design project such as a central processing unit design. **Effective Until: Summer 2003**

CoE 494 - Computer Communications Lab (0-3-1) Prerequisites: CoE 421 and CoE 394. Experiments cover signals and circuits in both time and frequency domains, modulation techniques, spectral analysis, transmission technology, signal generation, measurements and detection, distortion analysis, and white noise measurements. **Effective Until: Summer 2003**

CoE 495 - Computer Engineering Project (3-0-3) Prerequisites: CoE 485 and an approved project proposal. Projects must involve the design and execution of both hardware and software or firmware, and include library research, cost estimation and time budgeting. An oral presentation and demonstration of the project must be given. A final written report must be submitted. **Effective Until: Summer 2003**

CoE 496 - Independent Study (3-0-3) Prerequisites: CoE 485 and an approved project proposal. Students work on various individually selected projects guided by the department faculty. The project(s) of each student must be completed and professionally presented by assigned due dates for appropriate review and recording of accomplishment. An oral presentation will be made at a meeting of all students and faculty advisors involved in the course. A formal written report will be presented to the faculty advisor at the end of the course. If the course is used in lieu of CoE 495, the project must meet CoE 495 guidelines. **Effective Until: Summer 2003**

CoE 496H - Honors Independent Study (3-0-3) Prerequisites: CoE 485 and an approved project proposal. Open to students enrolled in the Honors College. Requirements are the same as CoE 496, but projects are more comprehensive and are of greater depth. **Effective Until: Summer 2003**

CoE 498 - Advanced Computer Systems Design Lab (0-3-1) Prerequisites: CoE 453, CoE 485. Corequisite: CoE 456. Design laboratory component of the advanced computer systems technical track offered to CoE majors in the senior year. Experiments emphasize advanced CPU design concepts, such as RISC approaches and exception handling, multiprocessor and systolic array computers, and FPGAs. Develop software programs to test the capabilities of these hardware designs. **Effective Until: Summer 2003**

Computer Science:

UNDERGRADUATE COURSES:

CIS 113A - Lab (0-0-0) Lab for CIS 113. **Effective Until: Summer 2006**

CIS 114A - Lab (0-0-0) Lab for CIS 114. **Effective Until: Summer 2006**

CS 101 - Computer Programming and Problem Solving (2-1-2) An introductory course in computer science, and programming in a high-level language (such as FORTRAN, C, etc.) and its use in solving engineering and scientific problems. The emphasis is on the logical analysis of a problem and the formulation of a computer program leading to its solution. Topics include basic concepts of computer systems, software engineering, algorithm design, programming languages and data abstraction, with applications. Designed for students not specializing in computer science.

CS 102* - Computer Science with Problem Solving (3-1-3)** An introductory course in computer science, with applications to engineering and technology problems. Emphasis on programming methodology using a high level language (such as FORTRAN) as the vehicle to illustrate concepts. Topics include basic concepts of computer systems, software engineering, algorithm design, programming languages and data abstraction, with applications. **Effective From: Fall 2006**

CS 103* - Computer Science with Business Problems (3-1-3)** An introductory course in computer science, with applications to business and managerial decision making. Emphasis on programming methodology using the COBOL language as the vehicle to illustrate concepts. Topics include basic concepts of computer systems, software engineering, algorithm design, programming languages and abstraction, with applications. **Effective From: Fall 2006**

CS 104 - Computer Programming and Graphics Problems (2-1-2) Corequisite: Math 138. An introductory course in computer science with applications in computer graphics for architecture. Emphasis on programming methodology using a high level language as the vehicle to illustrate the concepts. Topics include basic concepts of computer systems, software engineering, algorithm design, programming languages and data abstraction, with applications. **Effective From: Fall 2006**

CS 110 - Introduction to Computer Science IA (3-0-3) First semester of a two course sequence, equivalent to CS 113. Introduces fundamentals of computer science, with emphasis on programming methodology and problem solving. Topics include basic concepts of computer systems, software engineering, algorithm design, programming languages and data abstraction, including the development environment, native types, expressions, objects, classes, decisions, iteration, and methods. A high level language (Java) is fully discussed and serves as the vehicle to illustrate many of the concepts. **Effective From: Fall 2006**

CS 110A - CS 110A Computer Science Lab for CS 111 ((0-1.5-1.5)) Laboratory module for the first course of the sequence equivalent to CS 113. **Effective From: Fall 2006**

CS 111 - Introduction to Computer Science IB (3-0-3) Second semester of a two course sequence, equivalent to CS 113. Introduces fundamentals of computer science, with emphasis on programming methodology and problem solving. Topics include basic concepts of computer systems, software engineering, algorithm design, programming languages and data abstraction, including methods and classes, arrays, collections, inheritance and polymorphism, exceptions, recursion, testing and debugging. A high level language (Java) is fully discussed and serves as the vehicle to illustrate many of the concepts. **Effective From: Fall 2006**

CS 111A - CS111A Computer Science Lab for CS 111 ((0-1.5-1.5)) Laboratory module for the second course of the sequence equivalent to CS 113. **Effective From: Fall 2006**

CS 113 - Introduction to Computer Science (3-1-3) Fundamentals of computer science are introduced, with emphasis on programming methodology and problem solving. Topics include basic concepts of computer systems, software engineering, algorithm design, programming languages and data abstraction, with applications. A high level language is fully discussed and serves as the

vehicle to illustrate many of the concepts. CIS majors should enroll in CS 113. Students who receive degree credit for CS 113 may not receive degree credit for CIS 213. **Effective From: Fall 2006**

CS 113A - Lab (0-0-0) Lab for CS 113. **Effective From: Fall 2006**

CS 113H - Honors Introduction to Computer Science I (3-1-3) Prerequisite: Satisfactory performance on placement exam and/or departmental approval. A course similar to CS 113, but material is covered in greater depth. Honors students contemplating a major in computer science, or who plan to take advanced electives in computer science, should take CS 113H instead of CS 101H. Students who receive degree credit for CS 113H cannot receive degree credit for CS 213. **Effective From: Fall 2006**

CS 114 - Introduction to Computer Science II (3-1-3) Prerequisites: CS 113 or completion of a required 100 level GUR course in CIS, plus an approved CIS 105. A study of advanced programming topics with logical structures of data, their physical representation, design and analysis of computer algorithms operating on the structures, and techniques for program development and debugging. Course covers program specifications, correctness and efficiency, data abstraction, basic aspects of simple data structures, internal searching and sorting, recursion and string processing. Algorithmic analysis is also discussed. Students receiving degree credit for CS 114 cannot receive degree credit for CIS 335 or CIS 505. **Effective From: Fall 2006**

CS 114A - Lab (0-0-0) Lab for CS 114. **Effective From: Fall 2006**

CS 114H - Honors Introduction to Computer Science II (3-1-3) Prerequisites: CS 113H or department approval; A course similar to CS 114, but material is covered in greater depth. Students receiving degree credit for CS 114H cannot receive degree credit for CS 335 or CS 505. **Effective Until: Fall 2006**

CS 115 - Intro. to CS I in C++ (3-0-3) Fundamentals of computer science are introduced, with emphasis on programming methodology and problem solving. Topics include basic concepts of computer systems, software engineering, algorithm design, programming languages and data abstraction, with applications. The high level language C++ is fully discussed and serves as the vehicle to illustrate many of the concepts. CIS majors should enroll in CS 113. **Effective From: Fall 2006**

CS 115A - Computer Science I Lab/C++ (0-1.5-1.5) Laboratory for CS 115. **Effective From: Fall 2006**

CS 116 - Intro. to Computer Science II/C++ (3-0-3) Prerequisites: CS 115 or completion of a required 100 level GUR course in CS, plus an approved CS 105. A study of advanced programming topics with logical structures of data, their physical representation, design and analysis of computer algorithms operating on the structures, and techniques for program development and debugging. Course covers program specifications, correctness and efficiency, data abstraction, basic aspects of simple data structures, internal searching and sorting, recursion and string processing. Algorithmic analysis is also discussed. Students receiving degree credit for CS 116 cannot receive degree credit for CS 505. **Effective From: Fall 2006**

CS 116A - Computer Science II Lab/C++ (0-1.5-1.5) Laboratory for CS 116. **Effective From: Fall 2006**

CS 241 - Foundations of Computer Science I (3-0-3) Prerequisites: CS 114, Math 112. An introduction to the foundations of computer science with emphasis on the development of techniques for the design and proof of correctness of algorithms and the analysis of their computational complexity. Reasoning techniques based on propositional and predicate logic and relational calculus operations with applications to databases will also be introduced. Auxiliary topics such as combinatorics of finite sets, functions and relations, and graph-theory definitions and graph storage alternatives will also be examined. **Effective From: Fall 2006**

CS 251 - Computer Organization (3-0-3) Prerequisite: CS 113. An introduction to computer system structure and organization. Topics include representation of information, circuit analysis and design, register-transfer level, processor architecture and input/output. **Effective From: Fall 2006**

CS 252 - Computer Organization and Architecture (3-0-3) Prerequisite: CS 113. An introduction to the organization and architecture of computer systems, beginning with the standard Von Neumann model and then moving forward to more recent architectural concepts. Among the topics covered are digital logic, data representation, assembly language organization, memory addressing schemes, memory systems, interfacing and functional organization. **Effective From: Fall 2006**

CS 265 - Game Architecture and Design (3-0-3) Prerequisite: IT 201 or equivalent. Course introduces students to the core concepts and design methodologies integral to designing and developing games and other Entertainment Software. **Effective From: Spring 2007**

CS 280 - Programming Language Concepts (3-0-3) Prerequisite: CS 114 or equivalent. Conceptual study of programming

language syntax, semantics and implementation. Course covers language definition structure, data types and structures, control structures and data flow, run-time consideration, and interpretative languages. **Effective From: Fall 2006**

CS 288 - Intensive Programming Practicum (3-0-3) Prerequisite: CS 114 or equivalent, CS 280. The objective of this course is to raise the level of students' programming maturity by a combination of discussion of fundamental concepts and intensive practice in programming intermediate software applications. Students will use a modern development environment that offers comprehensive project management capabilities, and an appropriate programming language to develop their programs using object oriented and generic programming techniques. The course will be organized around a number of programming projects of intermediate size chosen by the faculty to illustrate a spectrum of programming development requirements and techniques. At least one project will be an introduction to programming of modern GUI applications. In addition students will be introduced to standard and commercial API's, class libraries and template libraries. **Effective From: Fall 2006**

CS 310 - Co-op Work Experience I (3) Prerequisites: completion of the sophomore year, approval of the department, and permission of the Office of Cooperative Education and Internships. Students gain major-related work experience and reinforcement of their academic program. Work assignments facilitated and approved by the Co-op office. Mandatory participation in seminars and completion of a report. **Effective From: Fall 2006**

CS 332 - Principles of Operating Systems (3-0-3) Prerequisite: CS 114 or equivalent. Organization of operating systems covering structure, process management and scheduling; interaction of concurrent processes; interrupts; I/O, device handling; memory and virtual memory management and file management. **Effective From: Fall 2006**

CS 332H - Honors Principles of Operating Systems (3-1-3) Prerequisite: CS 114 or equivalent. A course similar to CS 332, with a project of greater depth and scope. **Effective From: Fall 2006**

CS 333 - Introduction to UNIX Operating Systems (3-0-3) Prerequisite: CS 332 or equivalent and knowledge of C language. The course covers the UNIX system kernel including initialization, scheduling, context switching, process management, memory management, device management, and the file system. The course also includes the organization of shells, editors, utilities, and programming tools of the UNIX operating system. **Effective From: Fall 2006**

CS 341 - Foundations of Computer Science II (3-0-0) Prerequisites: (CS 241 or MATH 226) and CS 280. This course provides an introduction to automata theory, computability theory, and complexity theory. Theoretical models such as finite state machines, push-down stack machines, and Turing machines are developed and related to issues in programming language theory. Also, the course covers undecidability and complexity theory, including the classes P and NP. **Effective From: Fall 2006**

CS 341H - Honors Introduction to Logic and Automata (3-0-3) Prerequisites: completion of a 100-level GUR course in CS; CS 280, Math 226 or Math 326. A course similar to CS 341, with a project of greater depth and scope. **Effective From: Fall 2006**

CS 352 - Parallel Computers and Programming (3-1-3) Prerequisites: CS 252, CS 332. A course introducing parallel computers and parallel programming. General structures and design techniques of parallel computers are described. Programming paradigms and algorithm design considerations for parallel processors will be discussed. **Effective From: Fall 2006**

CS 353 - Advanced Computer Organization (3-0-3) Prerequisite: CS 252 or instructor approved equivalent. This course emphasizes the basic design principles of various components in a computer, as well as how the components are organized to build a computer. Topics include: design methodology, arithmetic and logic unit design, control unit design, memory hierarchy, memory system design, input and output devices, peripheral devices, and interfacing computers using software. A software simulation package is used to help the learning process. By the end of the semester, students will have built simulated computer. **Effective From: Fall 2006**

CS 357 - Fundamentals of Network Security (3-0-3) Prerequisite: CS 114. This course offers an in depth study of network security issues, types of computer and network attacks, and effective defenses. It provides both a theoretical foundation in the area of security and hands-on experience with various attack tools, firewalls, and intrusion detection systems. Topics include: network scanning, TCP/IP stack fingerprinting, system vulnerability analysis, buffer overflows, password cracking, session hijacking, denial of service attacks, intrusion detection. **Effective From: Fall 2006**

CS 370 - Introduction to Artificial Intelligence (3-1-3) Prerequisites: CS 114 and (Math 226 or CS 241). An exploration of concepts, approaches and techniques of artificial intelligence. Emphasizes both underlying theory and applications. Topics include knowledge representation, parsing language, search, logic, abduction, uncertainty, and learning. LISP and Prolog programming languages used extensively. Students are required to do programming assignments, complete a programming term project and review case studies. **Effective From: Fall 2006**

CS 370H - Honors Introduction to Artificial Intelligence (3-1-3)Prerequisites: CS 114, Math 226. A course similar to CS 370, with a project of greater depth and scope. **Effective From: Fall 2006**

CS 371 - Logic with Applications to Computer Science (3-0-3)Prerequisites: CS 114, Math 211 and (Math 226 or CS 241). An introduction to both the syntax and semantics (basic model theory) of first-order logic, covering one set of inference rules, sequent calculus or a tableau system and prove the completeness theorem for the proof system. You will also cover a relatively modern (and simpler) form of Incompleteness theorems and relate it to computational issues such as the halting problem, as well as issues related to automating logical reasoning. These will include Herbrand's theorem, resolution, and logic programming. **Effective From: Fall 2006**

CS 371H - Honors Logic with Applications to Computer Science (3-0-3)Prerequisites: CS 114; Math 211 and 226. A course similar to CS 371, with a project of greater depth and scope. **Effective From: Fall 2006**

CS 375 - World Wide Web Standards (3-0-3)Prerequisite: CIS 114. A state-of-the-art computer programming language/environment, such as Java and related tools, is studied and used as a vehicle to build applications that involve graphical user-interfaces, simple graphics, multithreading, images, animation, audio, database connectivity, remote objects, and networking. **Effective From: Fall 2006**

CS 408 - Cryptography and Internet Security (3-0-3)Prerequisite: Math 226 or CS 241. Covers security requirements for telecommunication over the Internet and other communication networks, various conventional and public-key encryption protocols, digital encryption standard, RSA and ElGamal cryptographic systems, digital signature algorithm and analysis of its cryptocommunity, and access sharing schemes. Students receiving credit for CS 408 may not enroll in CIS 608. **Effective From: Fall 2006**

CS 410 - Co-op Work Experience II (3 additive credits)Prerequisites: CS 310 or its equivalent, approval of the department, and permission of the Office of Cooperative Education and Internships. Provides major-related work experience as co-op/internship. Mandatory participation in seminars and completion of requirements that include a report and/or project. **Effective From: Fall 2006**

CS 421 - Numerical Algorithms (3-0-3)Prerequisite: completion of a 100-level GUR course in CIS. Corequisite: Math 222. This course deals with fundamentals of numerical methods, including discussion of errors, interpolation and approximation, linear systems of equations, solution of nonlinear equations, and numerical solution of ordinary differential equations. The algorithmic approach and the efficient use of the computer are emphasized. **Effective From: Fall 2006**

CS 431 - Database System Design and Management (3-0-3)Prerequisite: CS 114 or equivalent. Database system architecture; data modeling using the entity-relationship model; storage of databases; the hierarchical, network and relational data models; formal and commercial query languages; functional dependencies and normalization for relational database design; relation decomposition; concurrency control and transactions management. Student projects involve the use of a DBMS package. **Effective From: Fall 2006**

CS 431H - Honors Database System Design and Management (3-0-3)Prerequisite: CS 114 or equivalent. A course similar to CS 431, with a project of greater depth and scope. **Effective From: Fall 2006**

CS 432 - Advanced Operating Systems (3-0-3)Prerequisites: CS 252, CS 332. A survey of the design and implementation of distributed operating systems, both by introducing basic concepts and considering examples of current systems. Topics include: communication, synchronization, processor allocation, and distributed file systems. **Effective From: Fall 2006**

CS 434 - Advanced Database Systems (3-0-3)Prerequisites: CS 431. The course covers the basic concepts of traditional files and file processing, provides a "classic" introduction to the relational data model and its languages, and discusses database design methodology and application developments. Students are expected to learn the design of database application systems through a small project and to get some practical hands-on experience with commercial database management systems (DBMS) by writing application programs using the commercial DBMS query languages. **Effective From: Fall 2006**

CS 434H - Honors Advanced Database Systems (3-0-3)Prerequisites: CS 431. A course similar to CS 434, with a project of greater depth and scope. **Effective From: Fall 2006**

CS 435 - Advanced Data Structures and Algorithm Design (3-0-3)Prerequisite: CS 114 and (Math 226 or CS 241). Advanced topics in data structures and algorithms, including mathematical induction, analysis and complexity of algorithms, and algorithms involving sequences, sets, and graphs such as searching, sorting, order statistics, sequence comparisons, graph traversals, etc. Optional topics include geometric, algebraic, and numeric algorithms. **Effective From: Fall 2006**

CS 435H - Honors Advanced Data Structures and Algorithm Design (3-0-3)Prerequisite: CS 114 or CS 335, and Math 226 and Math 333. A course similar to CS 435, with a project of greater depth and scope. **Effective From: Fall 2006**

CS 438 - Interactive Computer Graphics (3-0-3)Prerequisites: completion of a 100-level course in CIS, plus knowledge of a higher level language. This course introduces fundamental concepts of interactive graphics oriented toward computer-aided design systems. Such systems emerge in engineering, architecture, and manufacturing. Topics include computer data structures for representation of two- and three-dimensional objects and algorithms for definition, modification, and display of these objects in applications. This course will also discuss a selection of special topics in interactive graphics. **Effective From: Fall 2006**

CS 439 - Image Processing and Analysis (3-0-3)Prerequisites: CS 114 and Math 333. This course is an intensive study of the fundamentals of image processing, analysis and understanding. Topics to be covered include: a brief review of the necessary mathematical tools, human visual perception, sampling and quantization, image transformation, enhancement, restoration, compression, reconstruction, image geometric transformation, matching, segmentation, feature extraction, representation and description, recognition and interpretation. **Effective From: Fall 2006**

CS 440 - Computer Vision (3-0-3)Prerequisite: Math 333. This course introduces basic concepts and methodologies of computer vision, and focuses on material that is fundamental and has a broad scope of applications. Topics include contemporary developments in all mainstream areas of computer vision e.g., Image Formation, Feature Representation, Classification and Recognition, Motion Analysis, Camera Calibration, Stereo Vision, Shape From X (shading, texture, motion, etc.), and typical applications such as Biometrics. **Effective From: Fall 2006**

CS 441 - Database Programming (3-0-3)Many technologies have been developed due to the interplay between World-Wide Web Development and Databases on one hand and the growth of Database applications in E-Commerce on the other hand. Today, practically every E-Commerce application has at least a Web component and a Database Component. Many languages have been developed in order to deal with these interactions. The proposed course will focus on accessing databases through the web but also mention new developments in the field. **Effective From: Fall 2006**

CS 451 - Data Communications and Networks (3-1-3)Prerequisite: CS 114. Fundamental concepts in data communications. Topics include: circuit and packet switching, layered network architecture, ISO Network protocols, performance analysis of data communication systems, flow control and alternate routing strategies and algorithms, various types of networks and their interconnections, network security and privacy. Additional topics include systems analysis and design, traffic engineering, planning and forecasting methodologies as applied to data communication networks. **Effective From: Fall 2006**

CS 456 - Open Systems Networking (3-0-3)Prerequisite: CS 114. An introduction to internetworking, including an in-depth study of the architecture of network interconnections, the internet services, and the protocols needed to provide these services. Topics include: architecture of interconnected networks, internet addresses and the address resolution problem, internet protocols, the domain name system, the socket interface, the client-server model of interaction, the OSI transport and application support protocols, and the TCP/IP application protocols. **Effective From: Fall 2006**

CS 458 - Technologies for Network Security (3-0-3)Prerequisite: CS 467. This course provides both an in depth theoretical study and a practical exposure to technologies which are critical in providing secure communication over the Internet. Topics include: remote access security, web security, wireless security, e-mail security, spam and spam filtering techniques, computer viruses and internet worms, honeypots and honeynets, security liability issues and compliance. **Effective From: Fall 2006**

CS 467H - Honors Efficient Algorithm Design (3-0-3)Prerequisite: CS 435 or CS 335; Math 333. The course focuses on presenting techniques for efficient sequential and parallel algorithm design. Algorithms for numerical and combinatorial problems will be discussed. The use of randomization in the solution of algorithmic problems will be explored. Applications to be considered include string matching, polynomials and FFT algorithms, sorting networks, algebraic computations and primality testing and factoring, matrix operations, randomized algorithms for sorting and selection, and data compression. **Effective From: Fall 2006**

CS 478 - Software Tools for Solving Problems (3-0-3)Prerequisites: junior or senior standing, permission of instructor. Provides students with an opportunity to interact directly with industry and solve actual problems using various -information-systems software tools. At the beginning of the semester, company representatives present actual problems they are facing, and the students work in groups to develop a solution, which they present at the end of the term. Presentation skills, working in groups, and using software tools for problem solving are stressed. **Effective From: Fall 2006**

CS 482 - Data Mining (3-0-3)Prerequisite: CS 431. The course covers the concepts and principles of advanced data mining systems design; presents methods for association and dependency analysis, classification; prediction; and clustering analysis. **Effective From: Fall 2006**

CS 485 - Special Topics in Computer Science/Information Systems (3-0-3)Prerequisites: junior standing and/or department approval. The study of new and/or advanced topics in an area of computer science not regularly covered in any other CIS course. The precise topics to be covered in the course, along with prerequisites, will be announced in the semester prior to the offering of the course. A student may register for no more than two semesters of Special Topics. **Effective From: Fall 2006**

CS 486 - Topics in Computer Science/Information Systems (3-0-3)Prerequisites: Same as for CS 485. A continuation of CS 485. **Effective From: Fall 2006**

CS 488 - Independent Study in Computer Science (3-0-3)Prerequisites: open only to students in the Honors Program who are computer science majors and who have the prior approval of the department and the CIS faculty member who will guide the independent study. Independent studies, investigations, research, and reports on advanced topics in computer science. Students must prepare, in collaboration with their faculty mentor and in the semester prior to enrolling in this course, a detailed plan of topics and expected accomplishments for their independent study. This must have the approval of both the department and the faculty mentor. A student may register for no more than one semester of Independent Study. **Effective From: Fall 2006**

CS 488H - Honors Independent Study in Computer Science/Information Systems (3-0-3)Prerequisites: honors college computer science or information systems majors who have the prior approval of the department and the CS faculty member who will guide the independent study. Independent studies, investigations, research, and reports on advanced topics in computer science. Students must prepare, in collaboration with their faculty mentor and in the semester prior to enrolling in this course, a detailed plan of topics and expected accomplishments for their independent study. This must have the approval of both the department and the faculty mentor. A student may register for no more than one semester of independent study **Effective From: Fall 2006**

CS 490 - Guided Design in Software Engineering (3-0-3)Prerequisite: senior standing or departmental approval. This course focuses on the methodology for developing software systems. Methods and techniques for functional requirements analysis and specifications, design, coding, testing and proving, integration and maintenance are discussed. **Effective From: Fall 2006**

CS 491 - Senior Project (3-0-3)Prerequisites: CS 490, senior standing and project proposal approval. An opportunity for the student to integrate the knowledge and skills gained in previous computer science work into a team-based project. The project involves investigation of current literature as well as computer implementation of either a part of a large program or the whole of a small system. **Effective From: Fall 2006**

CS 491H - Honors Computer Science Project (3-0-3)Prerequisites: CS 490, senior standing in the Honors College and project proposal approval. A course similar to CS 491, with a project of greater depth and scope. **Effective From: Fall 2006** ([Archived Versions](#))

GRADUATE COURSES:

CS 505 - Programming, Data Structures, and Algorithms (3 credits)Prerequisite: knowledge of at least one procedure-oriented language such as PASCAL or C. Computer science students cannot use this course for graduate degree credit. Intensive introduction to computer science principles: a procedure-oriented language such as C++; program design techniques; introductory data structures (linked lists, stacks, sets, trees, graphs); and algorithms (sorting, searching, etc.) and their analysis. Programming assignments are included. **Effective From: Fall 2006**

CS 506 - Foundations of Computer Science (3 credits)Prerequisite: knowledge of C/PASCAL. Corequisite: CS 505. Cannot be used for graduate credit towards the M.S. in Computer Science. Introduction to the concepts of iteration, asymptotic performance analysis of algorithms, recursion, recurrence relations, graphs, automata and logic, and also surveys the main data models used in computer science including trees, lists, sets, and relations. Programming assignments are given. **Effective From: Fall 2006**

CS 510 - Assembly Language Programming and Principles (3 credits)Prerequisite: knowledge of at least one procedure-oriented language such as PASCAL, C, or C++. Computer Science students cannot use this course for graduate degree credit. An intensive course in assembly language programming including basic machine organization, the structure of instruction sets, program linkage, macros and macro libraries. Extensive programming assignments are included. **Effective From: Fall 2006**

CS 515 - Advanced Computer Programming for Engineers (3 credits)Prerequisite: knowledge of at least one procedure-oriented language such as PASCAL, C, or FORTRAN. Students specializing in computer science may not take this course for credit. This course is designed for engineering students who require an extensive knowledge of programming for their project or thesis work. Topics include review of basic programming techniques, treatment of algorithm design, error analysis and debugging. As time permits, problem-oriented languages are examined. **Effective From: Fall 2006**

CS 540 - Fundamentals of Logic and Automata (3 credits) Prerequisite: Math 226 or equivalent (see undergraduate catalog for description). Theory of logic and automata and their influence on the design of computer systems, languages, and algorithms. Covers the application of Boolean algebra to design of finite state machines; formal systems, symbolic logic, computability, halting problem, Church's thesis, and the main ideas of the theory of computation. **Effective From: Fall 2006**

CS 590 - Graduate Co-op Work Experience I (3 additive credits) Prerequisite: students must have the approval of the co-op advisor for the CIS department. Provides on-the-job reinforcement and application of concepts presented in the undergraduate computer science curriculum. Work assignments are identified by the co-op office and developed and approved by the CIS department in conjunction with the student and employer. Students must submit, for CIS department approval, a proposal detailing the nature of the intended work. A report at the conclusion of each semester's work experience is required. Credits for this course may not be applied toward degree requirements for either the bachelor's or master's in computer science. **Effective From: Fall 2006**

CS 591 - Graduate Co-op Work Experience II (3 additive credits) Prerequisite: students must have the approval of the co-op advisor for the CIS department. Provides on-the-job reinforcement and application of concepts presented in the undergraduate computer science curriculum. Work assignments are identified by the co-op office and developed and approved by the CIS department in conjunction with the student and employer. Students must submit, for CIS department approval, a proposal detailing the nature of the intended work. A report at the conclusion of the semester work experience is required. Credits for this course may not be applied toward degree requirements for either the bachelor's or master's in computer science. **Effective From: Fall 2006**

CS 592 - Graduate Co-op Work Experience III (3 additive credits) Prerequisites: graduate standing, and acceptance by the CIS department and the Division of Career Development Services. Students must have the approval of the co-op advisor for the CIS department. Provides on-the-job reinforcement and application of concepts presented in the undergraduate or graduate computer science curriculum. Work assignments are identified by the co-op office and developed and approved by the CIS department in conjunction with the student and employer. Students must submit, for CIS department approval, a proposal detailing the nature of the intended work. A report at the conclusion of the semester work experience is required. Credits for this course may not be applied toward degree requirements for either the bachelor's or master's in computer science. **Effective From: Fall 2006**

CS 593 - Graduate Co-op Work Experience IV (0 credits) Prerequisites: One immediately prior 3-credit registration for graduate co-op work experience with the same employer. Requires approval of departmental co-op advisor and the Division of Career Development Services. Must have accompanying registration in a minimum of 3 credits of course work. **Effective From: Fall 2006**

CS 601 - Object-Oriented Programming (3 credits) Prerequisite: basic knowledge of C++. Covers the fundamentals of object-oriented programming. Includes object-oriented concepts such as data abstractions, encapsulation, inheritance, dynamic binding, and polymorphism, and uses C++ as the vehicle for illustrating and implementing these concepts. The object-oriented paradigm is systematically employed in the design of all concepts. Effects of this methodology on software maintenance, extensibility, and reuse. Significant programming/design projects. **Effective From: Fall 2006**

CS 602 - Java Programming (3 credits) Prerequisite: advanced Web-based programming with an emphasis on the Java language and platform. No prior knowledge of Java is required but students are expected to have a good understanding of object-oriented programming concepts such as encapsulation, inheritance, and polymorphism, experience with C++. Basic constructs and syntax and then the core advanced features. Topics include: networking and sockets, remote method invocation (RMI), database connectivity (JDBC), Java Beans, multi-threading and lightweight components (Swing). Common gateway interface (CGI) languages and browser scripting (JavaScript and VBScript) are discussed when used as a complement to the functionality of the Java language. Emphasis is on the Java Development Kit version 1.1 (JDK1.1), both deprecated methods and newly introduced features are discussed. **Effective From: Fall 2006**

CS 603 - Advanced Programming Environments and Tools (3 credits) Prerequisite: CS 601. Introduction to Graphical User Interface (GUI) Programming in the X Windows System environment. Design and implementation of the GUI at various levels of abstraction using industry standard software tools. Trade-offs between flexibility and ease of use inherent in GUI building tools. Best suited for the advanced programmer. **Effective From: Fall 2006**

CS 604 - Client/Server Computing (3 credits) Prerequisites: CS 333 and CS 432 or instructor approval (see undergraduate catalog for descriptions). Fundamentals of client/server architecture as applied to the development of software systems. Concepts of distributed systems such as open systems, middleware, software reengineering, and distributed computing environments. Components of distributed client/server technologies such as X Windows Systems, DCE, CORBA, NFS, and ODBC. Case studies are used to illustrate how client/server techniques can be used in a variety of applications. The importance of standards and their role in client/server architecture, such as Posix, DCE, and COS. Requires creation of distributed applications. **Effective From: Fall 2006**

CS 605 - Discrete Event Dynamic Systems (3 credits) Prerequisite: Math 630 or EE 601 or MnE 603 or equivalent. Covers discrete event dynamic system theory and its applications in modeling, control, analysis, validation, simulation, and performance evaluation of

computer systems, flexible manufacturing systems, robotic systems, intelligent supervisory control systems, and communication networks. Emphasis on Petri net and automation based approaches. **Effective From: Fall 2006**

CS 608 - Cryptography and Security (3-1-3)This course involves computational methods providing secure Internet communication. Among the topics covered are: Security threats in communication systems; conventional cryptography: substitution and transposition codes; distribution of secret key over the Internet; principles of public-key cryptography; RSA and other public-key cryptographic methods; and digital signature protocol. **Effective From: Fall 2006**

CS 610 - Data Structures and Algorithms (3 credits)Prerequisite: CS 505 or CIS 335 or equivalents (see undergraduate catalog for description). Intensive study of the fundamentals of data structures and algorithms. Presents the definitions, representations, processing algorithms for data structures, general design and analysis techniques for algorithms. Covers a broad variety of data structures, algorithms and their applications including linked lists, various tree organizations, hash tables, strings, storage allocation, algorithms for searching and sorting, and a selected collection of other algorithms. Programs are assigned to give students experience in algorithms, data structure design and implementation. **Effective From: Fall 2006**

CS 611 - Introduction to Computability and Complexity (3 credits)Prerequisites: mathematics bridge requirements. Introduces the theoretical fundamentals of computing, and provides an understanding of both the inherent capabilities and limitations of computation. The main models of computation are deterministic and non-deterministic Turing machines. Auxiliary models include partial and total recursive functions, first order logic, recursive and recursively enumerable sets, and symbol systems. Covers the essentials of computational theory: first order logic, Russel's Paradox, completeness and consistency, Goedel's Theorem, Church's Thesis, countable and uncountable sets, simulation and computation, diagonalization, dove-tailing, decidable and undecidable problems, reduction, recursion theory, Rice's Theorem, Recursion Theorem, execution time measures, P and NP, polynomial-time reduction, NP-completeness and NP-hardness and formal correctness semantics of programs. **Effective From: Fall 2006**

CS 621 - Numerical Analysis I (3 credits)Prerequisite: Math 511 (see undergraduate catalog for description) or an introductory course in numerical methods. An introduction to computational aspects of scientific and engineering problems. Time-dependent phenomena and corresponding quantitative models. Numerical stability and conditioning. Approximation of functions. Interpolation, integration. Solution of nonlinear equations. Ordinary differential equations of the first order. Finite and iterative algorithms for solution of systems of linear equations. Emphasis on computer implementation of algorithms and application to variety of engineering problems. **Effective From: Fall 2006**

CS 622 - Numerical Analysis II (3 credits)Prerequisite: Math 511 (see undergraduate catalog for description) or an introductory course in numerical methods. This course covers the theory and design of computer solutions to mathematical equations. Included are iterative methods for solving systems of linear and nonlinear equations, the numerical eigenvalue-eigenvector problem, and methods for solving ordinary and partial differential equations. Emphasis is on the control of errors generated by the computer. **Effective From: Fall 2006**

CS 630 - Operating System Design (3 credits)Prerequisites: CS 332, CS 432 (see undergraduate catalog for descriptions) and CS 505. An intensive study of computer operating system design including multiprogramming, time-sharing, real-time processing, job and task control, synchronization of concurrent processes and processors, resource scheduling, protection, and management of hierarchical storage. **Effective From: Fall 2006**

CS 631 - Data Management System Design (3 credits)Prerequisites: knowledge of C and data structures. Acquaintance with fundamental notions of relational database technology. Mathematical properties and usage of database programming languages. Methods of database design and conceptual modeling. Methods of physical storage for database information. Fundamental notions of concurrency control and recovery in database systems. **Effective From: Fall 2006**

CS 632 - Advanced Database System Design (3 credits)Prerequisites: CS 631 and knowledge of C++. Covers the concepts and principles of object-oriented data modeling and database systems, parallel and distributed database systems, database machines, real time (database) systems, multimedia and text databases, and imprecise information retrieval systems. Emphasis is on advanced data modeling, query optimization, indexing techniques, concurrency control, crash recovery, distributed deadlock detection, real-time scheduling, vague retrieval and system performance. **Effective From: Fall 2006**

CS 633 - Distributed Systems (3 credits)Prerequisites: completion of bridge requirements. Fundamental topics concerning the design and implementation of distributed computing systems are covered, including interprocess communication, remote procedure calls, authentication, protection, distributed file systems, distributed transactions, replicated data, reliable broadcast protocols, and specifications for distributed programs. All topics will be illustrated with case studies. Optional topics may include synchronization, deadlocks, virtual time, and load balancing. **Effective From: Fall 2006**

CS 635 - Computer Programming Languages (3 credits)Prerequisites: CS 505 and CS 510. The theory and design of computer

language systems; the formal theory of syntax and language classification; a survey of procedure and problem-oriented computer programming languages, their syntax rules, data structures, and operations; control structures and the appropriate environments and methods of their use; a survey of translator types. **Effective From: Fall 2006**

CS 636 - Compiling System Design (3 credits) Prerequisite: CS 635. Compiler organization; interaction of language and compiler design. The front end scanning, parsing, and syntax-directed translation: theory, standard approaches, and techniques; front-end tools such as Lex and Yacc. Attribute grammars. Code generation, register allocation, and scheduling; interaction with the run-time environment. Introduction to static analysis and optimization. As time permits, topics in modern compilers: compiling for object-oriented languages such as C++ or Java, memory hierarchies, pipelining, parallelism. Includes a significant programming component. **Effective From: Fall 2006**

CS 637 - Real-Time Systems (3 credits) Prerequisites: completion of bridge requirements. Theory and principles that govern real-time systems design, and mechanisms and methodologies that enable their construction and operation. All aspects of such systems will be covered, including scheduling, device and resource management, communications, machine architecture, kernel software, language design and implementation, specification and user interfaces, and performance analysis and verification techniques. **Effective From: Fall 2006**

CS 640 - Recursive Function Theory (3 credits) Prerequisite: CS 540 or equivalent. Review of basic computability theory. Topics include Church's thesis; unsolvability results; creative, productive, and simple sets; computational complexity; P=NP problem; and classification of solvable problems according to their complexity. **Effective From: Fall 2006**

CS 641 - Formal Languages and Automata (3 credits) Prerequisite: Math 226 or equivalent (see undergraduate catalog for description). Fundamentals of automata and formal languages: hierarchy of abstract machines and languages; nondeterministic finite state machines; tape and pushdown automata; context-free and context-sensitive grammars. **Effective From: Fall 2006**

CS 650 - Computer Architecture (3 credits) Prerequisites: CS 251 (see undergraduate catalog for description) and CIS 510. Exploiting instruction level parallelism (ILP) is central to designing modern computers. Presents design techniques used for such computers as IBM Power architectures, DEC Alpha, MIPS R4600, Intel P6, etc. Introduction of Instruction Set Architecture (ISA), various functional units, basic principles of pipelined computers. Modern techniques to ILP including superscalar, super-pipelining, software pipelining, loop unrolling, and VLIW. Memory hierarchy, including instruction cache, data cache, second level cache, and memory interleaving. Advanced computer architectures, including vector, array processors, interconnection technology, and ATM network of workstations. Hands-on experience designing a simple pipelined computer on screen and using CAD tools such as Cadence or ViewLogic. **Effective From: Fall 2006**

CS 651 - Data Communications (3 credits) Prerequisite: Math 333 (see undergraduate catalog for description). Intensive study of the analytic tools required for the analysis and design of data communication systems. Topics include: birth-death queuing systems, Erlang's distribution, bulk-arrival and bulk-service systems, design and analysis of concentrators and multiplexers, elements of Renewal Theory, M/G/1 system, analysis of Time Division Multiplexing, priority queues, analysis of random access systems, time reversibility, open and closed queuing networks, mean value analysis, flow and congestion, control mechanisms, routing algorithms, flow models, and network topological design. **Effective From: Fall 2006**

CS 652 - Computer Networks-Architectures, Protocols and Standards (3 Credits) Prerequisite: A high level programming language, Math 333 (see undergraduate catalog for description), or instructor approved equivalents. Intensive study of various network architecture and protocol standards; with emphasis on the Open Systems Interconnection (OSI) model. Topics include: analog and digital transmission, circuit and packet switching, the Integrated Services Digital Network (ISDN), Frame Relay, Broadband ISDN, Cell Relay, SONET, Local Area Networks (CSMA/CD, Token Bus, Token Ring, switched and isochronous Ethernets), Metropolitan Area Networks (FDDI, FDDI-II, DQDB), wireless and satellite networks, synchronization and error control, routing and congestion control, X.25 standard. **Effective From: Fall 2006**

CS 653 - Microcomputers and Applications (3 credits) Prerequisite: familiarity with an assembly level and higher-level language. An investigation of the personal computer based on the WinTEL architecture. Programming and use of the various input/output devices via operating system constructs. Use of computer in stand-alone (control) applications and networked applications. Investigation of non-Intel architectures and non-Windows systems as time permits. **Effective From: Fall 2006**

CS 654 - Telecommunication Networks Performance Analysis (3 credits) Prerequisites: CS 651, CS 652, or instructor approved equivalents. Modeling and analysis of telecommunication networks; with emphasis on Local Area Networks (LANs) and Metropolitan Area Networks (MANs). Case studies will be presented and discussed, and the need for modeling and analysis will be established. Various types of LANs, and MANs will be modeled and analyzed. Problem sets and case studies will be assigned to facilitate understanding of the covered material. **Effective From: Fall 2006**

CS 656 - Internet and Higher Layer Protocols (3 credits)The course provides a foundation of knowledge of the Internet and its protocols. Topics include: Addressing, Routing and Forwarding, Classless Interdomain Routing, the IP and ICMP protocols, the UDP and TCP protocols, the layering models in OSI and in TCP/IP, IGMP, Routing methods (RIP, OSPF, BGP), The Domain Name System, The World Wide Web and http. In addition, students will be made familiar with use of a packet sniffer (such as tcpdump or ethereal) and with tools such as ping, nslookup and traceroute. Students will develop the detailed knowledge of packet headers needed to understand output of packet sniffers. **Effective From: Fall 2006**

CS 657 - Principles of Interactive Computer Graphics (3 credits)Prerequisites: CS 505 or familiarity with the organization of at least one computer system, and knowledge of a structured programming language such as C. Graduate-level introduction to computer graphics concepts, algorithms, and systems. Includes 2-D raster graphics, algorithms, 2-D and 3-D geometric transformations, 3-D viewing, curves and surfaces. Emphasis on PC-based graphics programming projects. Principles of interactive graphics systems in terms of the hardware, software and mathematics required for interactive image production. **Effective From: Fall 2006**

CS 659 - Image Processing and Analysis (3 credits)Prerequisite: CS 505. Fundamentals of image processing, analysis and understanding. Topics include image representation, image data compression, image enhancement and restoration, feature extraction and shape analysis, region analysis, image sequence analysis and computer vision. **Effective From: Fall 2006**

CS 661 - Systems Simulation (3 credits)Prerequisites: an undergraduate or graduate course in probability theory and statistics, and working knowledge of at least one higher-level language. An introduction to the simulation of systems, with emphasis on underlying probabilistic and statistical methodologies for discrete-event simulations. Design of simulation applications, and simulation programming in a high-level language. Algorithms for the generation of pseudorandom numbers. Algorithmic methodologies for the simulation of discrete and continuous probabilistic processes. Use of statistical tools. Simulation of queuing systems. Applications of simulation to a variety of system studies. The special purpose simulation language GPSS is studied in detail. **Effective From: Fall 2006**

CS 662 - Model Analysis and Simulation (3 credits)Prerequisite: introductory course in simulation. Advanced topics in simulation methodology, including design of simulation experiments, variance reduction techniques, estimation procedures, validation, and analysis of simulation results. Queueing systems. Implementing a simulation with the SIMSCRIPT language. Models of continuous systems with applications to elementary socio-economic and industrial systems. Utilization of the DYNAMO II language. **Effective From: Fall 2006**

CS 665 - Algorithmic Graph Theory (3 credits)Prerequisite: CS 610. The elements of the theory of graphs and directed graphs with motivating examples from communication networks, data structures, etc; shortest paths, depth first search, matching algorithms, parallel algorithms, minimum spanning trees, basic complexity theory, planarity, and other topics. Programming assignments are included. **Effective From: Fall 2006**

CS 667 - Design Techniques for Algorithms (3 credits)Prerequisite: CS 610. An introduction to the principles of major design techniques in algorithms. Examples from a variety of topics and problems in computer science are used to demonstrate these design techniques and their appropriate application. **Effective From: Fall 2006**

CS 668 - Parallel Algorithms (3 credits)Prerequisites: CS 610 and CS 650. This course examines a variety of parallel algorithms and architectures. Shared memory algorithms and algorithms for special architectures (tree processors, grids, systolic arrays, butterflies) are considered. The basic theory of algorithm/architecture performance will be described. **Effective From: Fall 2006**

CS 669 - Computational Geometry (3 credits)Prerequisite: CS 610 or permission of the instructor. Intensive study of the fundamentals of computational geometry data structures and algorithms. Emphasis is on the design of efficient algorithms and data structures, proofs of their correctness and complexity analysis. Fundamental topics including geometric searching, convex hull computation, nearest/farthest searching, Voronoi diagrams, Euclidean minimum spanning trees, planar triangulation, planar point location, arrangement of lines. **Effective From: Fall 2006**

CS 670 - Artificial Intelligence (3 credits)Prerequisite: CS 610 and CS 631. Fundamental concepts and general techniques in artificial intelligence. Main topics include goal tree search, logic and deduction, abduction, uncertainty, fuzzy logic, knowledge representations, machine learning, vision, and action planning. The LISP programming language is used extensively. Students are required to do programming assignments, complete a programming term project, and review case studies. **Effective From: Fall 2006**

CS 671 - Knowledge-Based Systems (3 credits)Prerequisite: CS 670 or equivalent. Deals with the underlying architectures of ? classical? knowledge-based systems, i.e., systems based on a knowledge representation formalism that are built by knowledge acquisition from a domain expert; and advanced database systems, especially object-oriented and deductive databases. **Effective**

From: Fall 2006

CS 672 - Expert System Methods and Design (3 credits) Prerequisite: CS 670. Deals with expert systems, expert system shells, programming of rule-based systems, selection of shells, verification and validation of expert systems, and knowledge acquisition techniques for extracting knowledge from domain experts. **Effective From: Fall 2006**

CS 673 - Software Design and Production Methodology (3 credits) Prerequisite: CS 631. Modern techniques and methods employed in the development of large software systems, including a study of each of the major activities occurring during the lifetime of a software system, from conception to obsolescence and replacement. Topics include cost/performance evaluation, documentation requirements, system design and production techniques, system verification techniques, automated aids to system development, and project organization and management. **Effective From: Fall 2006**

CS 674 - Natural Language Processing (3 credits) Prerequisite: CS 670. Deals with techniques of natural language understanding. Topics are syntax and parsing (top down and bottom up), semantics, pragmatics and use of world knowledge in language understanding. Augmented Transition Networks will be used as programming tool set. Good knowledge of LISP or PROLOG. **Effective From: Fall 2006**

CS 682 - Geometric Modeling (3 credits) Prerequisite: CS 610. The techniques required to describe the shape of an object and to simulate dynamic processes; parametric geometry of curves, surfaces, and solids; and particular formulations for facilitating calculating geometric properties. Fundamentals of solid model construction and analysis are discussed extensively. Some applications in computer graphics, CAD, and CAM are also mentioned. **Effective From: Fall 2006**

CS 688 - Programming for Interactive Environments (3 credits) Prerequisite: knowledge of C++. A thorough study of the fundamental concepts and techniques of programming for modern interactive support environments, better known as graphical user interfaces (GUIs). A balanced blend of principle and practice, incorporating a general paradigm of interactive program development and numerous examples from, and projects in, the major GUI environments. **Effective From: Fall 2006**

CS 696 - Network Management and Security (3 credits) Prerequisites: CS 652 or ECE 683, and CS 656. Thorough introduction to current network management technology and techniques, and emerging network management standards. In-depth study of the existing network security technology and the various practical techniques that have been implemented for protecting data from disclosure, for guaranteeing authenticity of messages, and for protecting systems from network-based attacks. SNMP family of standards including SNMP, SNMPv2, and RMON (Remote Monitoring), OSI systems management. Various types of security attacks (such as intruders, viruses, and worms). Conventional Encryption and Public Key Cryptology. Various security services and standards (such as Kerberos, Digital Signature Standard, Pretty Good Privacy, SNMPv2 security facility). Same as ECE 638. **Effective From: Fall 2006**

CS 697 - Principles of Broadband ISDN and ATM (3 credits) Prerequisite: CS 652 or ECE 683 or equivalent. Study of the Broadband Integrated Services Digital Network (B-ISDN) architecture and services. In-depth study of the Asynchronous Transfer Mode (ATM), ATM Adaptation Layer (AAL), ATM switching architectures, SONET/SDH, ATM traffic control, broadband integrated traffic models, Operation Administration and Management (OAM) functions, TCP/IP over ATM, and ATM market. Same as ECE 639. **Effective From: Fall 2006**

CS 704 - Sequencing and Scheduling (3-0-3) Advanced sequencing and scheduling for job shops, flow lines, and other general manufacturing and production systems are discussed in this course. Both deterministic and stochastic scheduling models are covered in detail. Heuristics and worst case analysis for "unsolvable" hard scheduling problems (NP-C problems) are introduced. **Effective From: Fall 2006**

CS 725 - Independent Study in Computer Science I, II (3 credits) Prerequisites: graduate standing and department consent. **Effective From: Fall 2006**

CS 730 - Seminar in Database Management Topics (3 credits) Prerequisite: CS 631. A seminar in which students pursue intensive study of specialized topics in the current literature of database management. Each topic is supported by an initial reading list covering current problems in theory and practice. Students present the results of their studies in class with faculty and invited specialists participating. Topics include, but are not limited to, advanced data modeling, object oriented databases, query languages, semantic optimization, database mapping and integration, physical database architecture, database/knowledge-base integration, distributed databases, database machines, database version control, logical and deductive databases. **Effective From: Fall 2006**

CS 731 - Applications of Database Systems (3 credits) Prerequisites: IS 675 and CS 631. Restricted to students who are specializing in computer and information systems management. Comparative study of different models of database management

systems and their applications. Emphasis on the functions of the database administrator. Includes a survey of physical and logical organization of data, methods of accessing data, characteristics of different models of generalized database management systems, and case studies using these systems from various applications. Student teams design database systems for class projects.

Effective From: Fall 2006

CS 734 - Data Mining (3 credits) Prerequisites: Permission from instructor. Covers the concepts and principles of advanced data mining systems design. Presents methods for association and dependency analysis, classification and predication, and clustering analysis. Optional topics may include Web and scientific data mining, knowledge discovery applications, and current trends in data mining. **Effective From: Fall 2006**

CS 741 - Communication Network Design (3 credits) Prerequisites: CS 651 and CS 652. Basic problems of communication network design: analyzes their complexity and provides algorithms, heuristics and other techniques for their solution. **Effective From: Fall 2006**

CS 744 - Data Mining and Management in Bioinformatics (3 credits) Prerequisites: CS 610 or permission of the instructor. Concepts and principles of bioinformatic data mining and management with focus on efficiency and scalability. Methods for indexing and querying biological databases, biological data mining, and algorithmic development for bimolecular and phylogenetic data analysis. Trends and advances in areas such as functional genomics and proteomics, genetic engineering, and large-scale gene expression data analysis. **Effective From: Fall 2006**

CS 750 - High Performance Computing (3 credits) Prerequisite: CS 650. An in-depth study of the state of the art in high performance computing. Topics parallel computer architectures, programming paradigms, and their applications. Parallel architectures include PC clusters, shared-memory multiprocessors, distributed-memory multiprocessors, and multithreaded architectures. Parallel programming paradigms include message passing interface (MPI), its second-generation MPI-2, and multithreaded programming. Applications include computational science and high performance Web and database servers for Internet-based electronic commerce. Students program a parallel machine in class projects. First-hand experience in stable, scalable, high performance computing for Internet-based electronic commerce. **Effective From: Fall 2006**

CS 752 - Communication Protocol Synthesis and Analysis (3 credits) Prerequisite: CS 652 or basic familiarity with communication protocols. An in-depth study of the state of the art of protocol engineering. Enables students to apply the techniques of protocol design to real problems in communication protocols. **Effective From: Fall 2006**

CS 759 - Advanced Image Processing and Analysis (3 credits) Prerequisite: CS 659. Advanced study of recent research in image processing, analysis, and understanding. Topics include all image processing techniques, high-level recognition approaches, and automated expert vision systems. **Effective From: Fall 2006**

CS 775 - Seminar in Software Engineering (3 credits) Prerequisite: CS 673. A seminar in which students pursue intensive study of specialized topics in the current literature of software engineering. Each topic is supported by an initial reading list on current problems in theory and practice. The results of the studies are discussed in class with students, faculty and invited specialists. **Effective From: Fall 2006**

CS 777 - Seminar in Software Management and Production (3 credits) Prerequisites: Ph.D. core courses. A seminar in which students pursue intensive study of specialized topics in the current literature of software management and production. Each topic is supported by an initial reading list covering current problems in theory and practice. The results of the studies are discussed in class with students, faculty, and invited specialists participating. Topics include, but are not limited to, theory of algorithm structure, analysis of algorithms and programs, hardware technology assessment, automated tools for software production, software measurements and quality, peripheral device interfaces, data communications, computer networks, distributed processing, software verification, implementation standards, documentation standards, system security, software copyright, and project control and organization. **Effective From: Fall 2006**

CS 780 - Computer Vision (3 credits) Prerequisite: CS 505. This course introduces computational models of computer vision and their implementation on computers, and focuses on material that is fundamental and has a broad scope of application. Topics include contemporary development in all mainstream areas of computer vision e.g., Image Formation, Feature Representation, Classification and Recognition, Motion Analysis, Camera Calibration, 3D Vision, Shape From X, and typical applications such as Biometrics. **Effective From: Fall 2006**

CS 782 - Pattern Recognition and Applications (3 credits) Prerequisite: CS 610. Study of recent advances in development of (statistical and syntactic) pattern algorithm, approximation, and estimation techniques. Topics include statistical estimation theory, classifier design, parameter estimation and unsupervised learning, bias vs. variance, nonparametric techniques, linear discriminant functions, tree classifiers, feature extraction, and clustering. Additional topics include Support Vector machines (SVM), Bayesian

Learning, Hidden Markov Models (HMM), evolutionary computation, neural networks, with applications to signal interpretation, time-series prediction, and Biometrics. **Effective From: Fall 2006**

CS 785 - Seminar in Computer and Information Science I (3 credits) Prerequisites: determined by nature of topic area. Advance notice of the topics to be covered is given. These seminars examine in depth a special interest area of computer and information science. It emphasizes recent work in area selected for the offering of the course. This course is for master's students and cannot apply toward master's degree credit. **Effective From: Fall 2006**

CS 786 - Special Topics (3 credits) Prerequisites: same as for CS 785. A continuation of CS 785. **Effective From: Fall 2006**

CS 791 - Graduate Seminar (Non-credit) Corequisite (for doctoral students only): CIS 790. A seminar in which faculty, students, and invited speakers will present summaries of advanced topics in computer and information systems management. In the course students and faculty will discuss research procedures, dissertation organization, and content. Students engaged in research will present their own problems and research progress for discussion and criticism. **Effective From: Fall 2006**

CS 792 - Pre-Doctoral Research (3 credits) Prerequisite: permission from department chairperson. For students admitted to the doctoral program in computer and information science who have passed the field exam or the qualifying examination. Research is carried out under the supervision of a designated faculty member. Students identify a research problem and prepare a plan to solve the problem. A maximum of 6 credits of CS 792 may be applied to the CIS 790 requirement. **Effective From: Fall 2006**

CS 794 - Computer Science/Information Systems Colloquium (Non-credit) Prerequisite: graduate standing with major in computer science. Colloquium in which national and international experts in the various fields of computer science are invited to present and discuss the results of their recent research. **Effective From: Fall 2006**

CDS 201 - Career Development Seminar (1-0-0) This eight-week course is a requirement for all Career Advancement Program (CAP) sophomore students and is open to all students with higher than first-year standing who have an interest in career exploration and development. Learn effective job search strategies, how to explore and develop career objectives, prepare resumes and cover letters, how to research organizations, and improve interviewing skills. Through discussion, group exercises and actual interview practice sessions, become better prepared to begin the career development and job search process. Guest lecturers from the private and public sectors add a real-world perspective to the classroom experience.

Criminal Justice: Offered by the School of Criminal Justice at Rutgers-Newark

UNDERGRADUATE COURSES:

R202:307 - Culture and Crime (3) For more details go to [Rutgers Catalog](#).

Economics: Offered by the School of Management. See [Management](#) course list for faculty.

UNDERGRADUATE COURSES:

Econ 256 - Microeconomics (3-0-3) The theory of price determination and resource allocation under various market structures. The theory of demand, production, costs, factor and product pricing, income distribution, market failure, implications of government intervention in the market, and comparison of the free enterprise and alternative systems. Students who have received credit for SS 201 may not subsequently receive credit for Econ 256.

Econ 265 - Microeconomics (3-0-3) The theory of price determination and resource allocation under various market structures. The theory of demand, production, costs, factor and product pricing, income distribution, market failure, implications of government intervention in the market, and comparison of the free enterprise and alternative systems. Students who have received credit for SS 201 may not subsequently receive credit for Econ 265.

Econ 266 - Macroeconomics (3-0-3) The theory of national income determination. The determinants of aggregate production, employment and prices, as well as money and banking, business cycles and monetary and fiscal policy. Students who have received credit for SS 201 may not subsequently receive credit for Econ 266.

R220:102 - Introduction to Economics, Macro (3) For more details go to [Rutgers Catalog](#).

R220:304 - Economics of Labor (3) For more details go to [Rutgers Catalog](#).

R220:322 - Introduction to Econometrics (3) For more details go to [Rutgers Catalog](#).

R220:323 - Intermediate Microeconomic Theory (3) For more details go to [Rutgers Catalog](#).

R220:324 - Intermediate Macroeconomic Theory (3) For more details go to [Rutgers Catalog](#).

R220:339 - Economic Development (3) For more details go to [Rutgers Catalog](#).

R220:402 - Advanced Econometrics (3) For more details go to [Rutgers Catalog](#).

GRADUATE COURSES:

Econ 565 - Managerial Economics (3 credits) Managerial decision-making for different markets: structure of industry, vertical integration, conglomerate firms, multinational firms, theory of contestable markets, entry deterrence, estimating demand and cost functions, price discrimination, agency trade, theory of regulation, market signaling and hiring, and theory of share economy.

Ecology and Evolution: Offered by the Department of Ecology and Evolution at Rutgers-New Brunswick

GRADUATE COURSES:

R215:533 - The Behavior of Animal Populations (3 credits) For more details go to [Rutgers Catalog](#).

R215:565 - Community Dynamics (4 credits) For more details go to [Rutgers Catalog](#).

R215:590 - Population Ecology (4 credits) For more details go to [Rutgers Catalog](#).

Electrical and Computer Engineering: Offered by the [Department of Electrical and Computer Engineering](#).

UNDERGRADUATE COURSES:

ECE 101 - Introduction to Electrical and Computer Engineering (1-0-0) Prerequisite: None. Familiarize students with various disciplines, career opportunities and curricula in electrical and computer engineering. Invited speakers include faculty and industrial representatives. **Effective From: Fall 2003** ([Archived Versions](#))

ECE 231 - Circuits and Systems I (3-1-3) Prerequisites: CIS101 or CIS 113, Phys 121, Math 112. The basic concepts of electric circuit theory and system analysis. Topics include basic circuit elements, loop and node analysis, network theorems, sinusoidal steady-state analysis, power, resonance, mutual inductance, and ideal transformers.

ECE 232 - Circuits and Systems II (3-1-3) Prerequisite: ECE 231. Corequisite: Math 222. A continuation of circuits and systems with special emphasis on transient response. Topics include Laplace transform analysis, transfer functions, convolution, Bode diagrams, and Fourier series.

ECE 251 - Digital Design (3-1-3) Prerequisites: Phys 121 and FED 101C and FED 101D. The design of combinational and sequential logic circuits used in digital processing systems and computers. Basic register transfer operations are covered. Topics include Boolean algebra, minimization techniques and the design of logic circuits such as adders, comparators, decoders, multiplexers, counters, arithmetic logic units, and memory systems.

ECE 252 - Microprocessors (3-0-3) Prerequisites: ECE 251 and CIS 101 or CIS 113. An introduction to microprocessor system organization and assembly language programming. The course covers the architecture, instruction set and assembly language of a specific microprocessor. Other topics included are memory organization, input/output interfacing, interrupt processing as well as exception processing. The problems associated with the design of a single board computer are also covered. Students receiving degree credit for CIS 453 cannot receive degree credit for ECE 352. Co-listed as CoE 252.

ECE 271 - Electronic Circuits I (3-1-3) Prerequisite: ECE 231. Electronic circuits and devices, particularly junction diodes, bipolar transistors and field-effect transistors. Solid-state device physics is studied in sufficient detail to understand the basic models of semiconductor devices for dc and ac analysis.

ECE 291 - Electrical Engineering Laboratory I (0-3-1) Prerequisites: ECE 231, HSS 101. Corequisites: ECE 232, ECE 251. Laboratory work in the areas covered in ECE 231, ECE 232 and ECE 251. Emphasizes the construction, testing and analysis of both digital and analog circuits. Emphasizes basic measurement techniques throughout. Introduction to the use of PSpice for solving dc, ac and transient problems on the personal computer.

ECE 310 - Co-op Work Experience I (3 additive credits) Prerequisites: completion of the sophomore year, approval of the department, and permission of the Office of Cooperative Education and Internships. Students gain major-related work experience and reinforcement of their academic program. Work assignments facilitated and approved by the co-op office. Mandatory participation in seminars and completion of a report.

ECE 321 - Random Signals and Noise (3-0-3) Prerequisite: ECE 232. Corequisite: ECE 333. Random processes occurring in electrical engineering. An introduction to probability and random variables is followed by stochastic processes and noise. Topics include auto- and cross-correlation functions, power spectral density, response of linear systems to random signals, and noise figure calculations.

ECE 333 - Signals and Systems (3-0-3) Prerequisites: ECE 232, Math 222. A continuation of circuits and systems. Topics include signal models, system representations and properties, convolution, Fourier transform, sampling, z-transform, and an introduction to IIR and FIR filter design.

ECE 341 - Energy Conversion (3-0-3)Prerequisite: ECE 231. Magnetic materials and their applications including the design of singly- and multiply-excited magnetic circuits and transformers, and the steady-state performance of dc and ac electromechanical energy converters.

ECE 353 - Computer Organization and Architecture (3-0-3)Prerequisites: ECE 252, ECE 395. Emphasizes the hardware design of computer systems. Topics include register transfer logic, central processing unit design, microprogramming, ALU design, pipelining, vector processing, micro-coded arithmetic algorithms, I/O organization, memory organization and multiprocessing. **Effective From: Fall 2003**

ECE 354 - Digital Test (2-0-2)Prerequisites: ECE 251 or equivalent, Math 333 or equivalent. Covers theory and practice related to test technology. Topics include fault modeling, test generation, fault simulation, design for testability, fault diagnosis, built-in self-test, scan design, and many others. Surveys several industrial design for testability structures. **Effective From: Fall 2003**

ECE 361 - Electromagnetic Fields I (3-0-3)Prerequisites: ECE 231, Math 213, Phys 234. Vector analysis and calculus, static electric and magnetic fields, capacitance and inductance, electric currents, resistance, time dependent fields and introduction to Maxwell's equations. **Effective From: Spring 2006**

ECE 362 - Electromagnetic Fields II (3-0-3)Prerequisites: ECE 361. Maxwell's equations solutions, reflection and refraction of plane waves in dielectric and conducting media, transmission lines; transients and frequency domain solutions in lossy and lossless lines, Smith chart and its applications, parallel plate and rectangular waveguides.

ECE 368 - Signal Transmission (2-0-2)Prerequisites: ECE 232, ECE 251. Familiarization with signal transmission both within and between digital systems. Topics include the telegrapher's equations, wave propagation, lattice diagrams, transients in digital systems, crosstalk, proper termination for high-speed logic, and the transmission characteristics of various interconnecting geometries. **Effective From: Fall 2003**

ECE 372 - Electronic Circuits II (3-0-3)Prerequisites: ECE 232, ECE 271. Principles of FET and BJT small signal amplifiers: Q point design, input and output impedance, gain, and signal range limitations for the six different single stage configurations. Design of analog integrated circuits including current sources, differential amplifiers, noise sources, active loads, and CMOS circuits. Transistor high frequency models, Miller effect, and frequency response of multistage amplifiers. Feedback with multistage amplifiers and two-port network theory.

ECE 373 - Electronic Circuits III (3-0-3)Prerequisites: ECE 372, ECE 392. Topics include operational amplifier fundamentals, linear op-amp circuits, instrumentation amplifiers, feedback theory, active filters, practical op-amp limitations, Schmitt triggers, oscillators, multivibrators, timers, and waveform generators.

ECE 374 - Electronic Device I (3-0-3)This course addresses electronic devices on a fundamental level. Topics include semiconductors, Structure and properties of p/n junction, Schottky barrier, BJT, MOS, MOS FET, semiconductor optoelectronics. **Effective From: Fall 2006**

ECE 392 - Electrical Engineering Laboratory II (1-2-2)Prerequisite: ECE 291. Corequisites: ECE 333, ECE 372. Laboratory work in some of the areas covered in ECE 251, ECE 333 and ECE 372. Covers the practical design and testing of electrical and electronic circuits. Introduces engineering design, manufacturing and measurement concepts by the use of selected design projects. Design, construct and test electronic circuits using own components.

ECE 394 - Digital Systems Lab (0-3-1)Prerequisites: ECE 271, ECE 252. Experiments emphasize digital design from basic electronic circuits to complex logic. Topics include switching speed, operational amplifier circuits, basic sequential circuits, the arithmetic/logic unit, and computer memories. **Effective From: Fall 2003**

ECE 395 - Microprocessor Laboratory (0-4-2)Prerequisites: ECE 291, ECE 252. In this laboratory the students are expected to learn to apply their theoretical knowledge of both the hardware and software aspects of microprocessors. To attain this objective the students are required to construct a microprocessor based single board computer (SBC), with adequate interfacing capabilities to be able to perform some useful control tasks. Programming of the device is done in assembly language. Some of the experiments that follow the construction project deal with software while others deal with the problems of interfacing of microprocessors.

ECE 405 - Electrical Engineering Principles (3-0-3)Prerequisites: Phys 121. (No credit for ECE students.) For non-electrical engineering majors. Topics include basic dc and ac circuits, basic electronics, an introduction to electromechanical energy conversion and control theory.

ECE 410 - Co-op Work Experience II (3 credits) Prerequisites: ECE 310, approval of the department, and permission of the Office of Cooperative Education and Internships. Provides major-related work experience. Mandatory participation in seminars and completion of requirements that include a report and/or project. May count as EE or approved elective.

ECE 413 - Introduction to Electrical Engineering Practice (1-0-1) Prerequisite: senior standing or permission of the instructor. Planning and execution of engineering projects. Intellectual property: publications and proprietary documents, invention disclosures and patents. Safety: the role of engineering codes and standards. Engineering ethics. Professional organizations. Professional registration. Preparation of a technical proposal for a senior project and its approval required. **Effective Until: Summer 2005**

ECE 414 - Electrical and Computer Engineering Project I (1-0-1) Prerequisite: Senior standing or permission of instructor. Computer Engineering students will develop a project proposal for the senior design project. Invited faculty and industrial speakers will present project ideas and real examples. **Effective From: Fall 2005**

ECE 415 - Electrical Engineering Project (1-2-2) Prerequisites: ECE 373, ECE 413, ECE 494. A synthesis and focusing of previous experience, in and out of college, upon one or more electrical engineering projects selected by the student. Involves library research, design, cost analysis, construction and testing. Projects are shared in final project presentations. **Effective Until: Summer 2005**

ECE 416 - Electrical and Computer Engineering Project II (3-0-3) Prerequisites: ECE 495 and an approved project proposal. Projects must involve the design and execution of both hardware and software or firmware, and include library research, cost estimation and time budgeting. An oral presentation and demonstration of the project must be given. A final written report must be submitted. **Effective From: Fall 2005**

ECE 417 - Independent Study (3-0-3) Prerequisites: ECE 413 or ECE 414 and an approved project proposal. Students work on various individually selected projects guided by the department faculty. The project(s) of each student must be completed and professionally presented by assigned due dates for appropriate review and recording of accomplishment. An oral presentation will be made at a meeting of all students and faculty advisors involved in the course. A formal written report will be presented to the faculty advisor at the end of the course. **Effective From: Fall 2003** ([Archived Versions](#))

ECE 421 - Digital Data Communications (3-0-3) Prerequisites: ECE 232, Math 333. Covers communications basics and some topics in digital communications most germane to data communication. Topics include signal classification, correlation, spectral analysis, energy and power spectral density, white noise, signal transmission through linear systems, sampling and quantization, and principles of digital data transmission. **Effective From: Fall 2003**

ECE 422 - Computer Communications Networks (3-0-3) Prerequisites: ECE 321 or Math 333. Introduction to the fundamental concepts of computer communication networks. Topics include the OSI reference model, the physical, data link, network, and transport layers, TCP/IP, LANs (including token ring, token bus, and ethernet), ALOHA, routing and flow control. **Effective From: Fall 2003**

ECE 423 - Data Communications Networking Devices (3-0-3) Prerequisites: ECE 421 or ECE 481. Corequisites: ECE 479 or CIS 451. Provides a working knowledge of data communication networking devices, including modems, routers, multiplexers, switches, and concentrators and are used as building blocks in the implementation, modification, or optimization of data communications networks. Emphasizes device design, functionality and physical layer protocols. **Effective From: Fall 2003**

ECE 424 - Optical Communication Network (3-0-3) Prerequisites: ECE 232 and either ECE 231 or Math 333. Focuses on digital optical networks, architecture, modulation techniques, and detection noise. Related topics are wireless communication, infrared link, and CATV. Computer simulations of network systems are done with commercial software packages. **Effective From: Fall 2003**

ECE 425 - Wireless Communication Systems (3-0-3) Prerequisites: ECE 481 or ECE 421. Introduction to wireless system design and engineering. Develops an understanding and appreciation of the wireless engineering problems such as cellular layout design, resource allocation, mobility management, capacity and performance and signaling load calculations. Introduces physical layer building blocks such as modulation, synchronization, coding, diversity, equalization, and spreading. **Effective From: Fall 2003**

ECE 429 - Computer Communications Lab (0-3-1) Prerequisites: ECE 421 and ECE 394. Experiments cover signals and circuits in both time and frequency domains, modulation techniques, spectral analysis, transmission technology, signal generation, measurements and detection, distortion analysis, and white noise measurements. **Effective From: Fall 2003**

ECE 431 - Systems and Virtual Instrumentation (3-0-3) Prerequisites: ECE 252, ECE 333. Builds upon mathematics and electrical engineering science background to analyze and design feedback control and instrumentation systems. Emphasizes performance specifications, stability and modeling. The computer is used as an essential design and analysis tool. **Effective From: Fall 2003**

ECE 432 - Control Systems Elective (3-0-3) Prerequisites: ECE 431. Corequisite: ECE 496. A continuation of the study of automatic control systems with emphasis on computer-aided design and problem solving. Topics covered include state feedback control, observers, industrial regulators, linear quadratic regulators, and the analysis of various common system nonlinearities. Implementation techniques on both analog and digital platforms will be addressed. **Effective From: Fall 2003**

ECE 435 - Medical Imaging Instrumentation & Data Acquisition Systems (3-0-3) Three-Dimensional medical imaging modalities including X-ray Computer Tomography, Magnetic Resonance Imaging, Single Photon Emission Computer Tomography, Positron Emission Tomography, and Ultrasound utilizes advanced highly integrated electronic sensors, fast processor-based computers, and advanced signal processing and reconstruction methods. **Effective From: Fall 2006**

ECE 436 - Bio Control Systems (3-0-3) This course provides an introduction to dynamic and control in biological systems, with particular emphasis on engineering aspects of biological oscillators/waves. A combination of theoretical and simulation tools will be applied to analyze the qualitative and quantitative properties of selected biological systems. Feedback and control mechanisms in selected biological systems will be introduced. Real time signal acquisition and processing are also addressed. **Effective From: Fall 2006**

ECE 438 - Bio Electronic Systems Laboratory (0-4-2) This laboratory provides the laboratory experience for students interested in medical applications from the perspective of electrical and computer engineering. It consists of 3 modules: Bio-electronics, Bio-control and Bio-imaging. **Effective From: Fall 2006**

ECE 439 - Control Systems Laboratory (0-4-2) Prerequisites: ECE 431, ECE 494. Corequisite: ECE 432. Laboratory work in the design and synthesis of control systems, closely coordinated with the control systems elective. **Effective From: Fall 2003**

ECE 441 - Power Electronics (3-0-3) Prerequisites: ECE 373. Electronic devices and circuits used to energize various apparatus and systems. Topics include circuits, freewheeling diodes, thyristors, firing and commutation of silicon-controlled rectifiers, converters, dc choppers, and power supplies. **Effective From: Fall 2003**

ECE 442 - Power Systems Elective (3-0-3) Prerequisite: ECE 341. Introduction to power plants and power networks. Topics include transmission line parameters, system modeling, economic operations of power systems, load flow studies, short circuit analysis, and power system stability. **Effective From: Fall 2003**

ECE 449 - Power Systems Laboratory (0-4-2) Prerequisites: ECE 431, ECE 494. Corequisite: ECE 442. Laboratory work in the design and synthesis of power systems, closely coordinated with the power systems elective. **Effective From: Fall 2003**

ECE 451 - Advanced Computer Architecture (3-0-3) Prerequisites: ECE 353. Focuses on advanced concepts in computer systems design, and the interaction between hardware and software components at various levels (i.e., hardware/_software codesign). Introduces common performance measures used by hardware and software designers to facilitate comparative analysis. Main topics are: advanced pipelining, good instruction sets, CISC and RISC microprocessors, introduction to parallel computing, and a brief historical survey of computer designs. **Effective From: Fall 2003** ([Archived Versions](#))

ECE 452 - Advanced Computer Architecture II (3-0-3) Prerequisite: ECE 451. Topics include memory allocation, single-instruction stream parallelism, parallelism by message passing, shared-resource systems, protection and security, stack-oriented systems, systolic array systems, and data-flow systems. Discusses the relationships between software and hardware levels of system implementation and -operation. **Effective From: Fall 2003** ([Archived Versions](#))

ECE 453 - Introduction to Discrete Event Systems (3-0-3) Prerequisites: ECE 251 or CIS 251 or equivalent, and Math 333 or ECE 321 or equivalent. Introduces logical models, timed models, and stochastic timed models of discrete event systems. Applies petri net methodology to the modeling of computer systems, flexible manufacturing systems, communication networks, and robotics. Contrasts the approaches of _simulation, elementary queueing theory, and Markov processes. **Effective From: Fall 2003** ([Archived Versions](#))

ECE 457 - Digital Image Processing (3-0-3) Prerequisites: Foundation of discrete linear systems and Fourier transform or instructor approval. An introduction to the fundamental techniques for digital image processing. Covers human visual systems, image sensing and acquisition, image sampling and quantization, 1-D and 2-D systems, image enhancement, image restoration, image degradation, features extraction, and image segmentation. **Effective From: Fall 2003** ([Archived Versions](#))

ECE 459 - Advanced Computer Systems Design Lab (0-3-1) Prerequisites: ECE 451, ECE 495. Corequisite: ECE 452. Design laboratory component of the advanced computer systems technical track offered to CoE majors in the senior year. Experiments

emphasize advanced CPU design concepts, such as RISC approaches and exception handling, multiprocessor and systolic array computers, and FPGAs. Develop software programs to test the capabilities of these hardware designs. **Effective From: Fall 2003** ([Archived Versions](#))

ECE 461 - Microwave and Integrated Optics (3-0-3) Prerequisite: ECE 362 or equivalent. The analysis and design of microwave transistor amplifiers and oscillators using scattering parameter techniques. Topics include transmission line theory, scattering parameters, matching networks, signal flow graphs, amplifier design considerations (power gain stability, noise and band width), and negative resistance oscillator design. **Effective From: Fall 2003**

ECE 462 - RF/Fiber Optics Systems Elective (3-0-3) Prerequisite: ECE 362. Corequisite: ECE 461 or permission of instructor. Topics include dielectric waveguides and optical fibers, semiconductor optical sources and detectors; rf/microwave modulation and demodulation of an optical carrier; design concepts in optical transmitters and receivers; and usage of CAD software tools for rf/microwave simulations. **Effective From: Fall 2003**

ECE 463 - Optoelectronics (3-0-3) The course addresses electronic and optoelectronics device concepts. Topics include optical materials, semiconductor materials, light propagation in waveguide, solar cell, LED and modulation of light. **Effective From: Fall 2006**

ECE 469 - RF/Microwave and Fiber Optics Systems Laboratory (0-4-2) Corequisite: ECE 462. Laboratory work in characterization of RF/microwave transmission structures and optical fibers, sources and detectors, spectral and time domain (OTDR) measurements in micro-waves and optics. Experiments in microwave and fiber optic links. Usage of CAD software tools for RF/microwave simulations. **Effective From: Fall 2003**

ECE 471 - Active Network Design (3-0-3) Prerequisite: ECE 373. Topics include the basic theorems of network synthesis; the design of LC and RC networks; the design of second-order active RC low-pass, high-pass, band-pass and notch filters; and the design of high-order filters with Butterworth, Chebyshev, Elliptic, and Bessel response. Also, switched-capacitor circuit designs and other selected topics. **Effective From: Fall 2003**

ECE 472 - Pulse Techniques (3-0-3) Prerequisite: ECE 373. Topics in electronics including linear and non-linear operational-amplifier circuits, the frequency compensation of operational-amplifiers, higher-order active filters including switched-capacitor designs, waveform generators, multi-vibrators, timers, waveshapers, converters, and other selected topics. **Effective From: Fall 2003**

ECE 475 - VLSI Circuits (3-0-3) Prerequisite: ECE 372. Topics include MOSFETs, their characteristics and use in analog and digital circuit design, static and dynamic circuits; memory cells; differential stages; symbolic layout of NMOS and CMOS circuits; fundamentals of silicon processing technology and associated design rules and methodology; calculation of chip performance including power, speed and area; logic arrays.

ECE 476 - Electronic Device II (3-0-3) Prerequisite: ECE 372. Thorough study of basic principles of semiconductor electrical behavior (particularly as applied to junction, the MOS field effect, and optoelectronic devices) in order to understand their operation and characteristics. Devices include Schottky barrier and PN junction diodes, bipolar and FET transistors, solar cells, photoconductive and photovoltaic detectors, LEDs, and semiconductor lasers. Emphasis on characteristics important for circuit design, e.g., dynamic switching behavior. **Effective From: Fall 2003**

ECE 477 - Semiconductor Sensors and Bio Electronics (3-0-3) The course outlines electronic systems geared for bio-sensors from fabrication to realization point of view. Topics include MEMS, device fabrication, BioMEMS and detection methods, Signal Conditioning Circuits, Signal Amplification, Microarrays & Nanoscale Arrays, Nanotechnology. **Effective From: Fall 2006**

ECE 478 - VLSI Circuits (3-0-3) Prerequisite: ECE 372. Topics include MOSFETs, their characteristics and use in analog and digital circuit design, static and dynamic circuits; memory cells; differential stages; symbolic layout of NMOS and CMOS circuits; fundamentals of silicon processing technology and associated design rules and methodology; calculation of chip performance including power, speed and area; logic arrays. **Effective Until: Summer 2003**

ECE 479 - Optoelectronics and Electronic Laboratory (0-4-2) The Laboratory course outlines experiments on electronic and optoelectronics device concepts. Topics include Optical waveguide, Solar Cell, LED Modulation of Light, capacitance-voltage of MOS structure. **Effective From: Fall 2006**

ECE 481 - Communications Systems (3-0-3) Prerequisites: ECE 321, ECE 333, ECE 373. An introduction to communications systems and modulation theory. Topics are AM and FM systems, including methods of generation and detection, signal spectra, and

bandwidth requirements; thermal noise, calculation of signal-to-noise ratios and the effect of noise on the communications system analyzed; pulse code modulation systems with consideration given to bandwidth requirements, quantization noise and the effects of transmission errors.

ECE 482 - Communications Systems Elective (3-0-3) Prerequisites: ECE 481. Corequisite: ECE 495. A continuation of the study of communications systems with selected topics from different areas of communications theory such as sampled-data communications, information theory and noise. **Effective From: Fall 2003**

ECE 489 - Communications Systems Laboratory (0-4-2) Prerequisites: ECE 481. Corequisite: ECE 482. Laboratory work in the design and synthesis of communications systems, closely coordinated with the communications systems elective. **Effective From: Fall 2003**

ECE 494 - Electrical Engineering Laboratory III (1-2-2) Prerequisites: ECE 341, ECE 373, ECE 392. A continuation of laboratory work into the areas covered in ECE 341, ECE 352 and ECE 373.

ECE 495 - Computer Engineering Design Lab (1-4-3) Prerequisites: ECE 353, ECE 394. Preparation for putting into practice the concepts learned in ECE 353. Emphasizes hardware design and debugging. Topics include combinational and sequential logic design using CAD tools, design based upon PLA/PLD devices, computer interface design using hardware and software, and an open-ended design project such as a central processing unit design. **Effective From: Fall 2003** ([Archived Versions](#))

ECE 497 - Computer Systems Laboratory (0-4-2) Prerequisite: ECE 494. Corequisite: ECE 487. Laboratory work in the design and synthesis of computer systems, closely coordinated with the computer systems elective.

GRADUATE COURSES:

ECE 501 - Linear Systems and Random Signals (3 credits) This course, serving as a bridge course for non-electrical and computer engineering department graduate students, provides fundamental coverage of signal and system analysis, including probabilistic methods. Topics include signal models, system properties, Fourier Transform, introduction to probability, random variables, random processes, correlation functions, and spectral density.

ECE 550 - Circuit Analysis (3 credits) Introduction to analysis of linear circuits and systems. Techniques used include mesh and nodal analysis, network theorems, steady-state and transient methods, analogs, Fourier series and transforms, and Laplace transforms. Pole-zero diagrams are developed as an aid in the study of low-order systems. Credits for this course may not be used to fulfill any electrical engineering degree requirement. **Effective Until: Fall 2004**

ECE 590 - Graduate Co-op Work Experience I (3 credits) Prerequisites: permission from Department of Electrical and Computer Engineering and Division of Career Development Services. Cooperative education/internship providing on-the-job reinforcement of academic programs in electrical and computer engineering. Assignments and projects are developed by the co-op office in consultation with the electrical and computer engineering department. Work assignments are related to student's major and are evaluated by faculty coordinators in the ECE department. Credits for this course may not be used to fulfill any electrical or computer engineering degree requirement.

ECE 591 - Graduate Co-op Work Experience II (3 additive credits) Prerequisites: ECE 590 and permission from Department of Electrical and Computer Engineering and Division of Career Development Services. See ECE 590 course description. Credits for this course may not be used to fulfill any electrical or computer engineering degree requirement.

ECE 592 - Graduate Co-op Work Experience III (3 additive credits) Prerequisites: graduate standing and permission from Department of Electrical and Computer Engineering and Division of Career Development Services. See ECE 590 course description. Credits for this course may not be used to fulfill any electrical or computer engineering degree requirement.

ECE 593 - Graduate Co-op Work Experience IV (0 credits) Prerequisites: One immediately prior 3-credit registration for graduate co-op work experience with the same employer. Requires approval of departmental co-op advisor and the Division of Career Development Services. Must have accompanying registration in a minimum of 3 credits of course work. **Effective From: Fall 2006**

ECE 599 - Electrical Engineering Laboratory (3 credits) Prerequisites: B.S. in engineering or science, and permission from ECE department. Workshop on fundamental measurements involving instrumentation commonly used in testing electronic and power circuits. Credits for this course may not be used to fulfill any electrical engineering degree requirement.

ECE 601 - Linear Systems (3 credits) Methods of linear-system analysis, in both time and frequency domains, are studied.

Techniques used in the study of continuous and discrete systems include state-variable representation, matrices, Fourier transforms, LaPlace transforms, inversion theorems, sampling theory, discrete and fast Fourier transforms, and Z-transforms. Computer simulation of linear systems is used, and, where feasible, computer solutions are obtained.

ECE 605 - Discrete Event Dynamic Systems (3 credits) Corequisite: Math 630 or ECE 601 or MnE 603 or equivalent. Covers the theory of discrete event dynamic systems with applications in modeling, control, analysis, validation, simulation, and performance evaluation of computer systems, flexible manufacturing systems, robotic systems, intelligent supervisory control systems, and communication networks. Emphasis on Petri net and automation based approaches.

ECE 609 - Artificial Neural Networks (3 credits) Prerequisites: ECE 601 and ECE 673 or consent of instructor. Artificial Neural Networks (ANN) are networks consisting of massively parallel connected simple processing elements arranged in various topology, usually in layers. Various ANN models, learning paradigms, and applications are covered. The course evolves from a simple single-neuron structure to more complex networks.

ECE 610 - Power System Steady-State Analysis (3 credits) Prerequisite: B.S. in EE or ME. Steady-state analysis of power system networks, particularly real and reactive power flows under normal conditions and current flows under faulty conditions. Symmetrical components and digital solutions are emphasized.

ECE 611 - Transients in Power Systems (3 credits) Prerequisite: ECE 610. Transient performance of power systems with lumped properties, interruption of arcs, restriking voltage, re-ignition inertia effects, switching of rotational systems, magnetic saturation in stationary networks, harmonic oscillations, saturated systems, transient performance of synchronous machines.

ECE 612 - Computer Methods Applied to Power Systems (3 credits) Prerequisite: undergraduate computer programming. Digital computer techniques proven successful in the solution of power system problems, particularly in the electric utility industry. Emphasis on short-circuit, load flow, and transient stability problems. Matrix sparsity is considered.

ECE 613 - Protection of Power Systems (3 credits) Protection of Power Systems **Effective Until: Fall 2004**

ECE 614 - Dynamics of Electromechanical Energy Conversion (3 credits) Prerequisites: ECE 620 and undergraduate electric machines. Dynamic behavior of lumped parameter systems; study of a continuum electromechanics, such as magnetic diffusion and the stress tensor; and dynamics of electromechanical continua in two- and three-dimensional systems. **Effective Until: Fall 2004**

ECE 615 - Advanced Electromechanical Energy Conversion I (3 credits) Prerequisite: undergraduate electric machines. Steady-state performance of synchronous machines; time constants, sudden reactive loading; sudden short-circuit conditions; dynamic behavior of synchronous machines; speed torque-current control of induction machines; magnetic noise and voltage ripples; and Kron generalized machine theory. **Effective Until: Fall 2000**

ECE 616 - Power Electronics (3 credits) Prerequisite: B.S. in electrical engineering. Principles of thyristor devices, dynamic characteristics of choppers, commutation, protection, voltage-fed and current-fed inverter drives, cycloconverters, pulse width modulation, phase control, and microcomputer control, with case studies.

ECE 618 - Power System Design of Alternative Energy Sources (3 credits) Prerequisite: EE 451 or equivalent (see undergraduate catalog for description). System design modeling, economic feasibility, and applications of alternative and renewable energy sources including: fuel cells, storage batteries, bio-electrochemical cells, redox flow cells, ocean thermal energy converters, and magnetohydrodynamic converters. The modes of system interconnections, including linkage to conventional power systems, are also studied. **Effective Until: Fall 2004**

ECE 620 - Electromagnetic Field Theory (3 credits) Prerequisite: undergraduate electromagnetic field theory or equivalent. Maxwell's equations, boundary conditions and formulation of potentials. LaPlace and Poisson equations for electrostatic and magnetostatic problems and the method of images. Dielectric and magnetic materials, force and energy concepts. Quasi-static and time varying fields, plane, cylindrical and spherical waves. Green's functions, transmission lines.

ECE 622 - Wave Propagation (3 credits) Prerequisite: ECE 620 or equivalent. Fundamentals of electromagnetics; radiation and scattering; Green's functions; integral equations; numerical methods; ray optics and asymptotics.

ECE 623 - Fourier Optics (3 credits) Prerequisite: EE 362 (see undergraduate catalog for description) or equivalent. Theoretical background needed to analyze various optical systems: two-dimensional Fourier transforms, vector and scalar diffractions, Fresnel and Fraunhofer approximations, the properties of lenses, coherence theory, frequency analysis of optical imaging systems, spatial filtering, optical information processing, and wavefront-reconstruction imaging.

ECE 624 - Optical Engineering (3 credits) This course covers basic optical concepts, emphasizing those common to many optical instruments, such as light sources and their characteristics, polarization, coherence, and interferometry. The course introduces CAD tools for lenses, optical filters, and instrument design. The course also focuses on topics concerning optical systems, such as flat panel displays and micromechanical optical systems.

ECE 625 - Fiber and Integrated Optics (3 credits) Prerequisites: undergraduate electromagnetic field theory and solid-state circuits. Planar dielectric waveguides, step and graded index fibers and dispersion in fibers. The p-n junction and heterostructures, light emitting diodes and semiconductor lasers, p-i-n and avalanche photodetectors, optical transmitter and receiver designs, optical fiber communication system design concepts.

ECE 626 - Optoelectronics (3 credits) Prerequisites: undergraduate electromagnetic field theory and solid-state circuits. Optical propagation in anisotropic materials, polarization, birefringence and periodic media. Concepts of electro-optics and acousto-optic devices, optical modulators, switches, active filters for optical communication and optical processing.

ECE 630 - Microwave Engineering (3 credits) Prerequisite: undergraduate course in electromagnetic field theory. Review of transmission line theory and the Smith chart; scattering matrix representation, LC and microstrip matching networks; signal flow graph analysis; micro-wave transistor amplifier design, which includes power gain, stability, noise figure circles; oscillator design.

ECE 632 - Antenna Theory (3 credits) Prerequisite: undergraduate course in electromagnetic field theory. Fundamentals of electromagnetic field theory; far field approximation, antenna characteristics (gain, impedance, pattern, etc.); elementary antenna types (dipoles, loops, etc.), antenna array theory, wire antennas; broadband antennas.

ECE 635 - Conduction in Plasma (3 credits) Prerequisite: undergraduate course in direct power generation. Maxwellian velocity distribution function, concentration and diffusion gradients, mean free path, methods of ionization, field intensified ionization, drift velocity, plasma temperature methods of deionization, plasma oscillations and plasma sheath, spark breakdown and mechanism of arcs.

ECE 636 - Computer Networking Laboratory (3 credits) Prerequisites: ECE 682 or ECE683 or equivalent, and ECE 637 or equivalent. This course provides students with hands on training regarding the design, troubleshooting, modeling and evaluation of computer networks. In this course, students are going to experiment in a real test-bed networking environment, and learn about network design and troubleshooting topics and tools such as: network addressing, Address Resolution Protocol (ARP), basic troubleshooting tools (e.g. ping, ICMP), IP routing (e.g. RIP), route discovery (e.g. traceroute), TCP and UDP, IP fragmentation and many others. Student will also be introduced to the network modeling and simulation, and they will have the opportunity to build some simple networking models using the OPNET modeling tool and perform simulations that will help them evaluate their design approaches and expected network performance.

ECE 637 - Introduction to Internet Engineering (3 credits) Prerequisites: ECE683 or CIS 652 or equivalent. Provides a comprehensive introduction to the architecture of the Internet, the TCP/IP technology and the associated design and performance issues. The main topics of focus are: current LAN technologies, TCP/IP protocol suite, Internet configuration and troubleshooting, "unplugged" (Mobile) Internet, internetworking solutions (routers, bridges, routing protocols), real-time traffic support and flows in Internet, performance issues and other design considerations. Discovery (e.g. traceroute), TCP and UDP, IP fragmentation and many others. Student will also be introduced to the network modeling and simulation, and they will have the opportunity to build some simple networking models using the OPNET modeling tool and perform simulations that will help them evaluate their design approaches and expected network performance. Correctness semantics of programs. Mass spectrometry with other instruments (GC, LC, AES,) are illustrated.

ECE 638 - Network Management and Security (3 credits) Prerequisites: ECE 683 or CIS 652, and ECE 637 or CIS 656. Thorough introduction to current network management technology and techniques, and emerging network management standards. In-depth study of the existing network security technology and the various practical techniques that have been implemented for protecting data from disclosure, for guaranteeing authenticity of messages, and from protecting systems for network-based attacks. SNMP family of standards including SNMP, SNMPv2, and RMON (Remote Monitoring), OSI systems management. Various types of security attacks (such as intruders, viruses, and worms), Conventional Encryption and Public Key Cryptology. Various security services and standards (such as Kerberos, Digital Signature Standard, Pretty Good Privacy, SNMPv2 security facility). Same as CIS 696.

ECE 639 - Principles of Broadband Networks (3 credits) Prerequisites: ECE 683 or CIS 652 or equivalent. This course covers fundamental concepts of broadband networks. Topics include Broadband ISDN, Switching Techniques, ATM, SONET/SDH, Congestion Control, High-Speed Switching Architectures, Traffic Modeling of Broadband Services, Admission Control, Traffic Scheduling, IP/ATM Convergence, QoS Provisioning in IP Networks, and Optical Networks.

ECE 640 - Digital Signal Processing (3 credits) Prerequisite: ECE 601 or equivalent. The theory of digital signals and basic processing techniques: Discrete Fourier Series, Discrete Fourier Transform and FFT, Linear and Circular Convolution, Digital Filter Design Techniques, Discrete Hilbert Transforms, Discrete Random Signals, Chirp-Z and other advanced transforms. Introduction to multivariate signal processing. The typical applications of signal processing tools are discussed and connected to the theoretical foundations.

ECE 642 - Communication Systems I (3 credits) Corequisite: ECE 673. Principles of communication theory applied to the representation and transmission of information. Topics include analysis of deterministic and random signals, amplitude modulation, angle modulation, sampling, quantization, PCM, DM, DPCM, geometric representation of signals, error probability, matched filter and correlation receivers and performance analysis of communication systems signal to noise ratio.

ECE 643 - Digital Image Processing I (3 credits) Prerequisite: ECE 601. Introductory course in digital image processing. Topics include image models, digitization and quantization, image enhancement in spatial and frequency domains, image restoration, image segmentation and analysis.

ECE 644 - Introduction to Wireless and Personal Communications Systems (3 credits) Prerequisite: ECE 642 or equivalent. Introduces emerging personal communications networks (PCN) and envisioned personal communication services (PCS). Discussion of recent history of underlying technologies that are being used to synthesize PCN and delineation of the alternative approaches being considered. Focuses primarily on U.S. technologies, with coverage of wireless technologies in Europe and Japan.

ECE 645 - Wireless Networks (3 credits) Prerequisites: EE 321 or Math 333, or equivalent (see undergraduate catalog for descriptions). Introduction to wireless network design, management, and planning stages. Topics include demand modeling, radio planning, network optimization, and information handling architecture with emphasis on resource allocation and mobility management aspects. Investigation of signaling load optimizations and internetworking problems.

ECE 646 - Introduction to Data Communications (3 credits) Prerequisites: ECE 642 and ECE 673, or equivalent. Introduces the theory and technology of data communications over voice-grade and broadband channels. Provides the analytical tools required to understand and design data communication systems. Topics include: an overview of data communication systems, channel capacity, channel coding (block codes, cyclic codes, convolutional codes), data transmission, synchronization, equalization, and an introduction to adaptive equalization.

ECE 648 - Digital Microelectronics (3 credits) Prerequisite: undergraduate semiconductor circuits. Topics include: linear wave shaping with RC circuits, clipping and clamping circuits; theory of operation of semiconductor diode, bipolar transistor (BJT), and MOSFET; BJT and MOSFET inverters, gate circuits, and regenerative logic circuits.

ECE 649 - Compression in Multimedia Engineering (3 credits) Prerequisite: ECE 640 or instructor's permission. Foundations of information theory, audio/speech and video compression technologies. Detailed discussion of JPEG, image compression, H.261, MPEG-1 and MPEG-2 international video compression standard algorithms. Current status and future directions of very low bit rate MPEG-4 video compression standards activities.

ECE 650 - Electronic Circuits (3 credits) Prerequisite: senior undergraduate level semiconductor circuits. Methods of analysis and design of linear and digital semiconductor circuits are studied. Topics include low and high frequency models, passive and active biasing techniques, I-C analysis and design, op-amp circuits, and active filters.

ECE 657 - Semiconductor Devices (3 credits) Fundamental principles of solid state materials necessary for understanding semiconductor devices. Topics include crystal structure; energy bands; electron and hole generation, and transport phenomena; generation and recombination processes, and high field effects. P-N junction diode, metal semiconductor contact, and bipolar and metal oxide semiconductor transistors, including switching phenomena and circuit models. Introduction to: photonic devices~light emitting diodes, semiconductor lasers, photodetectors, and solar cells; microwave devices~tunnel and IMPATT diodes, transferred electron devices, and charge-coupled capacitors.

ECE 658 - VLSI Design I (3 credits) Prerequisite: ECE 657 or equivalent. Analysis and design of digital integrated circuits; basic building blocks and dependence on circuit parameters of propagation delay; noise margin; fan-out; fan-in; and power dissipation for circuits of different logic families, including NMOS, CMOS and BiCMOS; subsystem designs in combinational and sequential logic; Memory Systems; HSPICE circuit simulation is used for digital characteristics evaluation. Mentor Graphics Layout design tools are used for chip design.

ECE 659 - Fabrication Principles of Electronic and Optoelectronic Devices (3 credits) Prerequisite: ECE 657 or equivalent. Overview of all major processing steps in fabrication of integrated circuits such as crystal growth, epitaxy, oxidation, diffusion, ion implantation and etching. Formation of thin film structures along with techniques for defining submicron structures. Emphasizes

silicon device technology but also includes processing of compound semiconductors such as gallium arsenide.

ECE 660 - Control Systems I (3 credits) Prerequisites: undergraduate course equivalent to EE 333 or ME 305 (see undergraduate catalog for descriptions) and ECE 601 or equivalent or permission from instructor. Introduction to feedback control. Review of state-space analysis. Frequency-domain methods for analysis: Routh-Hurwitz stability algorithms, Root-loci; Nyquist and Bode plots; system type. Controllability and observability. The separation principle and design by pole placement. Linear observers. Optimization of quadratic performance criteria. Elements of random processes. The Kalman filter as an optimum observer. Robustness considerations.

ECE 661 - Control System Components (3 credits) Prerequisite: ECE 660. The theoretical and practical requirements for analog and digital state-of-the-art control system components are covered. Actuators, amplifiers, sensors, encoders, resolvers and other electromagnetic devices are included. A complete system is designed using current vendor catalog data. Problems affecting the system performance are analyzed using measures of functionality, reliability and cost.

ECE 662 - Large Power Control Systems (3 credits) Prerequisites: ECE 660, ECE 614, or equivalents. Emphasis on the design and test analysis of servomechanisms and regulation systems involving large power components such as dc machines, induction motors, and alternators. Positioning and velocity servos using rotating amplifiers are covered. A velocity servo for controlling a large induction motor is designed and a typical alternator voltage regulator studied, with regard to its servo characteristics. Methods of determining motor size and gear ratio in large positioning servos are covered.

ECE 664 - Real-time Computer Control Systems (3 credits) Prerequisite: EE 486 or equivalent (see undergraduate catalog for description). Emphasizes the practical aspects of modern computer control systems. Topics include: Architecture of digital signal processors (DSP) and microcontrollers, real-time data acquisition devices and interface, programming a DSP, review of sampling theorems and properties of discrete-time systems, introduction of control systems theory, design and implementation of parameter optimized controllers, state variable controllers, and cancellation controllers. An experimental project using a TMS320C2x DSP-based data acquisition system is an integral part of this course.

ECE 666 - Control Systems II (3 credits) Prerequisites: ECE 601 and ECE 660. Properties of nonlinear systems and basic concepts of stability including small-signal linearization. State plane methods are introduced, with emphasis on controller design for systems that can be represented by second-order approximations. Concepts of equivalent gain, describing function, and dual-input describing function as applied to a large class of nonlinear systems. Representation of linear sampled-data systems in discrete state variable form, stability and performance of discrete-event systems. Full-state feedback, pole placement and observer design. Linear quadratic control and Kalman filtering.

ECE 667 - Systems Studies in Bioengineering (3 credits) Prerequisite: Undergraduate or graduate course in linear systems. Basic techniques of simulation including digital simulation languages. Physiologic systems of current interest using systems analysis techniques leading to formulation of mathematical, computer, or electric circuit models. Systems examined include the circulatory, respiratory, or hormonal control systems. Basic techniques of signal processing are explored which are necessary to analyze data from physiologic systems. Same as BME 667.

ECE 673 - Random Signal Analysis I (3 credits) Fundamentals of the theory of random variables. Introduction to the theory of random processes. Topics include functions of random variables, sequences of random variables, central limit theorem, properties of random processes, correlation, spectral analysis and linear systems with random inputs.

ECE 677 - Optimization Techniques (3 credits) Prerequisite: undergraduate course in differential equations. Analytical and numerical methods for finding an extremum emphasizing how and when to apply them. Classical differentiation, Lagrange multipliers, the calculus of variations, penalty functions, slack variables, search techniques, and stochastic approximation are covered.

ECE 681 - Broadband Packet Switches (3 credits) Discussion and comparison of performance and implementation complexity. Topics include introduction of B-ISDN and asynchronous transfer mode (ATM) technology, ATM switch design criteria and performance requirement, survey of existing ATM switch architecture, shared-, medium- and shared-memory switches, knockout switch, terabit ATM switches, multicast ATM switch, optical ATM switch, IP switches and routers.

ECE 682 - Introduction to Computer Network Design: Internet Perspective (3 credits) Explicit emphasis on design considerations. Covers the basics of computer networking and the important current network technologies including the premier local area network and wide area network technologies and services, as well as the description of the relevant protocols. Also covers explicit related design considerations and implications. Amplifies the conclusions with discussions of relevant examples and case studies.

ECE 683 - Computer Network Design and Analysis (3 credits)Corequisite: ECE 673. Queueing models and state-transition models are introduced to model, design and analyze computer networks. The OSI model, LANS (including token ring, token bus, and Ethernet), and useful network protocols. Emphasis on the physical, data link and network layers. ALOHA, Stop-and-Wait protocol, Go-Back-N protocol, window-flow-control, and shortest-path routing.

ECE 684 - Advanced Microprocessor Systems (3 credits)Prerequisites: undergraduate course in computer architecture and microprocessors, and some experience in assembly language programming. Architecture of advanced microprocessors; CPU architecture, memory management and protection, interrupt and exception facilities, instruction sets, systems aspects including peripheral interfaces, communications ports, and real-time systems.

ECE 685 - Network Interface Design (3 credits)Prerequisite: ECE 683 or equivalent. Provides a working knowledge of data communications networking devices, the building blocks upon which networks are constructed. Emphasizes devices and their function in data communication networks. Covers the use of devices in the design, implementation, modification, and optimization of data communications networks.

ECE 686 - Instrumentation Systems and Microprocessors (3 credits)Prerequisite: undergraduate course in microprocessors. Principles of instrumentation transducers and the electronic amplifiers and filters needed to process the electrical signals generated by them; types and characteristics of A/D and D/A converters and other circuits necessary for the interfacing of instrumentation data to a computer or digital data transmission system. Emphasis placed on development of stand-alone analog instrumentation systems as well as microprocessor-based systems. Tradeoffs and alternatives for both implementations are emphasized as well as cost effectiveness of each design. Hardware and software are developed as needed.

ECE 687 - Design of Medical Instrumentation (3 credits)Prerequisite: undergraduate course in electronics. Principles and practice of medical instrumentation. Instrument components and medical instrument systems design. Examples taken from electrocardiography, clinical chemistry, medical imaging. Microprocessor-based systems emphasized.

ECE 688 - Microcontrollers in Instrumentation (3 credits)Prerequisite: undergraduate course in microprocessors. Microcontroller as single chip computer system for diverse applications. System microcontroller real-time design concepts from architecture to interface. Assembly language programs. Real-time facilities of advanced microcontrollers are emphasized.

ECE 689 - Digital System Design for Machine Arithmetic (3 credits)Prerequisite: undergraduate course in logic design. Data representation, integers, floating point and residue representation. Bounds on arithmetic speed, algorithms for high speed addition, multiplication, and division. Pipelined arithmetic. Hardware implementation and control issues.

ECE 690 - Computer Systems Architecture (3 credits)Prerequisites: ECE 684 and CoE 353 (see undergraduate catalog for description) or CIS 650. Discusses advanced topics in modern computer systems architecture such as pipelined and superscalar processors, parallel computers (vector, SIMD, MIMD), multithreaded and dataflow architectures, cache and memory hierarchy, and system interconnect architectures. Also discusses relevant system software design issues such as shared memory and message-passing communication models, cache coherence and synchronization mechanisms, latency-hiding techniques, virtual memory management, program partitioning and scheduling. Examples are drawn from real systems.

ECE 692 - Embedded Computing Systems (3)Pre-requisites: ECE 353 (CoE) or ECE 684 (EE) and CS 105 (or equivalents). Introduction of the methodology for the design and implementation of embedded computing systems, and its application to real-world problems. Topics include Embedded System Design Process, UML, ARM Instruct Set Architectures, CPU's Hardware Platforms, Software Design and Analysis, Embedded Operating Systems, Real-Time Scheduling, Hardware Accelerators, Distributed Embedded Systems, and Design Methodology and Quality Assurance. **Effective From: Fall 2006**

ECE 698 - Selected Topics in Electrical and Computer Engineering (3 credits)Special area course given when suitable interest develops. Advance notice of forthcoming topics will be given.

ECE 699 - Selected Topics in Electrical and Computer Engineering II (3 credits)See description for ECE 698 above.

ECE 700 - Master's Project (3 credits)Prerequisite: written approval of project advisor. An extensive paper involving design, construction, and analysis, or theoretical investigation. Joint projects with industry may be acceptable. Work is carried out under the supervision of a member of the department faculty. A maximum of 3 credits may be applied to the degree.

ECE 701 - Master's Thesis (3 credits)Prerequisite: written approval of thesis advisor. Projects involving design, construction, experimental or theoretical investigation. Joint projects with industry or governmental agencies may be acceptable. Work is carried on under the supervision of a designated member of the department faculty. Completed work in the form of a written thesis should be of

a quality leading to journal publication. The completed thesis must be defended by the student in an open forum and must be approved by a committee of at least three people. A student must register for a minimum of 3 credits per semester. Only the 6 credits indicated for the thesis will be applied to the degree.

ECE 710 - Economic Control of Interconnected Power Systems (3 credits) Prerequisite: ECE 610. Theoretical developments and computer methods in determining economic operation within the boundaries of a given steam-electric operating area. Energy accounting control and economic theories for interconnected steam and hydroelectric power systems.

ECE 711 - Power System Dynamics and Stability (3 credits) Prerequisites: ECE 610 and undergraduate course in electric machines. Elements of the stability problem: principal factors affecting stability, ordinary simplified methods of making stability calculations, and illustrations of the application of these methods to studies of power systems, damping, and saturation.

ECE 719 - Advanced Electromechanical Energy Conversion II (3 credits) Prerequisites: ECE 615, ECE 622. Derivation of circuit models of rotating systems, based on the cross-sectional space wave method and the study of generalized Maxwell-Lorentz equations, applied to coupled rotational bodies.

ECE 725 - Independent Study I (3 credits) Prerequisite: departmental approval. Program of study prescribed and approved by student's faculty coordinator. This special course covers areas of study in which one or more students may be interested but is not of sufficiently broad interest to warrant a regular course offering. Master's degree students cannot count ECE 725 as degree credit but can count these credits to qualify for full-time status.

ECE 726 - Independent Study II (3 credits) See description for ECE 725 above. This course is not available to master's students.

ECE 730 - Theory of Guided Waves (3 credits) Prerequisite: ECE 620 or equivalent. Modes, rays and beam propagation in guiding structures. Non-uniform waveguides and transitions, excitation of waveguides and optical fibers. Coupled modes theory with applications to resonators and couplers. Wave propagation in anisotropic media.

ECE 739 - Laser Systems (3 credits) Prerequisite: ECE 620 or permission of instructor. Optical resonators, laser radiation and oscillation. Laser characteristics: semiconductor lasers, gas and glass lasers; mode-locking, Q-switching. Quantum-well lasers, noise; modulation and detection of laser light, optical systems for communication and computation.

ECE 740 - Advanced Digital Signal Processing (3 credits) Prerequisites: ECE 601, ECE 640 and ECE 673. Topics in stationary discrete time stochastic processes; modeling of discrete time processes, Yule-waker equations, aspects of discrete wiener theory; principle of orthogonality, linear predictors; Levinson-Durbin recursion and algorithm, lattice predictors, method of least squares (RLS) algorithm, systolic array implementation of QRD-Ls.

ECE 742 - Communication Systems II (3 credits) Prerequisites: ECE 642 and ECE 673 or equivalents. Principles of digital communication. Topics include fundamentals of information theory, digital modulation techniques, optimum detector receivers for digitally modulated signals, the bandlimited gaussian channel and intersymbol interference, equalization, spread spectrum, CDMA.

ECE 745 - Advanced Wireless Networks (3 credits) Prerequisite: ECE 645. This course explores next generation wireless networks. Students are expected to conduct research on the up to the minute advances in research, development, and standards activities in wireless networks. Resource allocation and Quality of Service provisioning which include advanced queueing tools in the case of long range dependent and self-similar traffic are discussed. State of the art topics such as mobility management, routing, Mobile IP, Cellular IP, and relevant open issues are studied. New network architectures are studied in detail. These include advanced wireless data communications via ad hoc networking, wireless Internet, and multimedia service provisioning over broadband air interfaces.

ECE 746 - Adaptive Array Processing and Interference Cancellation (3 credits) Prerequisites: ECE 642 and ECE 673. Principles of array processing, performance criteria used, and adaptive algorithms for realization of these processors; and ideas and principles of array processing in the design of contemporary radar systems.

ECE 747 - Signal Decomposition Techniques: Transforms, Sub-bands, and Wavelets (3 credits) Prerequisites: ECE 640 and ECE 673. Multiresolution signal decomposition techniques, transforms, sub-bands, and wavelets. Time-frequency localization properties of multiresolution algorithms. Evaluation and critique of proposed decomposition strategies from compression and performance standpoints. Applications to speech and video compression, and localized feature extraction. These are basic signal processing tools used in diverse applications such as speech and image processing and storage, seismology, machine vision.

ECE 755 - Advanced Topics in Digital Communications (3 credits) Prerequisites: ECE 642 and ECE 673 or equivalent. Advanced

topics in digital communication systems in the presence of intersymbol interference, noise, and fading: modulation and demodulation in the presence of gaussian noise, efficient signaling with coded modulation, trellis decoding, Viterbi algorithm, digital transmission with intersymbol interference, and digital signaling over imperfect channels.

ECE 756 - Advanced Topics in Semiconductor Devices (3 credits) Prerequisite: ECE 657 or permission of instructor. Builds on ECE 657. Covers photonic devices particularly semiconductor laser and photodetectors for optical systems; microwave and other high speed devices; scaled advanced MOS, FET, and bipolar transistors.

ECE 757 - Advanced Wireless Communications (3 credits) Prerequisite: ECE 742 or equivalent. Introduction of digital cellular radio. In-depth analytical characterization of linear, time-variant systems as they apply to wireless channels. Thorough consideration of the principles of the CDMA multiuser system, together with methods for reducing multiple-access interference. Emphasis on general topics such as diversity interleaving.

ECE 758 - VLSI Design II (3 credits) Prerequisite: ECE 658 (with ECE 657 suggested). Use of CMOS, biCMOS and bipolar semiconductor technology for VLSI design. Digital techniques are emphasized with minor coverage of analog design. Application areas for full custom, gate arrays, standard cell, and compiled designs are compared. Mentor VLSI design tools running on the HP and Sun workstations are used in the course projects for each enrollee. The course attempts to provide a design environment for projects that is similar to that encountered by VLSI designers in industry.

ECE 759 - Principles of Phase Lock and Frequency Feedback (3 credits) Prerequisites: ECE 642 and ECE 673 or equivalents. Principles of operation and design for phase locked and frequency feedback loops, linear equivalent circuit, nonlinear effects, and optimization against noise used in a wide range of applications including low-level signal reception, tracking, phase extraction, filtering, and frequency synchronization. F.M. communication is emphasized.

ECE 760 - Solid-State Image Sensors (3 credits) Prerequisites: ECE 657 and ECE 648 or ECE 658. Construction, operation, and performance evaluation of visible and infrared image sensors. Included are a review of the main approaches for photodetectors and readout structures, image sensor architectures, performance evaluation and trade-offs, noise considerations, modulation transfer function, techniques for control of blooming, interlacing, color-coding for visible imagers, HDTV imagers, photo-counting amplifiers, and radiometry and figures of merit for infrared imagers.

ECE 766 - Stability Theory of Nonlinear Systems (3 credits) Prerequisite: ECE 666. Concepts of stability in dynamic systems, theory and application of Lyapunov's direct method. Use of functional analysis, and frequency response method of Popov and its extensions including their application to the investigation of stability, boundedness, and damping in a class of unforced and forced nonlinear systems.

ECE 768 - Optimal Control Theory (3 credits) Prerequisite: ECE 677. Optimal control for classes of deterministic systems with various constraints using calculus of variations, dynamic programming and the maximum principle, state variable constraints, and application of theory to design problems.

ECE 769 - Stochastic Estimation and Control (3 credits) Prerequisites: ECE 660 and ECE 673. Markov processes. The discrete-time Kalman filter as a minimum variance estimator. The continuous-time Kalman-Bucy filter. Relationship to the Wiener filter. Nonlinear systems: the extended Kalman filter and other generalizations. Computational difficulties and methods for avoiding them: separated-bias estimation, ?UDU? factorization. Applications in navigation and control.

ECE 773 - Random Signal Analysis II (3 credits) Prerequisite: ECE 673. Continuation of ECE 673. Non-stationary stochastic processes, harmonic analysis, the zero crossing problem, Markov processes, the Poisson process, orthogonal expansions, non-Gaussian processes, non-linear operations.

ECE 776 - Information Theory (3 credits) Prerequisites: ECE 642 and ECE 673 or equivalents. Classical theory of information developed from Shannon's theory. Information measure, Markov sources and extensions, the adjoint source, uniquely decodable and instantaneous codes and their construction, Shannon's first and second theorems, mutual information, and performance bounds on block and convolutional codes.

ECE 777 - Statistical Decision Theory in Communications (3 credits) Prerequisite: ECE 642 or equivalent. Relation between detection theory and statistical hypothesis testing problem. Use of Bayes decision criteria, Neyman-Pearson, and mini-max tests; receiver operating characteristics. Representation of signals in signal space, probability of error calculations. Estimation of random and non-random signal parameters, Cramer-Rao Inequality. The general Gaussian problem and the use of covariance matrices.

ECE 778 - Algebraic Coding for Information Transmission (3 credits) Prerequisites: ECE 642 and ECE 673. Coding for reliable

digital transmission and storage, error detection and correction codes. Decoding techniques and performance evaluation of block and convolutional codes, including BCH, Reed-Solomon code and Trellis coded modulation.

ECE 783 - Computer Communication Networks (3 credits) Prerequisites: ECE 673 and ECE 683. Data link control and communication channels. Delay models in data networks. Queueing analysis techniques are taught in detail. Multi-access communication techniques. Routing in computer communication networks.

ECE 785 - Parallel Processing Systems (3 credits) Prerequisite: ECE 684 or equivalent. Parallel computer architectures. General purpose and specialized parallel computers. Shared-memory multiprocessors, message-passing multicomputers, and vector supercomputers. Principles of scalable performance. MPP designs. SIMD and MIMD computers. Design of parallel algorithms (merging and sorting of data, FFT, etc.) and performance evaluation. Load balancing, data decomposition, and scheduling of operations.

ECE 788 - Selected Topics in Electrical and Computer Engineering (3 credits) Special-area course given when suitable interest develops. Advance notice of forthcoming topics will be given.

ECE 789 - Selected Topics in Electrical and Computer Engineering II (3 credits) See description for ECE 788.

ECE 790 - Doctoral Dissertation (Credits as designated) Required of all students working toward the Ph.D. in Computer Engineering or in Electrical Engineering. A minimum of 36 credits is required. The student must register for at least 6 credits of dissertation per semester; registration for additional credits may be permitted beyond the 6, with the approval of the advisor, up to a maximum of 12 credits per semester. If the student is still actively engaged in the research after completion of 36 credits, continued registration of 3 credits per semester is required.

ECE 791 - Graduate Seminar (0 credit) All master's and doctoral students must register for two semesters and six semesters of ECE 791 Graduate Seminar, respectively. To receive a satisfactory grade, students must attend at least five seminars during the semester, as approved by the seminar supervisor. **Effective From: Spring 2006**

ECE 792 - Pre-Doctoral Research (3 credits) Prerequisite: permission of the department. For students admitted to the program leading to the Ph.D. in Computer Engineering or Electrical Engineering. Research carried on under the supervision of a designated member of the department faculty. If the student's research activity culminates in doctoral research in the same area, up to a maximum of 6 credits may be applied toward the 36 credits required under ECE 790 after the student fulfills requirements of doctoral candidacy.

Engineering Design : Coordinated by the Office of the Dean, Freshman Studies and through the Office of the Dean, Newark College of Engineering

UNDERGRADUATE COURSES:

FED 101 - Fundamentals of Engineering Design (2-1-2) Corequisite: HSS 099 or HSS 101 and Math 103 or Math 104 or Math 111. Teams of students work on open-ended engineering projects. Sections are offered to represent an introduction to real-world engineering design problems in a specific engineering discipline. Topics covered include introduction to basic engineering design elements, processes, measurements, product and project design and development, with hands-on experiments in a specific major area. Students also learn to use engineering tools for computer-aided design and simulation. Technical writing and oral presentation along with project management skills are emphasized. Students are required to take an FED section corresponding to their declared major. Undecided students will be placed in FED sections which best correspond to their interests according to space availability.

FED 101C - Fundamentals of Engineering Design, Computer Aided Design/Graphics Component (0-2.25-1) Corequisite: HSS 100 in the spring or HSS 101 in the fall. Study technical graphics and the computer as a technical drawing tool. Introduces projections and multiview drawings and visualization. Discuss geometry commonly used in engineering design graphics, orthographic projections, dimensioning techniques, tolerancing and introduction to auxiliary and sectional views. Apply software program pro/ENGINEER to various problems. Interdisciplinary course coordinated by the Office of the Dean, Freshman Studies and through the Office of the Dean, Newark College of Engineering.

Engineering Graphics: Offered by the Department of Mechanical Engineering. See [Mechanical Engineering](#) course list for faculty.

UNDERGRADUATE COURSES:

EG 101 - Engineering Graphics (1-2-2) Engineering students are introduced to the fundamentals of engineering graphics. Representative topics covered are sketching, isometric and orthographic drawings, dimensioning and scales. In addition, students are taught the principles of charts and graphs including graphical calculus. Applications in the various engineering disciplines are studied by means of graphical vectors in force analysis, piping symbols and diagrams, electrical symbols and diagrams, and plot plans. An introduction to CAD is implemented in creating three-dimensional solid models and detailed drawings. Students who have completed FED 101C and FED 101D are not eligible for EG 101.

Engineering Management: Offered by the Department of Industrial and Manufacturing Engineering

GRADUATE COURSES:

EM 501 - Industrial Management (3 credits) Prerequisite: approval from the engineering management graduate advisor or program director. Operational aspects of management techniques: organization, product design and development, distribution logistics, marketing, plant location and layout, materials handling, production planning and control, inventory control, quality control, work analysis, and incentive plans.

EM 502 - Engineering Cost Analysis (3 credits) Prerequisite: approval from the engineering management graduate advisor or program director. Financial, engineering, economic, and cost-control aspects of industrial management; the accounting cycle; cost accounting procedure; and cost-model techniques of making cost comparisons through engineering economic studies.

EM 503 - Methods and Applications of Industrial Statistics and Probability (3 credits) Prerequisites: approval from the engineering management graduate advisor or program director, undergraduate course in calculus. An analytical approach to basic engineering probability and statistics, with applications drawn from both manufacturing and process industries. Emphasis is placed upon the utility of statistical inference derived from engineering data.

EM 602 - Management Science (3 credits) Prerequisites: undergraduate calculus and probability and statistics. Linear programming: formulation, methodology, and application; the transportation problem; the assignment problem; Markov chains and their applications in decision making; queueing systems; deterministic and stochastic inventory models.

EM 607 - Seminar in Contemporary Management Problems (3 credits) Prerequisites: undergraduate courses in economics and management. Readings, discussions, field studies, and reports in areas of contemporary management, behavioral science, management science, economics, and systems planning and control. Course is designed to encourage and give direction to student research for thesis.

EM 617 - Environmental Risk Assessment (3 credits) Prerequisites: undergraduate courses in calculus and economics. Application of management technique methodology to recognize, evaluate, and make decisions regarding expenditures for the mitigation of potentially hazardous environmental risks. Basic analytical techniques applicable to social and economic risk assessment; methodology and application to current air and water resources; and rationale for cost-benefit and trade-off analysis. Technical characteristics of materials: half-life, decomposition rates, and temperature sensitivity determining environmental probabilities and expectations.

EM 631 - Legal Aspects in Environmental Engineering (3 credits) Control of air, water, and solid waste pollution by federal, state, and local government statutes and international law. Preparation of environmental impact statements and the right of private citizens to bring suit under federal clean air and water pollution legislation are discussed, as well as limitations on these rights.

EM 632 - Legal Aspects in Construction (3 credits) Introduction to the legal factors affecting construction activities: contract responsibilities of contractors, engineers, and owners; subcontracts and third-party liability; construction law and code compliance; and insurance and bonds.

EM 633 - Legal Aspects of Health and Safety (3 credits) Review of key laws and regulations pertaining to occupational health, safety, and product liability; methods to determine which codes apply in given situations and to prepare operating procedures to be used for internal compliance.

EM 634 - Legal, Ethical and Intellectual Property Issues for Engineering Managers (3 credits) Introduction to various environmental, product liability, health and safety, and intellectual property, legal, as well as ethical, issues facing engineering managers. Current New Jersey and federal laws and pending legal actions in these fields. Case studies and advanced multimedia learning tools are used.

EM 635 - Management of Engineering Research and Development (3 credits)Prerequisites: principles of management and statistics, or EM 501 and EM 503. A systems approach to management of resources, and tasks needed for engineering research and development. Identification, analysis, and evaluation of the operational characteristics and structure of the research laboratory and engineering office; functions of planning, organizing, staffing, direction, control, innovation, and representation; and planning and control theories, techniques, and current practices in scientific and engineering management.

EM 636 - Project Management (3 credits)Prerequisites: IE 492 (see undergraduate catalog for description), IE 603 or equivalents. Introduction to concepts of project management and techniques for planning and controlling of resources to accomplish specific project goals. While the focus is on technically oriented projects, the principles discussed are applicable to the management of any project. Topics include time, cost considerations, cash flow forecasting, financial and performance control, documentation.

EM 637 - Project Control (3 credits)Prerequisite: EM 636 or equivalent. Focuses on the methodology that can be employed to plan project implementation and control progress. Topics include work breakdown construction, task and schedule development budgetary control, earned value analysis, and behavioral considerations. Project management software utilization is emphasized.

EM 638 - Advanced Topics in Project Management and Cost Engineering (3 credits)Prerequisites: EM 636, EM 637 or equivalent. Considers project management from its initial development to its successful execution from the owner and vendor's perspective. Topics emphasized include pre-proposal activities, project finance, risk control claim management, contract administration and human resource utilization and termination. Assignments include working in a team setting and, when appropriate, using relevant software.

EM 640 - Distribution Logistics (3 credits)Prerequisite: EM 602 or Tran 650 or equivalent. Distribution logistics emphasizing systems engineering techniques used to optimize corporate profit and customer service: transportation modes; inventory policies; warehousing and order processing; and the best logistics gross margin. Same as Tran 640.

EM 641 - Engineering Procurement and Materials Management (3 credits)Prerequisites: EM 602, EM 640, and EM 674 or equivalents. Study of the logistics life cycle, involving planning, analysis, design, testing, distribution and life cycle support. Make versus buy engineering design decision. Various tools and techniques for an effective life cycle support program. Bench-marking approach to survey available internal and external resources and competitor solutions. Constructing life cycle cost models for acquisitions. Build adequate specification. Application of the latest techniques in supplier chain quality management. Case studies and advanced multimedia learning tools are used.

EM 655 - Management Aspects of Information Systems (3 credits)Prerequisite: computer programming experience. Information flow in an organization as an integrated system and management resource: techniques of data analysis, design, and processing; characteristics of computerized information-handling equipment; data acquisition, storage, processing, retrieval, and transmission to decision-makers; and information systems for finance, production, inventory, accounting, marketing, and distribution.

EM 660 - Financing an Industrial Enterprise (3 credits)Prerequisites: undergraduate economics, accounting, and engineering economy. Principles of financial practice and management in modern business corporations emphasizing financial planning and control; capital project and working capital needs; internal and external financing; and finance as a major function of the management process.

EM 661 - Advanced Engineering Economics (3 credits)Prerequisite: undergraduate engineering economics or equivalent. Economic use of a firm's capital resources. Feasibility studies of potential major capital investments likely to be considered by an enterprise. Risk assessment, cost engineering, effect of financing sources, life cycle, and technologies forecasting models. Case studies are used.

EM 674 - Benchmarking and Quality Function Deployment (3 credits)Prerequisite: IE 673 or equivalent. Continuation of IE 673. Benchmarking surveys of competition, process analysis of engineering activities, statistical process control mathematics, Taguchi methods of process and product design, current total quality management innovations, quality functional deployment. Case studies and advanced multimedia learning tools are used.

EM 691 - Cost Estimating for Capital Projects (3 credits)Prerequisites: EM 502 and EM 503, or equivalent. Cost estimating techniques and procedures for budgeting used in evaluation, planning, and control of capital investments. Emphasis on updating for change, escalation, and statistical and computer methods.

EM 693 - Managerial Economics (3 credits)Prerequisite: undergraduate economics. Internal and external influences on the economic practices of business; classical and current theories of economic behavior; contemporary analytical techniques; behavior of costs, prices, and profits; demand analysis, competition and monopoly; capital expenditure planning; profit theories and business

cycles; and econometric models of market strategies, competitive action, and demand behavior.

EM 695 - Public Utility Energy Management (3 credits) Prerequisite: EM 602 or equivalent. Managing loads on electric power systems. Influence of variable rate structure and description of several projects currently in progress.

EM 696 - Nuclear Power Reactor Management (3 credits) Prerequisites: undergraduate economics and physics. Nuclear power reactor management and power generation alternatives: optimum performance; maximum control; minimum cost; capacity planning; cost estimating; investment requirements; plant location and safety; separation technology for fuel enrichment; transportation and storage of spent fuel; reprocessing and nuclear waste storage; and regulatory aspects of nuclear power.

EM 701 - Master's Thesis (6 credits) Prerequisites: matriculation for the M.S. degree, adequate graduate courses in the field of the proposed thesis, and the thesis advisor's approval. Thesis must contribute to the field, and preferably aid the candidate's present or potential career. While original research may not always result, the thesis should provide a new conclusion or application. A student must continuously register for a minimum of 3 credits per semester until the thesis is completed. Total credit will be limited, however, to the 6 credits indicated for the thesis.

EM 714 - Multicriteria Decision Making (3 credits) Prerequisite: some background in operations research. Multiobjective programming and conflict analysis to evaluate alternatives in decision making, utility, assessment methodology, interactive and noninteractive multiple mathematical programming methods, and surrogate worth trade-off methods are covered.

EM 715 - Design of an Enterprise (3 credits) Prerequisites: undergraduate economics, industrial management accounting, engineering economy, probability and statistics; 9 credits of EM courses at 600-level or above; and advisor's approval. Organization and management of an enterprise, from initial planning through production and distribution of manufactured products. Students choose the industry that they study.

EM 716 - Seminar in the Design of an Enterprise (3 credits) Prerequisite: EM 715. Continuation of EM 715. Depending on the student's interest, report on design of the particular enterprise emphasizing either the management of research and development; the management of production; the management of distribution; or the management of manpower.

EM 725 - Independent Research (3 credits) Prerequisite: permission from the ME department's industrial and management engineering division advisor. Program of study prescribed and approved by student's advisor. Special course covers areas of study in which one or more students may be interested, but is not of sufficiently broad interest to warrant regular course offering.

EM 740 - Management of Transportation Carriers (3 credits) Prerequisites: Tran 610 or equivalent and Tran 650 or EM 602 or equivalent. Presents theory and practice of managing transportation carriers, including the concepts of costing, pricing, designing and marketing transportation service; the concepts of financial efficiency and resource productivity with application to the selected freight carriers in each mode of transportation. Selected case studies of carriers' operations management practices in various modes. Comparative studies of service characteristics, market share, cost structures both within a particular transportation mode and between the modes. Same as Tran 740.

EM 765 - Multi-modal Freight Transportation Systems Analysis (3 credits) Prerequisites: Tran 610 or equivalent and Tran 650 or EM 602 or equivalent. Quantitative methods for the analysis and planning of freight transportation services. The supply-performance-demand paradigm for freight transportation systems. Cost and performance as determined by system design and operations. Relationship of traffic and revenue to service levels and pricing. Optimal service design and redesign for transportation enterprises and operations planning. Fleet and facility investment planning. Applications to various modes. Same as Tran 765 and CE 765.

EM 771 - Operations Cost and Management Control (3 credits) Prerequisites: 6 credits of EM courses at 600-level or above. Analysis and control of cost and other operational aspects of enterprises: manufacturing, distribution and overhead budgets; cost accounting; management information systems; relevant behavioral factors; financial and other management reports. Case studies used.

Engineering Technology: Offered by the Department of Engineering Technology

UNDERGRADUATE COURSES:

ET 101 - Introduction to Engineering Technology (0-2-1) This course introduces the student to engineering technology. Also included is an introduction to the various engineering technology options: Construction, Electrical and Computer, and Mechanical Engineering Technologies as well as Concrete Industry Management. **Effective From: Fall 2006**

ET 370 - Technical Product Selling (3-0-3) Prerequisite: Eng 352. Corequisite: Mgmt 390. Consideration of all the decisions in selling high-technology goods or services. Sales organization, communication skills, the industrial purchasing structure and the sales process in the context of selling products in the technological area. Examples, case studies, and simulation of real life situations, including developing engineering solutions, to complete a sale. Contact database management and presentation software is used.

ET 459 - Computer Adaptations for Persons with Disabilities (2-2-3) Prerequisite: CIS 101 or equivalent. Specific needs of persons with sensory impairments, speech impairments, learning disabilities and orthopedic handicaps. Laboratory experience with actual adaptive equipment.

Computer Technology :

UNDERGRADUATE COURSES:

CPT 310 - Computer Design Fundamentals for Computer Technology (2-2-3) Prerequisite: enrolled in the computer technology option. Boolean algebra, gates, combinational and sequential logic. Memory, microprocessor, and I/O control IC's. Sequential bus architecture.

CPT 315 - Computer Architecture for Computer Technology (2-2-3) Prerequisite: CPT 310. Computer design fundamentals for computer technology, Von Neumann computer architecture: processor, memory and I/O. Processor organization: registers, ALU, and control. Memory organization and memory bus, I/O organization: I/O bus, memory mapped I/O. Number representations and ALU designs. Fundamentals of assembly language, lab exercises in assembly language are used throughout to illustrate concepts.

Effective From: Spring 2003

CPT 330 - Software Web Applications for Engineering Technology I (2-2-3) Common software applications using software objects. The use of software objects in the management of programming projects. Projects illustrate concepts.

CPT 335 - Networks Applications for Computer Technology I (2-2-3) Prerequisites: C++, Visual Basic, UNIX utilities. Covers common gateway interface (CGI), servers, network protocols, network administration, server and network performance.

CPT 340 - Visual Basic for Engineering Technology (2-2-3) Creation of windows with text, controls, menus and graphics. Events detection. Files and _objects management. **Effective Until: Fall 2002**

CPT 341 - Visual Basic.NET for Engineering Technology (2-2-3) Prerequisites: Previous programming experience. Creation of windows with text, controls, menus and graphics, events detection, files and objects management, object oriented techniques.

Effective From: Fall 2005

CPT 395 - Co-op Work Experience I (3 degree credits) Prerequisites: Approval of the department and permission of the Office of Cooperative Education and Internships. Students gain major-related work experience and reinforcement of their academic program. Work assignments facilitated and approved by the co-op office. Mandatory participation in seminars and completion of a report.

CPT 401 - Senior Project (0-4-2) Prerequisites: senior standing in computer technology, MIS 345. Project management and development, scheduling, proposal writing, documentation of software projects, technical presentations. The successful completion of the project consists of research on a recent computer software and/or hardware product, and the application of the findings to the development of a project, which must include a software component. The senior project may be replaced by a cooperative education experience course, subject to advisor's approval.

CPT 430 - Software Web Applications for Engineering Technology II (2-2-3) Prerequisite: CPT 330. Common applications using software objects. The use of software objects in the management of programming projects. Projects are used to illustrate concepts.

CPT 435 - Networks Applications for Computer Technology II (2-2-3) Prerequisite: CPT 335. Network security. Database implementations. Scaling.

CPT 440 - Visual Basic Applications for Engineering Technology (2-2-3) Prerequisite: CPT 340. PC-based control techniques, embedded systems. Database control. Real-time control. Network data acquisition. Man-machine interface and ergonomics considerations.

CPT 450 - Computer Graphics for Computer Technology (2-2-3) Prerequisite: Calculus II, knowledge of the programming language used in the course, check with the instructor. Drawing shapes, curves and text. Colors and areas, point of light, shading. Masking, 2-D drawings and transformations, 3-D drawings and transformations. Animation. Introduction of a popular graphics

2007-2008

package. Lab exercises are used throughout to illustrate concepts. **Effective From: Spring 2003**

CPT 491 - Special Projects in Computer Technology (1-0-1) Prerequisite: Senior standing in computer technology. The student works on selected projects guided by the department staff.

CPT 492 - Special Projects in Computer Technology (2-0-2) See CPT 491.

CPT 493 - Special Projects in Computer Technology (3-0-3) See CPT 492.

2007-2008

Concrete Industry Management Technology : Offered by the Department of Engineering Technology

Construction Engineering Technology:

UNDERGRADUATE COURSES:

CET 313 - Construction Procedures I (3-0-3) Corequisite: CET 317. An introduction to heavy construction practices. Emphasis is on construction equipment, site preparation, earthmoving, compaction, dewatering, piles, drilling and blasting, and tunnelling. Case studies in heavy construction are used.

CET 314 - Construction Procedures II (3-0-3) Prerequisites: CET 313; CET 317. An introduction to building construction practices and building materials. Emphasis is on structural systems, construction materials and detailed finishing operations required to make a serviceable structure. Case studies in building construction are used.

CET 317 - Construction Computing (3-0-3) Prerequisites: CIS 101 or equivalent; basic courses in steel and concrete design, fluids/hydraulics, and surveying; access to a personal computer is also needed. An introduction to construction computing using menu-driven software programs. Application of available software to construction-related computing problems, including: strength of materials, structural analysis, fluids/hydraulics, surveying, scheduling, cost estimating, and computerized drafting (CAD).

CET 322 - Construction Codes and Regulations (3-0-3) Corequisite: CET 317. An introduction to the New Jersey Uniform Construction Code, the BOCA National Building Code, NJ DOT Standard Specifications and the CSI specification format. A code analysis of a typical construction project is undertaken. **Effective From: Spring 2005**

CET 323 - Construction Safety ((3-0-3)) This course will address the safety issues encountered in construction as mandated by the Occupational Safety and Health Act (OSHA) and other similar regulations. Upon the successful completion of the course, the participants will receive a 30 hour OSHA card. **Effective From: Fall 2005**

CET 331 - Structural Systems (3-0-3) Prerequisite: Strength of materials and basic course in steel and concrete design; CET 317. Study of types and behavior of modern structures using both analytical and intuitive techniques. Examples include beam and column, one- and two-way slab systems, wood and masonry systems, and wind and seismic analysis. **Effective From: Fall 2006**

CET 411 - Cost Estimating (3-0-3) Prerequisites: CET 313, CET 314, CET 317. Take off of quantities of materials from typical building and highway projects. Pricing for labor, materials, and equipment. Crew sizes, productivity and manpower leveling. Computerized cost estimating and take off methods. Prepare a complete bid estimate for a construction project.

CET 413 - Environmental Science (3-0-3) Prerequisites: CET 313, CET 314, CET 431. An introduction to construction-related environmental science topics, including basic environmental chemistry, geology, ground water hydrology, basic air quality, surface water run-off, erosion and sedimentation control, indoor air quality, and vibration analysis. Case studies cover various construction activities with respect to their effect on the environment and the manner in which they can be controlled. **Effective From: Fall 2006**

CET 415 - Construction Project Management (3-0-3) Prerequisites: CET 313, CET 314. Corequisite: CET 421. An introduction to construction management and administration methods and procedures including the design and construction process, project organizational structure, construction planning, contract administration, records and reports, financial management, risk analysis, manual and computerized GANTT and CPM scheduling, change orders and extra work, claims and disputes, cost accounting and document tracking.

CET 416 - Senior Construction Project (1-2-2) Prerequisite: CET 415; second semester senior standing in construction and contracting engineering technology. Simulates the methods and procedures used to successfully manage a construction project. Provides familiarization with constructability analysis, value engineering, productivity improvement, quality control, advanced field and office administration techniques, problem solving, and construction automation. Extensive use of construction-related computer software. Written submittals and oral presentations required.

CET 421## - Construction Contracts (3-0-3)Legal aspects of the various types of construction contracts and specifications. Scope, format, and use of various types of contracts such as owner-contractor and contractor-sub-contractor.

CET 431 - Construction Testing (2-2-3)Prerequisite: CET 331. Exposure to a variety of construction-related field tests and field testing equipment. Includes concrete mix design, concrete testing, soil density and compaction, asphalt tests, load testing of wood, mortar analysis and testing, brick and CMU testing, and quality control methods and procedures for finishes.

CET 435 - Design of Temporary Structures (3-0-3)Prerequisite: CET 331. Analysis of loadings on, and design of, temporary structures required in construction. Formwork, shoring and scaffolding systems, temporary bridges, trenching, and temporary retaining walls are among the subjects covered. Construction safety associated with temporary structures is stressed. **Effective From: Fall 2006**

CET 441 - Soils and Earthwork (3-0-3)Prerequisite: Strength of materials, CET 317. A study of the significant soil types and tests. Problems are investigated relating to soil mechanics, soil supported foundations for engineering structures. Appropriate field trips are made.

CET 450 - Mechanical and Electrical Systems I (3-3-4)Prerequisite: College physics. This course provides a technical working knowledge of the various systems used in the building construction industry. Such topics as site work; thermal control systems including plumbing, heating, ventilating, and air conditioning; electrical power distribution and lighting are discussed in detail. Lectures presented using residential, industrial and commercial applications from industry. Class projects included in the laboratory.

CET 451 - Mechanical and Electrical Systems II (3-0-3)Prerequisite: CET 450. A continuation of CET 450 from a more advanced viewpoint. Specifications will be studied along with mechanical and electrical designs as related to overall architectural studies. These comprehensive designs will require decisions of a more sophisticated nature.

CET 490 - Senior Project (3-0-3)Prerequisite: Senior standing in construction engineering technology. The student works on one or more individually selected projects guided by the department staff. The project must be construction related and may include planning, research (library or lab), engineering report, and statistical, analytical, or field investigation. Any of these may follow class-inspired direction, or the students may branch out on their own. The project(s) of each student must be completed and professionally presented by assigned due date for appropriate review and recording of accomplishments.

CET 491 - Special Project (1-0-1)Prerequisite: Senior standing in construction engineering technology. The student works on an individually selected project guided by the department staff. The project may be design- or construction-related and may include research, engineering design, technical report, or field investigation. Requirements will include a written submittal.

CET 492 - Special Project (2-0-2)Prerequisite: Senior standing in construction engineering technology. The student works on a selected project guided by the department staff. The project may be design- or construction-related and may include research, engineering design, technical report or field investigation. Requirements will include a written submittal.

CET 497 - Co-op Work Experience (3 degree credits)Prerequisites: Approval of the department, and permission of the Office of Cooperative Education and Internships. Provides major-related work experience as co-op/intern. Mandatory participation in seminars and completion of requirements that include a report and/or project.

Same as EM 640 and Tran 640 course designations pending

Construction Management Technology:

UNDERGRADUATE COURSES:

CMT 332 - Structural Systems for Construction Management (3-0-3) Study of the types and behavior of building structural systems using qualitative analysis techniques. Systems to be covered will include those involving structural steel, reinforced concrete, wood and timber, and plain and reinforced masonry. The effect of wind and seismic events on these systems is reviewed.

CMT 414 - Environmental Science for Construction Management (3-0-3) An introduction to construction-related environmental topics, including environmental chemistry, geology, ground water hydrology, outdoor air quality, surface water run-off, erosion and sedimentation control, indoor air quality, asbestos abatement, radon remediation, and noise and vibration.

CMT 436 - Temporary Structures for Construction Management (3-0-3) Prerequisite: CMT 332. Study of the types of the various temporary systems and structures used in field construction activities, including concrete forming and falsework, sheeting and shoring for excavations, scaffolding, barricades, ladders, and temporary bridges and ramps. Construction safety with respect to the systems is covered.

CMT 452 - Mechanical and Electrical Systems for Construction (3-0-3) Study of the different types of water supply, plumbing, fire protection, heating, ventilation, air conditioning and electrical systems commonly employed in residential and commercial buildings. Case studies include an overview of the design of these systems and their installation in the field.

Electrical and Computer Engineering Technology:

UNDERGRADUATE COURSES:

ECET 201 - Circuits I (2-2-3) Prerequisite: Math 138. This first course in Electrical Circuits introduces the student to both DC and AC Circuit Theory. It includes Ohm's and Kirchhoff's Laws for analysis of series and parallel circuits. Series-parallel, ladder and bridge networks are analyzed. Resonance and frequency response are included along with an introduction to AC circuits. Circuit simulations and laboratory experiments are designed to support the theory and obtain measurement skills. **Effective From: Fall 2006**

ECET 202 - Circuits II (2-2-3) Prerequisite: ECET 201. This second course in Electrical Circuits expands on AC Circuit Theory introduced in ECET 201. It includes Ohm's and Kirchhoff's Laws for analysis of series and parallel AC circuits. Series-parallel, ladder and bridge networks are analyzed using AC signals. Resonance and frequency response are included. Circuit simulation and laboratory experiments are designed to support the theory and obtain measurement skills. **Effective From: Fall 2006**

ECET 205 - Fundamentals of Analog Electronics (2-2-3) Prerequisite: ECET 201. This course introduces students to the active components used in electronics circuits. It covers the physics, the characteristics, and some applications of semiconductor diodes and transistors. The applications will include amplifiers, rectifiers, op amps, oscillators and timers. Circuit simulation and laboratory experiments are designed to support the theory and provide measurement skills. **Effective From: Fall 2006**

ECET 210 - Intro. to Microprocessors and Computer Architecture (2-2-3) Prerequisite: ECET 215. This is an introductory course in computer architecture and microprocessor applications for students who already have basic knowledge of digital circuit principles. Computer hardware architecture is analyzed, and assembly-language programs are written and run. Computer architecture concepts are applied through the use of assembly software programs for a popular microprocessor family. Theoretical ideas are reinforced by building and testing realistic experimental systems in the laboratory. **Effective From: Fall 2006**

ECET 214 - Introduction to Communications (2-2-3) Prerequisites: ECET 202 and ECET 205. A study of amplitude modulation, frequency modulation, and pulse modulation systems of transmission and reception, including applications of these systems in radio, television and telemetry. Introduces the latest digital communications theory and applications. Computer simulation and laboratory experiments are designed to support the theory and obtain measurement skills. **Effective From: Fall 2006**

ECET 215 - Introduction to Digital Electronics (2-2-3) Prerequisite: ECET 201. The first course in digital electronics develops the fundamentals of the binary system, circuit implementation from Boolean functions and map minimization. Course includes study of combinational logic, sequential logic circuits, flip-flops, counters, and shift register. Computer simulation and laboratory experiments are designed to support the theory and obtain measurement skills. **Effective From: Fall 2006**

ECET 300 - Circuit Analysis: Transform Methods (3-0-3) Prerequisites: DC and AC circuit analysis (AAS level). Corequisite: Math 322. The principles, theorems and techniques of circuit analysis are reviewed. The technique of waveform and circuit transforms is introduced. Laplace transforms are studied and applied in the solution of circuit problems with a variety of input functions. Fourier analysis also is introduced. Extensive use of computer simulation software.

ECET 303 - Circuit Measurements (1-3-2) Prerequisite: Electricity and electronics (AAS level). Corequisites: Eng 352 and Math 309. Lecture and laboratory sessions are designed to develop techniques for the measurement of various circuit parameters as well as the theoretical prediction of these parameters. Extensive use of computer simulation software.

ECET 305 - Integrated Circuit Applications (2-2-3) Prerequisite: ECET 303. Corequisite: ECET 300. Provides a working knowledge of the characteristics and applications of integrated circuits. Topics include how linear ICs work, the most common circuit configurations in which ICs are used, and how to design the most commonly needed circuits with ICs, using manufacturers' specification sheets.

ECET 310 - Microprocessors I (2-2-3) Prerequisites: Courses in digital logic and introduction to microprocessors (AAS level). Develops a working knowledge of the characteristics and applications of microprocessors. Emphasis is put on the architecture and

instruction set of an advanced microprocessor. Representative data handling problems are studied and tested in the laboratory.

ECET 314 - Communication Systems (2-2-3)Corequisite: ECET 300. A study of amplitude modulation, frequency modulation, and pulse modulation systems of transmission and reception, including applications of these systems in radio, television, and telemetry. Introduces the latest digital communications theory and applications. Perform appropriate laboratory exercises and projects.

ECET 319 - Electrical Systems and Power (2-2-3)Prerequisites: Physics I and calculus (AAS level). For non-ECET majors only. The fundamentals of ac and dc circuit theory are studied. Transistor and diode theory and their applications in amplifiers and filters are investigated. Electrical machines are also included in this course. Computer simulation as well as appropriate laboratories are required.

ECET 329 - Analog and Digital Electronics (2-2-3)Prerequisite: ECET 319 or equivalent. For non-ECET majors. Building on ECET 319, a study of more advanced topics in electronics including op-amps, digital logic and the logic families, an introduction to microprocessors and interfacing, with particular attention to the common buses used in instrumentation and data acquisition. Computer simulation as well as laboratories are required.

ECET 344 - Numerical Computing for Engineering Technology (2-2-3)Corequisite: Math 309. An introduction to the use of a computer to analyze and solve problems common in engineering technology. Write original programs in C language, integrating existing mathematical routines in programs.

ECET 350 - Computerized Industrial Controls (2-2-3)Prerequisite: Math 309. This course introduces students to the theory and application of computerized control systems and technologies used in industry today. The course focuses on the hands-on development and integration of programmable logic controllers (PLCs), motor controllers (drives), and supervisory software.

Effective From: Spring 2001

ECET 365 - Digital Logic and Circuit Design (3-0-3)Prerequisite: A course in digital logic (AAS level). Develops the mathematics and minimization techniques together with the circuit implementation for the design of combinational and sequential digital solid-state logic circuits. Studies decoders, multiplexers, counters, registers and PLDs. Computer and communications circuits are used as examples. Projects employ computer simulation of digital circuits.

ECET 395 - Co-op Work Experience I (3 degree credits)Prerequisites: Approval of the department and permission of the Office of Cooperative Education and Internships. Students gain major-related work experience and reinforcement of their academic program. Work assignments facilitated and approved by the co-op office. Mandatory participation in seminars and completion of a report.

ECET 401 - EET Senior Project I (2-0-2)Prerequisites: All required 300-level courses. Corequisite: ECET 406 or ECET 410. The introduction to ECET 402. Project management, concurrent engineering, proposal development, library research, and computer usage are stressed. Develop a formal proposal, technical specifications, Gantt chart, and design specifications for the senior project to be implemented in ECET 402. The project is appropriate to the student's concentration.

ECET 402 - EET Senior Project II (0-2-1)Prerequisite: ECET 401 (within one year). Apply technical knowledge to the implementation of the project approved in ECET 401. Complete design specifications, computer analysis and/or simulation and a formal test procedure. This portion of the project includes library research, time and cost planning, oral and written reports, as well as construction, trouble-shooting and demonstration of a working -prototype.

ECET 406 - Control Systems and Transducers (3-3-4)Prerequisite: ECET 305. Class and laboratory study of analog and digital automatic control. Using Laplace transforms, principles of analysis and design of control systems are introduced. Transducer characteristics and their application in instrumentation and control are investigated. Several experiments are implemented using Programmable Logic Controllers (PLCs).

ECET 410 - Microprocessors II (2-2-3)Prerequisites: ECET 310 and ECET 365. Covers the operations, bread boarding, and interfacing of devices peripheral to microcomputers. Emphasizes embedded applications of microprocessors to systems requiring both hardware and software development. Advanced topics include programmable peripheral I/O controllers, interrupts and local ISA, PCI and USB buses.

ECET 412 - Power Generation and Distribution (3-0-3)Prerequisite: ECET 300. Electrical power generation systems, including hydroelectric, steam, and nuclear plants. Substation and transmission line topics are included as part of the distribution system.

ECET 415 - Fundamentals of Telecommunications (2-2-3)Prerequisite: ECET 314 or equivalent. Topics include transmission media, transmission facilities such as T1 and T3, emerging technologies including SONET, ATM and spread spectrum, switching

systems, with emphasis on data communications, data communication protocols, and the open system interface (OSI).

ECET 416 - Networking Applications (2-2-3)Corequisite: ECET 344. Introduces students to the technology of networking with a particular focus on local area networks (LANs). Comprises two components: concept/theory and hands-on/applications in the laboratory. Topics include: overview of telecommunications systems; networking concepts, protocols and standards; wide area networks, (LANs), the enter-prise network, LAN topology, media access control, transport control protocol (TCP), internet protocol (IP), routing in the Internet, the asynchronous transfer mode (ATM) networks, and other topics related to installation, configuration and troubleshooting of local area networks.

ECET 418 - Transmission Systems (2-2-3)Prerequisites: ECET 305, ECET 314. A study of wireless and terrestrial transmission systems with an emphasis on fiber optics and the latest wireless techniques. The lectures examine the technologies as well as the advantages and disadvantages of the various transmission techniques. The laboratories are a mixture of fiber optic, microwave, and wireless experiments providing hands-on experience in these important areas.

ECET 440 - Clinical Internship (3 credits)Prerequisites: ECET 401, BME 302. Consists of 200 hours of experience in the clinical engineering department of a hospital. The student is under the supervision, and is evaluated by, the director of clinical engineering at the hospital. A final report is submitted to and graded by the NJIT faculty advisor.

ECET 444 - Technology Applications of Object-Oriented Programming (2-2-3)Prerequisites: ECET 344. Brings together prior software knowledge and applies it to the World Wide Web. Comprises theory and hands-on applications in the laboratory. Concepts in modular/structured design and object-oriented design with C++ and Java will be combined with Internet real-time applications. Examine several case studies during the last few weeks. Design, construct and test a practical software project.

ECET 491 - Special Projects in ECET (1 credit)Special projects course for ECET students with subject matter to be arranged by instructor and approved by program coordinator.

ECET 492 - Special Projects in ECET (2 credits)See ECET 491.

ECET 493 - Special Projects in ECET (3 credits)See ECET 491.

ECET 495 - Co-op Work Experience II (3 additive credits)Prerequisites: ECET 395 or its equivalent, approval of the department, and permission of the Office of Cooperative Education and Internships. Provides major-related work experience as a co-op/intern. Mandatory participation in seminars and completion of requirements that include a report and/or project.

Management Engineering Technology:

UNDERGRADUATE COURSES:

MNET 300 - Concepts in Machining (2-4-4) Applications in the machining of various materials. Topics include speeds and feeds calculations, tooling concepts, gauging techniques and prototype construction.

MNET 303 - Advanced Techniques in CAD/CAM (2-2-3) Applications including hands-on experience with CAD/CAM systems. Emphasis is on understanding how displayed objects are represented and manipulated on the computer. Laboratory experiences contribute to an understanding of the advantages and limitations of CAD/CAM systems.

MNET 315 - Industrial Statistics (2-2-3) Introduction to statistics covering data collection, analysis and presentation. Specialized topics include probability, control charts, correlation, regression, hypothesis testing, and -experimentation.

MNET 318 - Manufacturing Process Design (2-2-3) A development of the principles of production, methodology and economics in view of production requirements with respect to materials, tolerances and finish. Production processes are matched to the product requirements. Laboratory work supports the lecture. Computer problem solving is incorporated in the course.

MNET 395 - Co-op Work Experience I (3 degree credits) Prerequisites: Completion of the sophomore year, approval of the department, and permission of the Office of Cooperative Education and Internships. Students gain major-related work experience and reinforcement of their academic program. Work assignments are facilitated by the co-op office. Mandatory participation in seminars and completion of a report.

MNET 405 - Numerical Control for Machine Tools (2-2-3) Prerequisite: MNET 300 or equivalent. Fundamental concepts of numerical control systems. Assignments include mill and lathe programming techniques, sheet metal processing, and CNC economics.

MNET 414 - Industrial Cost Analysis (3-0-3) An introduction to general costing techniques. Time value of money concepts are introduced to decision-making matters such as equipment justification, design selection and fabrication costs.

MNET 416 - Production Scheduling (3-0-3) Prerequisite: MNET 315. A study of manual and computerized methods for setting schedules. Gantt charts, CPM, PERT, PERT/COST, and Line of Balance are some of the topics treated. Problems of line balancing and machine loading are discussed.

MNET 420 - Quality Systems (2-2-3) Prerequisite: Basic statistics. Introduction in quality control that emphasizes design quality, total quality management and statistical process control. Additional topics include quality economics, ISO, reliability, service quality, measurement and acceptance sampling.

MNET 422 - Tool Design (2-2-3) Prerequisite: MNET 300 and MNET 303. Introduction to the design of cutting tools with emphasis on speeds, feeds, and power requirements. Covers design of jigs, fixtures, punch and dies, gaging and inspection tooling with emphasis on current industrial practices.

MNET 423 - Motion and Time Study Techniques (2-2-3) A study of the basic principles of motion study concerning workplace design and related techniques involving process analyses, man-machine charts and micromotion study. Covers stopwatch time study techniques as well as predetermined time standards, work sampling and wage incentive system.

MNET 424 - Facilities Planning (1-2-2) Prerequisites: MNET 318. Operational principles and techniques of plant design. Topics are plant organization, plant location, layout, materials handling, production planning and control, inspection, methods and standards.

MNET 426 - Manufacturing Project (1-3-2) Prerequisite: Senior standing. A ?capstone? project requiring a formal written report and

oral presentation.

MNET 491 - Special Projects in MNET (1 credit)Special projects for MNET students with subject matter to be arranged by instructor and approved by program coordinator.

MNET 492 - Special Projects in MNET (2 credits)See MNET 491.

MNET 493 - Special Projects in MNET (3 credits)See MNET 491.

MNET 495 - Co-op Work Experience II (3 additive credits)Prerequisites: MNET 395 or its equivalent, approval of the department, and permission of the Office of Cooperative Education and Internships. Provides major-related work experience as a co-op/intern. Mandatory participation in seminars and completion of requirements that include a report and/or project.

Mechanical Engineering Technology:

UNDERGRADUATE COURSES:

MET 103 - Engineering Graphics & Intro. to CAD (1-2-2) A first course in Computer Aided Design (CAD), includes lab work using AutoCAD software. Topics include fundamentals of engineering graphics, AutoCAD command structure, setting units and limits, drafting primitives, layering, use of editing tools; grid, snap, and axis commands. Upon successful completion of this course, students should be able to effectively produce two-dimensional drawings using the AutoCAD software program **Effective From: Fall 2006**

MET 105 - Applied Computer Aided Design (1-2-2) Prerequisite: MET 103. A second course in Computer Aided Design (CAD), additional AutoCAD topics include blocks, move and copy, array, mirror, text, text styles, 3D and isometric modes. Upon successful completion of this course, students should be able to use advanced AutoCAD commands to quickly and efficiently produce 2D and 3D drawings, and also be able to modify the AutoCAD environment (e.g., menus, macros, etc.) to boost productivity. **Effective From: Fall 2006**

MET 205 - Advanced Computer Aided Design (2-2-3) Prerequisite: MET 105. This course introduces advanced CAD applications, including attribute and attribute extraction, external reference files, solid modeling, surface rendering and animation. Upon successful completion of this course, students should be able to use a CAD software package to develop animations consisting of 3D models with rendered surfaces. **Effective From: Fall 2006**

MET 235 - Statics for Technology (3-0-3) Prerequisites: Phys 102 and Math 238. Provides an understanding of equilibrium of particles and rigid bodies subject to concentrated and distributed forces. Upon successful completion of this course, the students should be able to analyze problems involving the equilibrium of particles and rigid bodies, including simple machines, trusses, and frictional forces. **Effective From: Fall 2006**

MET 236 - Dynamics for Technology (2-0-2) Prerequisite: MET 235 or Mech 235. Provides an understanding of the mathematics of the motion of particles and rigid bodies, and of the relation of forces and motion of particles. Upon successful completion of this course, the students should be able to describe the motion of particles and rigid bodies as functions of time and position, develop their equations of motions due to applied forces, and determine post impact behavior. **Effective From: Fall 2006**

MET 237 - Strength of Materials for Technology (2-2-3) Prerequisite: MET 235 or Mech 235. Provides an understanding of the kinds of stress and deformation and how to determine them in a wide range of simple, practical structured problems, and an understanding of the mechanical behavior of materials under various load conditions. The laboratory experience is integrated within the course. Upon successful completion of this course, the students should be able to determine stresses and deformations for a variety of simple structural problems. **Effective From: Fall 2006**

MET 301 - Analysis and Design of Machine Elements I (2-2-3) Prerequisites: Elementary strength of materials, calculus (AAS level), Physics I, C++ or BASIC. The principles of strength of materials are applied to mechanical design. Topics include theory of failure, stress concentration factors and fatigue, the design and analysis of shafts subjected to static and dynamic loadings, and critical speed of a rotating shaft.

MET 302 - Analysis and Design of Machine Elements II (3-0-3) Prerequisite: MET 301. A continuation of MET 301, including analysis and design of power screws, brakes, clutches, belts, chain drives, gears, gear trains, bearings, and other machine elements.

MET 303 - Applied Thermodynamics (3-0-3) Prerequisites: Calculus (AAS level), C++ or BASIC, Physics II. Basic principles of thermodynamics and their applications to internal combustion engines, turbines, compressors, power generating and refrigeration systems.

MET 304 - Applied Fluid Mechanics (2-2-3) Prerequisites: Math 309, Physics II, calculus (AAS level), C++ or BASIC. An introduction to fluid statics and the basic laws of fluid flow; conservation of mass, momentum and energy. Applications of the basic laws to internal and external incompressible flow, including specific topics in pipe flow systems, centrifugal pumps and fans, streamlining, and fluid

flow meters.

MET 307 - Plastics Technology (2-2-3)Prerequisite: MET junior standing. An introduction to the basic concepts of plastics conversion, resin classification, processing techniques and significant engineering properties.

MET 308 - Plastics Processing Techniques (2-2-3)Prerequisites: MET junior standing, MET 307. A study of the various processing techniques for both thermoset and thermoplastic materials. Topics include extrusion, injection molding, blow molding, compression moldings, and casting processes.

MET 314 - Dynamics of Machinery (2-2-3)Prerequisites: Dynamics or kinematics (mechanisms), calculus (AAS level), C++ or BASIC. Acquaints students with motion and forces in machines. Topics include velocity and accelerations in linkages, gears, cam and gear trains, static and dynamic forces, and torques in linkages.

MET 395 - Co-op Work Experience I (3 degree credits)Prerequisites: Junior standing, approval of the department, and permission of the Office of Cooperative Education and Internships. Students gain major-related work experience and reinforcement of their academic program. Work assignments facilitated and approved by the co-op office. Mandatory participation in seminars and completion of a report.

MET 401 - Mechanical Design Project I (2-0-2)Prerequisites: , MET 302, MET 303, MET 304, MET 314, ECET 329, Eng 352. Project and lecture applies the principles learned in all technical courses to more advanced design situations. Proposal of a typical mechanical engineering system is presented by an individual or by small groups. The proposal must meet the approval of course instructor. A formal proposal is required.

MET 403 - Applied Thermodynamics II (2-2-3)Prerequisites: Math 309, MET 303 or its equivalent, MET 304. Builds on a first course on thermodynamics and covers thermodynamic properties of steam, first and second law of thermodynamics. Topics include power and refrigeration cycles, psychrometric chart and combustion.

MET 404 - Applied Heat Transfer (2-2-3)Prerequisites: Math 309, MET 303, MET 304. An introduction to the fundamental theories and applications of heat transfer. Emphasizes understanding and practical problem solving in covering the three fundamental modes of heat transfer: conduction, convection, and radiation.

MET 407 - Structural Design (2-2-3)Prerequisites: C++ or BASIC, elementary strength of materials. Acquaints students with the fundamentals of structural design. Topics include analysis and design of structural members due to various loadings (tension, compression, bending, torsion, and shear), deflections of structural members, truss analysis, stress analysis of weldment.

MET 409 - AirConditioning and Refrigeration (2-2-3)Prerequisites: MET 303, MET 304. Calculation of building cooling and heating loads, psychrometric charts, air distribution and duct design. Topics also include compression and absorption refrigeration cycles, automatic control of refrigeration systems, and building energy management.

MET 415 - Automatic Control Systems (2-2-3)Prerequisites: MET senior standing. Introduction to programmable logic controllers (PLC) as a tool for industrial controls of machines and process. Includes selections of hardware and software, ladder logic programming, wiring methods, maintenance and trouble shooting of.

MET 448 - Mechanical Design Project II (0-2-1)Prerequisite: MET 401. Continuation of project MET 401. Oral presentation and formal written report are required.

MET 491 - Special Projects in MET (1-0-1)One-credit special project course for MET students. Must have an instructor agreeing to sponsor the project. Approval by program coordinator is required.

MET 492 - Special Projects in MET (2-0-2)Two-credit special project course for MET students. Must have an instructor agreeing to sponsor the project. Approval by program coordinator is required.

MET 493 - Special Projects in MET (3-0-3)Three-credit special project course for MET students. Must have an instructor agreeing to sponsor the project. Approval by program coordinator is required.

MET 495 - Co-op Work Experience II (3 additive credits)Prerequisite: MET 395. Approval of the department, and permission of the Office of Cooperative Education and Internships. Full-time work experience for approximately one semester. Provides major-related work experience. Mandatory participation in seminars and completion of requirements that include a report and/or project.

Surveying Engineering Technology:

UNDERGRADUATE COURSES:

SET 207 - Evidence and Procedures for Property Surveys (3-0-3) Prerequisites: CE 200. Introduction to surveying law and to the concept of evidence related to boundary locations as discoverable on the ground and through deeds or other written records. Understanding of the principles of property law, titles, land ownership, transfer of land ownership, deed descriptions, evidence recovery and conflict resolutions.

SET 301 - Route Surveying (Surveying III) (3-3-4) Prerequisites: Two courses in surveying (AAS level). Horizontal and vertical curves computation and layout with regard to highway design. Special emphasis on complex curves. Topics include control, positioning, error analysis, highway design problems, and layout. Also included is a review of the concepts of right-of-way surveys.

SET 302 - Geodetic Control Surveying (Surveying IV) (3-3-4) Prerequisites: Two courses in surveying (AAS level). A study of the higher order methods and techniques of surveying such as Global Positioning System (GPS) with observations of HARNs, 1st, 2nd and 3rd Orders of Accuracy along with the requisite computations to reduce these observations to measurements and the applications of these measurements to the State Plane Coordinate systems and the geoid.

SET 303 - Photogrammetry and Aerial Photo Interpretation (3-3-4) Prerequisite: Junior standing. A review of the principles of photography, including the physical science of optics as related to the use of aerial photos, to engineering and land surveying projects. Includes the necessary mathematics of photogrammetry and the process of designing and establishing the required data for proper acquisition of photogrammetric information.

SET 304 - Adjustment Computations I (4-0-4) Prerequisites: Unified Calculus. A course designed to give the student the necessary knowledge to reduce survey observations to measurements; to analyze the data to determine the relationship of adjusted measurements to the observations; to verify that the mathematical constraints have been met; and to introduce approximate and least squares adjustments of surveying observations.

SET 307 - Boundaries and Adjacent Properties (3-0-3) Prerequisite: Junior standing. A course on legal principles regarding boundaries and the constructive solutions of the problems of boundary surveying by a consideration of deed descriptions and examples of their application to surveying. **Effective From: Fall 2006**

SET 401 - Fundamentals of Geodesy (Surveying V) (3-0-3) Prerequisite: SET 302. Geodesy and its relation to surveying and other disciplines. Topics include geometric, physical and satellite geodesy. Also includes the concept of map projection.

SET 404 - Adjustment Computations II (4-0-4) Prerequisite: SET 304. Introduction to the concepts of observations and models. A continuation of the theory of least squares and the mathematical weighting of observations. Also includes the statistical evaluation of least square results.

SET 407 - Boundary Line Analysis (3-3-4) Prerequisite: SET 307. Develops the analytical synthesis of real property law, land surveying procedures, and scenario development compatible with current case law decisions for the development of most probable scenarios of boundary location for the court's consideration.

SET 420 - Land Information Systems (3-0-3) Prerequisites: Course in CADD, or permission of instructor. Topics include the function and design of multipurpose cadastre systems; the components of a digital Geographical/Land Information System (GIS/LIS); overview on design, implementation and evaluation problems of LIS.

SET 435 - Land Surveying Field Exercise (0-8-3) Prerequisite: SET 302 or permission of instructor. A "real world" surveying project is carried out, presented with a descriptive request for a survey, similar to a common work order from a client. The student prepares a survey (work) plan, carries out the survey, completes data processing and submits a final map. The map will have two forms, a hardcopy surveying plate and a database in an LIS format.

SET 440 - Land Development (2-3-3) Understanding the process of development of land through the study of land use law, federal, state and municipal land use regulations, federal and state regulations regarding environmental issues and the administrative and statutory laws governing the preparation of land surveys; impart the ability to prepare a land survey from initial contact and the proposal phase to preliminary and final plan approval through a class project designed to cover all of these phases. **Effective From: Fall 2001**

SET 490 - Senior Project in Surveying (2-0-2) Prerequisite: Senior standing. The student works on an individual surveying project guided by the department staff. The project should concentrate on a specific aspect of surveying, not necessarily on field measurements. Project includes library research, written report and oral presentation of findings.

Telecommunications Management Technology:

UNDERGRADUATE COURSES:

TMT 301 - Digital Electronics for Telecommunications (2-2-3) Studies the fundamentals of digital electronics including combinational and sequential logic. Emphasizes those signals and configurations commonly employed in telecommunication systems. Theory is reinforced in hardware and simulation laboratory exercises.

English: Offered by the Department of Humanities. See Humanities course list for faculty.

UNDERGRADUATE COURSES:

Eng 095 - General Skills in English as a Second Language (4.5-1-5) Intended for students in need of extensive practice in speaking, listening, reading, and writing in English prior to enrolling in HSS 099S.

Eng 200 - Communicating in Organizations (3-0-3) Prerequisite: HSS 101. Allows students to understand the need for writing in an information-based corporate culture. Students write intensively in a variety of forms for a variety of audiences. Attention is given to editing, graphic design, communications ethics, and desktop publishing. At the conclusion of the course, students prepare a portfolio of their work.

Eng 301 - Advocacy and the Law (3-0-3) Prerequisite: Eng 300, SS 300. Offers opportunities to explore the retrieval and use of legal and law-related materials while developing skills in oral advocacy and in writing persuasive legal documents, such as motion memoranda and briefs. Includes learning to listen to participants in the legal process as well as developing effective styles and forms of speech in the classroom. **Effective Until: Fall 2004**

Eng 302 - Communication Theory (3-0-3) Prerequisite: Eng 336. This course will introduce students to communication theory and practice. The course begins with a review of contemporary communication theory. After covering five selected theories--semiotic, visual, cultural, social, and reception--students will be required to apply a selected theory to a computer-mediated case study. Students will also be required to perform a collaborative field study. Through the course, students will be expected to read critically, to research peer-reviewed sources thoroughly, to present effective oral briefings, and to write analytic reports. **Effective From: Fall 2006**

Eng 333 - Cybertext (3-0-3) Through theoretical readings and electronic research, students explore and compare information structuring in print and digital media, particularly how digital technology influences the dynamics of text. Interactivity, visual communication and developments in the realm of cybernetics are addressed in the course. Materials presented in creative, technical and commercial areas were studied. **Effective From: Fall 2005**

Eng 336 - Advanced Composition (3-0-3) Prerequisite: HUM 101. Involves composing in-depth, persuasive research essays designed to address the aims of discourse (expressive, referential, literary, and persuasive), using current media tools (text, graphics, audio, animation and video) and venues (print and electronic), in several iterations. **Effective From: Fall 2006**

Eng 339 - Practical Journalism (3-0-3) Prerequisite: HSS 101. A descriptive and analytic survey of news systems. Assignments include practice in writing straight news items, sports writing, feature writing, science writing, interviewing, and editing with emphasis on understanding methods. The survey of printed and broadcast news systems includes the influence of technological, economic, legal, ethical, and historical factors.

Eng 340 - Oral Presentations (3-0-3) Prerequisite: HSS 101. Instruction and practice in effective oral presentations. Students deliver a wide range of presentations adapted to the needs of a variety of audiences. Topics include voice and diction, presentation skills, the effective use of visual aids, reporting technical material and audience analysis.

Eng 347 - Technical, Professional and Scientific Writing for Publication (3-0-3) Prerequisite: HSS 101. A journalism course that prepares students to write and publish scientific or technical papers. Working with their interests and knowledge, students learn writing for popular and specialized audiences, journal conventions, publishing process, article marketing, and editing techniques. Includes editorial committees, guest speakers, and technical advisors.

Eng 349 - Advanced Journalism Skills (3-0-3) Through hands-on writing and reporting supervised by the instructor, students learn competencies needed in various journalistic specialties. Special focus on how to cover science and technology, social issues, culture and the arts, sports, business and consumer news. Particular emphasis on copy-editing. **Effective From: Spring 2006**

Eng 351 - Online Journalism (3-0-3)A study of how news is covered on the World Wide Web, and the impact of online news on society and politics. History of news online. Differences between print, broadcast and online-what are the strengths and weaknesses inherent to each medium? Analysis of the websites of different news organizations-from the New York Times to CNN to special interest e-zines to blogs. **Effective From: Spring 2006**

Eng 352 - Technical Writing (3-0-3)Prerequisite: HSS 101. An advanced writing course. Combines current theory with actual practice to prepare students as technical writers. Analyze complex communication situations and design appropriate responses through tasks that involve problem solving, rhetorical theory, document design, oral presentations, writing teams, audience awareness, ethical considerations, and gender equity issues.

Eng 353 - Electronic Publishing (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents. Explores information structuring via print and digital media; how computer technology has influenced the ways in which information is presented in modern culture. Focuses on the optimal ways to prepare and present information for technical and commercial use. Important concepts such as visual literacy and effective design are discussed and addressed.

Eng 353A - Electronic Publishing Lab (0-3-2)Prerequisites: HSS 101, HSS 202 or their equivalents; Eng 352 and Eng 353. Seminar and laboratory-based course designed for PTC majors; open to others with appropriate backgrounds and interests and permission of instructor. Follow up of Eng 353, explores information structuring via digital media, and how computer technology has influenced the ways in which information is presented in contemporary culture. Through guided interactive research, present information for technical and commercial use. Projects involve use of html editors, graphical software, and NJIT networks. **Effective Until: Fall 2005**

Eng 354 - Advanced Electronic Publishing (3-0-3)Seminar and laboratory-based course designed for BA/BS majors; open to others with appropriate backgrounds and interests and permission of instructor. Follow up of Eng 353, explores information structuring via digital media, and how computer technology has influenced the ways in which information is presented in contemporary culture. Through guided interactive research, presents information for technical, commercial, and artistic use. Projects involve use of HTML editors, NJIT networks, and graphical and animation software. **Effective From: Fall 2005**

Eng 355 - Television News Writing and Production (3-1-3)This course consists of lectures and hands-on practice with the basics of television news writing and production and a field trip to a television station. After learning the fundamentals, the class will then begin its own news production by refining the video taped "packages" and integrating them into a studio newscast they will write and produce while guided by the instructor and with technical support from the staff of Instructional Technology and Media Services. The semester culminates in a final program that can be delivered to the campus community through ITMS's cable network. **Effective From: Spring 2007**

Eng 356 - Technical Writing in Distributed Environments (3-0-3)Prerequisite: HSS 101. Prepare distance-learning students to communicate technical information in collaborative computer systems. Uses both real-time and asynchronous communication tools in tasks that involve problem solving, rhetoric, information design, writing teams, audience awareness, and ethical considerations. ENG 356 will satisfy the ENG 352 Technical Writing requirement for distance learning students whose academic majors require ENG 352. **Effective From: Fall 2003 Until: Summer1 2024**

Eng 360 - Collaborative Communication: Community and Global Perspectives (3-0-3)Prerequisites: HSS 101, HSS 202, or their equivalents. The central focus is on the challenge for cooperative communication to solve local and global problems. Examines how technological advances have altered the way we gather resources to solve problems. Today's information is too vast, too diverse, and changes too rapidly to be used to solve social dynamics problems in traditional ways. Using the resources of all available technology--e-mail, video conferencing, satellite communications, etc.--the goal is to bring all stakeholders together in order to build consensus and/or solve problems.

Eng 364 - Theory of Rhetoric (3-0-3)Prerequisite: HSS 101. Examines theories of rhetoric from ancient to contemporary times. Special attention is paid to Aristotle, Peter Ramus, James Kinneavy, Walter Ong, and -Jurgen Habermas. Focuses on the ways in which theories inform the practice of communication. In the course project, students design and conduct field research based on rhetorical theory.

Eng 369 - Creative Writing (3-0-3)Prerequisite: HSS 101. Focuses on the complexities of creating literary texts. Analyzes student writing in genres such as fiction, creative non-fiction, poetry, and drama. Considers these genres from theoretical perspectives. Topics include character development, plot, dia-logue; meter, rhyme, figurative language; audience analysis, ethos, and narrative theory. Students write, edit and critique their own work with the aim of publication.

Eng 490 - Co-op Work Experience I (3-0-3)Prerequisites: major in Communication, junior standing, approval of the department, and

permission of the Office of Cooperative Education and Internships. Students gain major-related work experience and reinforcement of their academic program. Work assignments are facilitated and approved by the co-op office. Requires mandatory participation in seminars and completion of a report.

Eng 491 - Co-op Work Experience II (3-0-3)Prerequisites: Eng 490, approval of the department, and permission of the Office of Cooperative Education and Internships. Students gain major-related work experience and reinforcement of their academic program. Work assignments are facilitated and approved by the co-op office. Requires mandatory participation in seminars and completion of a report.

Eng 496 - Senior Project (3-0-3)Prerequisites: all Communication core courses, at least five Communication individual track electives. For professional and technical communication majors only. Provides students with a capstone experience. Offers PTC students the opportunity to enhance their understanding of communication through their integration of skills and knowledge gained in prior courses. The resultant research thesis or field project, of substantial length and originality, represents the culmination of the undergraduate disciplinary experience. Utilizing both a seminar and workshop approach, entails intense and sustained collaboration between student and instructor, and cooperation among students.

R350:254 - Literature and Politics in the Third World (3)For more details go to [Rutgers Catalog](#).

GRADUATE COURSES:

Eng 500 - English for International Graduate Students I (3 credits)Practice in listening and conversational English for students whose native language is not English. Level: Low Intermediate

Eng 502 - English for International Graduate Students II (3 credits)Practice in writing to improve sentence structure, grammar, vocabulary, and organization. For technical writing, see Eng 541. Level: High Intermediate.

Eng 503 - Advanced English for International Teaching Assistants (3 credits)Practice in public speaking for international TAs and other international students who want to improve their oral presentation skills. Also covers teaching techniques and pronunciation. Level: Advanced.

Eng 505 - Advanced Spoken English for International Graduate Students (3 credits)Designed to improve English pronunciation; accent reduction. Level: Advanced.

Eng 507 - Advanced Conversation and American Culture (3 credits)Practice in conversation in English at an advanced level. The goal is to help students gain the cultural knowledge and speaking skills to increase participation in American life. Level: Advanced.

Eng 521 - Technical Written and Oral Communication (3 credits)Develops skill in oral and written technical communication on a professional level. Three areas are emphasized: 1) analyzing professional and technical communication situations; 2) achieving clear, effective oral and written communication; and 3) developing awareness of variations in professional communication across cultures. For some assignments, students will work on projects from courses in their own fields. The approach is practical; course format is that of a workshop. Non-native speakers of English may take this course.

Eng 598 - Special Topics in ESL: Understanding Research Articles in Information Systems (3 credits)Develops skills in reading journal articles in Information Systems efficiently and with understanding. Includes practice in writing about journal articles. Helpful for CIS 675 and CIS 677.

Eng 599 - University Teaching Methods/Communication Skills (3 credits)Provides ideas, strategies, and techniques to help teaching assistants with their teaching assignments and to enhance their professional communication and interpersonal skills. Includes practical information on classroom management, the culture of the American classroom, diversity issues, and leadership skills. **Effective Until: Fall 2005**

Eng 601 - Advanced Professional and Technical Communication (3 credits)Provides the foundation and direction for all Professional and Technical Communication coursework. This course introduces students to the profession and the academic discipline of technical/professional communication. Modules include bibliographic research; usability analysis; working in teams; report writing; visual thinking; communicating with new technologies; and technical writing style. **Effective Until: Fall 2005**

Eng 603 - Cultural and Technological Change (3 credits)Prerequisite or corequisite: ENG 601. Examines the complex ways in which technology constructs and is constructed by society, with emphasis on interrelationships between technology and communication. Discussions focus on how technological change is expressed in social and political movements, literature, art,

architecture, and philosophy and how they, in turn, influence the future direction of technology. **Effective Until: Fall 2005**

Eng 604 - Communication Theory and Research (3 credits) Prerequisite or corequisite: ENG 601 . Reviews the major theories of communication and provides strategies for research in the field of Professional and Technical Communication. The course focuses on these research methods: problem statement and hypothesis formulation derived from theory; research design and data generation; existing information sources and their acquisition; and analytic techniques. Students develop analytic methods necessary to create a well-considered thesis proposal. **Effective Until: Fall 2005**

Eng 605 - Elements of Visual Design (3 credits) Prerequisite or corequisite: ENG 601 . Provides an understanding of and competency in the visual presentation of information. Course integrates theories of design, techniques of composition, and technologies of electronic and print publishing. Modules include both design principles and hands-on practice in visual literacy, layout and design, and graphic tools. **Effective Until: Fall 2005**

Eng 606 - Advanced Online Design (3 credits) Prerequisites: Eng 605 Elements of Visual Design. This course will focus on online visual communication strategies and community building. The course will cover: multimedia, usability heuristics, navigation theory, contemporary design practices and online community building. Students will be required to create a multidimensional online community and to participate in team-building by collaborating on the MSPTC newsletter. **Effective Until: Summer 2005**

Eng 610 - Creating Hypertext: User and Task Analysis (3 credits) Prerequisite: ENG 605 or equivalent . Covers the complex tasks needed to create nonlinear material: audience assessment, task analysis, scenario development, and evaluation. Students complete the life cycle of planning, implementing, testing and revising a nonlinear writing project. This is a writing intensive course that focuses on creating effective goal-oriented online products. **Effective Until: Fall 2005**

Eng 612 - Theory and Practice of Text Encoding (3 credits) Prerequisite: ENG 605 or equivalent . In the beginning, IBM created "Script," a series of low-level commands that formatted text on a page. Then came Generalized Markup Language (GML) a series of macros for Script. Today we have Standard Generalized Markup Language (SGML) Hypertext Markup Language (HTML) and Extensible Markup Language (XML), all of which rely on the same basic concepts. Students will learn XHTML in order to gain a solid understanding of the theory of text encoding, while looking into the past (when technical writers wrote the code behind the text) and into the future (when VoiceXML enables unified messaging in a single interface). Each student will also create a website. **Effective Until: Fall 2005**

Eng 613 - Multimedia Presentations (3 credits) Prerequisite: ENG 605 or equivalent . There are many ways to create presentations with short films, voice recordings, animations, photos, graphics, narrative, etc. The presentations can 'live' in a variety of ways - on the web, on CD, doing the email rounds, or appearing at a formal board meeting. We will experiment with as many multimedia programs as possible and during our experimentation we will uncover the bugs that go along with making multimedia presentations. We will also consider the balance between content and style - how much is TOO much? Each student will create several presentations. **Effective Until: Fall 2005**

Eng 620 - Proposal Writing (3 credits) Prerequisite or corequisite: ENG 601 . Provides an understanding of and practice in proposal writing for corporations, foundations, and government agencies. Students build skills to create a range of persuasive documents including proposals for research grants, responses to requests for proposal, and government proposals. **Effective Until: Fall 2005**

Eng 622 - Working in Teams (3 credits) Prerequisite or corequisite: ENG 601 . Uses case studies and simulations to provide both the theoretical foundations and the hands-on practice needed to work effectively in and among heterogeneous corporate groups. Includes collaborative writing, interviewing, and conflict resolution, and computer-mediated group work. **Effective Until: Fall 2005**

Eng 624 - Professional and Technical Editing (3 credits) Prerequisite or corequisite: ENG 601 . Presents the theory and practice of editing professional and technical writing. Topics include correctness and conciseness, hard copy and on-line editing, editing graphics, document management, editor-author relationships, and ethical considerations in editing. Students edit writing samples from a variety of technical fields. **Effective Until: Fall 2005**

Eng 626 - Hypertext Design Studio (3 credits) Prerequisite: ENG 605 or equivalent. Integrates language, image, linking and thinking in a studio approach to advanced HTML projects. Students work in computer laboratory with instructor on designing individual projects using current audio and video design applications. **Effective Until: Fall 2005**

Eng 631 - Communication and Environmental Problem Solving (3 credits) Prerequisite or corequisite: ENG 601. Develops critical thinking on ecological issues for problem solving by integrating technical information, human values, and communication with environmental change. Students combine theory, research and models, case studies, visual thinking, and scientific inquiry for application in individual decision-making course project. **Effective Until: Fall 2005**

Eng 632 - Content Management, Manuals and On-Line Help (3 credits) Prerequisite or Corequisite: ENG 601. The three skills that technical writers most often need are an ability to elicit information from recalcitrant SMEs (Subject Matter Experts), the ability to put this information on paper (user manuals) and the ability to put it online in a Help system. This class will focus on the development of skills and abilities that will enable Help system developers to gather, translate and manage information for end users. Students will use theory and practical applications such as RoboHelp and Forehelp to develop an on-line Help module in this course. **Effective Until: Fall 2005**

Eng 640 - Health Communication (3-0-3) This course will focus on the use of communication strategies to inform and influence individual and community decisions regarding health. The course will cover: the multidimensional nature of health communication, research in health communication, behavioral theories in health communication, rhetorical theories in health communication, legal and ethical concerns in health communication, the communication of risk and uncertainty, and the design of health campaigns. Students will be required to (a) research and prepare a health communication strategy for use in a specific context and (b) to design an accompanying print or hypertext document to be used in that context. **Effective Until: Fall 2005**

Eng 642 - Corporate Communication (3 credits) Prerequisite or corequisite: ENG 601. Develops communication skills for modern global corporate and business markets. Business documents may include mission/vision statements, business plans, financial statements/plans, marketing plans, and corporate policies and procedures. **Effective Until: Fall 2005**

Eng 650 - Web Based Training Design (3 credits) Prerequisite or corequisite: ENG 601 and ENG 605. Web-based Training (WBT) is at the forefront of the recent 'e-learning' boom. However, while WBT use is on the rise, specific skills and tools are required to ensure a successful WBT implementation. Based on proven instructional design concepts, this course provides the student with the skills necessary to create effective web-based training programs. **Effective Until: Fall 2005**

Eng 698 - Selected Topics in Professional and Technical Communication (3 credits) Prerequisite or corequisite: ENG 601 **Effective Until: Fall 2005**

Eng 700 - Project in Professional and Technical Communication (3 credits) Prerequisites: approval of graduate advisor, and completion of core courses. Demonstrates ability to conceive and execute an extended writing project with professional graphics and to make an oral and visual presentation of the work. Based on experiential research (internship, co-op, work experience) student submits a proposal, develops a project (e.g., guidebook, manual, online documentation, website, video, CD-ROM) and completes a paper describing the theory and methodology supporting the project application. With graduate advisor, student selects a faculty advisor, faculty reviewer, and external reviewer. **Effective Until: Fall 2005**

Eng 701 - Thesis in Professional and Technical Communication (6 credits) Prerequisites: approval of graduate advisor; completion of core courses. Demonstrates ability to conceive and execute an extended writing project with professional graphics and to make an oral and visual presentation of the work. The completed written thesis should warrant publication in a technical journal. Thesis Committee consists of program-approved faculty advisor, one other faculty member, and external reviewer. A student must register continuously for a minimum of 3 credits per semester until thesis is completed. Total will be limited to 6 credits. **Effective Until: Fall 2005**

Eng 725 - Independent Study in Professional and Technical Communication (3 credits) Prerequisite: approval of graduate advisor and supervising faculty. Allows development of areas of specialization for Master's Project or for areas of study in communication in which one or more students may be interested but which are not of sufficiently broad interest to warrant a regular course offering. **Effective Until: Fall 2005**

Entrepreneurship:

UNDERGRADUATE COURSES:

Entr 410 - New Venture Management (3-0-3) Prerequisites: Mgmt 390, Mrkt 330, Fin 315. Provides an understanding of the process of start up and early stage management of new, technology based, small firms. Emphasis is on recognizing, evaluating and deciding on a new business idea, as well as preparation for and management of the start up process. Preparation and execution of a new business plan.

Entr 420 - Technological Entrepreneurship (3-0-3) The course is organized around three fundamental issues that entrepreneurs need to understand: 1) how innovations evolve over time, 2) how and whys some innovations are successful and some are not and 3) how one manages a new venture that was formed to develop new technologies. It is intended to help students understand the issues associated with a new venture and to develop a business plan to launch a technology based firm.

Entr 430 - Entrepreneurial Strategy (3-0-3) Prerequisites: HRM 301, Mrkt 330, MIS 345, Fin 315, Acct 317, OM 375, Mgmt 491. Integrates knowledge of the different aspects of business learned in previous course work. In addition, provides an understanding of the decisions that guide the overall operations of a business organization and how the organization interacts with its markets, competitors, and suppliers. For the student who is considering starting or managing a small business. Combines classroom instruction in business strategy along with case analysis of small firms.

Environmental Engineering: Offered by the Department of Civil and Environmental Engineering. See [Civil Engineering](#) course list for faculty.

UNDERGRADUATE COURSES:

EnE 262 - Introduction to Environmental Engineering (3-1-3) Prerequisites: Chem 126, Math 112, and Phys 121. To introduce students to the integrated science, engineering, design and management concepts of engineered environmental systems. The course will cover environmental regulations and standards, environmental parameters, mass balance and natural systems, water quality management, water and wastewater treatment, air pollution control, noise pollution, and solid and hazardous waste management. Background material and laboratories in the environmental sciences and management areas will be covered. Group term papers and presentations will be required. **Effective From: Fall 2006**

EnE 360 - Water and Waste Water Engineering (3-0-3) Prerequisites: EnE 262 and junior standing. Training in the methods used for water pollution control. Topics include the chemical, physical, and biological processes that occur in waste treatment design and in receiving waters; modeling schemes to determine allowable loadings in various bodies of water; and waste treatment processes used for water pollution control.

EnE 361 - Solid and Hazardous Waste Engineering (3-0-3) Prerequisites: EnE 262 and junior standing. Exposure to the area of air pollution control, solid waste disposal, and radioactive waste disposal. Topics include the chemistry of contaminated atmospheres; the influence on meteorological conditions of dispersion of pollutants; abatement processes used in the control of emissions; classification and nature of solid waste, and solid waste disposal techniques; sources and methods for the disposal of radioactive contaminants; and related health effects.

EnE 491H - Honors Research Experience in Environmental Engineering (3-0-3) Prerequisites: Junior standing, agreement of a department faculty advisor, and approval of the associate chairperson for undergraduate studies. This course provides the student with an opportunity to work on a research project under the individual guidance of a member of the department. A written report is required for course completion. Open to students with a GPA of 3.0 or higher.

GRADUATE COURSES:

EnE 593 - Graduate Co-op Work Experience IV (0 credits) Prerequisites: One immediately prior 3-credit registration for graduate co-op work experience with the same employer. Requires approval of departmental co-op advisor and the Division of Career Development Services. Must have accompanying registration in a minimum of 3 credits of course work. **Effective From: Fall 2006**

EnE 610 - Hazardous Site Operations (3 credits) Course consists of overview of OSHA regulations and NIOSH standards concerning toxicological hazards and medical surveillance requirements, and recognition and monitoring of site hazards. Site layout, design of engineering control to minimize exposure, risk assessment, and modeling will also be presented. Students will receive a certification for the 40-hour OSHA Hazardous Waste Operation training.

EnE 620 - Environmental Chemodynamics (3 credits) The overall objective of this course is to introduce students to concepts, mechanisms, and models used to describe the transport of chemicals in the environment. Concepts and models presented in the first six weeks are applied to the air-water, sediment-water, and soil-air interfaces during the rest of the term. **Effective Until: Fall 2004**

EnE 660 - Introduction to Solid and Hazardous Waste Problems (3 credits) Prerequisite: EnE 663. (May be taken concurrently.) Introduction to solid waste disposal. Industrial and urban sources of solid waste and conventional methods of waste disposal. Application of engineering principles related to these topics.

EnE 661 - Microbiology for Environmental Engineers (3 credits) Prerequisite: EnE 663. (May be taken concurrently.) Biological and microbiological principles applied to environmental and sanitary engineering. Bacteriological examinations in the laboratory of water and wastewater.

EnE 662 - Site Remediation (3 credits) Prerequisite: EnE 663 or EvSc 610 (May be taken concurrently.) Examines site remediation from start to finish. Includes regulations, cleanup standards, remedial investigations, feasibility studies, risk assessment, and safety. Examines established and innovative cleanup technologies such as incineration, containment, bioremediation, vapor extraction and ground water recovery.

EnE 663 - Water Chemistry (3 credits) Prerequisite: undergraduate general chemistry. The ability to analyze and solve a wide range of chemical equilibrium problems in water chemistry is developed.

EnE 664 - Physical and Chemical Treatment (3 credits) Prerequisite: EnE 663. Physical and chemical operations and processes employed in the treatment of water and wastewater. Topics include gas transfer, coagulation, flocculation, solid-liquid separation, filtration, and disinfection.

EnE 665 - Biological Treatment (3 credits) Prerequisites: EnE 663, EnE 661. (May be taken concurrently.) Principles of evaluation and control of water pollution that describe aerobic treatment processes: oxidation ponds, trickling filters, and activated sludge. Anaerobic digestion and sludge handling and disposal as well as biodegradability study techniques for various wastes.

EnE 666 - Analysis of Receiving Waters (3 credits) Prerequisites or corequisites: EnE 663 and EnE 661. Ecological responses of various types of receiving waters to municipal and industrial waste loadings. Mathematical models for water quality prediction and planning.

EnE 667 - Solid Waste Disposal Systems (3 credits) Prerequisite: EnE 663. Review and evaluation of design criteria, methods, and equipment employed in handling and disposal of industrial and municipal solid wastes. Emphasis is on hazardous toxic waste, resource recovery, and regulatory constraints.

EnE 668 - Air Pollution Control (3 credits) Prerequisite: EnE 663 or physical chemistry. The nature of air pollution, its effect on the public, and legal and engineering remedies.

EnE 669 - Water and Wastewater Analysis (3 credits) Prerequisite: EnE 663. (May be taken concurrently.) Measurement of parameters of interest in water and wastewater quality studies is performed in the laboratory. Specific project requiring analysis, interpretation, and recommendations will be a major part of the work.

EnE 670 - Advanced Processes in Water Pollution Control (3 credits) Prerequisite: EnE 669. Detailed laboratory experiments using unit operations of sedimentation, coagulation and flocculation; chlorination, filtration, aeration, sludge treatment and digestion. Aspects of pilot plant design and layout are considered. Design parameters discussed in prerequisite courses are developed by advanced bench-scale laboratory procedures. Advanced design and synthesis are considered.

EnE 671 - Environmental Impact Analysis (3 credits) Prerequisite or corequisite: EnE 663. A graduate course dealing with physical aspects of the environment. Overview of environmental problems, federal and state standards, methodology for developing impact statements, case studies based on recent experience, basis for assessment and decision making.

EnE 672 - Stormwater Management (3 credits) This course provides a comprehensive study of stormwater management with emphasis on design practices. Topics include regulatory framework, an overview of structural and non-structural BMPs, groundwater recharge analysis, estimate of runoff, and design of detention basin and drainage systems. **Effective From: Spring 2006**

EnE 700 - Environmental Engineering Project (3 credits) Prerequisite: student must have sufficient experience and/or graduate courses in major field to work on the project. Subject matter to be approved by the department. Permission to register must be obtained from the project advisor. Extensive investigation, analysis, or design of environmental engineering problems not covered by regular graduate course work is required. A student with an exceptional project in EnE may, upon his/her own initiative and with the approval of his/her advisor, substitute the work of this course as the equivalent of the first 3 credits for EnE 701 Master's Thesis.

EnE 701 - Master's Thesis (6 credits) The thesis is to be prepared on a subject in the student's major field approved by the department. Approval to register for thesis must be obtained from the thesis advisor. A student must register for a minimum of 3 credits per semester. Credit will be limited, however, to the 6 credits indicated for the thesis.

EnE 702 - Special Topics in Environmental Engineering (3 credits) Prerequisite: advisor's approval. Topics of special current interest in environmental engineering.

EnE 720 - Environmental Chemodynamics (3) Introduction to concepts, mechanisms and models used to describe the transport of chemicals in the environment. Concepts and models are applied to air-water, sediment-water and soil-air interfaces. **Effective From:**

EnE 725 - Independent Study I (3 credits) Prerequisite: written permission from department chairperson plus courses to be prescribed by the supervising faculty member. Covers areas of study in which one or more students may be interested but which is not of sufficiently broad interest to warrant a regular course offering.

EnE 726 - Independent Study II (3 credits) Prerequisite: written permission from department chairperson plus courses to be prescribed by the supervising faculty member. Covers areas of study in which one or more students may be interested but which is not of sufficiently broad interest to warrant a regular course offering.

EnE 727 - Independent Study III (3 credits) Prerequisite: written permission from department chairperson plus courses to be prescribed by the supervising faculty member. Covers areas of study in which one or more students may be interested but which is not of sufficiently broad interest to warrant a regular course offering.

EnE 760 - Applied Environmental Soil Chemistry (3 credits) Prerequisites: EnE 663, Math 651 or equivalent. Understanding of physical and chemical processes occurring in soils as well as the chemical and physical properties of subsurface soil environments. Emphasizes current research on the subsurface environment.

EnE 790 - Doctoral Dissertation (Credits as designated) Required of all students working toward the doctoral degree. A minimum of 36 credits is required. The student must register for at least 6 credits of dissertation per semester until 36 credits are reached; registration for additional credits may be permitted beyond the 6, with the approval of the advisor, up to a maximum of 12 credits per semester. If the student has not completed the dissertation after completion of 36 credits, continued registration of 3 credits per semester is required.

EnE 791 - Graduate Seminar (3 credits) Seminar in which faculty or others present summaries of advanced topics suitable for research. Students and faculty discuss research procedures, thesis organization, and content. Students present their own research for discussion and criticism. Required of all doctoral students registered for EnE 790 unless requirement is waived, in writing, by the dean of graduate studies.

Environmental Policy Studies: Offered by the Department of Humanities and Social Sciences

GRADUATE COURSES:

EPS 601 - Behavioral Research Methods and Analysis (3 credits) Introduces beginning graduate students to the research tools necessary for specialized study in other environmental policy studies courses. Problem identification, research design and problem solving; methods of data analysis; gathering of original field data.

EPS 602 - Research Analysis for the Social and Policy Sciences (3 credits) Prerequisite: EPS 601. Distribution of social, political, economic and health-related data in both samples and populations using a general linear model with residuals. Test hypotheses using both the Fisher and Neyman-Pearson criteria. Use of software such as SPSS, Microsoft Excel and Resampling Stats. to develop and test models using correlation, regression and ANOV techniques.

EPS 606 - Technology Forecasting and Management Planning (3 credits) Prerequisite: quantitative background in science, social science, or engineering. Basic forecasting techniques such as regression analysis, scenario generating, Delphi conferencing, and morphological analysis with particular case studies and problems pertaining to the forecasting of technological development. The relation of technological forecasting to the management process and the understanding of the technological development process. Demonstration of techniques and application to the contemporary fields of technological importance such as energy, communications, transportation, housing, and computers.

EPS 609 - Environmental Risk Assessment (3 credits) Methodology to assess the social and economic risks to present-day environmental resources of air and water; cost-benefit and trade-off analysis; technical characteristics of materials such as half-life, decomposition rates, and temperature sensitivity; and probabilities of various environmental situations.

EPS 612 - Introduction to Environmental Policy Studies (3 credits) Introduction to six areas essential to a comprehensive understanding of environmental policy: concept of environmental policy; tools (law, economics, planning, science, engineering, ethics) for environmental policy; the U.S. perspective (NEPA, clean air and water acts, CERCLA); the international perspective (Club of Rome models, 1972 UNEP, 1992 Rio); industrial perspective (pollution prevention/life cycle engineering, privatization); and the local perspective (New Jersey DEP, NGOs, local industry, shoreline.) Same as MIP 612.

EPS 613 - Environmental History and Policy (3 credits) Explores the dialogue between humanity and the environment in the United States, as well as its global implications. Surveys fundamental themes of history and policy from an environmental perspective: colonial development, independence, western expansion, industrialization, urbanization, and the rise of a consumer society. Gives special attention to the emergence of an environmental perspective: wilderness appreciation, the conservation movement, public health, the rise of the environmental movement since the 1960s, environmental science, and the legislative and regulatory process.

EPS 614 - Environmental Economics (3 credits) Detailed overview of the relationship between political economy and the environment drawing on diverse case studies including global warming, ocean resources, energy policies, and contamination of the nation's water, air and soils. Economic and social policies for the fast-changing relationship between society and nature.

EPS 615 - The Politics of Science (3 credits) Geopolitical context in which scientific discovery and governmental science policy have been formulated since World War II: social construction and the constituencies that have a stake in its outcome; military influence on science policy priorities; and legislative obstacles to various science policy objectives.

EPS 616 - Global Problem Solving in Science, Technology, and the Environment (3 credits) Developing policy for the global era. Analyses and theories on political concept of sovereign nation states; the earth as one integrated economy, technology, science, politics and ecology; multinational corporations; worldwide patterns of capital and labor migration; energy flows; technology transfer; and impact of modernization and development on ecology.

EPS 622 - Sustainable Development (3 credits) Prerequisite: EPS 612 Challenges of sustainable development in the United States

and in other countries, influence of sustainable development concepts on environmental decision-making, sustainable development as a paradigm for environmental policy-making.

EPS 630 - Technology, Engineering and Civilization (3 credits)Technological development and technical innovation dating from the ancient world, medieval Europe, to the modern era, with emphasis on Western civilization. Comparisons of the United States, Europe, China and Japan. Major themes include the role of the military and war, proto-industrialization and industrial revolution, technology transfer, emergence of engineering as an occupational class, and the place of the United States as the world's premier technological nation.

EPS 634 - Professional Ethics (3 credits)Professional ethics: its source, range, and limits. Ethical thought and behavior in Western tradition and culture as they apply to business, engineering, and government. By studying both theoretical arguments and practical, real-life case studies, students learn to recognize, analyze and evaluate the ethics of personal professional decisions about work, careers, and policies.

EPS 638 - Physical Geography (3)Understanding the interaction between humans and the physical environment is important to the formulation of sound environmental policy. The course examines processes that shape the physical environment, the influence of human activities on these processes and the physical environment, and the application of this information to solving environmental problems.

EPS 642 - Urban Environmental Policy Studies (3 credits)Critical evaluation and formulation of environmental policy as it affects urban setting. History and theory of environmental policy. How the U.S. legal structure shapes environmental regulation and its administration. Shifting environmental policy paradigms. Case study analyses focusing on urban settings.

EPS 644 - The Rhetoric of Environmental Policy (3 credits)Introduces students to the major types of rhetorical analysis as well as assures that students can analyze and write technology policy that is informed by core rhetorical principles of that analysis.

EPS 651 - Introduction to Urban and Environmental Health (3 credits)Health problems associated with the social and psychological factors found in urban areas and health problems stemming from contamination of air, water, food, the work place and other special environments. Policies required to promote healthful living behavior and those required to regulate negative externalities.

EPS 660 - Ethics and Environmental Policy (3 credits)Contemporary environmental problems from the perspective of ethics or moral philosophy. Is there a moral obligation to preserve or protect the natural environment? What are the ethical presumptions and values underlying environmental policy? Are traditional theories of moral philosophy applicable to contemporary environmental problems, or is a new conception of the relationship between humanity and nature needed?

EPS 698/EPS 699 - Special Topics in Environmental Policy (3 credits each)Prerequisite: advisor's approval. Topics of special or current interest.

EPS 701 - Master's Thesis (6 credits)Prerequisite: matriculation for the master's degree, advisor's and departmental approval. Projects involving fieldwork, experimental, or theoretical investigation carried out under the supervision of a designated member of the departmental faculty. The completed thesis should be of a quality as to warrant publication, in whole or in part, in a professional journal. A minimum of 3 credits per semester is required until completion.

EPS 702 - Special Topics (3-0-3)Prerequisite: Approval of graduate advisor in Environmental Science. Topics of current interest in the field of environmental policy. Doctoral level course. **Effective From: Spring 2006**

EPS 711 - Environmental Policy: Corporate Approach and Organization (3 credits)Explores corporate and business advocacy approaches to influencing and responding to environmental policy and regulation from organizational, historic and strategic perspectives.

EPS 712 - Advanced Studies in Environmental Policy (3 credits)Analysis of environmental policy development and implementation by studying current issues such as the shift from command and control to pollution prevention, brownfields, clean air from local, regional and national perspectives, and environmental policy priority setting.

EPS 714 - Environmental and Natural Resources Economics (3 credits)Examines environmental regulation of firms and natural resource use with emphasis on the theoretical foundations required for public policy. Students focus primarily on the application of economic tools to improve environmental quality.

EPS 725 - Independent Study I (3 credits) Prerequisite: matriculation for the master's degree, advisor's and departmental approval. Projects not within the scope of existing courses are carried out under the supervision of a designated member of the departmental faculty.

EPS 726 - Independent Study II (3 credits) Prerequisite: matriculation for the master's degree, advisor's and departmental approval. Projects not within the scope of existing courses are carried out under the supervision of a designated member of the departmental faculty.

EPS 761 - Ethics and Environmental Policy II (3 credits) Presents a detailed investigation of the ethical bases of environmental policy decisions. Examines both theoretical philosophical arguments and practical case studies.

Epidemiology: Offered by the UMDNJ-New Jersey Medical School

GRADUATE COURSES:

EPI 615 - Introduction to Epidemiology and Control of Chronic and Infectious Diseases (3 credits) Prerequisites: epidemiology core courses. Terminology; major causes; occurrence, distribution and dynamic behavior; epidemiologic concepts; epidemiology of selected diseases; investigation of outbreaks and epidemics; application to medicine (individual basis) and public health (community and population basis); implement levels of prevention and control.

EPI 616 - Advanced Topics in Infectious and Chronic Diseases Epidemiology (3 credits) Prerequisites: epidemiology core courses, EPI 615. Utilizing practical and detailed examples, explores topically important issues in epidemiology to provide a framework for future self-learning and field research experiences. Applies principles to critically analyze relevant literature. Presents advanced, selected topics in depth with an emphasis on infectious disease epidemiology.

EPI 621 - Survey Research Methods/Questionnaire Design (3 credits) Prerequisites: biostatistics, epidemiology, health information systems core courses. Introduces basics of survey research; provides skills necessary to conduct research. Conduct a one-page survey and present the results to the class as a final project.

EPI 625 - Community-Based Epidemiological Research (3 credits) Prerequisites: epidemiology and biostatistic core courses. Investigate the epidemiology of a disease or an outbreak or risk factor(s) or any of the current public health issues. The investigation must warrant publication upon successful completion of the study; include detailed study in primary and secondary prevention of the selected topic; and requires review of relevant literature.

EPI 626 - Emerging and Re-emerging Infections (3 credits) Covers the problem organisms and the various approaches to the problems from immunization and surveillance to attacking the societal variables that provide the setting in which these epidemics arise and flourish. Includes deliberately initiated infections (bioterrorism) and controversial partial solutions such as food irradiation.

EPI 627 - Innovations in Public Health (3 credits) Includes some of the major historical approaches, current concepts (including control of illicit drug use, unusual community-based projects, use of large national cohorts) and potential future approaches; marketing of public health; appropriate, fiscally responsible screening; nutrition; and changes that will be created in public health innovations related to deciphering the genome.

EPI 628 - Pharmacoepidemiology (3 credits) Prerequisites: epidemiology core courses, required track courses. Familiarization with methodological issues in pharmacoepidemiology; commonly used designs (e.g. cohort, case-referent); identification of main sources of bias in these designs; familiarization with tactics to deal with these biases. Students present for discussion proposals for pharmacoepidemiologic research.

EPI 629 - Oral Epidemiology of Chronic and Infectious Diseases (3 credits) Provides an epidemiological overview of oral diseases. Topics include: clinical-decision analyses for the diagnosis, treatment, prevention and prognosis; research protocol; epidemiological data sources and clinical measurements; scientific papers; sampling techniques and research designs; descriptive and inferential statistics.

Financial Management: Offered by the School of Management

UNDERGRADUATE COURSES:

Fin 315 - Principles of Financial Management (3-0-3) Prerequisites: Acct 115, Acct 116. Principles of funding the business enterprise domestically and internationally with an emphasis on technology-based organizations. Topics covered include access to capital, means of long- and short-term financing, financial instruments, capital budgeting, and analysis of financial statements. Extensive use of electronic spreadsheets.

Fin 401 - Securities in Financial Markets (3-0-3) This course offers a quantitative approach to evaluating fixed income securities and to managing bond portfolios. Specific topics include: modern theory of bond pricing, pricing of high risk bonds, derivatives, and risk management. **Effective From: Fall 2005**

Fin 402 - Financial Risk Measurement and Management (3-0-3) This course offers an in-depth analysis of the measurement and management of risk in financial markets. Topics include: assessing overall market risk, credit risk, liquidity risk, settlement risk, volatility risk, measuring portfolio risk, and extreme value risk. **Effective From: Fall 2005**

Fin 403 - Financial Statement Analysis (3-0-3) This course offers comprehensive coverage of analysis of financial statements so that students can: a) evaluate the financial position of a firm; b) assess the firm's inherent value and the value of its securities; c) assess the firm's obligations and its ability to meet them; and d) analyze sources and uses of cash. **Effective From: Fall 2005**

Fin 404 - Financial Management Using ERP Systems (3-0-3) Enterprise Resource Planning (ERP) systems are covered in-depth as tools for increasing a firm's profitability, reducing its costs, and for improving its competitiveness. ERP platforms from PeopleSoft and Microsoft as used throughout the course to demonstrate financial management using integrated, firm wide information systems. **Effective From: Fall 2005**

Fin 416 - Corporate Finance (3-0-3) Prerequisite: Fin 315. Advanced corporate finance with an emphasis on the financial management of technology-based organizations. Case studies are used for comparative analysis. Emphasis is on organizational productivity and profitability.

Fin 422 - International Finance (3-0-3) Prerequisite: Fin 315. Introduction to the international financial management of the firm with an emphasis on technology-based organizations. Topics covered include hedging currency risk, capital budgeting internationally, raising funds internationally. Global competitiveness is addressed with comparative analysis of the financial management practices of American, European and Japanese firms.

Fin 423 - Risk Analysis (3-0-3) Prerequisite: Fin 315. The management of risk in the business enterprise. Topics include measurement of risk and hedging strategies, sources of liability, property and liability insurance, and insurance administration.

R390:315 - Investments (3) For more details go to [Rutgers Catalog](#).

R390:329 - Finance (3) For more details go to [Rutgers Catalog](#).

R390:386 - Futures and Options (3) For more details go to [Rutgers Catalog](#).

GRADUATE COURSES:

Fin 516 - Principles of Financial Management (3 credits)Fundamentals of financial management divided into two segments: investment and corporation finance.

Fin 600 - Financial and Economic Environment (3 credits)Intended for public and private organizations. Issues related to interest rates, extraordinary rates of inflation, fiscal and monetary policy, and regulatory policy are integrated with market structure, cost and production technology, pricing policy, cash flow, risk-return opportunities, capital budgeting techniques, and decision making in companies.

Fin 618 - Public and Private Financing of Urban Areas (3 credits)Ties government's budget, tax policy, allocation of resources between public and private sectors, with the structure, development, and growth needs of urban metropolitan areas. Focuses on problems of poverty, transportation, land-use, economic base, relation between central cities and suburban areas, and alternative engineering and economic solutions. Same as MIP 618 and Tran 604.

Fin 624 - Financial Management (3 credits)Prerequisite: Fin 516. The management of assets, liabilities and equity in a domestic framework. Includes: goals of the firm, time value of money, financial statement analysis, financial ratio analysis, financial planning and forecasting, capital budgeting, cost of capital, capital structure, dividend policy, working capital management, mergers and acquisitions, and pricing of options.

Fin 626 - Financial Investment Institutions (3 credits)Prerequisite: Fin 516. Introduces the role of banking institutions and investment banks in the domestic and international money market and capital environment to the financial managers. Covers instruments and services of financial intermediaries that are crucial to business management. Discussions range from the financial services and facilities of regional banks to money-center banking institutions. Alternatives of project financing, lending requirements and regulations, project financing, and role of intermediaries in local and international transactions. Focuses on the private placement procedures of all types of securities in the capital market and the unique role undertaken by the investment banking firms. Provides an insight about the public offering process for existing and venture capitalized firms.

Fin 627 - International Finance (3 credits)Prerequisite: Fin 516. Examines financing of exports and imports, managing multicurrency working capital, international aspects of capital budgeting, cost of capital and their relationship with political, economic, and financial risk. Explores financial innovations and their impact on the firm's financial strategy and performance of overall productivity. Discusses the tax consequences and principal-subsidiary relationship of the multinational enterprise. Introduces international money and capital markets, instruments, derivatives, and institutions.

Fin 630 - Applied Business Econometrics (3 credits)Introduces methodological development of quantitative tools essential to modern managers. Includes sampling distribution, hypothesis testing, nonparametric statistics, and simultaneous regression models. Centers on application setting with statistical results providing insights into management decisions.

Fin 631 - Working Capital Management and Credit Analysis (3 credits)Prerequisite: Fin 516. Optimal management of a firm's working capital, such as cash, marketable securities, receivables, and inventories with an emphasis on the institutional background and environmental modeling. Deals with cash flow analysis, the assessment of financial needs, and selecting the appropriate domestic and international sources for meeting a firm's credit needs.

Fin 632 - Financial Valuation of Technology-Based Companies (3 credits)Prerequisite: Fin 516. Concentrates on techniques and procedures of assessing, managing, and forecasting value of alternative corporate and business level strategies of companies with emphasis on technology-based companies. These strategies include new product introduction, joint venture agreements, new market entries, and capital expenditures.

Fin 634 - Mergers, Acquisitions, and Restructuring (3 credits)Prerequisite: Fin 516. Focuses on identifying and evaluating potential and international companies for mergers and acquisitions as well as structuring of deals. The financial, social and managerial implications of these changes in corporate ownership will be examined. Topics are: financing M&As, deal structuring, tax implications, valuation, broker/finder agreements, merger negotiations, and post-merger integration.

Fin 660 - Financial Planning and Decision Making (3 credits)Prerequisite: Fin 624. This course introduces the in-depth qualitative and quantitative analysis of the short-term and long-term investment and financing decisions in an uncertain environment. The course emphasizes a quantitative analysis (simulation model) and case studies that deal with actual business decisions and challenges. Students are assigned to competing financial management teams in order to develop financial planning and decision making expertise.

Fin 700 - Seminar in Theory and Research in Financial Management (3 credits)Prerequisites: Fin 624 or Fin 626. Only open to those students who do not do a thesis. The theory and applied tools of financial management. Presented in seminar format with

several students working as a team to analyze and resolve an issue in financial management.

Fin 701 - Thesis in Financial Management (6 credits) Prerequisites: Fin 624 or Fin 626; waived with approval of the assistant dean for graduate programs. Examines: What is research? Why do research? What are the objectives of research? Covers the need for research, criteria for good research and research design, concept of measurement, sampling design, primary data collection, experimentation and simulation, statistical and other types of analysis, and reporting of research findings.

History: Offered by the Federated History Department of NJIT and Rutgers-Newark

UNDERGRADUATE COURSES:

HIST 213 - The Twentieth-Century World (3-0-3) Prerequisite: HSS 101. Uses case studies to provide an interdisciplinary view of the 20th-century world. Selected literary, philosophical, and artistic movements are discussed in the context of the major historical developments of the century. This course satisfies three credits of the GUR in Cultural History. Honors Note: See HSS 101.

Hist 125 - Mapping Human History (3-0-3) An introduction to the relationship of time and space in human history, using selected case studies drawn from a wide range of historical periods and places. Students learn to read and use maps, with a particular emphasis on the critical examination of evidence.

Hist 334 - Environmental History of North America (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. The history of interactions between humans and their natural environment on the North American Continent. Considers perceptions of, use of, and alteration of the environment. Traces the cultural, intellectual, economic, political and technological transformations from early colonial times to the late 20th century. Addresses the diverse environmentalisms that have emerged the last several decades.

Hist 341 - The American Experience (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. American history from the colonies to the 20th century, with concentration on several selected themes basic to an understanding of the changing cultural patterns and social values of American civilization.

Hist 343 - African-American History I (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. Introduction to African-American history from pre-colonial West Africa to emancipation in the mid-19th century. Topics include the African slave trade, the economics and politics of slavery, gender and culture in the slave community, and the free black experience in both the north and south.

Hist 344 - African-American History II (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. Introduction to African-American history from the mid-19th century to the present. Covers race relations and the civil rights movement, as well as migration, black social and political thought, gender roles, and class formation.

Hist 345 - Communication through the Ages (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. Modes of communication, ancient and modern, in their social and cultural context?from cave painting to computers. Topics include literacy and economic development in the West; the technological revolution in media beginning with Daguerre, Samuel Morse, and Alexander Graham Bell; the institutional development of mass media and popular culture; and contemporary trends in world communication and interaction.

Hist 351 - Ancient Greece and the Persian Empire (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. The political, institutional, and cultural developments of Ancient Greece and the Persian Empire from the Mycenaean period to the King's Peace (386 B.C.).

Hist 352 - The Hellenistic States and the Roman Republic (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. The political and cultural developments of the Hellenistic states and their influence on the Republic of Rome to 30 B.C.

Hist 359 - History of the Middle East I (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. The political, cultural, and institutional developments in the Middle East from the Parthians to the capture of Constantinople by the Ottoman Turks. Four periods will be analyzed: the Parthian, the Sassanid Persian, the Caliphate, and the Seljuk and Ottoman Turks.

Hist 360 - History of the Middle East II (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212,

HSS 213 or their equivalents. The political, cultural, and institutional developments in the Middle East from the capture of Constantinople by the -Ottoman Turks to the impact of the Arab-Israeli conflict on the world today.

Hist 361 - The Founding of the American Nation (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. North America in the colonial and revolutionary periods, with emphasis on patterns of cultural and institutional development from early settlement through the ratification of the Constitution.

Hist 363 - The United States as a World Power (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. American domestic and foreign policy in the 20th century. Topics include imperialism, the Progressive Era, the Depression, the New Deal, World Wars I and II, the Cold War, America and the world today.

Hist 365 - Comparative Colonial History (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. A comparative analysis of the relationship between expanding Western nations and selected regions of Africa, Asia, and South America, from 1500 to 1970. A case study approach illuminates key historical processes, with a special emphasis on economic development and cultural change in colonial settings. Topics include European perceptions of culturally different peoples, race relations in colonial societies, forms of rebellion and resistance to European rule, nationalist movements.

Hist 366 - Gender, Race and Identity in American History (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. Surveys the social construction of gender in America from the 17th century to the present. Examines the changing gender roles and relations that have characterized and structured the historical experiences of different racial and ethnic groups. In a multicultural framework, covers the impact that colonization, industrialization, slavery, immigration and migration, urbanization, war, and social movements have had on the ways that women and men think of themselves in terms of gender as well as their respective roles in families and larger social networks.

Hist 368 - Comparative Economic History (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. A comparative analysis of the history of economic development, with particular attention to industrialization, shifting patterns of global trade, and changing labor markets. Topics include the Industrial Revolution, the rise of the world economy, the transformation of non-Western economies, labor migration, and newly industrializing countries.

Hist 369 - Law and Society in History (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. Uses historical case studies to illustrate and evaluate various approaches to the study of law and society. Topics include criminality and the rise of incarceration as a legal penalty in the 19th century; the comparative law of slavery; and the evolution of American Indian law.

Hist 372 - Contemporary Europe (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. European society in the 20th century, Nationalism, imperialism, totalitarianism, movements toward European unity, and prominent cultural developments.

Hist 374 - Modern Russian Civilization (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. Russia under the last tsars, the 1917 upheavals, rise of the Soviet state to world power under Lenin, Stalin, and others, until the collapse of the communist dictatorship.

Hist 377 - Cities in History (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. Examines social, cultural and economic changes in urban areas. Regions and themes vary and may include urbanization in Europe, the rise of cities in Latin America, and urban change in contemporary America.

Hist 379 - History of Medicine (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. Focuses on the evolving institutions, values, concepts, and techniques through which doctors attempted to control the impact of disease and preserve the health of Americans, beginning with the shaman and colonial physician through post-World War II changes in the system of medical care.

Hist 380 - History of Public Health (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. Attempts to protect the health of human populations from the Black Death in medieval Europe to recent threats from epidemics and chemical and biological terrorism. Shifts patterns of disease and the emergence and growth of public health as a domain of expert knowledge and policy. Topics include: epidemiology and statistical modes of inquiry; the tension between civil liberties and public health; the economics of health and disease; and the relationship between medicine and public health.

Hist 381 - Germs Genes & Body: Sci. & Tech. in Modern Medicine (3-0-3)Examines how science and technology came to play critical roles in the rise of modern medicine. Readings, lectures, and discussion focus on the specific innovations in ideas, practices, and technologies that helped transform Western medicine in the 19th and 20th centuries. The course also considers how medicine and the biomedical sciences both inform and reflect attitudes about the human body in Western society. **Effective From: Spring 2005**

Hist 382 - War and Society (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents.The evolution of warfare and the impact of war on political, economic, cultural, and social institutions, including the two World Wars and post-1945 conflicts.

Hist 383 - The Making of Modern Thought (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. The formation of contemporary images of human nature since the mid-19th century. Emphasis on Marx, Darwin, and Freud and their legacy to 20th century thought. Theories of the family, sexuality, and the changing role of women in society are explored.

Hist 385 - Technology and Society in European and World History (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. An introduction to the social history of European and global technology from the Middle Ages to the second Industrial Revolution of the late 19th century. Emphasis on such themes as the process of technological innovation, the nature of technological systems, the diffusion of technology, the interaction of Western and non-Western technology, the changing relations of science and technology, and the role of technology in broader historical movements.

Hist 386 - Technology in American History (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents.Survey of the history of American technology emphasizing the social and economic environments of technological change. Topics include the transfer of technology in building canals and cities, the rise of the factory system, the emergence of the American system of manufacture, and the development of major technological systems such as the railroad, telegraph, electric light and power, and automobile production and use. Focus on the professionalization of engineering practice, the industrialization of invention, and the growing links between engineers and corporate capitalism in the 20th century.

Hist 388 - Britain in the 20th Century (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. A survey of British history from the death of Queen Victoria to 1964 with emphasis on the social and political transformation resulting from Britain's declining economy and world position. Topics include: the causes and impact of the two World Wars, the transition from liberal democracy to welfare state, the turn from Empire to Europe, social and economic trends as well as foreign relations.

Hist 390 - Historical Problems of the 20th Century through Film (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. A study of selected problems in the 20th century using film as a window into history. Such topics as the rise of Nazi Germany, America in the thirties, World War II and American society, the development of cities, and the emergence of the Third World will be considered. In any one semester only two topics will be selected for study. The material for the course will include documentary films, newsreels, TV news films, and theatrical feature films as well as selected readings.

Hist 401, 402 - Independent Studies in History (1-0-1, or 2-0-2, or 3-0-3)Prerequisites: junior or senior standing; and before registering, permission from one of the following: NJIT history department chairperson, associate chairperson or history minor advisor. Pursuit of special interests in history not covered in a regular elective course. A history faculty member provides guidance and assigns readings and papers.

Hist 489H - Senior History Honors Seminar: Readings (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. Limited to senior history majors who are enrolled in the Albert Dorman Honors College or who receive permission from the undergraduate history advisor. Meets with 510:489 but includes more advanced readings.

Hist 490H - Senior History Honors Seminar: Research (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, HSS 213 or their equivalents. Limited to senior history majors who are enrolled in the Albert Dorman Honors College or who receive permission from the undergraduate history advisor. Meets with 510:490 but includes more rigorous research and writing requirements.

R512:462 - Topics in Recent American History (3)For more details go to [Rutgers Catalog](#).

R512:472 - Topics in Afro-American History (3)For more details go to [Rutgers Catalog](#).

R512:473 - Topics in Women's History (3)For more details go to [Rutgers Catalog](#).

R512:499 - Readings in American History (3)For more details go to [Rutgers Catalog](#).

GRADUATE COURSES:

Hist 620 - City and Disease in History (3 credits)Explores the dynamic interaction between the growth of cities and changes in the experience and location of disease. Presumes the intertwining of these two historical developments in the birth of a distinctly urban identity, one predicated on the notion that the modern city is somehow inherently diseased. Focuses on the New York and Newark metropolitan areas in the nineteenth and twentieth centuries. Among the topics considered are epidemic outbreaks, quarantines, the technology and organization of sanitation and hygiene, the professional formation of public, industrial and occupational medicine, and medical and popular responses to immigration.

Hist 622 - Culture and Science in the History of American Medicine (3 credits)Provides an overview of American medical history and a familiarity with the theoretical and practical ramifications of different approaches to the complex relationships between medicine, science, and culture. Topics include: the extent to which medicine is or has been scientific; reasons why science has been considered so important to medicine's professional culture; and the degree to which medicine's professional culture has been shaped by science as well as other factors, such as economic and political self-interest, technology, class, race, gender, and other kinds of cultural values.

Hist 624 - Technology, Environment and Medicine in World History, 1500-1900 (3 credits)Examines the interrelationship between the emerging modern world system and changes in technology, environment, and medicine, with particular emphasis on European overseas expansion and its impact in non-Western regions.

Hist 626 - Social History of American Medicine Since 1800 (3 credits)Topics include the practices of 19th-century ?regular? medicine; the relation between medical concepts and mainstream social thought; the treatment of women's health; antebellum alternative healers and alternative politics; the triumphs of late 19th- and early 20th-century medical therapeutics; the emergence of medicine as big business; medicine and racism; the emergence of nursing as a profession; modern medicine in an international perspective; New Age healing; the AIDS crisis and AIDS activism; and contemporary debates on the future of health care in the United States.

Hist 628 - Gender, Science and Technology in the Modern World (3 credits)Introduction to a wide range of political and cultural analyses of science and technology, with an emphasis on recent feminist critiques of science. Explores the questions of scientific neutrality; the gendering of scientific knowledge; the relationship between science, technology, and capitalism; the role of science in international politics; and why science has not freed women.

Hist 630 - History of the Body in Modern Western Culture (3 credits)Considers medical or scientific history primarily in terms of implications for bodily experience in everyday life. Begins with grand narratives of historical shifts in bodily perceptions and practices, and proceeds to more focused narratives of changing bodily experience, engaging key distinctions between genders, classes, and species as well as perceptions of pain and internal bodily structure. Materials will be drawn from early modern and modern Europe, as well as more recent bodily experience in the United States.

Hist 632 - Technology, Culture and History (3 credits)Treats the relationship between technology and cultural values in a variety of historical and geographical settings, from early modern Japan to twentieth-century America. Examines the ways in which cultural ideals, conceptions, and preconceptions serve to influence the rate and manner of technological change, as well as the ways in which technology affects social and cultural life.

Hist 634 - Environmental History of North America (3 credits)Explores the dialogue between humankind and the environment in North America over the course of the last four centuries. Examines the latest and most interesting work done in the new field of environmental history to see what such a perspective has to offer.

Hist 635 - History of Technology, Environment and Medicine: Theory and Method (3 credits)A team-taught course which surveys the methods employed in the three fields. Explores the interdisciplinary nature of each field, and the value of interdisciplinary scholarship.

Hist 638 - Social History of Communication (3 credits)Treats selected themes in the history of communication in different social and cultural contexts, from the ancient world to the twentieth century. Topics include: orality, proto-literacy, and literacy in ancient and medieval cultures; printing and the development of print culture in the early modern world; the "communication revolution" of the late 19th and early 20th centuries; and historiographical debates over the role of communication technologies in society.

Hist 640 - The Urban Environment (3 credits)Examines the role of the economy, culture, and technology in shaping the urban environment. Makes extensive use of Newark and the New York metropolitan area, including field observations and local research. In addition to other topics, explores in detail spatial relationships, the role of transportation, and the development of suburbia.

Hist 642 - The History of Health and International Development (3 credits)This course examines the history of western efforts to promote health and nutrition in the "developing world" from the beginnings of tropical medicine. We will trace this history through its many permutations from the establishment of colonial health services to the development of the Global Programme on AIDS. In doing so, we will explore the various economic and political interests and underlying cultural assumptions that have shaped the development of ideas and practices associated with international health and development.

Hist 644 - War, Technology and Society, 1500-1914 (3 credits)Examines key themes in the interrelationship between warfare, technology and society from the beginnings of modern warfare until World War I. Primary emphasis placed on the historical connections between violent conflict, the technical means by which it is carried out, and the socio-political environment within which wars take place. The effect of technology upon war and considerations of the effect of war on technological change and development. Samples the rich tradition of thought and ideas produced by philosophers and theorists on these themes.

Hist 701 - Master's Thesis (6 credits)Prerequisite: permission of graduate history advisor. For students writing a master's thesis in the history of technology, environment and medicine.

Hist 725, Hist 726, Hist 727 - Independent Study in History (3 credits)Prerequisites: permission of graduate history advisor and course instructor.

Hist 791 - Seminar in History of Technology, Environment and Medicine (Non-credit)Faculty, students and invited speakers present and discuss current topics of research in history, technology and medicine.

R510:520 - Topics in the History of Technology (3 credits)For more details go to [Rutgers Catalog](#).

R510:525 - Colloquium in the History of Women (3 credits)For more details go to [Rutgers Catalog](#).

R510:526 - Problems and Readings in Afro-American History (3 credits)For more details go to [Rutgers Catalog](#).

R510:547 - Comparative World Colonialism (3 credits)For more details go to [Rutgers Catalog](#).

R510:548 - Topics in the History of the American Environment (3 credits)For more details go to [Rutgers Catalog](#).

Humanities:

UNDERGRADUATE COURSES:

HUM 099 - English Composition: Reading, Writing, Speaking I (3-0-3 additive credit) The first course of the two-semester sequence, HUM 099-HUM 100. Focuses on the reading, writing and speaking skills necessary for success in a university curriculum. Emphasizes reading strategies, understanding main ideas, classifying ideas according to their importance, inferring meaning, vocabulary development, preparing written and oral summaries, developing a thesis, and other steps toward writing expository essays including a research essay. Mandatory weekly writing labs are held in conjunction with the course work. **Effective From: Fall 2005**

HUM 100 - English Composition: Reading, Writing, Speaking II (3-0-3) Prerequisite: HUM 099. The second course of the two-semester sequence, HUM 099-HUM 100. Focuses on essay writing strategies, clear expression, correct syntax, grammar and diction; basic organizational principles, researching ideas, documenting reference sources, reading longer, more complex material, determining flaws in an argument, and presenting group oral reports. Mandatory weekly writing labs are held in conjunction with course work. The sequence HUM 099-HUM 100 satisfies the English GUR. **Effective From: Fall 2005**

HUM 101 - English Composition: Writing, Speaking, Thinking (3-0-3) Provides instruction in written and oral communication in the context of the first-year curricula. Emphasizes critical thinking as essential in producing effective expository writing, with readings and writing assignments drawn from the Humanities, Engineering, and the Social and Natural Sciences. Placement in this course is based on performance on standardized composition and reading tests. This course satisfies the English GUR. Note: Special Honors sections are available; permission of Honors College or Humanities Department required. **Effective From: Fall 2005**

HUM 211 - The Pre-Modern World (3-0-3) Prerequisite: HUM 101. Compares and contrasts world cultures prior to 1400. Case studies focus on differing forms of material culture, belief systems, aesthetic norms, and artistic productions to develop an understanding of ancient and medieval world views. This course satisfies three credits of the GUR in Cultural History. **Effective From: Fall 2005**

HUM 212 - The Modern World (3-0-3) Prerequisite: HUM 101. The central theme is changing global relations between 1400 and 1900. Uses case studies to examine such key processes as the expansion of global trade and the formation of a global economy, European perceptions of non-Western cultures, and the roots and legacy of imperialism. This course satisfies 3 credits of the Cultural History GUR. Honors Note: See HUM 101. **Effective From: Fall 2005**

HUM 251 - Ethical Issues in Business (3-0-3) Prerequisite: HUM 101. An examination of the ethical problems and moral foundations of business from the perspective of moral philosophy. Among the questions explored are: What are the rights of employees and employers in the workplace? Do corporations and managers have an obligation to society at large? What is the relationship between personal and business morality? Is there a moral justification for the free market? **Effective From: Fall 2005**

HUM 325 - Humanities Special Topics (3-0-3) The study of new and/or advanced topics in an area of the humanities, not regularly covered in any other HUM, LIT, ENG OR HSS course at the 300-level. The precise topics to be covered, along with prerequisites, are announced in the semester prior to the offering of the course. A student may register for no more than two semesters of special topics courses. **Effective From: Spring 2006**

Humanities and Social Sciences: Offered by the Department of Humanities and Social Sciences.

UNDERGRADUATE COURSES:

HSS 099 - English Composition: Reading, Writing, Speaking I (3-0-3 additive credit) The first course of the two-semester sequence, HSS 099-HSS 100. Focuses on the reading, writing and speaking skills necessary for success in a university curriculum. Emphasizes reading strategies, understanding main ideas, classifying ideas according to their importance, inferring meaning, vocabulary development, preparing written and oral summaries, developing a thesis, and other steps toward writing expository essays including a research essay. Mandatory weekly writing labs are held in conjunction with the course work. **Effective Until: Summer 2005**

HSS 099S - English Composition: Reading, Writing, Speaking I (6-0-6 additive credit) The first course of the two-semester sequence, HSS 099S-HSS 100S. Intended for students for whom English is a second language. Focuses on the reading, writing and speaking skills necessary for success in a university curriculum, while strengthening English language proficiency. Emphasizes reading strategies, understanding main ideas, vocabulary development, grammar, developing a thesis, organizing an essay, and writing different kinds of expository essays, including a research essay. Mandatory weekly writing labs are held in conjunction with the course. **Effective Until: Summer 2005**

HSS 100 - English Composition: Reading, Writing, Speaking II (3-0-3) Prerequisite: HSS 099. The second course of the two-semester sequence, HSS 099-HSS 100. Focuses on essay writing strategies, clear expression, correct syntax, grammar and diction; basic organizational principles, researching ideas, documenting reference sources, reading longer, more complex material, determining flaws in an argument, and presenting group oral reports. Mandatory weekly writing labs are held in conjunction with course work. The sequence HSS 099-HSS 100 satisfies the English GUR. **Effective Until: Summer 2005**

HSS 100S - English Composition: Reading, Writing, Speaking II (3-0-3) Prerequisite: HSS 099S. The second course of the sequence, HSS 099S-HSS 100S. Continues the development of English language proficiency at a more advanced level and focuses on essay writing strategies, clear expression, correct syntax, grammar and diction, basic organizational principles, research ideas, documenting reference sources, reading longer complex material, and presenting oral reports. Mandatory weekly writing labs are held in conjunction with the course work. The sequence HSS 099S-HSS 100S satisfies the English GUR. **Effective Until: Summer 2005**

HSS 101** - English Composition: Writing, Speaking, Thinking (3-0-3)** Provides instruction in written and oral communication in the context of the first-year curricula. Emphasizes critical thinking as essential in producing effective expository writing, with readings and writing assignments drawn from the Humanities, Engineering, and the Social and Natural Sciences. Placement in this course is based on performance on standardized composition and reading tests. This course satisfies the English GUR. Note: Special Honors sections are available; permission of Honors College or Humanities Department required. **Effective Until: Summer 2005**

HSS 202** - Society, Technology, and Environment (3-0-3)** Prerequisite: HSS 101. Uses case studies to examine the relationships between the creation and use of technologies, the human and natural environment, and the development of social and cultural institutions. Its central theme is the manner in which human society structures the environment in which it lives: nature and culture, city and country, civilization and development. This course satisfies 3 credits of the Basic Social Sciences GUR. Honors Note: See HSS 101. **Effective Until: Summer 2005**

HSS 211** - The Pre-Modern World (3-0-3)** Prerequisite: HSS 101. Compares and contrasts world cultures prior to 1400. Case studies focus on differing forms of material culture, belief systems, aesthetic norms, and artistic productions to develop an understanding of ancient and medieval world views. This course satisfies three credits of the GUR in Cultural History. **Effective Until: Summer 2005**

HSS 212 - The World and the West (3-0-3) Prerequisite: HSS 101. The central theme is changing global relations between 1400 and 1900. Uses case studies to examine such key processes as the expansion of global trade and the formation of a global economy, European perceptions of non-Western cultures, and the roots and legacy of imperialism. This course satisfies 3 credits of the Cultural

HSS 251 - Ethical Issues in Business (3-0-3) Prerequisite: HSS 101. An examination of the ethical problems and moral foundations of business from the perspective of moral philosophy. Among the questions explored are: What are the rights of employees and employers in the workplace? Do corporations and managers have an obligation to society at large? What is the relationship between personal and business morality? Is there a moral justification for the free market? **Effective Until: Summer 2005**

HSS 401- 402 - Independent Studies in Humanities (3-0-3) Prerequisites: HSS 101; completion of the Cultural History GUR (6 credits); permission of instructor. Pursue areas of special interest in humanities not covered in regular electives. Students are assigned readings and write reports under the guidance of a member of the humanities faculty. **Effective Until: Summer 2005**

HSS 403 - Literature Capstone Seminar (3-0-3) Prerequisites: completion of the GUR in English (3 credits), Cultural History (6 credits), Basic -Social Sciences (6 credits) and either the Lit/Hist/Phil/STS (3 credits) or the Open Elective in Humanities and Social Science (3 credits). The remaining 300-level course may be taken as a co-requisite of the seminar. The capstone seminars allow students the opportunity to work closely with an instructor in a specific area of the instructor's expertise. Students are required to bring together interests and skills developed in previous courses. Students make in-depth oral and written presentations. A list of capstone seminars is published each semester in the course registration bulletin. Also see HSS 491H-HSS 499H. Honors students are not permitted to take this course to fulfill the Capstone in HSS GUR. They choose from HSS 491H-HSS 499H. **Effective Until: Summer 2005**

HSS 404 - History Capstone Seminar (3-0-3) Prerequisites: completion of the GUR in English (3 credits), Cultural History (6 credits), Basic Social Sciences (6 credits) and either the Lit/Hist/Phil/STS (3 credits) or the Open Elective in Humanities and Social Science (3 credits). The remaining 300-level course may be taken as a co-requisite of the seminar. The capstone seminars allow students the opportunity to work closely with an instructor in a specific area of the instructor's expertise. Students will be required to bring together interests and skills developed in previous courses. Students make in-depth oral and written presentations. A list of capstone seminars is published each semester in the course registration bulletin. Also see HSS 491H-HSS 499H. Honors students are not permitted to take this course to fulfill the Capstone in HSS GUR. They choose from HSS 491H-HSS 499H. **Effective Until: Summer 2005**

HSS 405 - Philosophy Capstone Seminar (3-0-3) Prerequisites: completion of the GUR in English (3 credits), Cultural History (6 credits), Basic Social Sciences (6 credits) and either the Lit/Hist/Phil/STS (3 credits) or the Open Elective in Humanities and Social Science (3 credits). The remaining 300-level course may be taken as a co-requisite of the seminar. The capstone seminars allow students the opportunity to work closely with an instructor in a specific area of the instructor's expertise. Students will be required to bring together interests and skills developed in previous courses. Students make in-depth oral and written presentations. A list of capstone seminars is published each semester in the course registration bulletin. Also see HSS 491H-HSS 499H. Honors students are not permitted to take this course to fulfill the Capstone in HSS GUR. They choose from HSS 491H-HSS 499H. **Effective Until: Summer 2005**

HSS 406 - English Capstone Seminar (3-0-3) Prerequisites: completion of the GUR in English (3 credits), Cultural History (6 credits), Basic Social Sciences (6 credits) and either the Lit/Hist/Phil/STS (3 credits) or the Open Elective in Humanities and Social Science (3 credits). The remaining 300-level course may be taken as a co-requisite of the seminar. The capstone seminars allow students the opportunity to work closely with an instructor in a specific area of the instructor's expertise. Students will be required to bring together interests and skills developed in previous courses. Students make in-depth oral and written presentations. A list of capstone seminars is published each semester in the course registration bulletin. Also see HSS 491H-HSS 499H. Honors students are not permitted to take this course to fulfill the Capstone in HSS GUR. They may choose from HSS 491H-HSS 499H. **Effective Until: Summer 2005**

HSS 407 - Theater Capstone Seminar (3-0-3) Prerequisites: completion of the GUR in English (3 credits), Cultural History (6 credits), Basic Social Sciences (6 credits) and either the Lit/Hist/Phil/STS (3 credits) or the Open Elective in Humanities and Social Science (3 credits). The remaining 300-level course may be taken as a co-requisite of the seminar. The capstone seminars allow students the opportunity to work closely with an instructor in a specific area of the instructor's expertise. Students will be required to bring together interests and skills developed in previous courses. Students make in-depth oral and written presentations. A list of capstone seminars is published each semester in the course registration bulletin. Also see HSS 491H-HSS 499H. Honors students are not permitted to take this course to fulfill the Capstone in HSS GUR. They choose from HSS 491H-HSS 499H. **Effective Until: Summer 2005**

HSS 408 - Science, Technology, and Society Capstone Seminar (3-0-3) Prerequisites: completion of the GUR in English (3 credits), Cultural History (6 credits), Basic Social Sciences (6 credits) and either the Lit/Hist/Phil/STS (3 credits) or the Open Elective in Humanities and Social Science (3 credits). The remaining 300-level course may be taken as a co-requisite of the seminar. The capstone seminars allow students the opportunity to work closely with an instructor in a specific area of the instructor's expertise. Students will be required to bring together interests and skills developed in previous courses. Students make in-depth oral and written

presentations. A list of capstone seminars is published each semester in the course registration bulletin. Also see HSS 491H-HSS 499H. Honors students are not permitted to take this course to fulfill the Capstone in HSS GUR. They choose from HSS 491H-HSS 499H. **Effective Until: Summer 2005** ([Archived Versions](#))

HSS 409 - Social Science Capstone Seminar (3-0-3) Prerequisites: completion of the GUR in English (3 credits), Cultural History (6 credits), Basic Social Sciences (6 credits) and either the Lit/Hist/Phil/STS (3 credits) or the Open Elective in Humanities and Social Science (3 credits). The remaining 300-level course may be taken as a co-requisite of the seminar. The capstone seminars allow students the opportunity to work closely with an instructor in a specific area of the instructor's expertise. Students will be required to bring together interests and skills developed in previous courses. Students make in-depth oral and written presentations. A list of capstone seminars is published each semester in the course registration bulletin. Also see HSS 491H-HSS 499H. Honors students are not permitted to take this course to fulfill the Capstone in HSS GUR. They choose from HSS 491H-HSS 499H. **Effective Until: Summer 2005**

HSS 491- HSS 499** - Honors Seminars in the Humanities (3-0-3)** Prerequisites: enrolled in the Honors College or permission of the instructor; completion of the General University Requirements in English (3 credits), Cultural History (6 credits), Basic Social Sciences (6 credits), and either the Lit/Hist/Phil/STS (3 credits) or the Open Elective in Humanities and Social Science (3 credits). The remaining 300-level course may be taken as a co-requisite of the seminar. The subjects are announced at the time of registration. Each seminar is limited to 16 students. These courses satisfy the Capstone Seminar in Humanities and Social Science Electives GUR for students enrolled in the honors college only. **Effective Until: Summer 2005**

**** Special Honors sections are available; permission of Honors College or Humanities Department required.

Human Resource Management : Offered by the School of Management. See [Management](#) course list for faculty.

UNDERGRADUATE COURSES:

HRM 301 - Organizational Behavior (3-0-3) Prerequisite: upper division standing. A foundation course in individual and group behavior in organizations. Processes such as perception, motivation and leadership are examined with a focus on issues central to technology-based organizations (innovation, creativity, managing technical professionals).

HRM 303 - Human Resources Management (3-0-3) Covers basic human resources concepts including recruitment, selection, EEO, training, labor relations, and human resources information systems. Human resources management practices in technology-based firms are studied in detail.

HRM 305 - Supervision and Employee Relations (3-0-3) The nature of supervision, particularly at the first line. Qualifications, duties, and responsibilities of supervisors. Planning the job, making work assignments, progressing, and controlling employees. Techniques of employee relations, such as conducting job instruction, maintaining discipline, appraising performance, and handling grievances. The supervisor's interrelationships with upper management and labor union representatives. The conference method and case study techniques are utilized.

HRM 310 - Managing Diversity in Organizations (3-0-3) Analyzes issues that arise in managing a diverse work force. After examining the demographic environment of contemporary organizations, significant attention is paid to developing strategies to recruit, train, motivate, and retain employees with diverse personal characteristics. While the emphasis is on developing broad-based interpersonal skills, the impact of federal and state laws and regulations is also studied. In addition, students examine the implications of technological developments for managing a diverse population (e.g., the use of new technologies in retaining the differently abled).

HRM 311 - Job and Work Environments (3-0-3) Prerequisite: HRM 301. The effect of job and work environments on the individual and on the organization. Covers fit between the worker and the workplace including issues such as: the micro environment of job layout and design, physical conditions of the workplace, the social environment of work, and macro environments of the workplace within a regional context.

HRM 407 - Social Insurance and Employee Benefits (3-0-3) Prerequisites: Econ 265 and Econ 266, or SS 201. The causes of economic insecurity in an urban, industrial society and the personal and social consequences. Social Security, unemployment insurance, workers' compensation, public assistance, and other government programs. Private programs of employee benefits. Analysis of trends in coverage, benefits, and benefit levels, and the impact of demographic, economic, and technological developments on the viability of present and proposed programs.

HRM 411 - Employee Training and Development (3-0-3) Prerequisite: HRM 303. Training and development is studied from the standpoint of employee contributions to gaining competitive advantage, with an emphasis on firms in technology-intensive industries. Topics include needs analysis, skills utilization, design and delivery of training programs, manpower planning, and employee development.

HRM 415 - Organizational Design and Development (3-0-3) Prerequisite: HRM 301. Focuses on the design of modern organizations with an emphasis on effectively responding to environmental and technological change. Design issues include analyzing organizational structures, understanding the process of organizational learning, and evaluating organizational cultures. Development issues focus on employee empowerment, vertical and horizontal communication in organizations, and self-managed work teams.

GRADUATE COURSES:

HRM 601 - Organizational Behavior (3 credits) Analysis of key organizational components; individual perception; learning ability; conflict resolution models; group processes in decision making; motivation; problem diagnosis, and the organization as the mechanism for joining into a coherent productive system. Organizational assessment for innovation, leadership styles, and environmental interaction.

HRM 605 - Managing High Performance Work Teams (3 credits) Developing and managing high performance is central to fostering the innovation and process improvements that are necessary to respond to competitive pressures. This course covers all aspects of building and managing high performance work teams. Case studies and experimental learning are used to reinforce theory and established best practices.

HRM 606 - Human Resource Management (3 credits) Management of human resources in business, industry, and government; developing personnel programs including wage and job classification, training, employee and labor relations, and accident prevention. Particular attention is directed to cases and roles involving both line and staff managers.

HRM 607 - Personnel and Evaluation Research (3 credits) Focuses on the assessment and improvement of personnel systems. Emphasis is on the use of diagnostic tools in problem identification, developing action plans, and assessing outcomes of HRM interventions. Special attention is given to survey methodology and to the use of assessment tools in conducting personnel research. Databases and statistical software packages are used in project work.

HRM 608 - Behavioral Issues in Transportation Studies (3 credits) Behavioral science concepts and principles such as perception, learning, motivation, and information processing as they relate to: transportation, consumer use of mass transit, automobiles, ridesharing and intelligent transportation systems. Same as Tran 608.

HRM 609 - Employee Development and Training (3 credits) Key concepts in training including needs analysis, curriculum design and delivery, managing external consultants, and the evaluation of off-site training programs are introduced to gain understanding of the training function in organizations. Emphasis is on the impact of technological changes on employee skills utilization and development; training as a means of sustained competitive advantage for technology-based organizations; and the effects of technological advances on the design and delivery of training programs.

HRM 610 - Seminar on Leadership Skills (3 credits) Leadership theory and research is used to provide a foundation for developing leadership skills in work organizations. This course covers all aspects of leadership properties and processes. Concepts and theory are reinforced with case studies and experiential learning exercises. Topics include charismatic leadership, forming and realizing a vision, motivating and socializing followers, conflict resolution, negotiation, power and authority, and values and ethics.

HRM 616 - Job Analysis and Design (3 credits) Analyzing and designing jobs in work organizations, particularly technology-based organizations. Principles of job analysis and job design are applied to the allocation of tasks in organizations. Draws upon theory and research from industrial and organizational psychology, organizational sociology, social psychology, industrial engineering and occupational medicine.

HRM 630 - Managing Technological and Organizational Change (3 credits) Prerequisite: HRM 601. Managing planned and unplanned change in organizations. The change process is studied in relation to technology-driven changes in the workplace and to other environmental factors. Focuses on planned and unplanned systemic change, such as downsizing, re-engineering, mergers, and acquisitions.

HRM 640 - Cultures in Organizations (3 credits) Prerequisite: HRM 601. Cultures and subcultures in organizations are studied from an ethnographic perspective. Managerial and professional cultures are studied as are engineering and R&D cultures. Organizational cultures are also studied in detail using case studies, with an emphasis on understanding culture as a control mechanism in modern organizations.

HRM 650 - Human Resource Information Systems (3 credits) Information systems as a tool in improving human resource functions in organizations. Emphasis is on the design of information systems and their applications to HRM problems. The course is applications oriented. A technical MIS background is not required.

HRM 655 - Theory and Research in Organizational Behavior (3 credits) Prerequisite: permission of the instructor. Survey of theory and empirical research on the behavior of individuals in organizations. Foundation in theories and concepts of organizational behavior, organizational psychology, and social and individual psychology. Read critically and evaluate classic works in these areas.

HRM 660 - HRM Issues in Technology-Based Organizations (3 credits) Prerequisite: HRM 606. An interactive course that emphasizes the special problems faced by organizations that include a high percentage of technically trained professional

employees. Linkages between HRM functions are examined and then built upon to develop a strategic plan for the firm's human resources. Special attention is directed toward the needs of technology-based organizations such as building technical skills aimed at maintaining competitive advantage; managing innovation; assessing employee skills bases company-wide; cross training; and fostering organizational learning. Case studies and comparative analyses are used extensively.

HRM 662 - Organizational Diagnosis and Development (3 credits)A problem-oriented approach to organizational development with a focus on improving work group and organizational performance. Diagnostic tools are introduced as a means of problem definition. Attention then turns to structural and process issues in organizational development. Issues with respect to technology and structure are also examined. Emphasis is primarily on the internal organization. Representative topic areas include self-managed work teams, empowerment strategies, work group structures and technologies, and conflict resolution strategies. Development also covers quality of work life issues.

HRM 670 - Advanced Issues in Resource Management (3 credits)Prerequisite: permission of the instructor. A research-based course that studies current issues in HRM. Course is designed for students in the Rutgers-Newark Ph.D. program.

HRM 685 - Cross Cultural Management Studies (3 credits)Provides insight into the institutional fabric and social and communication behavior of other cultures to better understand problems arising from cultural aspects of managing and doing business in various countries. Focus will be with the manager acting in various cultural environments, not restricted to the traditional human resource function at corporate headquarters. Cultural differences and technologies are also examined.

HRM 693 - Employment Relationships and the Law (3 credits)Legal issues in government regulation of labor-management relations: selection and designation of bargaining agents; administration and enforcement of collective bargaining agreements; activities of unions and employers in labor disputes; and laws regulating wages, hours, and benefits.

HRM 700 - Project in Human Resource Management (3 credits)Prerequisites: matriculation and advisor's approval. Comprehensive proposal for a program of human resource management; or a major component of a management program applied to an organization chosen by the student, including a design for recruitment, selection, OSHA, benefits services, and/or training program with an evaluation procedure. Another alternative is a comprehensive evaluation of existing human resource programs, including human resource plans and personnel operations requiring cost-benefit analysis. Students select an acceptable organization on which to base their proposal plans.

HRM 701 - Thesis in Human Resource Management (6 credits)Prerequisites: matriculation for the master's degree, adequate graduate courses in the field of proposed research, and research advisor's approval. Thesis may be developmental experience at an appropriate professional level, or a scholarly research paper providing useful data and/or conclusions for other professionals interested in further study. A student must register for a minimum of 3 credits per semester. Credit will be limited, however, to the 6 credits indicated.

Industrial Engineering: Offered by the Department of Industrial and Manufacturing Engineering

UNDERGRADUATE COURSES:

IE 101 - Introduction to Industrial Engineering (1-1-1) An Introduction to the field of Industrial Engineering, the functions performed by industrial engineers, career paths and opportunities in the field, introduction to the student and senior professional societies, and initiation of a mentoring program.

IE 203 - Applications of Computer Graphics in Industrial Engineering (1-2-2) Prerequisites: CIS 101, FED 101C and FED 101D. Areas of graphical communication germane to manufacturing and production are stressed. Provides mathematical and practical knowledge of graphical standards necessary to meet the requirements of today's industrial engineering practices. Introduction to the use of up-to-date software for computer-aided graphics, databases, spreadsheet, general programming, statistical analysis. Also, ProEngineer, Database, Lotus, Fortran/C/ Pascal, and SAS.

IE 224 - Production Process Design (2-2-3) Prerequisite: sophomore standing. Introduction to the theory and practice of manufacturing processes. Study covers the fabrication of metallic, plastic, and electrical products, operation of NC and other automatic equipment, and economics of the design and production process.

IE 310 - Co-op Work Experience I (3 additive credits) Prerequisites: junior standing, approval of co-op faculty advisor, and permission of the Office of Cooperative Education and Internships. Students gain major-related work experience and reinforcement of their academic program. Work assignments facilitated by the co-op office and approved by the co-op faculty advisor. Mandatory participation in seminars and completion of a report.

IE 331 - Applied Statistical Methods (3-0-3) Prerequisite: Math 211. A presentation of statistical analysis techniques and their applications. Topics include the statistical measures describing data, frequency distributions, probability distributions, sampling parameter estimation, hypothesis testings, regression analyses, and analyses of variance. Special emphasis on their application to industrial fields.

IE 334 - Engineering Economy and Capital Investment (3-0-3) Prerequisite: junior standing. Introduction to the principles of engineering economics for utilization and evaluation of capital investments, including time value of money, depreciation, cost of capital, life cycle cost, net present value, and payback. Consideration of decisions involving multiple choice replacement, uncertainty, and risk.

IE 335 - Engineering Cost Analysis and Control (3-0-3) Prerequisite: junior standing. The tools and techniques applicable for cost analysis and control including standard costs, variance analysis, cost volume relationships, cost estimation, and utilization of accounting data for control of operations.

IE 339 - Work Measurement and Standards (2-2-3) Prerequisites: IE 203, IE 224. Emphasizes the measurement and evaluation of existing work methods and how improvement can be achieved. Topics include visual and micro-motion study techniques, motion economy, time study, and work sampling. The development and use of standard data and computerized techniques. Also, hands-on experience through a series of laboratory experiments.

IE 355 - Human Factors (3-0-3) Prerequisite: junior standing. Human-machine systems analysis including study of workplace layout, measurement of employee efficiency and productivity, criteria for tool and fixture design or selection, industrial fatigue, environmental influences on performance including the effects of illumination, noise, vibration, thermal, and other atmospheric factors. Basic ideas of industrial hygiene; the impact of OSHA; and special techniques for experimenting with human subjects, via demonstrations and supervised experiments.

IE 411 - Co-op Work Experience II (3 additive credits) Prerequisites: IE 310, approval of co-op faculty advisor, and permission of the Office of Cooperative Education and Internships. Full-time work experience of approximately one semester's duration. Provides major-related work experience as a co-op/intern. Mandatory participation in seminars and completion of requirements that include a

report and an oral presentation to IE faculty.

IE 436 - Cost Analysis and Engineering Economics (3-0-3) Prerequisite: junior or senior standing. Not open to industrial engineering majors. Focuses on the economic factors of concern to manufacturing engineers. Major topics include justification of proposed capital expenditures, equipment retirement and replacement decisions, cost determination, profitability studies, and manufacturing budget construction and utilization for cost control.

IE 439 - Deterministic Models in Operations Research (3-0-3) Prerequisite: Math 222 or equivalent. The deterministic techniques of operations research. Topics include the applications of linear, nonlinear, integer, and dynamic programming methods and network flows analysis to solve industrial and systems engineering problems.

IE 440 - Stochastic Models in Operations Research (3-0-3) Prerequisites: IE 331, Math 222 or their equivalent. Probabilistic techniques of operations research. Topics include the applications of Markov chains, queueing and inventory control models to analyze and evaluate systems performance.

IE 441 - Information and Knowledge Engineering (3-0-3) Prerequisite: junior or senior standing. Introduction to recent advances in the application of computers in industrial engineering and database structures, both sequential and random. Description of methods for organizing data, database modeling, information storage and retrieval. Also, applications of expert systems concepts and techniques.

IE 443 - Senior Project I (1-3-2) Prerequisite: senior standing. Introduction to senior design project. Selection of specific system design for the project, establishment of initial contacts, preliminary collection and analysis of system data. Concepts of system design analysis emphasizing simulation modeling and analysis, model verification, and model validation.

IE 444 - Senior Project II (2-2-3) Prerequisite: IE 443. Senior design project, in which the concepts of industrial engineering systems, principles, and procedures are integrated and applied in industrial projects or case studies.

IE 445 - Industrial Simulation (2-2-3) Prerequisites: CIS 101, IE 331 or equivalent. Introduction to the application of simulation modeling for the analysis of complex industrial and manufacturing service systems. Examples are chosen from real-life situations such as warehousing, material handling, robotics, transportation, and hospital emergency rooms. Verification/validation as well as statistical analysis of both input/output data are introduced.

IE 447 - Legal Aspects of Engineering (3-0-3) Prerequisite: junior or senior standing. Familiarization with the U.S. system of case law, statutes and regulations applicable to professional relationships involving the engineer. Includes contracts, property, product liability and other torts, governmental regulatory bodies such as OSHA, EPA, and NRC, professional liability, and role of codes and standards.

IE 449 - Industrial Robotics (2-2-3) Prerequisites: CIS 101, Phys 121, junior or senior standing. Robotics in manufacturing systems. The field of robotics is studied with emphasis given to the role of programmable robots in manufacturing. Hands-on experience with hardware and software necessary for various industrial robot systems through laboratory experience.

IE 450 - Product Engineering Standards (3-0-3) Prerequisite: senior standing. Developing and using standards in the design, manufacturing, and use of products. Topics include economics of parts standardization, drawing and assembly techniques, and use of national and international standards. Review of the role of standards-setting bodies and methods for the development of product testing standards used in industry and commerce.

IE 451 - Industrial Measuring Systems (2-2-3) Prerequisite: IE 331. Reviews contemporary measuring systems and provides a basic understanding of the various methods, their accuracy, reliability, and relative costs to perform. Includes measuring methods needed for compliance evaluation in accordance with occupational and safety legislation, industrial processes, and product design.

IE 453 - Computer Integrated Manufacturing (2-2-3) Prerequisite: junior or senior standing. Examines the components of computer integrated manufacturing (CIM) including the design of information frameworks and network protocols required to orchestrate full manufacturing automation. Study of CAD, CAPP, robotics, NC, CNC, computer interfacing, and database systems in the context of a CIM environment. Exposure to state-of-the-art CIM software and hardware.

IE 455 - Automation and Programmable Logic Controllers (2-2-3) Prerequisites: junior or senior standing. Introduction to the design and implementation of programmable logic controllers for use in industry in the areas of automotive assembly, pharmaceutical manufacturers, the chemical industry, and others. Includes ladder logic, input/output ports, continuous process control, timing and counting functions, chaining sequences, and digital gate logic.

IE 456 - Introduction to Industrial Hygiene (3-0-3) Prerequisite: IE 355. Analysis of the effects of various environmental stressors on people at work, including their interference with performance and the development of acute and chronic health problems. Study of how numerous airborne contaminants, noise, thermal extremes, ionizing and nonionizing radiation, etc., affect workers alone and in combination. Topics include measurement and evaluation techniques, TLVs, control methodologies, legal requirements for employers.

IE 459 - Production Planning and Control (3-0-3) Prerequisites: IE 221, IE 439, junior or senior standing. A study of the components and functioning of integrated production, planning, and control systems. Forecasting, aggregate planning, scheduling, and recent models of production and inventory control for optimizing continuous and intermittent manufacturing operations. MRP basics. Introduction to using a computer to apply scheduling models.

IE 460 - Measuring Techniques and Quality Control (3-0-3) Prerequisite: understanding of basic probability. Not open to industrial engineering majors; intended for other engineers, inspection supervisors, and management. Various types of control charts and acceptance sampling systems and procedures. These techniques are used widely in industry to improve product quality and reduce costs.

IE 461 - Product Quality Assurance (3-0-3) Prerequisite: IE 331. Methods used to achieve higher product quality, to prevent defects, to locate chronic sources of trouble, to measure process capability, and to use inspection data to regulate manufacturing processes are emphasized. Preparation of statistical control charts and selection of suitable sampling plans

IE 466 - Material Handling and Facilities Layout (3-0-3) Prerequisite: IE 439. Analysis of organized human activities typified by industrial and office operations. Recent methods are applied to optimize location and layout of facilities. Introduction to modern material handling systems, expert systems in plant layout, logistics of motion of people and materials, flow analysis, plant layout, and material handling techniques.

IE 469 - Reliability in Engineering Systems (3-0-3) Prerequisites: IE 331 or equivalent, senior standing. Emphasizes the determination of systems reliability from a knowledge of characteristics and reliability of individual system components. Topics include reliability concepts, failure rates, systems analysis, optimization, maintenance, etc. Covers techniques for the formulation and evaluation of reliability models.

IE 472 - Product Liability Engineering (3-0-3) Prerequisite: junior or senior standing. The techniques available to the engineer to minimize the hazards of design and manufacturing that result in product liability cases. The effect of legal precedents on design, manufacturing, advertising, marketing, and using a product within developing technical disciplines such as: reliability prediction and analysis methods, assuring the quality of manufactured products, loss control systems, safety engineering precepts, human factors principles and design review. Review of government regulations for safety and protection.

IE 473 - Safety Engineering (3-0-3) Prerequisite: junior or senior standing. The principles and practices of safety engineering in product and facilities design. Safe practices and hazard control, safety standards and codes, inspection procedures, the role of insurance, governmental regulations, and safety statistics. Participation in current safety engineering research studies. The Occupational Safety and Health Act and related legislation.

IE 480 - Special Studies in Industrial Engineering for Non-Majors (3-0-3) Prerequisite: permission of the IE faculty advisor. Not open to industrial engineering majors. Individual investigations under faculty guidance through consultation, readings, and visits with recognized authorities and institutions, dealing with specialized industrial engineering problems. Explore in depth an area of interest and give a report in a seminar setting, and submit a written project report.

IE 481 - Investigations in Industrial Engineering I (3-0-3) Prerequisites: junior or senior standing, per-mission of the IE faculty advisor. Individual investigation under faculty guidance through consultation, readings, and visits with recognized authorities and institutions, dealing with specialized industrial engineering design problems. Explore in depth an area of interest and give a report in a seminar setting, and submit a written project report.

IE 481H - Investigations in Industrial Engineering I (3-0-3) Prerequisites: junior or senior standing, permission of the IE faculty advisor, enrolled in Honors College. Same as IE 481, but investigation is in more comprehensive and in greater depth.

IE 482 - Investigations in Industrial Engineering II (3-0-3) Prerequisites: IE 481, permission of the IE faculty advisor. Further individual investigations, a continuation of IE 481.

IE 482H - Investigations in Industrial Engineering II (3-0-3) Prerequisites: IE 481, permission of the IE faculty advisor. Further

individual investigations, a continuation of IE 481H.

IE 492 - Engineering Management (3-0-3)Prerequisite: junior or senior standing. An introduction for engineering majors to the fundamentals of engineering economics and the management process for engineering and development. Major topics include capital investment justification methods, project organization, scheduling and control techniques, legal, quality, and staffing issues.

IE 492H - Engineering Management (3-0-3)Prerequisite: junior or senior standing and enrolled in Honors College. Same as IE 492, but topics are treated more comprehensively and in greater depth.

GRADUATE COURSES:

IE 501 - Fundamentals of Industrial Engineering (3 credits)Basic concepts of industrial engineering for students who lack an undergraduate degree in the discipline, including: manufacturing processes, work methods and measurement concepts, basics of human factors, quality control, facilities design, production planning, operations research tools, and simulation models.

IE 590 - Graduate Co-op Work Experience I (3 additive credits)Prerequisites: permission from the industrial engineering program director and the Division of Career Development Services. Cooperative education internship providing on-the-job reinforcement of academic programs in industrial engineering. Work assignments and projects are developed by the co-op office in consultation with the industrial engineering program director. Work assignments are related to student's major and are evaluated by faculty coordinators in the IE department. Course cannot be applied toward degree credit.

IE 591 - Graduate Co-op Work Experience II (3 additive credits)Prerequisite: permission from the industrial engineering program director and the Division of Career Development Services. Course cannot be applied toward degree credit.

IE 592 - Graduate Co-op Work Experience III (3 additive credits)Prerequisites: graduate standing and permission from the industrial engineering program director, and the Division of Career Development Services. Course cannot be applied toward degree credit.

IE 593 - Graduate Co-op Work Experience IV (0 credits)Prerequisites: One immediately prior 3-credit registration for graduate co-op work experience with the same employer. Requires approval of departmental co-op advisor and the Division of Career Development Services. Must have accompanying registration in a minimum of 3 credits of course work. **Effective From: Fall 2006**

IE 601 - Measurement Methods for Performance Analysis of Operations (3 credits)Prerequisite: undergraduate mathematics for management science, or EM 602. Quantitative study of various analytical methods for designing and evaluating systems employed in the management of complex enterprises such as decision-making, efficiency measurement, and methods for obtaining optimal system performance.

IE 603 - Behavioral Science in Engineering Organization (3 credits)Prerequisite: undergraduate probability and statistics, or EM 503. A study of scientific research on human behavior in organizations. Processes and problems of communication in engineering activities; line-staff and supervisor-subordinate relationships; formal and informal organizations; organization models; and technical and social structure of organizations.

IE 604 - Advanced Engineering Statistics (3 credits)Prerequisite: IE 331 (see undergraduate catalog for description) or equivalent. The foundations of modern quality improvement, scientific basis of quality engineering, probability, statistical inference, statistical experimental design issues such as randomized blocks, factorial design at different levels, application to factorial design, building models, and implementation and critique of Taguchi's contributions. Statistical software is used in the data analysis.

IE 605 - Engineering Reliability (3 credits)Prerequisite: statistics. Concepts of modern reliability applied to practical industrial problems: statistical concepts, reliability through design, reliability through testing, analysis of reliability data, and the organization and management of a reliability program. Offered alternate years.

IE 606 - Maintainability Engineering (3 credits)Prerequisite: statistics. Factors affecting maintainability design applied to military and industrial problems: statistical concepts; maintainability prediction, allocation, and demonstration; availability, system and costeffectiveness; provisioning; optimal maintenance policies; and management of a maintainability program.

IE 608 - Product Liability Control (3 credits)Product liability and the effect of legal doctrines on minimizing hazards of design and manufacture. Use of actuarial techniques and legal precedents applicable to design, manufacturing, advertising, and marketing problems: warranties, notices, disclaimers, definition of liability, use of expert witnesses, reliability prediction and analysis methods, safety engineering concepts, and design review. A review of government regulations for safety and protection, as well as mandatory

and voluntary standards will also be included.

IE 609 - Advanced Analytical Engineering Statistics (3 credits) Prerequisite: IE 604. An extension of the techniques of engineering statistical analysis to industrial applications. Emphasis is placed on the design of experiments and analysis of tests for multivariate level problems.

IE 610 - Transportation Economics (3 credits) Prerequisite: undergraduate course in economics. Principles of engineering economy. Costs of highway and public transportation facilities. Economic comparisons and evaluations. Financing approaches, tax allocation theory. Programming highway and public transit improvements. Same as Tran 610.

IE 614 - Safety Engineering Methods (3 credits) Prerequisites: introductory course in statistics and industrial or construction management. Application of selected safety engineering methods to detect, correct, and prevent unsafe conditions and procedures in future practice. Methods selected are from safety management and programs; loss prevention; fire protection; systems safety; the design of buildings and other facilities; and the design of products, machinery, and equipment. Engineering problems in designing and constructing a hazard-free environment.

IE 615 - Industrial Hygiene and Occupational Health (3 credits) Prerequisites: one year of college physics and one semester of college chemistry or biology. Introduction to industrial hygiene. Recognition, evaluation and control of human exposure to noise, heat, bio-hazards, chemicals, radiation, and improper lighting. Government standards, field measurements, work practices, engineering designs, and the effects of excessive exposure on worker health and productivity.

IE 618 - Engineering Cost and Production Economics (3 credits) Prerequisite: IE 502 or equivalent. Cost management of operational activities. Focuses on capital investment decision making and efficient resource utilization to achieve cost-effective operations. Topics include alternative investment evaluation, budgeting activity based costing, quality costs, life cycle management and relevant behavioral science. These are considered in the context of manufacturing and service industry application.

IE 621 - Systems Analysis and Simulation (3 credits) Prerequisites: IE 331, IE 466 (see undergraduate catalog for descriptions), or equivalent or department approval. The application of well-integrated systems approach, systems and systems engineering in the system life cycle, system design process, mathematical tools and techniques applied to systems analysis, design for operational feasibility, systems engineering management, modeling techniques including simulation, application of discrete simulation techniques to model industrial systems, design of simulation experiments using software, output data analysis.

IE 622 - Simulation and Risk Analysis in Operations Management (3 credits) Prerequisites: IE 331 (see undergraduate catalog for description) or equivalent. Introduction to the concepts, methodologies and applications of simulation in operations management. Foundations of simulation, Monte Carlo approaches, simulation models using spreadsheets, generating probabilistic outcomes using random number generation techniques, applying risk analysis software to spreadsheets for various decisions making. Variety of applications in operations management, finance and marketing. Software to develop models of practical operations management applications, is provided.

IE 623 - Linear Programming (3 credits) Prerequisite: EM 602 or introductory course in operations research. Principles, methodology, and practical applications of linear programming to complex problems in production and marketing, simplex techniques, duality theory, parametric analysis, Wolfe and Dantzig's decomposition methods, ellipsoid method, and Karmakar's method.

IE 624 - Heuristic Methods (3 credits) Prerequisites: EM 503 or equivalent. Techniques and concepts used to develop intelligent decision support systems. Application of rules called heuristics and models of reasoning to solve problems in engineering design and manufacturing. Topics include set theory, fuzzy subset theory, decision theory, logic, inference expert systems and single and multi-fault diagnostics.

IE 641 - Operations Analysis (3 credits) Prerequisites: EM 602 and computer programming experience. Management systems and business behavior using industrial models. Special attention is given to the interaction of individual elements that make up the total system.

IE 642 - Network Flows and Applications (3 credits) Prerequisite: EM 602 or equivalent. Theories, algorithms, computation complexity, and application of networks, shortest path, network flow, and minimum cost flow problems. Models of industrial service systems as network problems.

IE 643 - Transportation Finance (3 credits) Prerequisite: undergraduate course in economics. Balance sheets and income statements. Asset and liability management, sources and costs of debt and equity financing. Financial performance measures in the private sector (airlines, railroads, trucking and bus companies). Financing issues associated with the public sector (highways and

mass transit). Equity and efficiency in pricing. Subsidy allocation formulae. Innovative financing schemes in the public sector. Same as Tran 643.

IE 644 - Application of Stochastic Modeling in Systems Control (3 credits) Stochastic processes applied to control of various types of systems: Markov chains, queueing theory, storage theory applications to measure performance of flexible manufacturing systems, telecommunication and distributions networks and similar service systems. Knowledge of probability theory and linear algebra is essential.

IE 650 - Advanced Topics in Operations Research (3 credits) Prerequisite: introductory course in operations research or equivalent. Current topics in deterministic models of operations research: linear programming, large scale decomposition, integer programming, dynamic programming, and nonlinear programming. Emphasis on optimization techniques for solving mathematical programming problems.

IE 651 - Industrial Simulation (3 credits) Prerequisite: introductory course in statistics/simulation or instructor's permission. Statistical design and analysis of Monte Carlo simulation experiments from an engineering view. Examples are provided with emphasis on industrial and manufacturing applications of simulation modeling. Markovian processes simulation, random number generation, mathematical programming, heuristics and decision theory.

IE 652 - Facilities Location and Plant Layout (3 credits) Prerequisite: introductory course in operations research or instructor's approval. Basic concepts of facilities location and plant layout. Quantitative and qualitative tools needed in industrial engineering, including single and multiple facilities location problems, site selections and allocation models, use of Duality theory in location and plant layout problem, and computerized layout planning.

IE 653 - Facility Maintenance (3 credits) Prerequisite: EM 501 or equivalent. Intended for those individuals who manage the functioning and maintenance of physical facilities. Emphasis on planning and control of facilities use, maintenance, utility management, managerial control, budgets and costs, personnel administration, legal and safety, flexibility measurement, and design.

IE 661 - Man-Machine Systems (3 credits) Prerequisite: human factors engineering. Analysis of integrated man-machine systems: physical and psychological effects of systems of deterministic and conditional responses of individuals and groups, and the resulting interaction between individuals, groups, and machine systems; also current research and development pertaining to man-machine systems.

IE 662 - Cognitive Engineering (3 credits) Prerequisite: IE 355 or equivalent. The purpose of this course will be to introduce the application of human factors and cognitive psychology principles to the user interface design of information technology, including computer systems, groupware and communications, handheld devices and Internet applications, and automatic speech recognition interfaces. The course will provide grounding in the engineering design processes used to enhance the usability of products and services, and usability testing methods used by user interface designers. Secondly, major areas and design problems in human-computer interaction and Information Technology will be covered, with real world examples. The course would be appropriate for advanced undergraduates in engineering, computer science, and psychology.

IE 664 - Advanced Ergonomics (3 credits) Prerequisite: IE 355 or equivalent. The course covers important topics for ergonomics, including functional anatomy of the human body, work physiology and body energy expenditure, and biomechanics for people at work. Commonly used analytical tools for ergonomics will be introduced in the course.

IE 665 - Applied Industrial Ergonomics (3 credits) Prerequisites: IE 355 (see undergraduate catalog for description) or IE 699. Introduces the fundamentals and applications of industrial ergonomics for improving equipment, tool, workplace, and job design. Engineers, as well as safety and health professionals, will benefit from the course by understanding the design principles for human operators and current issues in industrial ergonomics, and a variety of evaluating methodologies for the design.

IE 669 - Human Design Factors in Engineering (3 credits) Prerequisite: engineering statistics. Human factors research related to workplace and equipment design and development. Capabilities and limitations of the human sensory-motor system. Design of displays and resulting interaction between individuals, groups, environments and machine systems. Current research in engineering pertaining to the man-machine interface. Not for IE students who have had an undergraduate course in human factors.

IE 670 - Industrial Work Physiology (3 credits) Prerequisite: IE 669 or equivalent. A study of human physiological responses to industrial environmental factors emphasizing knowledge of human anatomy and physiological tolerances: skeletal, muscle, and neuromuscular systems, evaluation of physical work capacity and performance, changes in circulation and respiration during work. Semester project under the instructor's supervision is also required.

IE 672 - Industrial Quality Control (3 credits) Prerequisite: engineering statistics. The management of quality assurance: operational and statistical principles of acceptance sampling and process control; quality problems in production lines, and introduction to total quality management concepts.

IE 673 - Total Quality Management (3 credits) Introduces the concept of total quality management as applicable to industrial systems. Presents methods for product quality improvement. Emphasis is on prevention through quality engineering and design, and goes beyond traditional statistical process quality control. Presentation of recent methods in supplier management, quality assurance, process control, and competitor analysis. Includes Taguchi methods and quality function deployment. Description of ISO 9000 and Baldrige Award.

IE 674 - Quality Maintenance and Support Systems (3 credits) Prerequisites: probability and statistics, IE 331 (see undergraduate catalog for description) or equivalent. Consideration of factors necessary for cost effective maintenance and support of technical operating systems. Topics discussed include service organization and management, spare parts and logistics, quality assurance, ISO9003 training. Examples from automation, computer systems, clinical engineering, power, and transportation will be used to illustrate application areas.

IE 675 - Safety in Facility and Product Design (3 credits) Prerequisite: IE 614 or equivalent. Application of safety principles to minimize the health and safety hazards in the design and manufacture of various products. Practical techniques for, and economic ramifications of, conformance with the many statutes enacted to assure safe workplaces and products.

IE 677 - Applied Statistics and Epidemiology for Hazard Analysis (3 credits) Prerequisite: IE 604 or equivalent. Application of statistical concepts to the field of hazard analysis including: investigation of root causes of accidents, their patterns and trends; rules for systematic data analysis; determination of commonality factors; availability and use of customized computer software.

IE 681 - Interdisciplinary Seminar in Occupational Safety and Health (1 credit) Prerequisite: OSHE students, or permission of instructor. This is a required course for students who receive the trainee scholarship from the Occupational Safety and Health Engineering Program sponsored by the National Institute for Occupational Safety and Health (NIOSH). Other graduate students are also welcome and encouraged to take the interdisciplinary seminar course. Students and residents in the ERC programs will be able to participate in an interdisciplinary course with students in industrial hygiene, occupational medicine and occupational safety.

IE 682 - Industrial Safety and Health Evaluation (3 credits) Prerequisite: OSHE students, or permission of instructor. This is a required course for students who receive the trainee scholarship from the Occupational Safety and Health Engineering Program sponsored by the National Institute for Occupational Safety and Health (NIOSH). Other graduate students are also welcome and encouraged to take this site visit course. Upon completion of this course, students will be able to plan and conduct a walk-through evaluation of health and safety hazards in a workplace. Students will also understand the role of occupational health and safety disciplines in the recognition and prevention of occupational injury and illness.

IE 685 - Systems Safety (3 credits) Prerequisites: applied probability/statistics and introductory safety. Safety decision making and systems engineering applications to safety, including planning, managing and conducting system safety programs.

IE 699 - Special Topics in Industrial Engineering (3 credits) Prerequisite: approval from the industrial engineering graduate advisor. Special course given when interest in a subject area develops. Advanced notice of topics will be given before registration.

IE 701 - Master's Thesis (6 credits) Prerequisites: matriculation for the master of science degree, thesis advisor's approval, and adequate graduate courses in the field of the proposed thesis. Candidates for the degree who choose this option must submit an acceptable thesis on an approved subject that contributes to the literature of the field, and preferably aids the candidate's present or potential, career. While original research may not always result, the thesis should provide a new conclusion or application. Approval to register for the thesis must be obtained from the thesis advisor. A student must continuously register for a minimum of 3 credits per semester until the thesis is completed. Total credit will be limited, however, to the 6 credits indicated for the thesis.

IE 704 - Sequencing and Scheduling (3 credits) Prerequisite: IE 650 or equivalent. Advanced sequencing and scheduling for job shops, flow lines, and other general manufacturing and production systems are discussed in this course. Both deterministic and stochastic scheduling models are covered in detail. Heuristics and worst case analysis for unsolvable hard scheduling problems (NP-C problem) are introduced.

IE 705 - Mathematical Programming in Management Science (3 credits) Prerequisites: IE 623 and IE 650. An advanced study of various mathematical programming techniques such as linear and non-linear, parametric, integer, stochastic and dynamic programming. Readings and discussions emphasize mathematical advances and applications in operations research.

IE 706 - A Queueing Approach to Performance Analysis (3 credits) Prerequisite: IE 644 or equivalent. Newly developed techniques in the area of queueing networks that play a critical role in studying several aspects of discrete event stochastic systems such as FMS, computer-aided communication systems, transportation systems and service systems.

IE 725 - Independent Research (3 credits) Prerequisite: approval from the industrial engineering program director. Program of study prescribed and approved by student's advisor. This special course covers areas in which one or more students may be interested but is not of sufficiently broad interest to warrant a regular course.

IE 753 - Airport Design and Planning (3 credits) Prerequisite or corequisite: Tran 610 or EM 693. Planning of individual airports and statewide airport systems. Functional decision of air and landside facilities. Orientation, number and length of runways. Concepts of airport capacity. Passenger and freight terminal facility requirements. Airport access systems. FAA operating requirements. Financial, safety and security issues. Same as CE 753 and Tran 753.

IE 754 - Port Design and Planning (3 credits) Prerequisite: Tran 610 or EM 693. Functional design of the water and landsides for general cargo, liquid and dry bulk, and container operations. Yard and storage systems. Port capacity in an intermodal network. Economic, regulatory, and environmental issues. Same as CE 754 and Tran 754.

IE 760 - Quantitative Methods in Human Factors (3 credits) Prerequisite: IE 661. More advanced human factors engineering concepts analyzed quantitatively: systems modeling, control theory, human error, and decision making. Discussion of human factors, research design and data analysis. Operator/computer interaction is also emphasized.

IE 761 - Advanced Studies in Human Factors (3 credits) Prerequisite: one year of graduate work in human factors or the equivalent. The course integrates various areas of graduate studies in human factors such as: work physiology, occupational safety, environment and human-machine systems. Detailed discussion of selected current papers covering theoretical review, experimental design, results, applications, and future research. Completion of semester project under instructor's guidance is mandatory.

IE 762 - Psychophysical Methods in Human Factors (3 credits) Prerequisite: one year of graduate work in human factors or instructor's approval. This course considers various classical and modern psychophysical methods, signal detection theory, information theory, and human information processing applicable to advanced human factors/occupational safety research measurement and normative modeling.

IE 791 - Graduate Seminar (Non-credit) A seminar in which faculty or others present summaries of advanced topics suitable for research. Discussion of research procedures, thesis organization, and content. Students engaged in research will present their own research for discussion and criticism. **Effective From: Fall 2005**

Information Systems:

UNDERGRADUATE COURSES:

IS 118 - Introduction to Application Development Tools (3-0-3) Application development principles, and associated development tools and programming. HTML, and PHP are examples of open source development tools that are becoming defacto standards within the development community. Knowledge of these tools will benefit the student in subsequent courses and in their senior capstone project. In the proprietary arena, VB.Net is extensively used for application in all environments and its penetration into the development area is quite large and often is the language of choice of many Windows shops. **Effective From: Fall 2006**

IS 245 - Information Technology Systems: Hardware/Software (3-0-3) This course reviews hardware/software technologies in order to enable system developers to understand tradeoffs in the design of computer architectures for effective computer systems. Also covered are operating systems and systems architecture for networked computing systems. Topics include Hardware (CPU architecture, memory, registers, addressing modes, busses, instruction sets, multi processors versus single processors, and peripheral devices), Operating systems (processes, process management, memory and file system management), and Telecommunications (basic network components, switches, multiplexers and media, installation and configuration of multi-user operating systems). **Effective From: Fall 2006**

IS 265 - Introduction to Information Systems (3-0-3) Prerequisite: 100-level Computer Science GUR course. Information systems is the study of how organizations use information technology. This course is an overview of the information systems discipline, the role of information systems in organizations, and the changing nature of information technology. Computer tools for analysis and presentation are used. **Effective From: Fall 2006**

IS 270 - Multimedia Information Systems (3-0-3) Prerequisite: Same as CS 114. Multimedia combines text, graphics, sound, video, and animation in a single application. Preparation for creating multimedia information systems, and understanding the crucial issues involving technology, design and effectiveness of multimedia applications. Programming techniques for integrating video, sound, animation, and graphics, and design strategies for multimedia information systems. **Effective From: Fall 2006**

IS 305 - Community Service Internship (0-2-1) Prerequisite: IS 350. Increasingly, computer scientists are recognizing their ethical responsibility to provide advice and assistance that will improve the ability of government and social service agencies to use computers to serve the public. This course involves approximately 40 hours of internship in a community agency, arranged through the NJIT Cares Program. The interns will use their skills to improve the effectiveness of the use of computers at the agency. Bi-weekly progress reports will be submitted, with required meetings with the course supervisor, and a final report. (IS 305 may be combined with two approved credits of CIS 105 and used as a technical elective in a CIS degree program.) **Effective From: Fall 2006**

IS 310 - Co-op Work Experience I (3) Prerequisites: completion of the sophomore year, approval of the department, and permission of the Office of Cooperative Education and Internships. Students gain major-related work experience and reinforcement of their academic program. Work assignments facilitated and approved by the Co-op office. Mandatory participation in seminars and completion of a report. **Effective From: Fall 2006**

IS 335 - Introduction to .NET Framework (3-0-3) Prerequisite: IT 202 or equivalent. This course introduces students to .NET Framework, a new computational environment that supports more than 25 programming languages and is platform and device independent. Problem solving and system development topics are integrated into the course by using C# languages as a vehicle to illustrate the concepts. **Effective From: Spring 2007**

IS 350 - Computers and Society (3-0-3) Prerequisites: completion of a 100-level GUR course in CIS; one basic SS course; HSS 111. Examines the historical evolution of computer and information systems and explores their implications in the home, business, government, medicine and education. Topics include automation and job impact, privacy, and legal and ethical issues. Co-listed as STS 350. **Effective From: Fall 2006**

IS 365 - Computer Applications to Commercial Problems (3-0-3)Prerequisite: CS 280, or CS 114 and knowledge of COBOL.

Covers design and implementation of commercial application software systems. Concepts of organization and management of data and files including file operations and organization of sequential access, relative access, indexed sequential access, virtual storage access and multi-key access methods. The COBOL language is used to illustrate these concepts and to implement application systems. The design and implementation of commercially oriented computer systems. Emphasis is placed on modern computers as a tool for solving business problems. The COBOL programming language will be extensively studied and utilized in developing the programming techniques for the solution of these problems. **Effective From: Fall 2006**

IS 373 - World Wide Web Standards (3-0-3)Prerequisites: CS 114 and junior standing. This course covers the standards that are emerging for formatting, accessing, displaying, transmitting and structuring information, including the standards and protocols existing and under development today. Topics include: Standards, Rationale, Pros and Cons, the Standards Process; Standards Bodies & Participating on Standards Bodies; How Companies Influence Standards; How Developers Incorporate Standards in their Programs; Planning for Emerging Standards; Company Policies Regarding Web Standards; Standards and Legal Issues. **Effective From: Fall 2006****IS 390 - Requirements Analysis and Systems Design (3-0-3)**Prerequisite: CS 114. A study of the information systems development life-cycle, from the initial stages of information requirements analysis and determination to the ultimate activities involving systems design. Theory, methodologies and strategies for information requirements analysis, including the assessment of transactions and decisions, fact-finding methodologies, structured analysis development tools, strategies of prototype development, and an overview of computer-aided software engineering (CASE) tools. Theory, methodologies and strategies for systems design, including design of user-interfaces, particularly menu-driven and keyword dialogue strategies, and issues in the proper design of computer output. **Effective From: Fall 2006****IS 392 - Text Processing, Retrieval & Mining (3-0-3)**Prerequisites: CS 114 and Math 333. Text retrieval concerns the representation, organization, storage, and retrieval of text elements. Students will learn methods of text and data organization, as well as numerical data storage methods in commercial databases. Topics include techniques such as automatic indexing, query expansion, and how to use these techniques to improve retrieval effectiveness and efficiency. **Effective From: Fall 2006****IS 405 - Internship in Community Service (1-0-1)**Prerequisite: IS 305 or its equivalent, approval of the department, and permission of the Office of Service Learning and Career Development Services. This course involves approximately 40 hours of internship in a community agency, arranged through the NJIT Cares Program. The interns will use their skills to improve the effectiveness of the use of computers at the agency. Bi-weekly progress reports will be submitted, with required meetings with the course supervisor, and a final report. **Effective From: Fall 2006****IS 410 - Co-op Work Experience II (3 additive credits)**Prerequisites: IS 310 or its equivalent, approval of the department, and permission of the Office of Cooperative Education and Internships. Provides major-related work experience as co-op/internship. Mandatory participation in seminars and completion of requirements that include a report and/or project. **Effective From: Fall 2006****IS 413 - Requirements for Emergency Management Information Systems (3)**Requirements analysis, interface design, and supporting functionality of information systems related to the complete preparedness lifecycle for emergency, disaster, and crisis situations for government bodies and/or private organizations. Components of the lifecycle-planning, mitigation, training, alerting, response, recovery, and assessment, are studied. Human and organizational behavior in this environment and how it influences system functionality and design of the user interface. Integration and coordination issues across the phases of the process. **Effective From: Fall 2006****IS 431 - Database Design, Management and Applications (3-0-3)**Prerequisite: CS 114 or equivalent. Database system components; data modeling using the Entity-Relationship model, Semantic Object model, UML and other data models; Relational Database Management Systems-functionality and design concepts and applications; querying a database; Structured Query Language; functional dependencies and higher order normalization for relational database design; relation decomposition; overview of concurrency control and transaction management, Database application design and management issues. Student projects involve the use of DBMS packages, including Oracle and Microsoft Access. **Effective From: Fall 2006****IS 433 - Electronic Commerce Requirements and Design (3-0-3)**Prerequisites: CS 431; IS 390 or CS 490. Introduces critical concepts emerging in the field of electronic commerce, such as business to consumer (B2C), business to business (B2B), supply chain management (SCM) systems, and peer to peer (P2P). The course provides concepts and practical skills for building effective, usable, and secure electronic commerce systems, offering a conceptual framework for the study of electronic commerce as well as hands-on skills for building systems for electronic commerce. **Effective From: Fall 2006****IS 441 - Geographic Information Systems (3-0-3)**Prerequisite: CS 431. Geographic Information Systems (GIS) allow individuals and organizations to pose, explore and answer a variety of public- and private-sector questions using spatial data. In this course the

student will learn to identify, manipulate and analyze spatial data using state-of-the-art software. The course is project-driven and hands-on: students will define and address real problems using real data. The course will also cover selected topics in information visualization as they relate to the use of GIS. **Effective From: Fall 2006**

IS 447 - Human-Computer Interfaces (3-0-3)Prerequisite: IS 390. This course covers the design and evaluation of the human-computer interface in interactive computer systems. Among the topics covered are approaches to interface design such as menus, commands, direct manipulation; screen layout strategies; metaphor models; models of human information process; evaluation approaches such as protocol for analysis, interactive monitoring, use of surveys; and requirements for documentation and help. Students are expected to design interface mockups and evaluate them. **Effective From: Fall 2006**

IS 448 - Ubiquitous Computing (3-0-3)Handheld devices, mobile and wireless technologies, 'smart spaces', wearables and other technologies are creating a ubiquitous computing environment that is moving application development off the desktop. This course explores recent developments in both the technical and Human Computer Interaction(HCI) side of ubiquitous computing. To put into practice what is being learned, the class will use scenario based usability engineering techniques to design various aspects of a ubiquitous computing application to be deployed at NJIT. **Effective From: Fall 2006**

IS 455 - IT Policy and Strategy (3-0-3)Prerequisite: Completion of a 100-level GUR course in the Computing Sciences. This course provides an understanding of the use of information technology from an organizational perspective by focusing on the development of IT policies and plans to achieve organizational goals. Topics include the strategic uses of IT, translating IT objectives into operating principles, IT architecture and infrastructure, software development management, organizational change, outsourcing, governance, risk management, and performance measurement. **Effective From: Fall 2006**

IS 461 - Systems Simulation (3-0-3)Prerequisites: completion of a 100-level GUR course in CIS; Math 333. This course introduces computer simulation as an algorithmic problem solving technique. Includes discrete simulation models, elementary theory, stochastic processes, use of simulation languages, random number generators, simulation of probabilistic processes, design of simulation experiments, validation of models, queueing systems, and applications to the design and analysis of operational systems. The GPSS language is covered in detail. **Effective From: Fall 2006**

IS 465 - Computer Techniques for Management Information Systems (3-0-3)Prerequisite: CS 431. Design and programming concepts are presented for automation of management information systems. Includes the organization of files and techniques for processing information based upon organizational requirements and available hardware and software. Some case studies are presented. **Effective From: Fall 2006**

IS 475 - Evaluation of Computer Applications (3-0-3)Prerequisite: a course in probability and statistics, or social science research methods. Methods for identifying usability problems and for testing the relative merits of alternative designs for interactive systems. Following a review of ** pending approval usability heuristics, students read journal articles about and practice five different methods: semi-structured interviews, protocol analysis, cognitive walkthroughs, user surveys, and controlled experiments. **Effective From: Fall 2006**

IS 485 - Special Topics in Computer Science/Information Systems (3-0-3)Prerequisites: junior standing and/or department approval. The study of new and/or advanced topics in an area of computer science not regularly covered in any other CIS course. The precise topics to be covered in the course, along with prerequisites, will be announced in the semester prior to the offering of the course. A student may register for no more than two semesters of Special Topics. **Effective From: Fall 2006**

IS 486 - Topics in Computer Science/Information Systems (3-0-3)Prerequisites: Same as for IS 485. A continuation of IS 485. **Effective From: Fall 2006**

IS 488 - Independent Study in Computer Science (3-0-3)Prerequisites: open only to students in the Honors Program who are computer science majors and who have the prior approval of the department and the CIS faculty member who will guide the independent study. Independent studies, investigations, research, and reports on advanced topics in computer science. Students must prepare, in collaboration with their faculty mentor and in the semester prior to enrolling in this course, a detailed plan of topics and expected accomplishments for their independent study. This must have the approval of both the department and the faculty mentor. A student may register for no more than one semester of Independent Study. **Effective From: Fall 2006**

IS 491 - Senior Project (3-0-3)Prerequisites: IS 465, senior standing, and, in a prior semester, project proposal approved by the faculty advisor. Integration of knowledge and skills gained in previous information systems courses into an individual research project. The project entails investigation of current literature and the design, implementation and evaluation of an information system. **Effective From: Fall 2006**

IS 491H - Honors Senior Project (3-0-3) Prerequisites: CS 490, senior standing in the Honors College and project proposal approval. A course similar to IS 491, with a project of greater depth and scope. **Effective From: Fall 2006**

GRADUATE COURSES:

IS 500 - Introduction to Systems Analysis (3 credits) Prerequisites: statistics and differential equations. Covers a wide variety of systems oriented approaches to solving complex problems. Illustrative examples are chosen from a wide variety of applications. Mathematical tools are only introduced to the extent necessary to understand the technique and its application to the problem. Topic areas include probabilistic and decision theory models, simulation, morphological analysis, cluster analysis, structural modeling, Delphi and dynamic system models. The role for the computer in applying these techniques to complex problems will be discussed. The student will be exposed to some of the fundamental controversies concerning the appropriateness or validity of systems approaches to human problem solving. **Effective From: Fall 2006**

IS 565 - Aspects of Information Systems (3 credits) Co-requisite: CS 431 or permission of the department. Methods and models of supporting the management process; ethical issues pertaining to the construction, deployment, and impact of information systems on organizations and society; description, analysis, and design of information systems to assist problem solving and decision-making in a business environment. **Effective From: Fall 2006**

IS 590 - Graduate Co-op Work Experience I (3 additive credits) Prerequisite: students must have the approval of the co-op advisor for the CIS department. Provides on-the-job reinforcement and application of concepts presented in the undergraduate computer science curriculum. Work assignments are identified by the co-op office and developed and approved by the CIS department in conjunction with the student and employer. Students must submit, for CIS department approval, a proposal detailing the nature of the intended work. A report at the conclusion of each semester's work experience is required. Credits for this course may not be applied toward degree requirements for either the bachelor's or master's in computer science. **Effective From: Fall 2006**

IS 591 - Graduate Co-op Work Experience II (3 additive credits) Prerequisite: students must have the approval of the co-op advisor for the CIS department. Provides on-the-job reinforcement and application of concepts presented in the undergraduate computer science curriculum. Work assignments are identified by the co-op office and developed and approved by the CIS department in conjunction with the student and employer. Students must submit, for CIS department approval, a proposal detailing the nature of the intended work. A report at the conclusion of the semester work experience is required. Credits for this course may not be applied toward degree requirements for either the bachelor's or master's in computer science. **Effective From: Fall 2006**

IS 592 - Graduate Co-op Work Experience III (3 additive credits) Prerequisites: graduate standing, and acceptance by the CIS department and the Division of Career Development Services. Students must have the approval of the co-op advisor for the CIS department. Provides on-the-job reinforcement and application of concepts presented in the undergraduate or graduate computer science curriculum. Work assignments are identified by the co-op office and developed and approved by the CIS department in conjunction with the student and employer. Students must submit, for CIS department approval, a proposal detailing the nature of the intended work. A report at the conclusion of the semester work experience is required. Credits for this course may not be applied toward degree requirements for either the bachelor's or master's in computer science. **Effective From: Fall 2006**

IS 593 - Graduate Co-op Work Experience IV (0 credits) Prerequisites: One immediately prior 3-credit registration for graduate co-op work experience with the same employer. Requires approval of departmental co-op advisor and the Division of Career Development Services. Must have accompanying registration in a minimum of 3 credits of course work. **Effective From: Fall 2006**

IS 613 - Design of Emergency Management Information Systems (3) This course is concerned with the development of requirements, the design of the human interaction, and the supporting functionality of any Information System related to the complete preparedness lifecycle for emergency, disaster, and crisis situations for government bodies, non-profit, and/or private organizations that are concerned with business continuity. It also focuses on organizational behavior and its effects on the functionality of the system and the design of the human interface. **Effective From: Fall 2006**

IS 614 - Command and Control Systems (3) This course investigates the adaptability and use of military Command and Control (C2) to emergency response. It examines the functionality and properties of C2 systems in terms of matching requirements for these systems to the behavior of individuals, groups, and organizations under emergency conditions. The course will also address the concept of integrating systems across the operational, tactical, and strategic spectrum surfacing during various stages of emergency management and response. **Effective From: Fall 2006**

IS 615 - Improvisation in Emergency Management (3) This course explores the continuum between planned and improvised behavior in emergency management. It introduces tools and techniques useful for understanding and supporting decision-making in emergencies, and enables learners to apply them in simulated emergency response scenarios. The focus is on decision making under time pressure, the influence of cognitive, policy and organizational factors, and the design and use of technologies to support

planned and improvised decision making. **Effective From: Fall 2006**

IS 623 - Qualitative Research on Information Systems (3 credits) Prerequisites: IS 350 (or equivalent covering basics of research in IS) or IS 675. A review of major qualitative research methods in Information Systems research, including interviews, content analysis, participant observation (ethnography), case and field studies, group techniques, and selected other methods. Students read and make experiential use of articles providing examples of the use of these methods in the IS journal literature. **Effective From: Fall 2006**

IS 634 - Information Retrieval (3 credits) Prerequisites: CS 631. Covers the concepts and principles of information retrieval systems design. Techniques essential for building text databases, document processing systems, office automation systems, and other advanced information management systems. **Effective From: Fall 2006**

IS 658 - Multimedia Systems (3 credits) Prerequisite: CS 601 (Object-Oriented Programming) or equivalent. Multimedia software systems incorporate various media, such as text, images, video and audio, to provide rich experiences for users. This is a course in the design, implementation and evaluation of multimedia systems. The course has three major content areas and goals: (1) multimedia data types-the goal being to understand the development and use of various multimedia data types; (2) usability and user modeling-the goal being to incorporate theories of human perception and cognition into the design and evaluation of multimedia systems; and (3) multimedia design and software tools-the goals being to plan and develop multimedia projects and to be aware of ways in which multimedia is being used in the public and private sectors. Both terms must be completed to receive credit toward the history requirement. **Effective From: Fall 2006**

IS 663 - Advanced System Analysis and Design (3 credits) This course focuses on the systems analysis and design techniques employed in the development of software applications. Topics include software process and process models (e.g. Rational Unified Process), project management, structured and object oriented analysis, system design, quality systems, system and software architecture, design patterns, re-use and component-based design, change control and configuration management. Analysis and design will be covered primarily from an object oriented perspective. Students will read selected material from the literature, actively participate in discussions, labs and exercises in addition to participating in projects that involve analysis and design for real-world problems. **Effective From: Fall 2006**

IS 675 - Information System Evaluation (3 credits) Prerequisites: a course in statistics and IS 677. Theoretical perspectives and methodological approaches to evaluate information systems within the context of the user and organizational environment. Topics include qualitative techniques such as protocol analysis and interviews; quantitative techniques such as sample surveys and controlled experiment; cost-benefit analysis, and analyses of data gathered by these approaches by methods such as regression, correlation, and analysis of variance. Emphasis on the application of these approaches to improve functionality, interface, and acceptance of information systems in organizations. **Effective From: Fall 2006**

IS 676 - Requirements Engineering (3 credits) Prerequisites: IS 663 or CS 673 or equivalent project experience in the field. Theory, principles, and practical application of the methodologies and tools of requirements engineering. The focus is development of large software systems and the integration of multiple systems into a comprehensive, domain dependent solution. All aspects of requirements engineering will be covered, including problem analysis, requirements specification techniques and tools, and specification of functional and non-functional requirements. Related technologies like domain analysis and pre-planned systems integration are also discussed. **Effective From: Fall 2006**

IS 677 - Information System Principles (3 credits) Prerequisites: familiarity with the organization of a computer system and knowledge of at least one higher-level language. Reviews the role of information systems in organizations and how they relate to organizational objectives and organizational structure. Identifies basic concepts such as the systems point of view, the organization of a system, the nature of information and information flows, the impact of systems upon management and organizations, human information processing and related cognitive concepts. Introduces various types of applications that are part of information systems. The course focus is on management information systems. **Effective From: Fall 2006**

IS 679 - Management of Computer and Information Systems (3 credits) Management of the development, planning, and utilization of information systems within organizations. Focuses on the current literature in the management of information systems. Topics include the approval and decision process for the development of systems, use of steering committees and various approaches to user involvement. Utilizes a number of Harvard University case studies. Project utilizing professional literature required. **Effective From: Fall 2006**

IS 680 - Information Systems Auditing (3) This course is intended to provide the student with a fundamental working knowledge of a number of IS risk and control issues that affect industries today. Topics include the IS audit process, IT infrastructure and operations, information protection, disaster recovery and business continuity, IT service delivery and support, business application systems, and project management. Following each section, students will work through a series of Certified Information Systems Audit

exam questions. **Effective From: Fall 2006**

IS 681 - Computer Security Auditing (3 credits) Prerequisites: CS 601 or CS 631 or permission of the instructor. Security control risks and issues. Information protection concepts, elements of security systems, computer crime and legal issues, controls and auditing systems, firewall configuration. **Effective From: Fall 2006**

IS 683 - Object-Oriented Software Development (3 credits) Prerequisites: CS 635, experience in software design and development or explicit approval of the instructor. Advanced course in software development. Presents the object-oriented methodology for software development and examines various areas to which this methodology can be applied. Analysis, design, and implementation of object-oriented software and the effect of this methodology on code reusability, extensibility, and robustness. Examines object-oriented languages, object-oriented databases, and object-oriented user-interfaces. **Effective From: Fall 2006**

IS 684 - Business Process Innovation (3 credits) Prerequisites: IS 663 or CS 673. Knowledge of information systems development. Discusses a balanced approach to business process innovation (BPI) that includes both incremental improvement and re-engineering. Introduces strategy and process alignment, various types of business processes, and process mapping software. Details a BPI implementation methodology, interwoven with many case studies. Students will work on real process re-design projects using a process mapping software product. **Effective From: Fall 2006**

IS 686 - Pervasive Computing: An HCI Perspective (3 credits) This course examines Pervasive/Ubiquitous Computing, the trend toward increasingly ubiquitous connected computing devices in the environment. A trend being brought about by a convergence of advanced electronic, and particularly, wireless technologies and the internet. It does this from a Human Computer Interaction perspective looking at the current and future design of various systems. **Effective From: Fall 2006**

IS 698 - Special topics in Information Systems (3) Special area course given when suitable interest develops. Advance notice of forthcoming topics will be given. **Effective From: Fall 2006**

IS 725 - Independent Study in Information Systems (3 credits) Prerequisites: Graduate standing and department consent. **Effective From: Fall 2006**

IS 732 - Design of Interactive Systems (3 credits) Prerequisite: IS 675. Design of interactive systems and human computer interfaces. Covers the current professional literature in this field and the knowns about design. Emphasizes application areas that have a great deal of cognitive variability and diverse user populations. Design interfaces for various applications. The impact of costs and operational practices upon user behavior and current research topics in interface design are covered. **Effective From: Fall 2006**

IS 735 - Computer Mediated Communication Systems (3 credits) Prerequisite: IS 675. Seminar for students contemplating research in the following areas: designs and the impact of, computer-based systems for human communication, including electronic mail, computer conferencing, Computer-Supported Cooperative Work (CSCW), Group Decision Support Systems (GDSS), the Internet and the World Wide Web. Topics include alternative design structures, impacts of primarily text-based asynchronous group communication, and recent empirical studies. Completion of a publishable state-of-the-art written review or design of a tailored CMC system is required. **Effective From: Fall 2006**

IS 754 - Measurement and Evaluation of Software Quality and Performance (3 credits) Prerequisites: Ph.D. core courses, CS 630, CS 661. A study of the tools for the measurement of software products and the use of these tools in the evaluation of software quality and performance. Structural and functional models of algorithms, programs, and systems are presented to define the quantitative and subjective characteristics of computer products. Course includes the use of hardware and software tools, the study of simulation and analytic techniques, description of workloads and benchmarks for system evaluation, problems of scale, proof of program correctness, feature value analysis, and the design and interpretation of experiments. **Effective From: Fall 2006**

IS 762 - Computerized Information Systems for Planning and Forecasting (3 credits) Prerequisite: IS 675. Capturing and processing of subjective and empirical data for use in planning and forecasting information systems and the incorporation of these facilities into information systems designs. Emphasis on conveying understanding of the limitations of various methods and techniques to meet various planning and forecasting objectives. Use of various techniques such as the Delphi method, structural modeling, cluster analysis and regression approaches. **Effective From: Fall 2006**

IS 763 - Qualitative Methods in IS Research (3) Prerequisites: IS 675 or IS 350 (or an equivalent course) A review of major qualitative research methods in Information Systems research, including interviews, content analysis, participant observation (ethnography), case and field studies, group techniques, and selected other methods. Students read and make experiential use of articles providing examples of the use of these methods in the IS journal literature. **Effective From: Fall 2006**

IS 767 - Decision Support Systems (3 credits)The design, implementation, and utilization of models and their software support systems for application in managerial decision making at the strategic, tactical, and operational levels. Topics include the perspective of decision-support systems, the management of large simulation models and documentation standards, combined hybrid simulation languages and their applications, financial modeling and financial modeling languages. Systems dynamics and its managerial applications at the strategic level; specialized modeling and analysis software packages for managerial decision making; and recent research in computer-aided tools for capturing group judgment, modeling, and decision-making are also discussed. **Effective From: Fall 2006**

IS 776 - Independent Study in Information Systems (3 credits)Prerequisite: restricted to students in the doctoral program in Information Systems (or students in the joint Rutgers- NJIT PhD in management who major in CIS). Students must have an approved program of study and approval of a faculty advisor to register for this course. Normally used for work on the "state of the art literature review," preceding the thesis, which is then presented to a committee for approval. **Effective From: Fall 2006**

IS 786 - Special Topics (3 credits)Prerequisites: same as for CS 785. A continuation of CS 785. **Effective From: Fall 2006**

IS 787 - Information Systems PhD Seminar A (1 credit)The seminar includes student presentations related to their research, faculty presentations, and occasional outside speakers. Its goal is to enable students to identify their research areas for the dissertation, and to obtain constructive feedback on their papers and research in progress. Two presentations are required of each student. Open to students in the PhD program in Information Systems. **Effective From: Fall 2006**

IS 788 - Information Systems PhD Seminar B (3 credits)Prerequisite: restricted to students in the doctoral program in Information Systems (or students in the joint Rutgers- NJIT PhD in management who major in CIS). The seminar includes student presentations related to their research, faculty presentations, and occasional outside speakers. Its goal is to enable students to identify their research area for the dissertation, and to obtain constructive feedback on their papers and research in progress. Students are required to engage in a research internship under the direction of a faculty member, and to make at least three presentations, including at least one for a paper to be submitted to a professional meeting or journal. **Effective From: Fall 2006**

IS 791 - Graduate Seminar (Non-credit)Corequisite (for doctoral students only): CIS 790. A seminar in which faculty, students, and invited speakers will present summaries of advanced topics in computer and information systems management. In the course students and faculty will discuss research procedures, dissertation organization, and content. Students engaged in research will present their own problems and research progress for discussion and criticism. **Effective From: Fall 2006**

IS 792 - Pre-Doctoral Research (3 credits)Prerequisite: permission from department chairperson. For students admitted to the doctoral program in computer and information science who have passed the field exam or the qualifying examination. Research is carried out under the supervision of a designated faculty member. Students identify a research problem and prepare a plan to solve the problem. A maximum of 6 credits of CS 792 may be applied to the CIS 790 requirement. **Effective From: Fall 2006**

IS 794 - Computer Science/Information Systems Colloquium (Non-credit)Prerequisite: graduate standing with major in computer science. Colloquium in which national and international experts in the various fields of computer science are invited to present and discuss the results of their recent research. **Effective From: Fall 2006**

Management Information Systems: Offered by the School of Management

UNDERGRADUATE COURSES:

MIS 245 - Introduction to Management Information Systems (3-0-3) Concepts of information systems, business process, hardware, software, systems analysis, e-commerce, enterprise systems and computer applications in organizations, techniques of systems analysis, systems designs, implementations, and information management (both technical and behavioral) are studied in the organizational context of management information needs. **Effective From: Spring 2005**

MIS 246 - Tools and Technologies for the Digital Firm (3-0-3) This course is designed to provide students with an introduction to the applications being used by digital firms, companies that rely extensively on the use of information technology to support all their functions and processes. Although function specific systems (e.g. accounting information systems, financial information systems) are introduced the emphasis is on enterprise wide systems such as those offered by SAP, Oracle and Peoplesoft. A basic introduction to the technologies underlying the applications used in business is also provided.

MIS 345 - Management of Information Systems (3-0-3) Prerequisites: CIS 103 or CIS 113, MIS 246. Training managers or entrepreneurs to use and manage information systems. The evolution of the computer as a management information tool and a demonstration of how this tool can be used to improve both the effectiveness and efficiency of managers.

MIS 360 - Survey of E-Commerce Tools & Technologies (3-0-3) Prerequisite: MIS 246. Covers the current technologies behind e-commerce solutions such as dynamic Web sites, database integration, server-side scripting, client-side scripting, and XML.

MIS 376 - Information Systems and Operations Management (3-0-3) This course will integrate information systems with operations management. The role information systems play in the operations management functions for both the goods and services sectors of a global economy. Topics to be covered are mission and strategy development, demand forecasting, capacity planning, facility location, process strategy, inventory management, project management and total quality management. The way information systems integrates these concepts with ERP, SCM, CRM and other business systems will be discussed. **Effective From: Spring 2005**

MIS 445 - Decision Support Systems and OLAP (3-1-4) Prerequisites: MIS 345 and OM 375. Introduces students to the use of decision support systems (DSS) to support management decisions. Topics include: DSS software tools, model management, and DSS design and use.

MIS 463 - Systems Analysis and Design for Managers (3-0-3) This course focuses on the analysis and development of systems to meet the increasing need for information within organizations. Topics include systems development life cycle, analysis and design techniques, information systems planning and project identification and selection, requirements collection and structuring, process modeling, data modeling, design of interface and data management, system implementation and operation, system maintenance, and change management implications of systems. **Effective From: Spring 2005**

GRADUATE COURSES:

MIS 545 - Management Information Systems (3 credits)Tools and techniques of management information systems and how they can be used to improve the quality of management decisions. Includes computer-based solutions to management problems in office automation, budgeting, communications, and decision support, major features of hardware and software computer system components and how to design a system, and technical tools ranging from flowcharts and decision tables to automated design.

MIS 620 - E-Commerce Technologies (3 credits)Intended to develop a basic understanding of the Internet and its underlying technologies as a foundation for e-commerce with an introduction to e-commerce applications. Addresses the technology for MIS managers to effectively manage the launching of e-commerce infrastructures. Covers data communication and networking, EDI, intranets and extranets, bandwidth and security issues.

MIS 625 - Management Strategies for E-Commerce (3 credits)Prepares students for effective management of internet-based businesses and electronic commerce and oversight of global business activities in an increasingly competitive environment. Introduces Internet concepts and infrastructure. Examines current and proposed Internet services forming the basis of Internet commerce. Covers corporate intranets and extranets and their applications to corporate computing, seamless e-commerce, and other emerging services such as VPN. Issues are discussed, with special emphasis on security.

MIS 635 - Management of Telecommunications (3 credits)A comprehensive review of current trends in telecommunications with an emphasis on the techniques required by non-technically trained managers to deal with hardware, software, and human interfaces. Specific areas to be covered include the types of telecommunication networks, common network operating systems, and network design strategies.

MIS 636 - Telecommunications: Policies and Regulations (null)Familiarization with government regulations for all forms of telecommunications, including video and audio. Covers such aspects as the ways in which corporations manage and provide security for telecommunications. Covers briefly: major telecommunications policies and regulations that have made a major impact on the current environment; telecommunications regulations in a global environment.

MIS 645 - Managing IT for Competitive Advantage (3 credits)Prerequisite: MIS 545. The management of information processing resources, including: role of information processing, estimates of personnel resources and budgets, integration of corporate and MIS plans, organizational alternatives for MIS departments and support staffs, management of computer operations, equipment and general software acquisitions, intermediate and long-range MIS plans, integration of personal computers, minicomputers, and mainframes, and security and controls.

MIS 648 - Decision Support Systems for Managers (3 credits)Prerequisites: MIS 545, Mgmt 580. Covers the use of decision support systems to support management decision making in a real world environment. Topics include: establishing and measuring decision support systems success criteria, software tools, model management, elements of artificial intelligence, and statistics. Justification, design, and use of decision support systems.

MIS 654 - Design of Accounting Information Systems (3 credits)Management's need for information and design of systems to provide this information. Emphasis on designing controls to ensure that the system meets management's objectives. Comparison of management and technical aspects of information systems. Accounting information systems will be used as models, but the course will incorporate all functions within the organization and provide the student with tools needed to manage the system and safeguard the assets of the organization.

MIS 655 - Information Systems Audit, Control and Security (3 credits)Emphasizes controls and how an auditor or a manager verifies that controls are in existence and are effective. Security and controls are complementary and should be included in an MIS system environment. Covers the internal controls that should be present in an information system given its environment.

MIS 665 - Introduction to Electronic Commerce (3 credits)Examines the changes in business processes and organizations enabled by electronic commerce technologies and application. Develops an understanding of the new electronic marketplace based on fundamental economics of the digital economy. Investigates electronic economies, new organizational structures, information systems architectures, and decision analysis.

MIS 680 - Management Science (3 credits)Introduction to the methodology of decision making applying the techniques of operations research and system analysis to managerial problems. Introduction to the concept of objective functions and constraints, concepts of value and utilities, optimization algorithms, networks and game theories. Elementary mathematical model linear production systems, inventory systems, multi-criteria decision making, project management and transportation planning. Topics will be discussed from the deterministic as well as scholastic points of view.

MIS 690 - Executive Information Systems (3 credits)Provides decision makers a framework for designing and building systems to

2007-2008

gain competitive advantage. Covers executive support systems, executive information systems, and group support systems.

MIS 701 - Thesis in Information Systems Management (6 credits) Prerequisites: MIS 645, MIS 648, CIS 675, CIS 679 or waived with approval of the Dean. Examines what is research? Why do research? What are the objectives of research? Covers need for research, criteria for good research and research design, concept of measurement, sampling design, primary data collection, experimentation and simulation, statistical and other types of analysis, and reporting of research findings.

2007-2008

Information Technology: Offered by the Information Technology Committee

UNDERGRADUATE COURSES:

IT 101 - Introduction to Information Technology (3-0-3) Overview of emerging information technologies and the principles behind these developments. Discusses applications developed around the evolving Internet infrastructure and their impact on business, information technology professionals and society. Covers topics such as multimedia systems and standards, distributed and network computing, e-commerce and data management in the context of problem solving and programming which are integrated into the course using a modern development environment. **Effective From: Fall 2005**

IT 102 - Introduction to Information Technology II (3-0-3) Prerequisites IT101. This course develops a broader and deeper understanding of the concepts and tools of IT providing a foundation for later work. It focuses on problem solving using object-oriented, event-driven, and networked programming. Topics include classes, objects, GUI's, events, sockets, client/server programming, multithreading, multimedia, exception handling and IO. A modern development environment and programming language are used to realize the concepts introduced. **Effective From: Fall 2005**

IT 201 - Information Design Techniques (3-0-3) Prerequisite: IT 101. This course presents an introduction to the theory and practice of information design. Topics covered include the theoretical foundations of information design, graphic design, content design, interaction design, usability, multimedia design, sound and video, animation, and an introduction to 3D modeling. **Effective From: Fall 2005**

IT 202 - Internet and Applications (3-0-3) Prerequisite: IT 102 or CIS 113 (or equivalents). This course covers Internet applications and concepts from client/server programming to 3-tier architectures. HTML is introduced for information layout and transfer, as well as, Javascript, including elements of the Document Object Model, and basic HTTP. XML, DTD's and Cascading Style Sheets, illustrate methods for exchanging, structuring and presenting information. A database (like MS Access), SQL, and a server-side language (like JSP) are used to implement 3-tier applications.

IT 220 - Wireless Networks (3-0-3) This course introduces the students to the applied topic of Wireless Networks, focusing on applied methods, tools and technologies, as well as practical experience in designing & implementing wireless networks. Topics include hardware, software, data, applications, communication, design & installation of wireless networks, together with the implementation, performance, security and limitations of such systems.

IT 230 - Computer and Network Security (3-0-3) This course introduces the applied topic of Computer Security, presenting the evolution of computer security, the main threats, attacks & mechanisms, applied computer operations & security protocols, main data transmission & storage protection methods via cryptography, ways of identifying, understanding & recovery from attacks against computer systems, various methods of security breach prevention, network systems availability, applications security, recovery & business continuation procedures and counter systems penetrations techniques and the role of the US Government in security of national computer infrastructure.

IT 265 - Game Architecture and Design (3-0-3) Prerequisite: IT 201 or equivalent. Course introduces students to the core concepts and design methodologies integral to designing and developing games and other Entertainment Software. **Effective From: Spring 2007**

IT 310 - E-commerce Technology (3-0-3) An overview of the technologies relevant to electronic commerce. Communications and networking, web authoring tools, system security, databases and archiving, EDI, transaction processing, and factory/warehouse data networks. Provides competency to appraise tools such as HTTP servers, secure transaction software and firewalls, low and high-end database systems, heterogeneous networks, NNTP Servers, client software, procurement systems, and intelligent agents. Covers e-commerce models including agent-based and Java-based, electronic contracts and the electronic exchange of technical data, electronic cash systems and user security.

IT 311 - Co-op Work Experience I (3-0-3) Prerequisite: Completion of the sophomore year, approval of the program coordinator, and permission of the Office of Cooperative Education and Internship. Students gain major-related work experience and reinforcement of their academic program. Work assignments facilitated and approved by the Co-op office. Mandatory participation in seminars and completion of a report.

IT 320 - Virtual Instrumentation (3-0-3) Cross-listed with OPSE 310. Prerequisite: CIS 113. Covers the basics of virtual instrumentation including use of IEEE GPIB, RS232 interfaces, and data acquisition boards. Interface a computer to various instruments for data acquisition and instrument control using a state-of-the-art software platform such as National Instruments LABVIEW. Emphasis is on the practical aspects of interfacing a computer to various instruments including timing issues, real-time data acquisition and instrument control, instrument status, and acquisition speed.

IT 330 - Computer Forensic (3-0-3) Prerequisites: IT 230, CIS 332. This course introduces students to the applied topic of Computer Forensic, the study of obtaining and analyzing digital information from computers that have been used to commit illegal actions (computer crime), for use as evidence in civil, criminal, or administrative cases.

IT 335 - Introduction to .NET Framework (3-0-3) Prerequisite: IT 202 or equivalent. This course introduces students to .NET Framework, a new computational environment that supports more than 25 programming languages and is platform and device independent. Problem solving and system development topics are integrated into the course by using C# languages as a vehicle to illustrate the concepts. **Effective From: Spring 2007**

IT 360 - Programming for Computer Graphics (3-0-3) Introduction to programming graphics and animation through the use of an appropriate application interface such as OpenGL. Topics include 2D and 3D graphics with mappings from the real world coordinates to graphics display. Perspective display will be provided by an interface. Basic vector and matrix operations which underlie the concepts of perspective will be covered.

IT 380 - Educational Software Design (3-0-3) Prerequisites: IT 201. Educational Software design employs the instructional principles of constructivist pedagogy such as anchoring learning activities to a larger task or problem, supporting the learner in developing ownership for the overall problem or task, designing an authentic task, and giving the learner ownership of the process used to develop a solution to develop courseware for K-8 audience. The course builds on the participatory design model of software engineering in order to develop integrated learning environments that support visual and verbal literacy; encourage learners to construct their own paths to knowledge; and to develop methodologies that offer a better understanding of what children want and need when using technology. This course enables the student to be able to plan, organize, and systematically develop instructional materials. This course implements instructional design theory and pedagogy in order to create an actual application for a computer-based environment. **Effective From: Spring 2005**

IT 411 - Co-op Work Experience (3-0-3) Prerequisite: Completion of the sophomore year, approval of the program coordinator, and permission of the Office of Cooperative Education and Internship. Students gain major-related work experience and reinforcement of their academic program. Work assignments facilitated and approved by the Co-op office. Mandatory participation in seminars and completion of a report.

IT 420 - Computer Systems and Networks (3-0-3) This course provides students with an understanding of methods, tools and technologies required to work with computer systems and networks. It includes a detailed discussion of Internet/intranet issues, including standards, connectivity, performance, protocols, network configurations, network design, wireless technology, management and simulation through practical cases, covering both hardware and software systems.

IT 430 - Ethical Hacking for Administrators (3-0-3) Prerequisite: IT 420 or equivalent. This course will explore the various means that an intruder has available to gain access to computer resources. Traditional security analysis often falls short due to the rapidly evolving threats that exist. The course was developed to teach how system and network vulnerabilities are found and exploited and what steps can be taken to mitigate the risk. **Effective From: Spring 2007**

IT 485 - Special Topics in Information Technology I (3-0-3) Prerequisites: junior standing and/or advisor approval. The study of new and/or advanced topics in an area of information technology and its application not regularly covered in any other IT course. The precise topics to be covered, along with prerequisites, are announced in the semester prior to the offering of the course. A student may register for no more than two semesters of special topics courses.

IT 486 - Special Topics in Information Technology II (3-0-3) Prerequisites: same as for IT 485. A continuation of IT 485.

IT 488 - Independent Study in Information Technology (3-0-3) Prerequisites: open only to Information Technology majors who have the prior approval of the program director and the IT faculty who will guide the independent study taking the form of

investigations, research, and reports on advanced topics in information technology. Students must prepare, in collaboration with their faculty mentor and in the semester prior to enrolling in this course, a detailed plan of topics and expected accomplishments for their independent study. This must have the approval of both the program director and the faculty mentor. A student may register for no more than one semester of independent study.

IT 488H - Honors Independent Study in Information Technology (3-0-3) Prerequisites: open only to Honors College Information Technology majors who have the prior approval of the program director and the IT faculty who will guide the independent study taking the form of investigations, research, and reports on advanced topics in information technology. Students must prepare, in collaboration with their faculty mentor and in the semester prior to enrolling in this course, a detailed plan of topics and expected accomplishments for their independent study. This must have the approval of both the program director and the faculty mentor. A student may register for no more than one semester of independent study.

IT 490 - Systems Integration (3-0-3) Prerequisite: IT 420. The course will introduce the major design, implementation & distributed deployment issues regarding system integration, Network Operating Systems (NOS), cross platform database integration, e-commerce and e-business applications implementation, cross-servers & multiple locations e-sessions migration and the related communications security. **Effective From: Fall 2005**

IT 491 - IT Capstone Project (3-0-3) Prerequisites: senior standing. An opportunity for students to integrate the knowledge and skills gained in previous information technology work into a team research project. The project involves investigation of current literature as well as implementation of either a part of a large application or the whole of a small system.

IT 491H - Honors IT Capstone Project (3-0-3) Prerequisites: senior standing in the Honors College and project proposal approval. Similar to IT 491, with a project of greater depth and scope.

Infrastructure Planning: Offered by the School of Architecture

GRADUATE COURSES:

MIP 601 - Interdisciplinary Infrastructure Studio I (6 credits) Collaborative work on realistic infrastructure projects by teams of students with different professional backgrounds under the supervision of interdisciplinary faculty. A project manager coordinates and ensures that working conditions in practice are simulated in the studio. Projects include analytical, financial and design components and emphasize planning strategies and the coordinating function of the design process. Studio products are presented orally in reviews and documented in written and illustrated reports.

MIP 602 - Interdisciplinary Infrastructure Studio II (6 credits) A comprehensive planning and design project emphasizing infrastructure technologies and information management. CAD and other computer applications are used to produce computer-generated graphics and multi-media presentations. Although subjects and approaches will vary, the work of the studio is intended to develop the students' ability to deal with all facets of infrastructure planning regardless of previous academic background. The final products must include a full written and illustrated report on the project and the research on which it is based.

MIP 612 - Introduction to Environmental Policy Studies (3 credits) Introduction to six areas essential to a comprehensive understanding of environmental policy: concepts of environmental policy; tools (law, economics, planning, science, engineering, ethics) for environmental policy; the U.S. perspective (NEPA, clean air and water acts, CERCLA, etc.); the international perspective (Club of Rome models, 1972 UNEP, 1992 Rio, etc.); industrial perspective (pollution prevention/life cycle engineering, privatization, etc.); and the local perspective (New Jersey DEP, NGOs, local industry, shoreline, etc.). Same as EPS 612

MIP 615 - Introduction to Transportation Studies (3 credits) Prerequisite: elementary probability and statistics. Presentation of the characteristics of the traffic stream, road users, and of vehicles, and a review of traffic flow relationships. Students are exposed to the principal methodologies followed by transportation practices to perform volume, speed, travel time, delay, accident, parking, pedestrian, transit and goods movement studies. Presentation of the principal methodologies used to perform transportation facility capacity analyses for: basic freeway sections, weaving areas, ramps and ramp junctions, multi-lane and two lane roadways, signalized and unsignalized intersections. Students get hands on experience using the highway capacity software (HCS) and SiDRA. Same as CE 660 and Tran 615.

MIP 618 - Public and Private Financing of Urban Areas (3 credits) Ties government's budget, tax, policy, allocation of resources between public and private sectors, with the structure, development, and growth needs of urban metropolitan areas. Focuses on problems of poverty, transportation, land-use, economic base, relation between central cities and suburban areas, and alternative engineering and economic solutions. Same as Fin 618 and Tran 604.

MIP 631 - History and Theory of Infrastructure (3 credits) The historical role of infrastructure in the formation of cities and the relation of planning theories to urban culture. Case studies are used to develop effective ways of learning urban design; method and substance are equally emphasized. Concentration on the social, economic, political, technological and topographic factors that affect urban form; analysis of urban design schemata and their relation to patterns of use; and the critical appraisal of planning ideologies and strategies. Same as Arch 631H.

MIP 652 - Geographic Information Systems (3 credits) Prerequisite: course or working knowledge of CADD or permission of instructor. Geographical/Land Information System (GIS/LIS) is a computerized system capable of storing, manipulating and using spatial data describing location and significant properties of the earth's surface. GIS is an interdisciplinary technology used for studying and managing land uses, land resource assessment, environmental monitoring and hazard/toxic waste control, etc. Introduces this emerging technology and its applications. Same as CE 602 and Tran 602.

MIP 655 - Land Use Planning (3 credits) Spatial relations of human behavior patterns to land use: methods of employment and population studies are evaluated; location and spatial requirements are related to land use plans; and concepts of urban renewal and recreational planning are investigated by case studies. Same as Tran 655 and CE 655.

MIP 673 - Infrastructure Planning in Practice (3 credits)Infrastructure planning principles, methods and tools. Through selected examples, acquaintance with infrastructure planning theories and models, quantitative methods of research and analysis, information management, decision making, and implementation techniques. Same as Arch 673.

MIP 674 - Infrastructure and Architecture (3 credits)Examination of areas of overlap and continuity between architecture, landscape architecture, urban design, building science and infrastructure. Topics include the typology, programming and design of public facilities; the housing fabric; the relation between built form, urban space and infrastructure. Same as Arch 674.

MIP 675 - Elements of Infrastructure Planning (3 credits)Introductory survey of the basic principles, operation and design of physical infrastructure systems including roads, public transportation, community facilities, public open space, surface drainage, and electric, gas, water, waste disposal, and telecommunications services. Same as Arch 675.

Journalism, Writing, Media: Offered by the Department of English at Rutgers-Newark. See Rutgers English course list for faculty.

UNDERGRADUATE COURSES:

R570:201 - Journalism and Communications Media (3) For more details go to [Rutgers Catalog](#).

Literature: Offered by the Department of Humanities. See Humanities course list for faculty

UNDERGRADUATE COURSES:

LIT 320 - American Literature (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. A survey of major works of American literature. Provides a foundation for understanding the currents of American thought and experiences. Special emphasis is paid to American literature within a global context.

LIT 321 - British Literature (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. A survey of the major works of British literature. Provides a foundation for understanding the currents of British thought and experience. Special emphasis is paid to British literature within a global context.

LIT 330 - World Literature I: North America, Latin America and the Caribbean, Australia and Oceania (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Enhances understanding of other cultures and of past and contemporary global interactions.

LIT 331 - World Literature II: Africa and the Middle East, Asia, and Europe (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Enhances the understanding of other cultures and of past and contemporary global interactions.

LIT 340 - Contemporary Literature (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Focuses on the study of literary works published within the last ten years. Considers how contemporary issues and problems are addressed in a variety of literary works.

LIT 350 - Fiction (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Explores the short story and the novel from varied countries and eras. Emphasis is given to narrative methods, representative themes, and global perspectives.

LIT 352 - 20th Century European Fiction (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Examines themes ranging from war and occupation, revolution, Fascism, and Communism to individual liberation and self-discovery, existentialism, absurdism, and feminism.

LIT 355 - Poetry (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Explores the problems, devices, and techniques of poetry's sound, rhythm, meter; diction and tone; connotation, metaphor, and symbol as a means of demystifying the reading of poems. Emphasis is given to the place and purpose of poetry in a technological society.

LIT 360 - Drama (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Follows the development of play structure from folkloric origins to contemporary theater. Emphasis is on text, history of text development, and the changing purpose of theatrical presentations.

LIT 361 - 20th Century American Drama (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Examines the development of 20th century American drama with emphasis on the ways, often experimental, in which the playwrights reflect the spirit of the times.

LIT 362 - Non-Western Drama (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Explores classical and contemporary theater and drama in China, Japan, India, Africa, and the Middle East.

LIT 363 - Ethnic and Minority Drama (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Using contemporary dramas as social, historical, and cultural artifacts, examines the experience of

Latinos, Asian Americans, Native Americans, and African Americans.

LIT 364 - Modern Continental and British Drama (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. An examination of some of the dramas from the late nineteenth and twentieth centuries with the purpose of gaining some understanding of how dramatists, in both subject matter and technique, reflect the spirit of the times. Representative playwrights include Ibsen, Shaw, Wilde, Strindberg, Synge, Chekhov, O'Casey, Pirandello, Anouilh, Brecht, Ionesco, and Pinter.

LIT 365 - Non-Fiction (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Examines the ways that writers examine cultural issues through the use of literary non-fiction. Emphasis is placed on autobiographical, persuasive, and narrative techniques.

LIT 370 - Literature and Diversity (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Allows students to explore the literature of human difference, including the literature of cross-cultural experience and sexual difference.

LIT 372 - African-American Literature (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Allows students to explore themes and styles particular to literary works by and about African-Americans.

LIT 374 - Women and Literature (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents.. Allows students to explore literature by and about women from around the world. Special attention is paid to autobiographical narratives

LIT 376 - Latin American Literature (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Examines the ways that writers of Latin America and the Caribbean explore their respective culture through techniques such as dream, myth, and legend to achieve an authentic and unique -vision. Special emphasis is given to 20th-century authors.

LIT 378 - Literature and Nature (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Literature as it reveals and interprets the natural world. Examines the ways that nature has been used in fiction, drama, poetry, and non-fiction. Students learn to describe the natural world in their writing. Co-listed as STS 378.

LIT 380 - Historical Literature (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Sources of fiction and drama are often based on historical personalities and actual incidents. Examines a number of such works. Original historical material is compared with the literary work it inspired, thus providing insights into the nature of the creative process and the purposes of the historian and the creative writer.

LIT 382 - The Comic Tradition in English and American Literature (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Presents great comic works from the 14th century to the present. Students study verse narratives, plays, novels, and essays. Emphasis is given to the classical roots and international connections of the comic tradition in English, the relationship between form and function in comedy, and elucidation of comedy's social and philosophical ends.

LIT 384 - American Musical Theater (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Experience a unique American theatrical tradition. Special attention is paid to contemporary productions.

LIT 386 - Science Fiction (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Explores the distinctive characteristics of science fiction as a literary genre and its function as a social criticism. Special attention is given to the ways in which cultural gender coding surfaces in the text. Films and video are used.

LIT 388 - The Russian Novel and Short Story (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Focuses on Russian fiction of the 19th and 20th centuries. Approaches material both as evidence of artistic vision and as social documents of Russian history.

Management: Offered by the School of Management.

UNDERGRADUATE COURSES:

Mgmt 190 - Industrial Organization and Management (3-0-3) Introduction to business enterprise, including organization structure, basis of authority and responsibility, financial systems, marketing, and the interaction of government and business. The interrelationships of the broad economic, political, psychological, and social influences upon business.

Mgmt 216 - Business Statistics (3-0-3) Prerequisite: Math 105 or Math 333. Introduction to business data analysis for application in management decision-making processes. Productivity measures, employment trends, national income data, and consumer price changes. Methods for collection of business and economic data, presentation of data and computer applications, index numbers, historical analysis trend projections, survey sampling, and planning for business research.

Mgmt 290 - Legal Environment of Business (3-0-3) The basic principles of common and statutory law applicable to business and professional relationships, emphasizing contracts, negotiable instruments, sales of goods, agency and business organizations.

Mgmt 310 - Co-op Work Experience I (3 additive credits) Prerequisites: junior standing, approval of the school, and permission of the Office of Cooperative Education and Internships. Students gain major-related work experience and reinforcement of their academic program. Work assignments facilitated and approved by the co-op office. Mandatory participation in seminars and completion of a report.

Mgmt 350 - Knowledge Management (3-0-3) The purpose of this course is to introduce students to Knowledge Management. This term is used to refer to the ways in which organizations create, gather, manage and use the knowledge. Emphasis is placed on the information systems needed to capture and distribute knowledge and how knowledge can be used to gain competitive advantage.

Mgmt 380 - Principles of E-Commerce (3-0-3) This course is designed to provide an overview of electronic commerce technologies, e-commerce strategies and their implications for work organizations. The course focuses on how the Internet has transformed business and the emergence of the digital firm.

Mgmt 390 - Principles of Management (3-0-3) Prerequisite: junior or senior standing. The broad basic principles of the managerial process that are fundamental to the successful operation of various types of enterprises. Emphasizes the role of management at all levels of responsibility. Organization, motivation and morale; scientific management and human relations; the functions of planning, directing, and controlling. A rational synthesis of research and concepts, which together constitute the subject matter of management.

Mgmt 390H - Honors Principles of Management (3-0-3) Prerequisites: member of the Honors College or permission of the instructor

Mgmt 410 - Co-op Work Experience II (3 credits) Prerequisites: Mgmt 310 or equivalent, approval of the school, and permission of the Office of Cooperative Education and Internships. Provides major-related work experience as a co-op/intern. Mandatory participation in seminar and completion of requirements that include a report and/or project.

Mgmt 460 - Management Strategies for E-Commerce (3-0-3) Prerequisite: MIS 360. Learn about the Internet, intranets and extranets and incorporating them into business planning and operations

Mgmt 480 - Managing in a Technological Environment (3-0-3) Prerequisite: Mgmt 390. Introduction to an array of technologies affecting management functions to provide an appreciation and understanding of the importance of new technologies as critical success factors for modern organizations. An integrative approach is taken in analyzing how changes in technology affect individual, group, and organizational effectiveness.

Mgmt 491 - International Business (3-0-3) A basic understanding of the activities in international business providing a framework for

understanding them from the perspective of a company manager. Covers international trade, multinational enterprises, foreign exchange, foreign direct investment, international financial institutions, barriers to international trade, accounting of taxation, industrial relations, multinational enterprise, and world order

Mgmt 492 - Business Policy (3-0-3) Prerequisite: senior standing. A capstone course in the area of business administration focusing on the integration of concepts taught in various functional courses such as marketing, finance, operations management, accounting, organizational behavior. Issues related to corporate responsibilities and ethical behavior are also incorporated in this course. Emphasis on application of concepts to real life situation is achieved through case discussion and projects.

Mgmt 492H - Honors Business Policy (3-0-3) Prerequisites: member of the Honors College, senior standing.

Mgmt 496* - Introduction to Transportation (3-0-3) Prerequisite: upper division standing. Introduction to transportation systems and the transportation industry. Survey of the various modes of transportation, organizational structure and operation of private and public carriers. The role of government in the regulation of the U.S. transportation industry. Management of traffic and physical distribution operations. Cost and service comparisons of competing modes of transportation. Organized labor and associated costs.

GRADUATE COURSES:

IM 593 - Graduate Co-op Work Experience IV (0 credits) Prerequisites: One immediately prior 3-credit registration for graduate co-op work experience with the same employer. Requires approval of departmental co-op advisor and the Division of Career Development Services. Must have accompanying registration in a minimum of 3 credits of course work. **Effective From: Fall 2006**

Mgmt 501 - Management Foundations (3-0-3) This course provides foundation knowledge for MSM and MBA students whose undergraduate coursework does not include coursework in accounting and finance. It therefore, serves as a pre-qualifier for the MSM and MBA programs. **Effective From: Fall 2004**

Mgmt 580 - Managerial Science (3 credits) Introduction to methods of operations research and systems analysis of managerial problems: objective functions and constraints, theories of values, optimization and simulation modeling with emphasis on models of production systems, decision analysis, inventory systems, project planning, and transportation systems. Deterministic and stochastic approaches to these topics are covered.

Mgmt 610 - Foundations of Management in Organizations (3 credits) Presented during the residence week for the Executive Program. Includes management accounting, managerial economics, statistics, operations research, marketing, MIS, and finance.

Mgmt 620 - Management of Technology (3 credits) Technology as a main component of an organizational entity. Generation, development, and implementation of technology are outlined. Influence of technology on global competitiveness is also discussed.

Mgmt 625 - Distribution Logistics (3 credits) Distribution logistics emphasizing techniques used to optimize corporate profit and customer service; transportation modes; inventory policies; warehousing and order processing; and the best logistics gross margin. Same as EM 640 and Tran 640.

Mgmt 630 - Decision Analysis (3 credits) Introduction to the methodology of decision analysis using computer based techniques and systems analysis. Introduces concepts of modeling, probability, and choice. Addresses the philosophy and detailed methods involved in decision analysis. Methods are applied to address routine and special business decisions.

Mgmt 635 - Data Mining and Analysis (3 credits) This course provides an introduction to data mining with an emphasis on large scale databases as a source of knowledge generation and competitive advantage. Specific topics include: framing research questions; data modeling; inferential data mining techniques; and evaluation and deployment of data mining systems.

Mgmt 640 - New Venture Management (3 credits) Prerequisite: Fin 516. For the student who is considering starting or managing a new business. The course combines classroom instruction in business management and a term project involving the analysis of a business case. The course is designed to build upon and integrate the student's previously acquired business knowledge and skills into an understanding of how to start and run a new business.

Mgmt 645 - New Venture Finance (3 credits) Prerequisite: Fin 516. This course is designed to provide students with understanding of the problems and opportunities posed by the financing of a new and growing technology-based business. Students will study the financial conditions of new businesses and examine the effect of growth upon cash flow while exploring optimal sources of capital.

Mgmt 650 - Knowledge Management (3 credits) Prerequisite: MIS 545. Students will learn the principles of the knowledge

management process. At the end of the course, students will have a comprehensive framework for designing and implementing a successful knowledge management effort and be able to assist in the development of knowledge.

Mgmt 655 - Global Competitiveness (3 credits)Improves knowledge of the issues involved in international business operations and their management. Develops skills in selecting key issues and familiarization with emerging methods for organizing and managing international operations. Emphasis will be on companies with technological, product, production, or design focus.

Mgmt 657 - Import/Export Processes (3 credits)Prerequisite: Mgmt 670 or Mgmt 655. Discusses key elements of import/export planning processes with an emphasis on the technology-based firm. International environment, market analysis, export strategy, and transactions are studied. Covers trade regulations and policies, financial advantage of foreign trade zones, and international standards for technology-based products. Factors underlying trade encouragement and restrictions between nations are also considered.

Mgmt 660 - Managing Supply and Value Chains (3 credits)This course is focused on the flow of products, information and revenue across supply and value chains in organizations. Special emphasis is placed on emerging e-business models and their effects on supply and value chains, and customer relationship management. The course also includes a survey of relevant information technologies.

Mgmt 665 - International Product Development (3 credits)Prerequisite: Mgmt 670 or Mgmt 655. Students will learn about product development processes as part of international business development operations. Examines differences in developing products for: national and international customers, production and service industries, and static and dynamic client needs. Examines methods of design management, means to integrate product design, production, and marketing functions, and measures for product life-cycle accounting. Term projects examine national differences in product development.

Mgmt 670 - International Business (3 credits)Covers the scope and the essential characteristics of international business in the world economy; MNEs as economic, political, and social institutions; national and international control; functional management and operations; country evaluation; and regional market analysis.

Mgmt 675 - Legal Environment of International Business (3 credits)Focuses on the legal aspects of international business activities. Topics include: international trade practices and government regulations; legal aspects of international joint ventures, mergers, and acquisitions; and the legal component of intellectual property rights and its relation to trade disputes.

Mgmt 676 - Managing the Digital Firm (3 credits)Sweeping technological change coupled with globalization has led to the development of new organizational forms which fall into the general category of digital firms. This course is focused on the digital processes that are transforming organizations and on managing all aspects of the digital firm. Topics include managing a virtual workforce, managing digital technologies, and protecting and leveraging digital assets.

Mgmt 678 - Management Strategies for Electronic Commerce (3 credits)Examines recent developments in information technology that have had a significant impact on the economy and various industries with a focus on management strategies. Topics include intellectual property rights, privacy, ownership of information, and security.

Mgmt 680 - Entrepreneurial Strategy (3 credits)For the student who is considering starting and/or managing a new business. Integrates knowledge of the different aspects of business that have been learned as separate subjects. Provides an understanding of the decisions that guide the overall operations of an entrepreneurial business organization and how it interacts with its markets, competitors, and suppliers. Combines classroom instruction in business strategy along with case analysis of small firms. Should be taken in the last semester of the program, unless prior arrangement has been made with the instructor or the graduate advisor. Taken in the final semester only.

Mgmt 685 - Operations Research and Decision Making (3 credits)Introduces the concepts of objective functions and constraints, concepts of value and utilities, optimization algorithms, networks, and game theory. Covers models of linear programming, inventory systems, multi-criteria decision-making, project management, and transportation planning. Topics discussed from probabilistic and deterministic approaches.

Mgmt 688 - Information Technology, Business and the Law (3 credits)Includes historical and constitutional foundations, crimes, and torts in cyberspace, virtual property (patents online, copyrights in digital information, trade secrets in cyberspace, and cybermarks), electronic commerce contracting, electronic commerce, electronic money and the law, and information technology and online infringement of rights of intellectual property.

Mgmt 690 - Electronic Communities in Organizations (3 credits)The rapid acceptance of the Internet and the growth of corporate

intranets have spawned the development of electronic communities within and outside of organizations that share ideas, information and knowledge. This course explores the development, use and dynamics of electronic communities with an emphasis on their role in work organizations. Students will learn how to analyze and evaluate learning communities and to examine their relationship to important processes in organizations such as change, knowledge management, and customer relationship management.

Mgmt 691 - Legal and Ethical Issues (3 credits)Explores the legal and ethical responsibilities of managers. Analyzes extent to which shareholders should be allowed to exercise their legitimate economic, legal, and ethical claims on corporate managers; extent of regulation of a particular industry, individual rights of the employee and various corporate interests, and corporate responsibility to consumers, society, and conservation of natural resources and the environment.

Mgmt 692 - Strategic Management (3 credits)Prerequisites: Business Fundamentals Core. Integration of the functional areas in management providing a top management perspective to the role of chief executive in an organization; strategy formulation and implementation; and ethical issues related to corporate strategies. Taken in the final semester only.

Mgmt 695 - Business Strategy for Environmental Management (3 credits)This is a capstone course integrating the functional areas in management to provide a top management perspective to potential managers. The course deals with the role of the chief executive in environmental management and how strategies are formulated and implemented.

Mgmt 701 - Master's Thesis (6 credits)Prerequisite: approval of the assistant dean for graduate programs. For students who desire to complete a thesis in management. Students must register every semester until the thesis is completed. Only 6 credits indicated for the thesis is applied to degree credit.

Mgmt 710 - Forecasting Methods for Business Decisions (3 credits)Covers the application of forecasting techniques to various phases of business and management decision making. Topics include forecasting with cyclical and seasonal series; Box-Jenkins modeling; regression modeling; use of stochastic models; and the linkage of management forecasts to macro forecasts. Actual models in use will be reviewed and evaluated.

Mgmt 791 - Graduate Seminar (Non-credit)Faculty, students and invited speakers present and discuss current topics of research in management.

R620:555 - Seminar in Organizational Behavior (3 Credits)For more details go to [Rutgers Catalog](#).

R620:556 - Seminar in Organizational Theory (3 credits)For more details go to [Rutgers Catalog](#).

R620:671 - Management of Innovation and Technology (3 credits by arrangement)For more details go to [Rutgers Catalog](#).

R620:677 - Culture and Organizations (3 credits by arrangement)For more details go to [Rutgers Catalog](#).

Manufacturing System Engineering: Offered by the Department of Industrial and Manufacturing Engineering

GRADUATE COURSES:

MnE 601 - Manufacturing Systems (3 credits) Modeling and control of large-scale systems with application to complex manufacturing systems including mathematically based modeling and control, and artificial intelligence-based methods.

MnE 602 - Flexible and Computer Integrated Manufacturing (3 credits) Prerequisites: EM 602 and MnE 601, or instructor's approval. Integrated manufacturing as a decision and information network, with appropriate automation; manufacturing LANs, MAP, PDES, programmable controllers, and MRP-II are discussed in technical detail; group technology, cellular manufacturing and relevant process planning approaches; mathematical techniques for CIM and FMS scheduling and control.

MnE 603 - Management of Manufacturing Systems (3 credits) Methods of planning and control of manufacturing organization, processes and facilities including demand forecasting, product development, capacity planning, inventory control, site selection, finance development, decision processes, personnel development and training, and manufacturing policy formulation.

MnE 612 - Robotic Manufacturing Systems (3 credits) Industrial robotic programming and control. Robotic end effectors and sensors, tactile and vision. Cell design and control. Artificial intelligence. Robotic project using one of twenty industrial robots. Economic analysis and productivity. Material transfer, machine loading, assembly, inspection, welding, painting, and safety aspects. Hardware/software interfacing.

MnE 638 - Multi-lifecycle Engineering (3 credits) Prerequisites: basic knowledge of applied probability and statistics. Considers the fundamental elements of multi-lifecycle engineering from a systems perspective forming a framework for industrial ecology and a pathway towards sustainable development. Topics emphasized include lifecycle assessment, demanufacturing systems, design for environment, reengineered materials, and environmental risk management and product stewardship. Assignments include working in a team setting and, when appropriate, using relevant software.

MnE 654 - Design for Manufacturability (3 credits) Prerequisite: MnE 601 or instructor's approval. Methodologies used in the synthesis and analysis of product design to optimize manufacturability. The relationship of design to production processes, product material, material handling, quality costs, and CAD/CAM are presented. Emphasis is on both formed products and assembled products. Simulation and other design analysis tools are employed.

MnE 655 - Concurrent Engineering (3 credits) Concurrent/simultaneous engineering methods and tools such as system analysis, system modelling and system integration, market oriented, integrated design for manufacturing, assembly, quality and maintenance, product design analysis, integrated product design and manufacturing innovation methods, QFD (Quality Function Deployment) ? applied to concurrent engineering, FMEA (Failure Mode and Effect Analysis), POKA-YOKE, KANZEI, waste reduction, quality circles, rapid prototyping of designed objects and various other advanced processing methods.

MnE 700 - Master's Project (3 credits) An interdisciplinary team project performed in collaboration with industry. The project must reflect proficiency in the student's selected area of specialization.

MnE 701 - Master's Thesis (6 credits) In special cases, a thesis based on an important industrial problem will be substituted for the master's project. Research for the thesis should be performed with industrial sponsorship and collaboration.

MnE 715 - Selected Topics (3 credits) Prerequisite: approval of the program director. Topics in various areas of specialization.

MnE 725 - Independent Study in Manufacturing (3 credits) Prerequisites: written permission from the director of manufacturing systems engineering programs, and courses prescribed by the supervising faculty member. Areas of study in manufacturing computer systems analysis and design in which one or more students may be interested, but that are not of sufficiently broad interest to warrant a regular course offering.

MnE 791 - Manufacturing Engineering Seminar (1 credit) A series of invited speakers, primarily from industry, will discuss current manufacturing problems and methods. Attendance at these seminars is required for all students enrolled in the manufacturing systems engineering program.

Marketing Management: Offered by the School of Management

UNDERGRADUATE COURSES:

Mrkt 330 - Principles of Marketing (3-0-3) Fundamentals of marketing in a global context are covered using lectures, cases and class projects. Topics include product management, buying behavior, segmentation, total quality management, and social responsibility.

Mrkt 331 - Consumer and Buyer Behavior ((3-0-3)) Prerequisites: Math 105 and Mrkt 330. Psychological, social, and economic influences on consumer behavior. The application of consumer behavioral innovation to marketing decisions: research and measurement techniques, individual influences, environmental influences, and consumer information processing and decision making. A field research project will be undertaken. **Effective From: Fall 2005**

Mrkt 338 - Product Development and Management (3-0-3) Prerequisite: Mrkt 330. The process of product development is studied in detail with specific emphasis on technology-driven innovation. Techniques for getting closer to customers including TQM principles are also covered.

Mrkt 339 - Selling and Promotion (3-0-3) Prerequisite: Mrkt 330. Focusing on developing the skills and knowledge necessary to influence decision makers in organizational buying centers and in other relevant areas. Techniques studied include personal selling, sales promotion, advertising, and publicity. Also covers ethical issues are also covered.

Mrkt 360 - Internet Marketing (3-0-3) Prerequisite: Mrkt 330. Covers electronic markets, data collection and market research, and Internet-based marketing programs.

Mrkt 430 - Marketing Research (3-0-3) Prerequisite: Mrkt 330. The process of marketing research is studied in detail from study design through report preparation. A hands-on, experiential approach is taken with an emphasis on secondary research and multivariate statistical methods. Data analysis is conducted using SAS and/or SPSS.

Mrkt 434 - Marketing to Organization (3-0-3) Prerequisite: Mrkt 330. Techniques for marketing industrial products to organizations in the manufacturing, service, government, and non-profit sectors are covered within the context of a global marketplace. Emphasis is on the marketing of high technology products using a customer-driven approach.

Mrkt 435 - Marketing Channel Management (3-0-3) Prerequisite: Mrkt 330. This course helps students to understand the role of the distribution system from a management standpoint. The course discusses the promotion and flow of goods through a marketing channel from the producer to the final consumer. Key topics to be studied include channel design, channel management, channel strategy, selection of middlemen, motivation of intermediaries and channel member performance evaluation. It will also discuss the very important aspect of electronic channels that have become pervasive with the advent of the Internet revolution.

GRADUATE COURSES:

Mrkt 530 - Principles of Marketing 3 credits (3 credits) Examination of the factors relating to marketing process. The nature and significance of consumer and organization buying behaviors, competition, government regulations, consumerism, and social responsibility are analyzed. Covers decision making in market research, product development, pricing, distribution, advertising, promotion, selling, and marketing strategy.

Mrkt 620 - Competing in Global Markets (3 credits) Designed to help prepare students to become effective managers overseeing global market activities in an increasingly competitive environment. It will examine the impact of global economic, financial, cultural, political, and legal factors on the development of marketing programs and on the marketing/R&D and marketing/manufacturing interfaces.

Mrkt 630 - Models of Consumer Behavior (3 credits) Provides students a framework, the buyer decision process model, to analyze how and why products and services are selected and purchased. Impact of consumer decisions on the marketing strategies of organizations is emphasized. Focus on quality management of the marketing function to determine customer needs; provide the appropriate products, prices, distribution systems, and promotion messages; and measure customer satisfaction after purchase and use.

Mrkt 631 - Market Planning and Analysis (3 credits) Provides a research and managerial perspective on advanced marketing research methods and analytical techniques. Topics include problem formulation, research design, data collection and analysis, managerial report writing. Students will acquire experience by developing and executing their own marketing research project using sophisticated computerized analytical techniques.

Mrkt 632 - Marketing Strategy for Technology-Based Organizations (3 credits) Students combine the knowledge and skills learned in other marketing courses and develop strategic marketing plans that focus on quality management, productivity improvement, and international competitiveness. Buyer decision making, market segmentation and targeting, product positioning, market response, and competitive actions are analyzed. Case studies and student projects add realism and practical experience to the course.

Mrkt 636 - Design and Development of High Technology Products (3 credits) Focus on analysis of needs of buyers and consumers for specific product characteristics and the development of appropriate products to satisfy such needs. The process of identifying new product opportunities, screening new product concepts, product testing and test marketing, product positioning, and development of the marketing strategy and implementation plans.

Mrkt 637 - Marketing Communications and Promotions (3 credits) Communications, sales promotion, and public relations are examined from the perspective of the manager. Topics include advertising and promotion research, media selection, creative production of electronic and print materials, and the budgeting and control of their use. Field research will be stressed as part of the course project requirement.

Mrkt 638 - Sales Management for Technical Professionals (3 credits) Focuses on the promotion and sales of products in the business-to-organization market. All elements of the marketing communications mix are covered according to their importance in that market: selling, sales promotion, trade advertising, and publicity. The latest techniques are reviewed and discussed using case histories and student projects. Issues of global competitiveness, high technology products, and the role of total quality management in marketing communications are emphasized.

Mrkt 640 - Industrial Marketing Management (3 credits) Stresses the role of the manager in all aspects of marketing. Managerial decision-making techniques and strategies for product development, product pricing, distribution channels, personal selling, advertising and promotion. Strategic and operational marketing plans are developed based on student field research.

Mrkt 642 - International Marketing Management (3 credits) Focus on multinational enterprise in the global market, emphasizing special managerial skills required to adapt sound marketing practices to foreign cultural, political, economic and financial environments. Foreign opportunities and marketing strategies are examined. Students prepare a marketing plan for entry into an international market after conducting appropriate research.

Mrkt 645 - Internet Marketing Strategy (3 credits) Introduction to the use of the Internet and electronic commerce in the development of marketing strategy. Examines the characteristics of electronic markets, the use of Internet for data collection and market research, the Internet as a communication and distribution medium, and the development of Internet-based marketing strategies.

Mrkt 701 - Thesis in Marketing Management (3 credits) Prerequisites: Mrkt 630, Mrkt 631, Mrkt 632 or waived with approval of the Dean. For students who do a thesis in marketing. State-of-the-art marketing research methods: importance in marketing decision

making, research objectives, research design, measurement concepts, reliability and validity, primary and secondary data collection, sampling design, qualitative and quantitative research and analytical methods, field studies and survey research, multivariate analytical models. Also covers planning, preparation and submission of the thesis.

Mrkt 731 - Advanced Market Planning and Analysis (3 credits) Prerequisite: Mrkt 631. Covers advanced topics in the design and analysis of market research studies. Focus on the development of statistical sampling methods and techniques to develop estimates for complex marketing problems. Also focuses on advanced multivariate analysis and estimation techniques needed in the interpretation of complex marketing problems.

Mrkt 753 - Marketing Science (3 credits) Prerequisite: Mrkt 631. Emphasizes quantitative model building approach to the complex problems of marketing decision making using the principles of quantitative decisions to management problems and econometrics to the understanding of large amounts of data, which lead to improvements in marketing decision effectiveness. Such areas of marketing as buyer behavior, pricing, promotion, advertising, sales force management, and new product planning will be analyzed.

R630:576 - Quantitative Methods in Marketing Credits by arrangement (3 credits) For more details go to [Rutgers Catalog](#).

R630:625 - Clustering Analysis (3 Credits by arrangement) For more details go to [Rutgers Catalog](#).

R630:660 - Qualitative Research Methods (3 credits) For more details go to [Rutgers Catalog](#).

R630:668 - Causal Modeling (3 credits) For more details go to [Rutgers Catalog](#).

Material, Science and Engineering : Offered by the Materials Science and Engineering Committee

UNDERGRADUATE COURSES:

MtSE 301 - Principles of Material Science and Engineering (3-0-3) Prerequisites: Phys 111 and Phys 121, Chem 125 and Chem 126, Math 111 and Math 112 or equivalent. Examines the interrelationships among structure, properties, and performance of engineering materials. Topics to be covered include atomic structure, crystallography, solid state imperfections and diffusion. The properties of metals, semiconductors, polymers, ceramics, and composites as well as their behavioral response to mechanical, chemical, optical, electrical, and magnetic stimuli are examined in light of their performance in service.

MtSE 311 - Properties of Materials (3-0-3) Prerequisite: two semesters of college physics or equivalent. Intended for engineering technology students and is an introduction to the principal metallic and nonmetallic engineering materials, including their physical properties, response to heat treatment, and corrosion -resistance.

MtSE 318 - Engineering Materials (3-2-4) Prerequisites: Physics III; Chem 126. Introduces the student to such engineering materials as metals, viscoelastic materials, ceramics, polymers, and semiconductors. The approach is interdisciplinary with stress upon the structure of materials. Various mechanical and thermal treatments are discussed and related to the stability of the resultant properties. The laboratory sessions implement and emphasize the effects of these mechanical and thermal treatments on the materials.

MtSE 319 - Engineering Materials (3-0-3) Prerequisites: Physics III; Chem 126. This course is identical to MtSE 318, with the laboratory omitted.

MtSE 450 - Electron Microscopy (2-2-3) Prerequisites: Physics III; Chem 126. Combines the lecture and laboratory in introducing the field of electron microscopy. Topics include magnetic electron lenses, electron optical systems, selected area diffraction, sample preparation, thin foil techniques, and photography.

MtSE 451 - X-Ray Diffraction (2-2-3) Prerequisites: Physics III; Chem 126. Combines the lecture and laboratory in introducing the methods of X-ray diffraction. Topics include directions and intensities of diffracted beams, diffractometer methods, Laue methods, power photographs, reciprocal lattice constructions, and the rotating crystal method.

MtSE 452 - Materials Science I (3-0-3) Prerequisites: Physics III; Chem 126; ME 435 or Phys 335. Emphasizes the structure and properties of materials and the relationships between them. The primary topics include the thermodynamics of solids, fracture mechanisms, diffusion, elasticity, plasticity, fatigue strength, viscosity, and creep.

MtSE 453 - Materials Science II (3-4-5) Prerequisite: MtSE 452. Emphasizes the electronic properties of materials in conjunction with an introduction to ceramics. Topics include semiconductors, thermoelectricity, magnetism, conductivity, dielectric, optical properties, and an introduction to the properties and behavior of ceramics.

GRADUATE COURSES:

MtSE 593 - Graduate Co-op Work Experience IV (0 credits) Prerequisites: One immediately prior 3-credit registration for graduate co-op work experience with the same employer. Requires approval of departmental co-op advisor and the Division of Career Development Services. Must have accompanying registration in a minimum of 3 credits of course work. **Effective From: Fall 2006**

MtSE 601 - Fundamentals of Engineering Materials (3 credits) Prerequisite: graduate standing. The effect of structure on the properties and behavior of engineering materials. Topics include atomic structure, bonding, crystallography, and defects in solids; properties of metals, semiconductors, ceramics, and polymers and their behavioral response to mechanical, chemical, optical, electrical, and magnetic stimuli. **Effective From: Fall 2005**

MtSE 602 - Thermodynamics of Materials (3 credits) Prerequisite: undergraduate thermodynamics. Review of first, second, and third laws of thermodynamics and their applications to materials. Stability criteria, simultaneous chemical reactions, binary and multicomponent solutions, phase diagrams, surfaces, adsorption phenomena, thermochemistry of homogeneous and heterogeneous reactions are covered. **Effective From: Fall 2005**

MtSE 605 - Fundamentals of Engineering Materials (3 credits) Prerequisite: graduate standing. The effect of structure on the properties and behavior of engineering materials. Topics include atomic structure, bonding, crystallography, and defects in solids; properties of metals, semiconductors, ceramics, and polymers and their behavioral response to mechanical, chemical, optical, electrical, and magnetic stimuli.

MtSE 610 - Mechanical Properties of Materials (3 credits) Prerequisite: graduate standing. Elements of elasticity and plasticity theory, deformation and fracture behavior of materials, the concept of dislocations and their interaction with other lattice defects, strengthening mechanisms in solids, and principles of failure analysis. Materials to be studied include metals, polymers, ceramics, glasses, and composites.

MtSE 615 - Composite Materials (3 credits) Prerequisites: MtSE 605 and MtSE 610. Introduction to fundamental principles of design and technology of composite materials. Materials based on polymer, ceramic, and metal matrices are discussed. Properties of the constitutive materials, their structure, methods of structural arrangements, as well as properties and characterization of the final products are described. The different perspectives, examples, and problems in composite applications are outlined.

MtSE 619 - Nano-scale Characterization of Materials (3 credits) Prerequisites Graduate standing or consent of instructor. The course presents the basics of nanotechnology and the principles and application of advanced instrumentation for the characterization of nanostructures. Topics include atomic force microscopy, near-field optics, dielectric spectroscopy, and light scattering. The significant component of the course is laboratory work at the W. M. Keck Foundation Laboratory and research project.

MtSE 625 - Introduction to Ceramics (3 credits) Prerequisite: MtSE 605. Mechanical, thermal, electrical, magnetic, and optical properties of crystalline and glassy ceramics are discussed from a structural viewpoint. Important processing methods, design and evaluation of properties, and modern applications of ceramic materials are emphasized.

MtSE 627 - Glass Science and Engineering (3 credits) Prerequisites: MtSE 605 and MtSE 630. Formation and structure of inorganic, polymeric, and metallic glasses. Transport phenomena, kinetics of crystallization, glass transition, and phase separation; chemical, mechanical and optical properties of glasses.

MtSE 630 - Thermodynamics of Materials (3 credits) Prerequisite: undergraduate thermodynamics. Review of first, second, and third laws of thermodynamics and their applications to materials. Stability criteria, simultaneous chemical reactions, binary and multicomponent solutions, phase diagrams, surfaces, adsorption phenomena, thermochemistry of homogeneous and heterogeneous reactions are covered.

MtSE 648 - NanoMaterials (3 credits) Prerequisite: Junior or Senior courses of modern materials science, chemistry and physics. Introduction to functional nanomaterials and nanotechnology. Types of nanomaterials-fullerenes, nanotubes, quantum dots, supramolecules, dendrimers. Fundamental, materials science, chemistry and physics of nanomaterials. Nanoscale properties and computational modeling. Synthesis, assembly and fabrication techniques. Characterization of nanomaterials. Emerging applications in nanoelectronics, nano-sensors, biology and fuel cells.

MtSE 650 - Physical Metallurgy (3 credits) Prerequisite: MtSE 605. Processing-structure-property relationships in metallic alloys. Alloy systems covered include carbon steels, stainless steels, aluminum and titanium alloys, and super alloys. Topics to be presented include elementary theory of metals, defects and related phenomena, solidification, phase phenomena, solid state diffusion, nucleation and growth kinetics, as well as transformation and deformation processes.

MtSE 655 - Diffusion and Solid State Kinetics (3 credits) Prerequisite: MtSE 630. The atomic theory of diffusion and mathematical

derivation of the diffusion equations. Diffusion phenomena in dilute alloys as well as in ionic and covalent solids are considered. High atom mobility effects at defect sites and surfaces are examined. Chemical kinetics and kinetics of phase transformations including nucleation, growth, and spinodal decomposition are discussed.

MtSE 681 - Composite Materials (3 credits) Prerequisites: MtSE 601 and MtSE 610. Introduction to fundamental principles of design and technology of composite materials. Materials based on polymer, ceramic, and metal matrices are discussed. Properties of the constitutive materials, their structure, methods of structural arrangements, as well as properties and characterization of the final products are described. The different perspectives, examples, and problems in composite applications are outlined. **Effective From: Fall 2005**

MtSE 682 - Introduction to Ceramics (3 credits) Prerequisite: MtSE 601. Mechanical, thermal, electrical, magnetic, and optical properties of crystalline and glassy ceramics are discussed from a structural viewpoint. Important processing methods, design and evaluation of properties, and modern applications of ceramic materials are emphasized. **Effective From: Fall 2005**

MtSE 685 - Physical Metallurgy (3 credits) Prerequisite: MtSE 601. Processing-structure-property relationships in metallic alloys. Alloy systems covered include carbon steels, stainless steels, aluminum and titanium alloys, and super alloys. Topics to be presented include elementary theory of metals, defects and related phenomena, solidification, phase phenomena, solid state diffusion, nucleation and growth kinetics, as well as transformation and deformation processes. **Effective From: Fall 2005**

MtSE 687 - Glass Science and Engineering (3 credits) Prerequisites: MtSE 601 and MtSE 602. Formation and structure of inorganic, polymeric, and metallic glasses. Transport phenomena, kinetics of crystallization, glass transition, and phase separation; chemical, mechanical and optical properties of glasses. **Effective From: Fall 2005**

MtSE 688 - Mathematical and Statistical Methods in Materials Science (3 credits) More emphasis on analytical methods and statistics. Course is required for Ph.D. students in Materials Science. **Effective From: Fall 2006**

MtSE 690 - Directed Study in Materials Science and Engineering (3 credits) Prerequisites: As specified by the instructor. Directed study at the Master's level under the guidance of a faculty member on a topic in materials science and engineering.

MtSE 700 - Master's Project (3 credits) Prerequisites: sufficient experience and/or graduate courses to work on the project and approval of project advisor. An extensive report involving an experimental, theoretical, or literature investigation is required. The literature investigation should result in a critical review of a specific area. Students may extend the master's project into a master's thesis.

MtSE 701 - Master's Thesis (6 credits) Prerequisites: sufficient experience and/or graduate courses to work on the thesis and approval of thesis advisor. Research involving experimental or theoretical investigations or collaborative projects with industry or governmental agencies may be accepted. Completed work in the form of a written thesis should merit publication in a technical journal and must be approved by a committee consisting of three faculty members. A student must register for 3 credits per semester. Only the 6 credits indicated for the thesis will be applied to the degree.

MtSE 702 - Characterization of Solids (3 credits) Current methods for characterizing the chemical composition, crystallographic structure, electrical mapping, and morphology of solid materials. Principles and application of Auger Electron Spectroscopy (AES), Secondary Ion Mass Spectroscopy (SIMS), X-ray Photoelectron Spectroscopy (XPS), X-ray Emission Spectroscopy (XES), and Rutherford Backscattering Spectroscopy (RBS) for chemical analysis, X-ray Diffraction (XRD) and electron diffraction for crystallographic analysis, Electron Beam Induced Current (EBIC) microscopy, voltage contrast microscopy, Cathodoluminescence for electrical mapping, and Atomic Force Microscopy (AFM), Transmission Electron Microscopy (TEM), Scanning Electron Microscopy (SEM) and Nomarski interference contrast microscopy (DIC) for morphology.

MtSE 719 - Physical Principles of Characterization of Solids (3 credits) Prerequisite: MtSE 619/ME 619, Nano-scale characterization of materials. Basic science behind solid state characterization. Elements of modern physics. Optical microscope. Neutron scattering. Infrared and Raman spectroscopy. Rutherford backscattering spectroscopy. NMR. X-ray diffraction. X-ray photoelectron spectroscopy and Auger Electron Spectroscopy. SEM, TEM, STEM and STM.

MtSE 722 - Science and Technology of Thin Films (3 credits) Prerequisite: graduate standing. Methods of preparing thin films by physical and chemical means are examined. Topics pertinent to nucleation and growth mechanism of single and polycrystalline films, structure determination, film thickness and compositional evaluation properties are discussed. The electrical, magnetic, optical, and mechanical properties of metallic, semiconductor, and insulating thin films are studied with particular relevance to integrated circuit applications. **Effective From: Fall 2005**

MtSE 723 - Defects in Solids (3 credits) Prerequisites: MtSE 601 and MtSE 725. Crystallographic defects in solids, namely point defects such as vacancies and interstitial, line defects such as dislocations, and planar defects such as grain boundaries. Correlation of these defects to the mechanical, electrical and optical behavior of materials is examined in particular. Experimental methods for observation and characterization of defects including TEM, EBIC, DLTS are described. **Effective From: Fall 2005**

MtSE 724 - Transport of Electrons and Phonons in Solids (3 credits) Prerequisite: Phys 687/26:755:687. Basic transport processes involving electrons and phonons in solids. Topics include transport-related phenomena such as Hall effect, quantum Hall effect, magneto-resistance, size effects, thermal conductivity, thermoelectric effects, phonon drag, ballistic phonons, and ballistic electrons. Applications of transport to the characterization of new electronic materials including thin films are stressed. **Effective From: Fall 2005**

MtSE 725 - Crystallography and Diffraction (3 credits) Prerequisite: graduate standing. The atomic arrangement of crystalline materials including treatment of crystalline defects and diffraction phenomena. Lattices, crystal systems, symmetry operations are covered as well as the fundamentals of electron and X-ray diffraction.

MtSE 737 - Transport of Electrons and Phonons in Solids (3 credits) Prerequisite: Phys 687/26:755:687. Basic transport processes involving electrons and phonons in solids. Topics include transport-related phenomena such as Hall effect, quantum Hall effect, magneto-resistance, size effects, thermal conductivity, thermoelectric effects, phonon drag, ballistic phonons, and ballistic electrons. Applications of transport to the characterization of new electronic materials including thin films are stressed.

MtSE 757 - Defects in Solids (3 credits) Prerequisites: MtSE 605 and MtSE 725. Crystallographic defects in solids, namely point defects such as vacancies and interstitial, line defects such as dislocations, and planar defects such as grain boundaries. Correlation of these defects to the mechanical, electrical and optical behavior of materials is examined in particular. Experimental methods for observation and characterization of defects including TEM, EBIC, DLTS are described.

MtSE 765 - Science and Technology of Thin Films (3 credits) Prerequisite: graduate standing. Methods of preparing thin films by physical and chemical means are examined. Topics pertinent to nucleation and growth mechanism of single and polycrystalline films, structure determination, film thickness and compositional evaluation properties are discussed. The electrical, magnetic, optical, and mechanical properties of metallic, semiconductor, and insulating thin films are studied with particular relevance to integrated circuit applications.

MtSE 780 - Current Topics in Materials Science and Engineering (3 credits) Prerequisites: As specified by the program for the semester's offering. Topics of current interest in materials science and engineering.

MtSE 790 - Doctoral Dissertation (Credits as designated) Required of all candidates for the degree of Doctor of Philosophy. A minimum of 36 credits is required. Students must register for 6 credits each semester until 36 credits are reached. If the dissertation is not yet complete, registration for an additional 3 credits is required each semester thereafter.

MtSE 791 - Graduate Seminar (Non-credit) Required of all students enrolled in the M.S. or Ph.D. Program in Materials Science and Engineering. Faculty, students, and invited speakers will present and discuss current topics of research in materials science and engineering.

MtSE 792 - Pre-Doctoral Research (3 credits) Prerequisite: permission of the program director. For students enrolled in the Ph.D. program before passing the Ph.D. qualifying examinations. Research is carried out under the supervision of a faculty member of the student's choice. A maximum of 6 credits may be applied to MtSE 790

Mathematics: Mathematics**UNDERGRADUATE COURSES:**

Math 098 - Introduction to College Math (4-1-4) Topics include: Elementary Algebra, Introduction to Graphs and Functions, Linear Functions, Equations, Inequalities, Systems of Linear Equations, Radicals and Complex Numbers, Quadratic Equations, Rational Expressions and Rational Functions, Functions and Relations, Exponential and Logarithmic Functions and Equations. Introduction to the logistics of applied calculus. Diverse applications will be emphasized throughout the course. This course may not be used to satisfy degree requirements in any program. **Effective From: Spring 2005**

Math 102 - Modern Pre-calculus (6 credits) This course is an incentive non-traditional approach to pre-calculus employing curriculum innovations for the preparation of students for college calculus. The course infuses calculus techniques into the pre-calculus curriculum. The format includes both regular class and workshop environments with a focus on student problem solving. Course meets on Saturdays in the fall and spring terms and M, T, W, R in the summer, second session. This course is only available to high school students.

Math 103 - University Mathematics I (4-1- 4 additive credits) Prerequisite: Math 098 with a grade of C or better or placement by performance on standardized entrance examinations. Consists of a series of projects, many of which introduce and use elementary differentiation and/or integration in which the students perform sustained algebraic and trigonometric computations. The projects involve the following topics: polynomials, rational expressions, expressions involving radicals, exponential and logarithmic functions, right triangle trigonometry, and the solution of linear and quadratic equations. This course may not be used to satisfy degree requirements in any program.

Math 104 - University Mathematics II (4-1- 4 additive credits) Prerequisite: Math 103 with a grade of C or better or placement by performance on standardized entrance examinations. Consists of a series of projects, many of which introduce and use elementary differentiation and/or integration in which the students perform sustained algebraic and trigonometric computations. The projects involve the following topics: radian measure, conic sections, trigonometric functions and identities, law of sines and cosines, logarithmic equations, partial fraction decomposition, systems of linear and nonlinear equations, functions in polar coordinates, and hyperbolic functions. This course may not be used to satisfy degree requirements in any program.

Math 105 - Elementary Probability and Statistics (3-0-3) Prerequisite: (Intended for students who are not in Science or in Engineering.) Math 104 with a grade of C or better or placement by performance on standardized entrance examinations. Considers notions of probability. Topics include the binomial and normal distributions, expected value, and variance. The notions of sampling, hypothesis testing, and confidence intervals are applied to elementary situations.

Math 111 - Calculus I (4-1-4) Prerequisite: Math 104 with a grade of C or better or placement by performance on standardized entrance examinations. Topics include limits, differentiation, applications of differentiation, and integration.

Math 111H - Honors Calculus I (4-1-4) Admission to this course is by invitation, based on standardized entrance exams. Topics enhance those of Math 111 and concepts are studied in detail. Emphasizes science and engineering applications.

Math 112 - Calculus II (4-1-4) Prerequisite: Math 111. Topics include integration, applications of integration, series, exponential and logarithmic functions, transcendental functions, polar coordinates, and conic sections.

Math 112H - Honors Calculus II (4-1-4) Prerequisite: grade of B or better in Math 111H or grade of A in Math 111. Topics enhance those of Math 112 and concepts are studied in detail. Emphasizes science and engineering applications.

Math 113 - Finite Mathematics and Calculus I (4-0-4) Prerequisite: (Intended for Architecture students.) Math 104 with a grade of C or better or placement by performance on standardized entrance examinations. An introduction to differential and integral calculus. Applications include area, volumes, curve lengths, surface area, centroids, and moments. Focus is on application throughout the course.

Math 114 - Finite Mathematics and Calculus II (4-0-4)Prerequisite: (Intended for Architecture students.) Math 113. Topics include numerical methods, set theory and counting, series, descriptive statistics and basic probability, matrices, and optimization.

Math 138 - General Calculus I (3-0-3)Prerequisite: (Intended for students who are not in Science or in Engineering.) Math 104 with a grade of C or better or placement by performance on standardized entrance examinations. An introduction to differential and integral calculus of a single variable.

Math 211 - Calculus III A (3-0-3)Prerequisite: Math 112. Topics include vectors, curvature, partial derivatives, multiple integrals, line integrals, and Green's theorem. Students who are considering a major in Mathematical Sciences or who are undecided about their major should take Math 213.

Math 213 - Calculus III B (4-0-4)Prerequisite: Math 112. Topics include vectors, curvature, partial derivatives, multiple integrals, line integrals, and Green's, divergence, and Stokes' theorems.

Math 213H - Honors Calculus III (4-0-4)Prerequisite: grade of B or better in Math 112H or grade of A in Math 112. Topics enhance those of Math 213 and concepts are studied in detail. Emphasizes science and engineering applications.

Math 222 - Differential Equations (4-0-4)Prerequisite: Math 211 or Math 213. Methods for solving ordinary differential equations are studied together with physical applications, Laplace transforms, numerical solutions, and series solutions.

Math 222H - Honors Differential Equations (4-0-4)Prerequisite: grade of B or better in Math 213H or grade of A in Math 211 or Math 213. Topics enhance those of Math 222 and concepts are studied in detail. Emphasizes science and engineering applications.

Math 225 - Survey of Probability and Statistics (1-0-1)Prerequisite: Math 112. Topics include descriptive statistics, elements of probability, random variables and distributions; mean and variance; introduction to estimation and inference. This course satisfies the Mathematics GUR in probability and statistics. However, degree credit will not be granted for both Math 225 and any other upper level course in probability and/or statistics.

Math 225A - Survey of Probability and Statistics (1-0-1)For Chemical Engineering students only. Prerequisite: Math 112. Topics include descriptive statistics, elements of probability, random variables and distributions; mean and variance; introduction to estimation and inference. This course satisfies the Mathematics GUR in probability and statistics. However, degree credit will not be granted for both Math 225 and any other upper level course in probability and/or statistics.

Math 226 - Discrete Analysis (4-0-4)Prerequisite: Math 112. An introduction to discrete mathematics. Topics include elementary set theory, logic, combinatorics, relations, graphs and trees, algebraic systems.

Math 226H - Honors Discrete Analysis (4-0-4)Prerequisite: grade of "B" or better in Math 112H or grade of "A" in Math 112. An introduction to discrete mathematics. Topics enhance those of Math 226 and concepts are studied in detail. Emphasizes science and engineering applications.

Math 238 - General Calculus II (3-0-3)Prerequisite: (Intended for students who are not in Science or in Engineering.) Math 138. A continuation of Math 138. Topics include applications of integral calculus and an introduction to ordinary differential equations.

Math 240 - Numerical Mathematics Laboratory (3-0-3)Prerequisite: Math 112, and CIS 113 or knowledge of FORTRAN, C, or C++. Introduction to basic concepts and processes of numerical mathematics with emphasis on practical issues of implementation, use of numerical algorithms and software, and interpretation of numerical data. Weekly projects involving writing computer programs, presenting numerical results in tables and graphs, evaluation and approximation of standard numerical functions, round-off errors and loss of significance, basic iterative processes, matrix arithmetic, random number generation, and Monte Carlo methods. Students gain experience using a programming language, such as C, and mathematical software, such as MATLAB.

Math 244 - Introduction to Probability Theory (3-0-3)Prerequisite: Math 112. Topics include basic probability theory in discrete and continuous sample space, conditional probability and independence, Bayes' theorem and event trees, random variables and their distributions, joint distribution and notion of dependence, expected values and variance, moment generating functions, useful parametric families of distributions including binomial, geometric, hypergeometric, negative binomial, exponential, gamma, normal and their applications, simple case of central limit theorem and its uses.

Math 245 - Multivariate Probability and Stochastic Processes (3-0-3)Prerequisite: Math 244 or Math 333. Topics include discrete and continuous multivariate distributions and their moments, multivariate normal distributions, order statistics, discrete and

continuous Markov chains, Poisson processes, and Brownian motion processes.

Math 246 - Introduction to Financial Mathematics ((3-0-3))An introduction to the basics of simple interest and discount, compound interest and discount, and simple annuities. This course is primarily intended for students whose major only requires Calculus I. It cannot be used for credit towards major or minor degrees offered by the Department of Mathematical Sciences. **Effective From: Fall 2005**

Math 305 - Statistics for Technology (3-0-3)Prerequisite: (Intended for students in Engineering Technology.) Math 111, 138 or Unified Calculus. An introduction to the modern concepts of statistics needed by engineering technologists. Topics include organization of data, descriptive statistics, discrete and continuous probability distributions, sampling distribution and designs, estimation -- one and two populations, tests of hypotheses.

Math 309 - Mathematical Analysis for Technology (4-0-4)Prerequisites: (Intended for students in Engineering Technology.) Calculus I or Unified Calculus. Emphasis on integration techniques; applications such as related rates, curve sketching, maximum and minimum, area, moments, centroids, volumes, approximate methods, partial derivatives, vector calculus, parametric equations, and infinite series.

Math 310 - Co-op Work Experience I (3 Credits)Prerequisites: Completion of the sophomore year, departmental approval, and permission of the Office of Cooperative Education and Internships. Students gain major-related work experience and reinforcement of their academic program. Work assignments facilitated and approved by the co-op office. Mandatory participation in seminars and completion of a report.

Math 322 - Differential Equations for Technology (3-0-3)Prerequisite: (Intended for students in Engineering Technology.) Math 309. An applied science study using differential equations as the vehicle for comprehension of the unknown. Introduction to first-order differential equations and their applications to motion, cooling and electromechanical systems followed by higher order differential equations and their solutions. Study of methods of undetermined coefficients, variation of parameters, and many series and numerical methods. Includes Laplace transforms, matrix methods, and eigenvalue problems.

Math 326 - Discrete Analysis for Computer Engineers (3-0-3)Prerequisite: Math 112. An introduction to mathematical logic, Boolean algebra, and Karnaugh maps. Other topics include functions, equivalence relations and partially ordered sets, counting, graph theory and finite state machines. The emphasis is on computation but proofs will be addressed. Students cannot receive credit for both Math 226 and Math 326.

Math 331 - Introduction to Partial Differential Equations (3-0-3)Prerequisite: Math 222. Partial differential equations in science and engineering. Topics include initial- and boundary-value problems for parabolic, hyperbolic, and elliptic second-order equations. Emphasis is placed on separation of variables, special functions, transform methods, and numerical techniques.

Math 331H - Honors Introduction to Partial Differential Equations (3-0-3)Prerequisite: grade of "B" or better in Math 222H or grade of "A" in Math 222. Topics enhance those of Math 331 and concepts are studied in detail. Emphasizes science and engineering applications.

Math 332 - Introduction to Functions of a Complex Variable (3-0-3)Prerequisite: Math 222. Functions of a complex variable: Cauchy-Riemann equations, Cauchy-Goursat theorem, integration, series, residues, poles, geometrical aspects. Emphasis on techniques.

Math 332H - Honors Introduction to Functions of a Complex Variable (3-0-3)Prerequisite: grade of "B" or better in Math 222H or grade of "A" in Math 222. Topics enhance those of Math 332 and concepts are studied in detail. Emphasizes science and engineering applications.

Math 333 - Probability and Statistics (3-0-3)Prerequisite: Math 112. Descriptive statistics and statistical inference. Topics include discrete and continuous distributions of random variables, statistical inference for the mean and variance of populations, and graphical analysis of data.

Math 333H - Honors Probability and Statistics (3-0-3)Prerequisite: grade of "B" or better in Math 112H or grade of "A" in Math 112. Topics enhance those of Math 333 and concepts are studied in detail. Emphasizes science and engineering applications.

Math 334 - Operations Research (3-0-3)Prerequisite: Math 244 or Math 333. Considers mathematical methods found especially in contemporary fields such as operations research and reliability engineering. Topics include linear programming, graph theory, finite mathematics, differential equations, matrices, and determinants.

Math 335 - Vector Analysis (3-0-3) Prerequisite: Math 211 or Math 213. Algebra and calculus of vectors. Topics include the theorems of Gauss, Green, and Stokes, and curvilinear coordinates.

Math 336 - Applied Abstract Algebra (3-0-3) Prerequisite: Math 112 or departmental approval. Classical algebra from a modern and constructive viewpoint. Emphasis is on the development of algorithmic and computational skills. Topics include rings, fields, and groups and their applications to science and engineering.

Math 337 - Linear Algebra (3-0-3) Prerequisite: Math 112 or departmental approval. Matrices, determinants, systems of linear equations, vector spaces, linear transformations, eigenvalues, eigenvectors, and related topics.

Math 337H - Honors Linear Algebra (3-0-3) Prerequisite: grade of "B" or better in Math 112H or grade of "A" in Math 112. Topics enhance those of Math 337 and concepts are studied in detail. Emphasizes science and engineering applications.

Math 340 - Applied Numerical Methods (3-0-3) Prerequisites: Math 211 or Math 213, and CIS 101 or CIS 113 or Math 240. Introduction to numerical methods with emphasis on mathematical models. Implements and investigates numerical techniques for the solution of linear and nonlinear systems of equations, eigenvalue problems, interpolation and approximation, techniques of optimization, Monte Carlo methods, and applications to ordinary differential equations and integration.

Math 340H - Honors Applied Numerical Methods (3-0-3) Prerequisites: CIS 101 or CIS 113. Grade of "B" or better in Math 213H or grade of "A" in Math 211 or Math 213. Topics enhance those of Math 240 and concepts are studied in detail. Emphasizes science and engineering applications.

Math 341 - Introduction to Statistics (3-0-3) Prerequisite: Math 244 or Math 333. Covers the theory and applications of classical statistical inference. Topics include sampling distributions, point and interval estimation, criteria of good estimators, maximum likelihood estimators and their large sample properties, statistical hypotheses and tests, including most powerful and uniformly most powerful tests and likelihood ratio tests, classical tests of parametric hypotheses about means and variances of normal populations, tests for proportion, chi-square tests of homogeneity, independence, goodness-of-fit, sign test and Wilcoxon test.

Math 344 - Regression Analysis (3-0-3) Prerequisite: Math 333 or Math 341. An introduction to statistical data analysis using regression techniques. Topics include least squares estimation, hypothesis testing, prediction, regression diagnostics, residual analysis, variance stabilizing transformations, regression using indicator variables, variable selection, and model building.

Math 346 - Mathematics of Finance I (3-0-3) Prerequisite: Math 112. The main topics include basic problems in interest, annuities, certain amortization and sinking funds, bonds and related securities. **Effective From: Spring 2005**

Math 347 - Mathematics of Finance II (3-0-3) Prerequisites: Math 346 and Math 244 or Math 333 and Math 211 or Math 213. This course introduces mathematical models of bond and stock prices, which lead to arbitrage pricing of options and other derivative securities, and portfolio management. These areas of mathematical finance have a great impact on the way financial markets function. Topics include risk-free, and risky assets, portfolio management, futures, and options. **Effective From: Spring 2005**

Math 371 - Physiology and Medicine (3-0-3) Prerequisite: Math 211 or Math 213, or departmental approval. (No biology requirement.) Mathematical models of organs and organ systems: the heart and circulation, gas exchange in the lungs, electrical properties of excitable membranes, neuro-biological clocks, the renal countercurrent mechanism, muscle mechanics. The biology is introduced with each topic. Emphasis is on quantitative problem solving, model building, and numerical simulation.

Math 372 - Population Biology (3-0-3) Prerequisite: Math 211 or Math 213, or departmental approval. (No biology requirement.) Introduction to the mathematics of populations: Malthus' model of geometric population growth, Euler's renewal equations, age structure in human populations, predator satiation, chaos, mathematical models of inheritance, and the theory of epidemics. The ability to weave back and forth between physical concepts and mathematical notation is emphasized as well as the relationships between random and non-random models of similar phenomena.

Math 373 - Introduction to Mathematical Biology (3-0-3) Prerequisites: Math 211 or 213 or 213H and Math 337. This course provides an introduction to the use of mathematical techniques applied to problems in biology. Discrete and continuous models of biological phenomena will be discussed. Biological topics discussed range from the subcellular molecular systems and cellular behavior to physiological problems, population biology and developmental biology. Techniques of phase plane analysis for differential equations are introduced in the course. No prior background in biology is necessary. **Effective From: Spring 2005**

Math 388 - Introduction to Chaos Theory (3-0-3) Prerequisite: Math 211 or Math 213. An elementary treatment of chaos theory and

its applications concentrating on discrete dynamical systems. Uses theory and applications illustrated by computer experiments to develop such topics as bifurcation, attractors, the logistic map, period-doubling routes to chaos, symbolic dynamics, Sarkovskii's theorem, fractals, and Julia and Mandelbrot sets for complex dynamics.

Math 410 - Co-op Work Experience II (3 credits) Prerequisites: Math 310, departmental approval, and permission of the Office of Cooperative Education and Internships. Provides major-related work experience. Mandatory participation in seminars and completion of requirements that include a report and/or project.

Math 426 - Advanced Discrete Analysis (3-0-3) Prerequisite: Math 226 or Math 326. Topics include graphs, trees and their applications, grammars, finite state machines, Turing machines and Petri nets, applied combinatorics -- Stirling, Catalan, and Ramsey numbers, Polya-Burnside counting methods, finite Markov chains and coding theory.

Math 430 - Analytical and Computational Neuroscience (3-1-3) Prerequisites: Math 211 or Math 213, Phys 121, and CIS 101 or CIS 113. A mathematical and computational introduction to the biophysical mechanisms that underlie physiological functions of single neurons and synapses. Topics include voltage-dependent channel gating mechanisms, the Hodgkin-Huxley model for membrane excitability, repetitive and burst firing, nerve impulse propagation in axons and dendrites, single- and multi-compartmental modeling, synaptic transmission, calcium handling dynamics and calcium dependent currents and processes.

Math 431 - Systems Computational Neuroscience (3-1-3) Prerequisites: Math 211 or Math 213, and CIS 101 or CIS 113 or Math 240, or departmental approval. A mathematical and computational introduction to operations of neuronal systems and networks. Topics include central pattern generators, neuroethology of sensory systems, sensory motor transformations, models of various brain regions, models of visual processes, large network modeling, models of learning and memory, neural coding and mathematics of neural networks.

Math 440 - Advanced Applied Numerical Methods (3-0-3) Prerequisites: Math 331 and Math 340. A survey of numerical methods for solving ordinary and partial differential equations. Includes initial-value and boundary-value problems for ordinary differential equations and for elliptic, hyperbolic, and parabolic partial differential equations.

Math 440H - Honors Advanced Applied Numerical Methods (3-0-3) Prerequisites: grade of "B" or better in Math 331 or Math 331H and Math 340 or Math 340H. Topics enhance those of Math 440 and concepts are studied in detail. Emphasizes science and engineering applications.

Math 441 - Actuarial Mathematics I (3-0-3) Prerequisite: Math 346. Topics include the economics of insurance, individual risk models for a short term, survival distributions and life tables, life insurance per year, life annuities, and net premiums.

Math 442 - Actuarial Mathematics II (3-0-3) Prerequisite: Math 441. Topics include net premium reserves, insurance models including expenses, nonforfeiture benefits, and dividends.

Math 443 - Statistical Methods (3-0-3) Prerequisite: Math 341. Topics include complete sufficient statistics and uniformly minimum variance estimators, general linear hypotheses and related topics, nonparametric inference including rank and order statistics, permutation methods, U-statistics, and Pitman efficiency.

Math 444 - Applied Sampling Methods and Quality Control (3-0-3) Prerequisite: Math 333, or Math 244 and Math 341. An introduction to sample survey and statistical quality control. Topics include sampling from a finite population and different sampling techniques, more detailed study of random sampling and stratification, control charts and acceptance sampling plans in statistical quality control.

Math 445 - Introduction to Experimental Design (3-0-3) Prerequisite: Math 333, or Math 244 and Math 341. Basic concepts and principles of designs are covered. Topics include randomized blocks, Latin squares, factorial designs.

Math 446 - Topics in Applied Statistics (3-0-3) Prerequisite: Math 341 or Math 333. Topics may include biostatistics, environmental statistics, statistical consulting.

Math 447 - Applied Time Series Analysis (3-0-3) Prerequisite: Math 341 or Math 333. An introduction to applied univariate time series analysis. Topics include regression techniques for modeling trends, smoothing techniques (moving average smoothing, exponential smoothing), autocorrelation, partial auto-correlation, moving average, and autoregressive representation of series, Box-Jenkins models, forecasting, model selection, estimation, and diagnostic checking, Fourier analysis, and spectral theory for stationary processes.

Math 448 - Stochastic Simulation (3-0-3)Prerequisite: Math 333 and Math 340. An introduction in the use of computer simulation to study stochastic models. Topics include the generation of samples of continuous and discrete random variables and processes with applications to stochastic models, statistical analysis of the results, and variance reduction techniques. **Effective From: Fall 2005**

Math 450H - Methods of Applied Mathematics I (Capstone I) (3-0-3)Prerequisites: Math 331, Math 337, and Math 340. Combines mathematical modeling with physical and computational experiments conducted in the Undergraduate Mathematics Computing Laboratory.

Math 451H - Methods of Applied Mathematics II (Capstone II) (3-0-3)Prerequisite: Math 450H. Small teams of students conduct research projects under the guidance of faculty members who perform applied research.

Math 460 - Differential Geometry of Curves and Surfaces (3 credits)Prerequisites: Math 222. Curves in the plane and Euclidean space, moving frames, surfaces in Euclidean space, orientability of surfaces, Gaussian and mean curvatures, surfaces of revolution, ruled surfaces, minimal surfaces, special curves on surfaces, Theorema Egregium, the intrinsic geometry of surfaces.

Math 473 - Intermediate Differential Equations (3-0-3)Prerequisites: Math 222 and Math 337. Topics in the qualitative behavior of solutions of ordinary differential equations with applications to engineering problems. Includes phase plane analysis, stability, dynamical systems, and chaos.

Math 475 - Intermediate Partial Differential Equations (3-0-3)Prerequisites: Math 331 and Math 337. A survey of methods, beyond separation of variables, for analyzing and solving the fundamental partial differential equations of mathematical physics. Considers first-order equations, Laplace's equation, the wave equation, the heat equation, and linear hyperbolic systems. Emphasizes using methods of calculus to solve canonical initial- and boundary-value problems.

Math 475H - Honors Intermediate Partial Differential Equations (3-0-3)Prerequisites: Grade of "B" or better in Math 331H and Math 337H or Grade of "A" in Math 331 and Math 337. Topics enhance those of Math 475 and concepts are studied in detail. Emphasizes science and engineering applications.

Math 477 - Stochastic Processes (3-0-3)Prerequisites: Math 244 or Math 333 and Math 337. This course introduces the theory and applications of random processes needed in various disciplines such as mathematical biology, finance, and engineering. Topics include discrete and continuous Markov chains, Poisson processes, as well as topics selected from Brownian motion, renewal theory, and simulation. **Effective From: Fall 2006**

Math 480 - Introductory Mathematical Analysis (3-0-3)Prerequisite: Math 211 or Math 213. Builds on principles taught in basic calculus courses. Topics discussed include continuity, differentiation, integration, and the limit process of sequences and series.

Math 481 - Advanced Calculus (3-0-3)Prerequisite: Math 213 and Math 480. Systematic development of partial differentiation, multiple and improper integrals, transformations, inverse and implicit function theorems, and integrals over curves and surfaces.

Math 491 - Independent Study in Mathematics (3-0-3)Prerequisites: Senior standing and departmental approval. Each student works under the direct supervision of a member of the Department of Mathematical Sciences. The work consists primarily of a project applying the student's mathematical skills to an engineering- or science-oriented project.

Math 493 - Seminar in Actuarial Science (1-0-1)Prerequisite: Departmental approval. A series of lectures by practicing actuaries on topics of technical and/or current practices. Subjects announced at the time of registration. Progress is evaluated through projects and term papers. A comprehensive report summarizing some aspect of special interest to the student is required.

Math 495 - Topics in Applied Mathematics (3-0-3)Prerequisites: Math 331, Math 332, and Math 340, or departmental approval. A survey of selected areas of applied mathematics. Case histories of problems in applied mathematics from an industrial background.

GRADUATE COURSES:

Math 545 - Introductory Mathematical Analysis (3 credits) Prerequisite: Math 211 or Math 213, and departmental approval. Rigorous treatment of the calculus of real-valued functions of one real variable: the real number system, epsilon-delta theory of limit, continuity, derivative, and the Riemann integral. The fundamental theory of calculus. Series and sequences including Taylor series and uniform convergence. The inverse and implicit function theorems.

Math 546 - Advanced Calculus (3 credits) Prerequisite: Math 545 or Math 480. Rigorous treatment of the calculus of real-valued functions of several real variables: the geometry and algebra of n -dimensional Euclidean space, limit, continuity, derivative, and the Riemann integral of functions of several variables, the inverse and implicit function theorems, series, including Taylor series, optimization problems, integration on curves and surfaces, the divergence and related theorems.

Math 573 - Intermediate Differential Equations (3 credits) Prerequisites: Math 222, Math 337, or departmental approval. Methods and applications for systems of ordinary differential equations: existence and uniqueness for solutions of ODEs, linear systems, stability analysis, phase plane and geometrical methods, Sturm-Liouville eigenvalue problems.

Math 590 - Graduate Co-op Work Experience I (3 additive credits) Prerequisites: Graduate status, departmental approval, and permission of the Division of Career Development Services. Cooperative education/internship providing on-the-job complement to academic programs in mathematics. Work assignments and projects are developed by the Co-op Office in consultation with the Department of Mathematical Sciences.

Math 591 - Graduate Co-op Work Experience II (3 additive credits) Prerequisites: Graduate status, departmental approval, and permission of the Division of Career Development Services.

Math 592 - Graduate Co-op Work Experience III (3 additive credits) Prerequisites: Graduate status, departmental approval, and permission of the Division of Career Development Services.

Math 593 - Graduate Co-op Work Experience IV (0 credits) Prerequisites: One immediately prior 3-credit registration for graduate co-op work experience with the same employer. Requires approval of departmental co-op advisor and the Division of Career Development Services. Must have accompanying registration in a minimum of 3 credits of course work. **Effective From: Fall 2006**

Math 599 - Teaching in Mathematics (3 credits) Required of all master's and doctoral students in Mathematical Sciences who are receiving departmental or research-based awards. Provides students with the skills needed to communicate effectively and to perform their teaching and related duties. Students are exposed to strategies and methods for communicating and for teaching undergraduate mathematics, and they are required to practice and demonstrate these techniques. Not counted for degree credit.

Math 611 - Numerical Methods for Computation (3 credits) Prerequisites: (This course is not intended for students in the Master's in Applied Mathematics program or in the doctoral program in Mathematical Sciences.) Math 222, Math 337, and proficiency in a computer language (FORTRAN, C, or C++), or departmental approval. A practical introduction to the numerical methods of science and engineering. Numerical solution of linear systems. Interpolation and quadrature. Iterative solution of nonlinear systems. Computation of eigenvalues and eigenvectors. Numerical solution of initial- and boundary-value problems for ODEs. Introduction to numerical solution of PDEs. Includes examples requiring student use of a computer with some use of software packages.

Math 613 - Advanced Applied Mathematics I: Modeling (3 credits) Prerequisites: Math 331 and Math 337, or departmental approval. Concepts and strategies of mathematical modeling are developed by investigation of case studies in a selection of areas. Consistency of a model, nondimensionalization and scaling, regular and singular effects are discussed. Possible topics include continuum mechanics (heat and mass transfer, fluid dynamics, elasticity), vibrating strings, population dynamics, traffic flow, and the Sommerfeld problem.

Math 614 - Numerical Methods I (3 credits) Prerequisites: Math 222, Math 337, Math 340, and proficiency in a computer language (FORTRAN, C, or C++), or departmental approval. Theory and techniques of scientific computation, with more emphasis on accuracy and rigor than Math 611. Machine arithmetic. Numerical solution of a linear system and pivoting. Interpolation and quadrature. Iterative solution of nonlinear systems. Computation of eigenvalues and eigenvectors. Numerical solution of initial- and boundary-value problems for systems of ODEs. Applications. The class includes examples requiring student use of a computer.

Math 630 - Linear Algebra and Applications (3 credits) Prerequisites: (This course is not intended for students in the Master's in Applied Mathematics program or in the doctoral program in Mathematical Sciences.) Math 211 or Math 213, and Math 222. Development of the concepts needed to study applications of linear algebra and matrix theory to science and engineering. Topics include linear systems of equations, matrix algebra, orthogonality, eigenvalues and eigenvectors, diagonalization, and matrix decomposition.

Math 631 - Linear Algebra (3 credits) Prerequisites: Math 222 and Math 337, or departmental approval. Similar in aim and content to Math 630 but with more emphasis on mathematical rigor. Linear systems of equations, matrix algebra, linear spaces, orthogonality, eigenvalues and eigenvectors, diagonalization, and matrix decomposition. Applications.

Math 635 - Analytical Computational Neuroscience (3 credits) Prerequisites: Math 211 or 213, Math 337, and CIS 113 or Math 240, or departmental approval. This course will provide an intermediate-level mathematical and computational modeling background for small neuronal systems. Models of biophysical mechanisms of single and small networks of neurons are discussed. Topics include voltage-dependent channel gating mechanisms, the Hodgkin-Huxley model for membrane excitability, repetitive and burst firing, single- and multi-compartmental modeling, synaptic transmission, mathematical treatment of 2-cell inhibitory or excitatory networks. In this course, the students will be required to build computer models of neurons and networks and analyze these models using geometric singular-perturbation analysis and dynamical systems techniques.

Math 636 - Systems Computational Neuroscience (3 credits) Prerequisites: Math 635. This course covers mathematical and computational modeling of neuronal networks. Topics covered include central pattern generators, models of visual processes, models of learning and memory, neural coding and mathematics of neural networks, models of oscillations in sensory, thalamic and thalamo-cortical networks, neuronal wave propagation.

Math 637 - Foundations of Mathematical Biology (3 credits) Prerequisites: Math 222 and Math 337, or departmental approval. This course provides an introduction to the use of mathematical techniques applied to solve problems in biology. Models discussed fall into 3 categories: discrete, continuous, and spatially distributed. Biological topics discussed range from the subcellular molecular systems and cellular behavior to physiological problems, population biology and developmental biology.

Math 639 - Mathematical Modeling II (3-0-3) Continuation of Math 613 (Advanced Applied Mathematics I, Modeling). Concepts and strategies of Mathematical modeling are developed by case studies in a selection of areas. Topics will be complementary to those presented in Math 613, and include for example, the mathematical theory of elasticity and electromagnetism. **Effective From: Fall 2006**

Math 644 - Regression Analysis Methods (3 credits) Prerequisite: Math 661. Regression models and the least squares criterion. Simple and multiple linear regression. Regression diagnostics. Confidence intervals and tests of parameters, regression and analysis of variance. Variable selection and model building. Dummy variables and transformations, growth models. Other regression models such as logistic regression. Using statistical software for regression analysis.

Math 645 - Analysis I (3 credits) Prerequisite: Math 546 or departmental approval. Review and extension of the fundamental concepts of advanced calculus: the real number system, limit, continuity, differentiation, the Riemann integral, sequences and series. Point set topology in metric spaces. Uniform convergence and its applications.

Math 646 - Time Series Analysis (3 credits) Prerequisite: Math 661 or departmental approval. Time series models, smoothing, trend and removal of seasonality. Naive forecasting models, stationarity and ARMA models. Estimation and forecasting for ARMA models. Estimation, model selection, and forecasting of nonseasonal and seasonal ARIMA models.

Math 647 - Time Series Analysis II (3 credits) Prerequisite: Math 646. Continuation of Math 646. Covers methods of time series analysis useful in engineering, the sciences, economics, and modern financial analysis. Topics include spectral analysis, transfer functions, multivariate models, state space models and Kalman filtering. Selected applications from topics such as intervention analysis, neural networks, process control, financial volatility analysis.

Math 651 - Applied Mathematics I (3 credits) Prerequisite: Math 222 or departmental approval. A survey of mathematical methods for the solution of problems in the applied sciences and engineering. Topics include: ordinary differential equations and elementary partial differential equations. Fourier series, Fourier and Laplace transforms, and eigenfunction expansions. **Effective From: Spring 2006**

Math 652 - Applied Mathematics II (3 credits) Prerequisite: (This course is not intended for students in a graduate program in Mathematical Sciences.) Math 651. Continuation of Math 651. Topics include: partial differential equations, functions of a complex variable, and the calculus of variations.

Math 656 - Complex Variables I (3 credits) Prerequisite: Math 545 or Math 645 or departmental approval. The theory and applications of analytic functions of one complex variable: elementary properties of complex numbers, analytic functions, elementary complex functions, conformal mapping, Cauchy integral formula, maximum modulus principle, Laurent series, classification of isolated singularities, residue theorem, and applications.

Math 661 - Applied Statistics (3 credits) Prerequisite: Math 112. Role and purpose of applied statistics. Data visualization and use of statistical software used in course. Descriptive statistics, summary measures for quantitative and qualitative data, data displays. Modeling random behavior: elementary probability and some simple probability distribution models. Normal distribution. Computational statistical inference: confidence intervals and tests for means, variances, and proportions. Linear regression analysis and inference. Control charts for statistical quality control. Introduction to design of experiments and ANOVA, simple factorial design and their analysis.

Math 662 - Probability Distributions (3 credits) Prerequisite: Math 341 or Math 333, and departmental approval. Probability, conditional probability, random variables and distributions, independence, expectation, moment generating functions, useful parametric families of distributions, transformation of random variables, order statistics, sampling distributions under normality, the central limit theorem, convergence concepts and illustrative applications.

Math 663 - Introduction to Biostatistics (3-0-3) Prerequisites: Undergraduate Calculus. Introduction to statistical techniques with emphasis on applications in health related sciences. This course will be accompanied by examples from biological, medical and clinical applications. Summarizing and displaying data; basic probability and inference; Bayes' theorem and its application in diagnostic testing; estimation, confidence intervals, and hypothesis testing for means and proportions; contingency tables; regression and analysis of variance; logistic regression and survival analysis; basic epidemiologic tools; use of statistical software.

Effective From: Spring 2005

Math 664 - Methods for Statistical Consulting (3 credits) Prerequisite: Math 661 or departmental approval. Communicating with scientists in other disciplines. Statistical tools for consulting. Using statistical software such as JMP, SAS, and S-plus. Case studies which illustrate using statistical methodology and tools are presented by the instructor and guest speakers from academia and industry. Assignments based on case studies with use of statistical software is required.

Math 668 - Probability Theory (3 credits) Prerequisite: Math 545 and Math 662, or departmental approval. Introduction to measure theory and integration, axiomatic probability, random variables, distribution function, expectation, independence, modes of convergence, characteristic functions, Laplace-Stieltjes transforms, sums of identically distributed random variables, conditional expectation, martingales.

Math 671 - Asymptotic Methods I (3 credits) Prerequisite: Math 645 or Math 545, and Math 656, or departmental approval. Asymptotic sequences and series. Use of asymptotic series. Regular and singular perturbation methods. Asymptotic methods for the solution of ODEs, including: boundary layer methods and asymptotic matching, multiple scales, the method of averaging, and simple WKB theory. Asymptotic expansion of integrals, including: Watson's lemma, stationary phase, Laplace's method, and the method of steepest descent.

Math 672 - Biomathematics I: Biological Waves and Oscillations (3 credits) Prerequisites: Math 222, Math 331, and Math 337, or departmental approval. Models of wave propagation and oscillatory phenomena in nerve, muscle, and arteries: Hodgkin-Huxley theory of nerve conduction, synchronization of the cardiac pacemaker, conduction and rhythm abnormalities of the heart, excitation-contraction coupling, and calcium induced waves, wave propagation in elastic arteries, models of periodic human locomotion.

Math 673 - Biomathematics II: Pattern Formation in Biological Systems (3 credits) Prerequisites: Math 222, Math 331, and Math 337, or departmental approval. Emergence of spatial and temporal order in biological and ecological systems: Hopf and Turing bifurcation in reaction-diffusion systems, how do zebras get their stripes, patterns on snake skins and butterfly wings, spatial organization in the visual cortex, symmetry breaking in hormonal interactions, how do the ovaries count. Basic techniques of mathematics are introduced and applied to significant biological phenomena that cannot be fully understood without their use.

Math 675 - Partial Differential Equations (3 credits) Prerequisite: Math 690 or departmental approval. A survey of the mathematical theory of partial differential equations: first-order equations, classification of second-order equations, the Cauchy-Kovalevsky theorem, properties of harmonic functions, the Dirichlet principle. Initial- and boundary-value problems for hyperbolic, elliptic, and parabolic equations. Systems of equations.

Math 676 - Advanced Ordinary Differential Equations (3 credits) Prerequisites: Math 222, Math 337, and Math 545 or Math 645. A rigorous treatment of the theory of systems of differential equations: existence and uniqueness of solutions, dependence on initial conditions and parameters. Linear systems, stability, and asymptotic behavior of solutions. Nonlinear systems, perturbation of periodic solutions, and geometric theory of systems of ODEs.

Math 677 - Calculus of Variations (3 credits) Prerequisite: Math 545 or Math 645 or departmental approval. Necessary conditions for existence of extrema. Variation of a functional, Euler's equation, constrained extrema, first integrals, Hamilton-Jacobi equation, quadratic functionals. Sufficient conditions for the existence of extrema. Applications to mechanics.

Math 685 - Combinatorics (3 credits) Prerequisite: Math 545 or Math 645. Generating functions, principle of inclusion-exclusion, pigeonhole principle, partitions. Polya's theory of counting, graph theory, and applications.

Math 687 - Quantitative Analysis for Environmental Design Research (3 credits) Prerequisites: Math 333 and departmental approval. Fundamental concepts in the theory of probability and statistics including descriptive data analysis, inferential statistics, sampling theory, linear regression and correlation, and analysis of variance. Also includes an introduction to linear programming and nonlinear models concluding with some discussion of optimization theory.

Math 688 - Mathematical and Statistical Methods in Materials Science (3 credits) More emphasis on analytical methods and statistics. Course will be required for Ph.D. students in Materials Science. **Effective From: Fall 2006**

Math 689 - Advanced Applied Mathematics II: Ordinary Differential Equations (3 credits) Prerequisites: Math 545 or Math 645, Math 613, and Math 631. A practical and theoretical treatment of boundary-value problems for ordinary differential equations: generalized functions, Green's functions, spectral theory, variational principles, and allied numerical procedures. Examples will be drawn from applications in science and engineering.

Math 690 - Advanced Applied Mathematics III: Partial Differential Equations (3 credits) Prerequisite: Math 689. A practical and theoretical treatment of initial- and boundary-value problems for partial differential equations: Green's functions, spectral theory, variational principles, transform methods, and allied numerical procedures. Examples will be drawn from applications in science and engineering.

Math 691 - Stochastic Processes with Applications (3 credits) Prerequisite: Math 662. Renewal theory, renewal reward processes and applications. Homogeneous, non-homogeneous, and compound Poisson processes with illustrative applications. Introduction to Markov chains in discrete and continuous time with selected applications.

Math 698 - Sampling Theory (3 credits) Prerequisite: Math 662. Role of sample surveys. Sampling from finite populations. Sampling designs, the Horowitz-Thompson estimator of the population mean. Different sampling methods, simple random sampling, stratified sampling, ratio and regression estimates, cluster sampling, systematic sampling.

Math 699 - Design and Analysis of Experiments (3 credits) Prerequisite: Math 662. Statistically designed experiments and their importance in data analysis, industrial experiments. Role of randomization. Fixed and random effect models and ANOVA, block design, latin square design, factorial and fractional factorial designs and their analysis. **Effective From: Spring 2006**

Math 700 - Master's Project (3 credits) Prerequisites: Matriculation for the Master of Science in Applied Mathematics or in Applied Statistics and departmental approval. Work must be initiated with the approval of a faculty member, who will be the student's project advisor. Work of sufficient quality may qualify for extension into a master's thesis, see Math 701.

Math 701 - Master's Thesis (6 credits) Prerequisite: Matriculation for the master's degree and departmental approval. Students must register for a minimum of 3 credits per semester until completion. The work is carried out under the supervision of a designated member of the faculty.

Math 707 - Advanced Applied Mathematics IV: Special Topics (3 credits) Prerequisite: Departmental approval. A current research topic of interest to departmental faculty. Typical topics include: computational fluid dynamics, theoretical fluid dynamics, acoustics, wave propagation, dynamical systems, theoretical and numerical aspects of combustion, mathematical biology, and various topics in statistics.

Math 710 - Graduate Research Methods (3 credits) Prerequisite: Math 614, Math 671, and Math 690. Acquaints second-year graduate students with the techniques and vocabulary of a field in applied mathematics. Each student contacts a designated faculty member and is given several basic papers or books on a research topic of current interest. The student prepares two lectures on his/her topic to be given at the end of the semester. A sample list of active fields of research includes acoustics, electromagnetic theory, elasticity, fluid dynamics, combustion, and mathematical biology.

Math 712 - Numerical Methods II (3 credits) Prerequisites: Math 614, Math 331 or departmental approval, and proficiency in a computer programming language (FORTRAN, C, or C++). Numerical methods for the solution of initial- and boundary-value problems for partial differential equations, with emphasis on finite difference methods. Consistency, stability, convergence, and implementation are considered.

Math 713 - Advanced Scientific Computing: Multi-Dimensional Finite-Difference Schemes and Spectral Methods (3 credits) Prerequisite: Math 712 and proficiency in a computer programming language (FORTRAN, C, or C++). Derivation and analysis of

finite difference schemes for systems of partial differential equations in two and three spatial dimensions and time. Issues pertaining to efficient implementation of algorithms and to stability of physical and numerical boundary conditions. Pseudo-spectral and spectral methods to solve partial differential equations. Approximation properties of Fourier and Chebyshev series and techniques based on the Fast Fourier Transform (FFT) and on matrix multiplication to numerically compute partial derivatives. Time-discretization techniques suitable for use with pseudo-spectral and spectral methods. Model systems arising in wave propagation, fluid dynamics, and mathematical biology will be considered.

Math 715 - Mathematical Fluid Dynamics I (3-0-3) Introduction to the basic ideas of fluid dynamics, with an emphasis on rigorous treatment of fundamentals and the mathematical developments and issues. The course focuses on the background and motivation for recent mathematical and numerical work on the Euler and Navier-Stokes equations, and presents a mathematically intensive investigation of various model equations of fluid dynamics (e.g., the Korteweg-de-Vries equations). **Effective From: Fall 2005**

Math 716 - Mathematical Fluid Dynamics II (3-0-3) Continuation of Math 715. Further development of the ideas of fluid dynamics, with an emphasis on mathematical developments and issues. A selection of topics will be developed in some detail, for example: Stokes flow and low-Reynolds-number hydrodynamics; flow at high Reynolds number and boundary layers; shock waves and hyperbolic systems; dynamics of interfacial flows; hydrodynamic stability; rotating fluids. **Effective From: Fall 2005**

Math 717 - Inverse Problems and Global Optimization (3-0-3) Introduction to inverse problems and global optimization. Linear, quasi-linear, and nonlinear inverse problems are studied with emphasis on regularization techniques. Bayesian statistical approaches and Monte Carlo methods are introduced and discussed in the context of inverse problems. The mathematical foundations of simulated annealing, genetic algorithms, and TABU are presented. **Effective From: Fall 2006**

Math 720 - Tensor Analysis (3 credits) Prerequisite: Math 613 and Math 631, or departmental approval. Review of vector analysis in general curvilinear coordinates. Algebra and differential calculus of tensors. Applications to differential geometry, analytical mechanics, and mechanics of continuous media. The choice of applications will be determined by the interests of the class.

Math 722 - Wave Propagation (3-0-3) Derivation of linear wave equations describing acoustic, electromagnetic, elastodynamic and hydrodynamic phenomena. Fundamental solutions and their application to initial value problems. Applications and solution of boundary value problems using Green's functions, image and spectral methods. Related time harmonic problems, including radiation, scattering, diffraction and transmission phenomena. Dispersive waves and the method of stationary phase. Linear waves in anisotropic media. **Effective From: Fall 2006**

Math 745 - Analysis II (3 credits) Prerequisite: Math 645. Lebesgue measure and integration, including the Lebesgue dominated convergence theorem and Riesz-Fischer theorem. Elements of Hilbert spaces and L_p -spaces. Fourier series and harmonic analysis. Multivariate calculus.

Math 756 - Complex Variables II (3 credits) Prerequisite: Math 656. Selected topics from: conformal mapping and applications of the Schwarz-Christoffel transformation, applications of calculus of residues, singularities, principle of the argument, Rouché's theorem, Mittag-Leffler's theorem, Casorati-Weierstrass theorem, analytic continuation, and applications, Schwarz reflection principle, monodromy theorem, Wiener-Hopf technique, asymptotic expansion of integrals; integral transform techniques, special functions.

Math 761 - Statistical Reliability Theory and Applications (3 credits) Prerequisite: Math 662 or departmental approval. Survival distributions, failure rate and hazard functions, residual life. Common parametric families used in modeling life data. Introduction to nonparametric aging classes. Coherent structures, fault tree analysis, redundancy and standby systems, system availability, repairable systems, selected applications such as software reliability.

Math 762 - Statistical Inference (3 credits) Prerequisite: Math 662 or departmental approval. Review of sampling distributions. Data reduction principles: sufficiency and likelihood. Theory and methods of point estimation and hypothesis testing, interval estimation, nonparametric tests, introduction to linear models.

Math 771 - Asymptotic Methods II (3 credits) Prerequisite: Math 671. Continuation of Math 671. Asymptotic methods for the solution of PDEs, including: matched asymptotic expansions, multiple scales, the WKB method or geometrical optics, and near-field far-field expansions. Applications to elliptic, parabolic, and hyperbolic problems. Further topics in the asymptotic expansion of integrals and the WKB method. Emphasis on examples drawn from applications in science and engineering.

Math 786 - Large Sample Theory and Inference (3 credits) Prerequisites: Math 762 and Math 668. Limit theorems, central limit theorem, asymptotic expansions and large deviations, limit theorems in martingales and semi-martingales and stochastic differential equations, asymptotic expansions of functions of statistics, linear parametric estimation, asymptotic efficiency, martingale approach to inference: test for homogeneity and goodness of fit, decomposable statistics, inference for counting processes and censored data,

inference in nonlinear regression, existence and consistency of least squares estimator (LSE), asymptotic properties of LSE, Von Mises functionals, estimation of parameters of stable laws, empirical characteristics function for inference, generalized least squares for linear models.

Math 787 - Non-Parametric Statistics (3 credits) Prerequisite: Math 662. Wilcoxon signed-ranks test, Mann-Whitney U test, binomial sign test for single sample and two dependent samples, McNemar's test, Cochran Q test, Wilcoxon matched-pairs signed-ranks test, Kruskal-Wallis one-way analysis of variance, Friedman two-way analysis of variance, Siegel-Tukey test for equal variability, chi-squared goodness-of-fit test, test for homogeneity and independence, single-sample runs test and other tests of randomness, correlation tests: Spearman's rank-order correlation, coefficient and Kendall's tau, Kendall's coefficient of concordance, and Goodman and Kruskal's gamma, comparing power efficiency.

Math 790 - Doctoral Dissertation (Credits as designated) Prerequisite: Excellent performance on the doctoral qualifying examination. A minimum of 36 credits is required of all candidates for the Ph.D. degree. Candidates must register for 6 to 12 credits per semester, to be determined by a designated dissertation advisor. After reaching 36 credits, students must continue to register for 3 credits each semester until degree completion.

Math 791 - Graduate Seminar (0 credit) All master's and doctoral students receiving departmental or research-based awards must register for this course each semester. **Effective From: Fall 2006**

Math 792 - Pre-Doctoral Research (3 credits) Prerequisite: Departmental approval. For students admitted to the Ph.D. program in the Mathematical Sciences. Research is performed under the supervision of a designated faculty member. If the work culminates in doctoral research in the same area, up to 6 credits may be counted toward Math 790. See Math 790.

Mechanical Engineering:

UNDERGRADUATE COURSES:

ME 215 - Engineering Materials and Processes (2-2-3) Prerequisite: Chem 126. Students also must register for the lab component. Combined lecture and laboratory relating to the study of engineering materials. Processes of formation from liquid and particle state, plastic forming, molding deformation, and metal removal. Effects of heat treatment on material properties. Laboratory exercises involve basic machine tools and computer-controlled equipment.

ME 231 - Kinematics of Machinery (3-0-3) Prerequisites: CIS 101, Mech 234. Design, selection, and evaluation of mechanisms for various applications. Topics include planar and spatial linkages, cams, gears, planetary and non-planetary gear systems, linkage synthesis, linkage dynamics, and an introduction to robotic manipulators using vector, matrix, and complex number methods. Projects involve using mathematics software for analysis and plotting of motion and inertial forces in planar and spatial linkages.

ME 304 - Fluid Mechanics (3-0-3) Prerequisites: Mech 236, ME 311. Introduction to the basic principles of conservation of mass, momentum, and energy as they apply to engineering systems which utilize fluids. Some of the topics are dimensional analysis, theoretical and empirical analysis of one-dimensional compressible and incompressible flow, empirical analysis of external and internal flows, and elementary boundary layer theory.

ME 305 - Introduction to System Dynamics (3-0-3) Prerequisites: Math 222, Mech 236, ME 231. Principles of dynamic system modeling and response with emphasis on mechanical, electrical, and fluid systems. Application of computer simulation techniques.

ME 310 - Co-op Work Experience I (3 additive credits) Prerequisites: completion of sophomore year, approval of department, and permission of the Office of Cooperative Education and Internships. Students gain major-related work experience and reinforcement of their academic program. Work assignments facilitated by the co-op office and approved by the department. Mandatory participation in seminars and completion of a report.

ME 311 - Thermodynamics I (3-0-3) Prerequisites: Math 211, Phys 111. Thermodynamic fundamentals. Topics are the first and second laws of thermodynamics, physical properties of pure substances, entropy, ideal and real gases, and gaseous mixtures.

ME 312 - Thermodynamics II (3-0-3) Prerequisite: ME 311. A continuation of ME 311 including studies of irreversibility and combustion. Thermodynamic principles are applied to the analysis of power generation, refrigeration, and air-conditioning systems. Introduction to solar energy thermal processes, nuclear power plants, and direct energy conversion.

ME 315 - Stress Analysis (3-0-3) Prerequisites: Math 222, Mech 237, ME 215. Problems related to mechanical design. Topics include two-dimensional elasticity, transformation of stress and strain, plane stress problems, axisymmetric members, buckling criteria, and failure theories.

ME 316 - Machine Design (3-0-3) Prerequisites: ME 231, ME 315. Aspects of the design process and design of machine elements. Mini-projects are used to introduce engineering design procedures.

ME 339 - Fundamentals of Mechanical Design (3-0-3) Prerequisite: Mech 234. For industrial engineering majors. Topics include kinematics of mechanisms, machine components, and a brief introduction to mechanical vibrations. Students gain the ability to deal with design problems from the viewpoint of a non-specialist.

ME 343 - Mechanical Laboratory I (2-2-3) Prerequisites: EE 405, Math 225, Mech 236. Corequisite: ME 304. Students also must register for the lab component. Laboratory and lecture in instrumentation and measurement for mechanical engineering students. Applications for the sensing of such variables as pressure, temperature, mass flow, and displacement. Particular attention to the applicability and sensitivity of instruments.

ME 403 - Mechanical Systems Design I (2-1-3)Prerequisites: ME 304, ME 305, ME 312, ME 316. Corequisite: ME 407. Lectures and projects covering problem solving methodology in the design, analysis, and synthesis of mechanical and thermal systems. The student's academic background combines with engineering principles and topics to serve as a foundation for broad engineering projects. Emphasis on creative thinking and the engineering design process in projects involving the optimal conversion of resources.

ME 405 - Mechanical Laboratory II (1-2-2)Prerequisite: ME 343, ME 312. Corequisite: ME 407. Laboratory emphasizing the use of fundamental principles and instrumentation systems for the analysis and evaluation of mechanical components within a system.

ME 406 - Mechanical Laboratory III (1-2-2)Prerequisite: ME 405, ME 407. Laboratory covering the testing and evaluation of complete mechanical systems.

ME 407 - Heat Transfer (3-0-3)Prerequisites: Math 222, ME 304, ME 311. A study of the three fundamental modes of heat transfer: conduction, convection, and radiation. A physical interpretation of the many quantities and processes in heat transfer using numerical methods. Theory is applied to the analysis and design of heat exchangers and other applications. Where appropriate, computer simulation is used.

ME 408 - Mechanical Systems Design II (1-2-2)Prerequisite: ME 403, ME 407. A continuation of ME 403 from a more integrated viewpoint, with lectures on special topics. Concepts in optimization and computer simulation are considered in the design and synthesis of mechanical engineering systems. The projects are more comprehensive, emphasizing creative design, and requiring design decisions of a more sophisticated nature.

ME 410 - Co-op Work Experience II (3 credits)Prerequisites: ME 310, approval of the department, and permission of the Office of Cooperative Education and Internships. Full-time work experience of approximately one semester's duration. Provides major related work experience as co-op/internship. Mandatory participation in seminars and completion of requirements that include a report and project.

ME 425 - Finite Element Method in Mechanical Engineering (3-0-3)Prerequisites: CIS 101, Math 222, and Mech 237. Introduction to central ideas underlying the finite element method in mechanical engineering and its computer implementation. Fundamental concepts such as interpolation functions for one- and two-dimensional elements, bar element method, Galerkin's method, discretization of a model, methods of assembling global matrices, and the final solution techniques for obtaining nodal values. Specific applications to mechanical engineering problems in trusses, beams, torsion, heat transfer, fluid flow, plane stress, and plane strain.

ME 430 - Introduction to Computer-Aided Design (2-2-3)Prerequisites: CIS 101, Math 222. Introduction to basic concepts of computer-aided design as applied to mechanical engineering design problems. Topics include numerical techniques, computer graphics, geometric modeling, design optimization, and databases for design. The laboratory uses current CAD software packages for mechanical design. Projects involve applications of the basic principles using student's own as well as available software.

ME 431 - Introduction to Robotics and Automation (3-0-3)Prerequisites: CIS 101, Mech 236. Introduction to mechanics and control of robotic manipulators. Topics include spatial transformations, kinematics, dynamics, trajectory generation, actuators and control, and relations to product design and flexible automation.

ME 432 - Principles of Air Conditioning and Refrigeration (3-0-3)Prerequisites: ME 304, ME 312; Corequisite: ME 407. A course in the fundamentals of air conditioning and refrigeration. Topics covered are psychometrics, cooling and heat load calculations, air distribution systems, duct design, vapor compression and absorption systems, and the principles of cooling towers.

ME 433 - Vibration Analysis (3-0-3)Prerequisites: Mech 236, Math 222. An introduction to the fundamental theory of mechanical vibrations. Undamped and damped systems with single and multiple degrees of freedom, transient vibration, vibrations of continuous media, and analog and numerical methods.

ME 435 - Thermodynamics (3-0-3)Prerequisites: Math 211, Phys 111. Intended for non-mechanical engineering students of all disciplines. Topics include the basic laws of thermodynamics, properties of fluids and solids, analysis of open and closed systems, gas and vapor power cycles, refrigeration and air conditioning, and an introduction to heat transfer. Cannot be taken for credit by mechanical engineering students.

ME 437 - Structural Analysis (3-0-3)Prerequisite: ME 315. Fundamentals of structural analysis. Consideration of stresses and deflections of beams as well as the design of beams, columns, trusses, and structural connections of steel, reinforced concrete, and timber structures.

ME 438 - Introduction to Physical Metallurgy (3-0-3) Prerequisites: Chem 126, ME 215. Introduction to metallic microstructures, solid solutions and the mechanical properties of metals and alloys. Physical understanding of diffusion processes is emphasized in covering the relationship between the nature of metals and different heat treating processes.

ME 439 - Principles of Tribology (3-0-3) Prerequisites: Chem 126, Mech 237. An introduction to the principles of wear resistance of machine parts and tribology. Physical understanding of different mechanisms of wear and friction and methods of increasing durability.

ME 441 * - Computer Simulation and Analysis in Mechanical Engineering (2-2-3) Prerequisites: ME 430. This course covers various topics in Computer-Aided Design (CAD) and Computer-Aided Engineering (CAE). The course provides an in-depth understanding and skill of constructing 2-D drawings using well-known commercial CAD package, and integrating 3-D solid modeling techniques into simulation, and analysis animation of new designs using commercial CAD/CAE software. The students will have hands-on experience to analyze Structure, Heat Transfer, and Computational Fluid Dynamics problems by using several different software packages. The course also focuses on CAD Product Data Exchange using both Direct Database conversion and International Standards based conversion methods between major CAD/CAE systems. Typical industrial applications will be illustrated.

ME 451 - Introduction to Aerodynamics (3-0-3) Prerequisites: ME 304, ME 311. Introduction to the basic principles and properties of fluid flow around immersed bodies. Topics include the kinematics and dynamics of fluid fields, the thin airfoil, finite wing theory, and one-dimensional compressible flow.

ME 452 - Dynamics of Space Flight (3-0-3) Prerequisites: Mech 236, Math 222. An introduction to the mechanics of space flight. After a brief introduction to the physics of the solar system, the dynamics of space flight are developed from the Newtonian viewpoint. Covers the performance and propulsion methods of rocketry.

ME 454 - Compressible Flow (3-0-3) Prerequisites: ME 304, ME 312, Math 222. Equations of one-dimensional compressible flow. Topics are flows with variable areas, friction, mass addition, heat addition, normal shocks, and combination of these effects. Special topics in two-dimensional flows such as oblique shocks.

ME 455 - Automatic Controls (3-0-3) Prerequisite: ME 305. Introduction to the principles of automatic controls. Emphasis on systems, considering their mechanical, hydraulic, pneumatic, thermal, and displacement -aspects. First and second order linear systems. Introduction to system analysis techniques such as Nyquist and Bode diagrams and applications in system design.

ME 470 - Engineering Properties of Plastics (3-0-3) Prerequisites: ME 215, Mech 237. A study of the physical properties of the various commercial thermosetting and thermoplastic resins. An introduction to linear viscoelastic theory and its relationship to measurable mechanical properties of plastics. Also, engineering properties such as flammability, chemical resistance, and electrical properties.

ME 471 - Introduction to Polymer Processing Techniques (3-0-3) Prerequisites: ME 304, ME 407. A study of the various plastics processing techniques, including extrusion, injection molding, blow molding, compression molding, thermoforming, rotational molding, casting, etc. The relationship between product design and choice of process will be presented.

ME 472 - Introduction to Biomechanical Engineering (3-0-3) Prerequisites: ME 316 or equivalent; or permission of the instructor. Introduction to biomechanical engineering integrating the principles of mechanics with the notions of physiology into simple mathematical models consisting of sets of governing equations. Topics include anatomy; basic concepts and definitions of biomechanical engineering; basic solid mechanics such as human force and motion; basic fluid mechanics such as the cardiovascular system and blood circulation; engineering design of general assistive devices.

ME 490 - Mechanical Engineering Project A (3-0-3) Prerequisites: departmental approval required. One or more individually selected projects. Projects usually require library research, design, cost analysis, planning of testing. Also involves an engineering report and a technical presentation.

ME 490H - Honors Mechanical Engineering Project I (3-0-3) Prerequisites: member of Honors College and departmental approval required. Similar to ME 490.

ME 491 - Mechanical Engineering Project B (3-0-3) Prerequisite: ME 490 and departmental approval required. One or more selected projects. Projects usually require library research, design, cost analysis, planning of testing. Also involves an engineering report and a technical presentation.

ME 491H - Honors Mechanical Engineering Project II (3-0-3) Prerequisites: member of Honors College, and departmental approval required. Similar to ME 491.

GRADUATE COURSES:

ME 590 - Graduate Co-op Work Experience I (3 additive credits) Prerequisites: permission from Department of Mechanical Engineering and Division of Career Development Services. Cooperative education internship providing on-the-job reinforcement of academic programs in mechanical engineering. Work assignments and projects are developed by the co-op office in consultation with the mechanical engineering department. Work assignments are related to student's major and are evaluated by faculty coordinators in mechanical engineering. Course cannot be used for mechanical engineering degree credit.

ME 591 - Graduate Co-op Work Experience II (3 additive credits) Prerequisites: permission from Department of Mechanical Engineering and Division of Career Development Services. Course cannot be used for mechanical engineering degree credit.

ME 592 - Graduate Co-op Work Experience III (3 additive credits) Prerequisites: permission from Department of Mechanical Engineering and Division of Career Development Services. Course cannot be used for mechanical engineering degree credit.

ME 593 - Graduate Co-op Work Experience IV (0 credits) Prerequisites: One immediately prior 3-credit registration for graduate co-op work experience with the same employer. Requires approval of departmental co-op advisor and the Division of Career Development Services. Must have accompanying registration in a minimum of 3 credits of course work. **Effective From: Fall 2006**

ME 607 - Advanced Thermodynamics (3 credits) Prerequisite: undergraduate thermodynamics. Basic laws of thermodynamics are applied to various thermodynamic systems. Topics include: availability, stability requirements, equation of state, property relations, properties of homogeneous mixtures, optimization applied to power generation and refrigeration cycles, and thermodynamic design of system components.

ME 608 - Non-Equilibrium Thermodynamics (3 credits) Prerequisites: undergraduate thermodynamics and heat transfer, and ME 616. (May be taken concurrently.) Principles and mathematical techniques of non-equilibrium thermodynamics applied to mechanical engineering problems. Topics include field theory, energy and entropy balances, variational principles, and applications to fluid flow, heat exchangers and combustion.

ME 609 - Dynamics of Compressible Fluids (3 credits) Prerequisites: undergraduate differential equations, fluid mechanics, and thermodynamics. One-dimensional reversible and irreversible compressible fluid flow, including effects of variable area, friction, mass addition, heat addition, and normal shock; two-dimensional reversible subsonic and supersonic flows, and an introduction to the method of characteristics and two-dimensional oblique shock.

ME 610 - Applied Heat Transfer (3 credits) Prerequisites: undergraduate fluid mechanics, thermodynamics, heat transfer and differential equations. Fundamentals of conduction, convection and radiation heat transfer. Practical engineering applications of heat exchangers including the design approaches by Mean Temperature Difference and Effectiveness-NTU methods, fins, convection fouling factors, and variable property analysis. **Effective From: Fall 2006**

ME 611 - Dynamics of Incompressible Fluids (3 credits) Prerequisites: undergraduate fluid mechanics and ME 616. (May be taken concurrently.) An introduction to the hydrodynamics of ideal fluids; two-dimensional potential flow and stream functions; conformal mapping; and differential equations of viscous flow. Boundary layer theory and dimensional analysis are introduced.

ME 612 - Gas Dynamics (3 credits) Prerequisite: ME 616. (May be taken concurrently.) Physical phenomena of gas dynamics and mathematical methods and techniques needed for analysis. Dynamic and thermodynamic relations for common flow situations are described through vector calculus. The nonlinearity of resulting equations and solutions such as numerical analysis, linearization or small perturbation theory, transformation of variables, and successive approximations are discussed. The method of characteristics is reviewed in detail for shock flows.

ME 613 - Radiation Heat Transfer (3 credits) Prerequisites: undergraduate differential equations, thermodynamics, heat transfer and ME 616. (May be taken concurrently.) Heat radiation of solid bodies, gases and flames; angle factors; radiative properties of electrical conductors and non-conductors; application of radiative networks to multi-body problems; diffuse specular reflectors; artificial satellites and space vehicles; analogy between heat transfer by radiation and electrical networks; and combined conduction and radiation problems.

ME 614 - Continuum Mechanics (3 credits) Prerequisites: Undergraduate courses in mechanics, fluid mechanics, solid mechanics, and mathematics (linear algebra, differential equations, and vector calculus) or approval of the instructor. Fundamentals of the mechanics of continuous media. Specific topics include vector and tensor analysis; kinematics associated with finite deformation; the

stress tensor; and the conservation laws of mass, linear momentum, angular momentum, and energy. Constitutive equations for linear and non-linear elastic solids and for inviscid and Newtonian fluids are discussed. The role of material invariance under superimposed rigid body motion and material symmetry in the formulation of appropriate constitutive equations are emphasized.

ME 615 - Advanced Mechanical Vibrations (3 credits) Prerequisites: undergraduate differential equations and system dynamics. One-, Two- and Multiple degree of freedom systems, Lagrange's equation of motion, Runge-Kutta computation, Finite Element Method and classical methods for normal mode analysis, matrix notation and iteration procedure, and Fourier series representation for the solution of vibration problems. **Effective From: Fall 2006**

ME 616 - Matrix Methods in Mechanical Engineering (3 credits) Prerequisite: undergraduate differential equations. Applications of matrix algebra and matrix calculus to engineering analysis; matrix methods in solid and fluid mechanics; vibration, elasticity, viscous fluids, and heat transfer. Matrix theory is used to show the basic unity in engineering analysis.

ME 618 - Selected Topics in Mechanical Engineering (3 credits) Prerequisite: departmental approval. Given when interest develops. Topics may include analysis and/or design of energy or mechanical systems of current interest to mechanical engineers.

ME 619 - Nano-scale Characterization of Materials (3 credits) Prerequisites Graduate standing or consent of instructor. The course presents the basics of nanotechnology and the principles and application of advanced instrumentation for the characterization of nanostructures. Topics include atomic force microscopy, near-field optics, dielectric spectroscopy, and light scattering. The significant component of the course is laboratory work at the W. M. Keck Foundation Laboratory and research project.

ME 620 - Stress Methods in Mechanical Design (3 credits) Prerequisites: undergraduate differential equations and strength of materials. Governing equations and solutions for analysis and design of structural and machine elements; appropriate boundary conditions to investigate pipes and rods subjected to shrink and force fits; rotating disks of uniform and variable thickness; beam and plate elements; and thermal stresses and stress concentrations in mechanical design. **Effective From: Fall 2006**

ME 621 - Energy Methods in Mechanical Design (3 credits) Prerequisites: undergraduate differential equations and strength of materials. Use of energy methods to design structural and machine elements. Includes approximate solutions for problems using conservation of energy and several variational approaches; the role of energy in failure criteria; combined loads; and the relationship of variational methods to the development of finite element solutions. **Effective From: Fall 2006**

ME 622 - Finite Element Methods in Mechanical Engineering (3 credits) Prerequisites: undergraduate differential equations and strength of materials. Using variational formulation and Ritz approximation, element equations for bar, beam, potential flow, heat transfer, torsion of a solid bar and plane elasticity problems are derived and solved with computer programs. **Effective From: Fall 2006**

ME 624 - Microlevel Modeling in Particle Technology (3 credits) Presents methodologies for analyzing the macroscopic properties of particulate systems in terms of the underlying microlevel processes. Significant components are the mathematical modeling of particulate systems at the microlevel, analytical and numerical methods for predicting macroscopic properties from microlevel models, and comparison of theoretical predictions with experimental results. Demonstrates the importance of the interaction of these three components in the scientific process. The first part concerns the flow of dry particles where any interstitial fluid can be ignored. The second part considers the flow of particles suspended in an interstitial fluid. Also includes a class project involving development of simulations. Same as ChE 625.

ME 625 - Introduction to Robotics (3 credits) Prerequisites: undergraduate differential equations, kinematics and demonstrated competence in computer programming and ME 616. (May be taken concurrently.) Introduction to robotics, and computer-controlled programmable robotic manipulators; robot geometries; kinematics of manipulators; differential motion; work space planning and trajectory control; dynamics; robot sensing, and robot programming.

ME 628 - Machine Vision Principles and Applications (3 credits) Prerequisites: undergraduate differential equations and demonstrated competence in computer programming. Fundamentals of machine vision as applied to inspection, recognition, and guidance in mechanical and manufacturing processes. Emphasis on real-time machine vision algorithms for machine parts inspection and identification. Topics include lighting and optics, camera selection and calibration, image segmentation, edge detection, feature extraction, and pattern classification.

ME 630 - Analytical Methods in Machine Design (3 credits) Prerequisites: undergraduate differential equations, machine design, and ME 616. (May be taken concurrently.) Theory and analytical methods used in machine design. Comparisons are made between approximate and exact engineering methods for evaluation of the range of applicability of solutions. Topics include advanced analysis of threaded members; keyed, splined, and shrink fits when subjected to torque; preloaded bearings; surging, presetting and buckling

of coiled springs; and accurate analysis of impact stresses and stresses beyond the yield point.

ME 631 - Bearings and Bearing Lubrication (3 credits) Prerequisites: undergraduate differential equations, machine design and ME 616. (May be taken concurrently.) The theoretical and physical aspects of lubrication: hydrostatic and hydrodynamic problems. Reynold's differential equation for pressure distribution applied to slider bearing and journal bearing problems with and without end leakage.

ME 633 - Dynamics of Machinery (3 credits) Prerequisites: undergraduate differential equations and matrix analysis. Consideration of kinematics, constraints and Jacobians, linear and angular momentum and potential energy and conservative forces of mechanical systems. Application of principle of virtual work, D'Alembert's principle, method of virtual power and Lagrange's equation to systems of particles and systems of rigid bodies.

ME 635 - Computer-Aided Design (3 credits) Prerequisites: undergraduate linear algebra (matrices operation) and differential equations. Adaptation of computer for solving engineering design problems; design morphology; simulation and modeling; algorithms; problem-oriented languages; use of available software; computer graphics, and automated design. **Effective From: Fall 2006**

ME 636 - Mechanism Design: Analysis and Synthesis (3 credits) Prerequisites: undergraduate kinematics, dynamics and demonstrated competence in computer programming and ME 616. (May be taken concurrently.) Kinematic principles combined with computer-assisted methods for designing mechanisms; complex polar notation; and dynamic and kinetostatic analysis of mechanisms. Kinematic synthesis of planar mechanisms; graphical Burmester theory for plane linkage synthesis; and planar linkage synthesis for function and path generation.

ME 637 - Kinematics of Spatial Mechanisms (3 credits) Prerequisites: undergraduate kinematics, dynamics, knowledge of matrices and ME 616. (May be taken concurrently.) Advanced techniques for the dual-number coordinate-transformation matrix modeling to perform the displacement, velocity, static and dynamic force analysis of spatial mechanisms. Applications considered will include shaft couplings, skew four-bars, wobble plates, generalized slider-cranks and robotic manipulators.

ME 638 - Computer-Aided Machining (3 credits) Prerequisites: demonstrated competence in computer programming, ME 305, ME 616 and ME 635 or equivalent. Introduction of computer applications to understand integrated computer-aided machining process. Included in the course are the fundamentals of motion control and NC/CNC/DNC machining, part programming and post-processors, and advances in CAM. Student projects are carried out using appropriate manufacturing software.

ME 641 - Refrigeration and Air Conditioning (3 credits) Prerequisites: undergraduate differential equations, fluid mechanics and thermodynamics. Refrigeration and air conditioning cycles; comfort analysis, psychometric chart analysis, heat and mass transfer steady and transient processes, heating and cooling design loads, energy loads and standards requirements.

ME 643 - Combustion (3 credits) Prerequisites: Undergraduate thermodynamics & fluid mechanics. Chemical & physical process of combustion: ideal combustion, actual combustion, mass balance, energy of reaction, maximum adiabatic combustion temperature, chemical equilibrium, heating values of fuels, combustion in furnaces, internal combustion engines & other heat engines, with emphasis on the analysis & control of the products of combustion in light of environmental considerations.

ME 644 - Building Environmental Control Principles (3 credits) Prerequisites: undergraduate thermodynamics, fluid mechanics, heat transfer and differential equations. Control systems for buildings including control of temperature, moisture and air quality. Optimization of systems for control of building energy use. Modern microprocessor-based control systems, including direct digital control, proportional and integral controllers, predictive control, adaptive control, optimum start controllers and optimal control.

ME 653 - Control of Electro-Mechanical Networks (3 credits) Prerequisites: undergraduate electrical circuits and mechanical vibrations or equivalent. Electro-mechanical systems; control loops; use of mechanical networks in dynamic systems; and stability and response to various inputs in electro-mechanical networks.

ME 655 - Introduction to Modern Control Methods (3 credits) Prerequisites: undergraduate system dynamics and automatic controls. Introduction to modern control methods applied to mechanical and manufacturing systems. Topics include state variable feedback, observer theory, nonlinear control, optimal control, and adaptive control for both continuous and discrete systems.

ME 660 - Noise Control (3 credits) Prerequisites: undergraduate differential equations and physics. Engineering methods for reducing noise pollution; reduction of intensity at the source; limitation of transmission paths and absorption; application to structures, machinery, ground transportation, aircraft, and noise measurement.

ME 664 - Experiments and Simulations in Particle Technology (3 credits) Prerequisites: graduate standing and consent of the

instructor. Covers a particle size analysis using sieves as well as laser diffraction technique, size reduction with ball mill, measurement of powder flow properties and internal angle of friction, measurement of angle of repose, design of mass flow hoppers using Jenike direct shear tester, measurement of minimum sintering temperature of powders, particle sedimentation, powder mixing, dry particle coating, and fluidized beds. Simulations involve various dry and fluid based particle systems, focusing on particle-particle and fluid-particle interactions. Same as ChE 664.

ME 670 - Introduction to Biomechanical Engineering (3 credits) Prerequisites: undergraduate thermodynamics, statics, and dynamics. Introduction to biomechanical engineering of physiological systems; fluid flow, structural, motion, transport, and material aspects; energy balance of the body, and the overall interaction of the body with the environment.

ME 671 - Biomechanics of Human Structure and Motion (3 credits) Prerequisites: undergraduate statics, kinematics, and dynamics. Principles of engineering mechanics and materials science applied to human structural and kinematic systems and to the design of prosthetic devices. Topics include anatomy; human force systems; human motion; bioengineering materials; and design of implants, supports, braces, and replacements limbs.

ME 672 - Biomaterials-Characterization (3 credits) Prerequisites: mechanics of materials, principles of materials science and engineering. Engineering physiology, stress analysis and mechanical laboratory. Fundamental concepts on the methods and rationales used in characterization of metal, ceramic, polymeric, and biologic materials used in biomedical implant fabrication including survey of various techniques and engineering design aspects on biomaterials.

ME 675 - Mechanics of Fiber Composites (3 credits) Prerequisites: ME 315 (see undergraduate catalog for course description) and demonstrated competence in computer programming. Introduces various design problems using fiber composites. Analysis of general fiber composite laminate and short fiber composites, fracture mechanics, fatigue, creep and viscoelasticity, thermal stresses, special layups and associated optimization problems.

ME 676 - Applied Plasticity (3 credits) Prerequisite: ME 620 or equivalent. Fundamentals of plasticity applied to mechanical and manufacturing engineering problems. Topics include elastic-plastic analysis for beams, rings and plates. Plastic instability and slip-line fields are considered.

ME 678 - Engineering Design of Plastic Products (3 credits) Prerequisite: Knowledge of Pro/Engineer (or IDEAS). Structure and properties of plastics including stress-strain behavior and the effect of fillers and reinforcements. Designing for impact, flexure, shear, friction, puncture, creep and fatigue. Case studies of structural, electrical, and optical applications. **Effective From: Fall 2006**

ME 679 - Polymer Processing Techniques (3 credits) Prerequisites: undergraduate courses in fluid dynamics and heat transfer. Techniques for processing of plastics: extrusion, injection molding, compression molding, thermoforming, casting.

ME 680 - Polymer Processing Equipment (3 credits) Prerequisites: ChE 645 or equivalent and undergraduate heat transfer. Application of heat transfer, fluid mechanics, and thermodynamics to the design and control of polymer processing equipment. Detailed consideration of extrusion, collandering, rotational molding, stamping, and injection molding.

ME 700 - Master's Project (3 credits) Prerequisite: department approval. An extensive paper involving design, construction, and analysis, or theoretical investigation. Further information may be obtained from the graduate advisor.

ME 701 - Master's Thesis (6 credits) Prerequisite: department approval. Projects involving design, construction, experimental, or theoretical investigation carried out under the supervision of a designated member of the mechanical engineering faculty. The completed written thesis must be defended in a publicly announced oral defense. A student must register for a minimum of 3 credits per semester until completion, although degree credit will be limited to the 6 credits indicated for the thesis.

ME 710 - Conduction Heat Transfer (3 credits) Prerequisite: ME 610 and ME 616 or equivalent. Heat transfer by conduction: differential and integral forms of the energy equation for isotropic and anisotropic material. Analytical and numerical studies of transient and steady one-, two-, and three-dimensional heat transfer problems for a variety of boundary conditions including phase change. In addition, variational and boundary element methods are applied to heat conduction problems.

ME 711 - Convection Heat Transfer (3 credits) Prerequisites: ME 610 and ME 616 or equivalent. Development of convective heat transfer theory: currently available methods, analytical and numerical, for predicting heat rates in forced, natural, and mixed convection in laminar and turbulent flow regimes are thoroughly studied. Studied techniques are applied to the thermal design of complex systems.

ME 712 - Mechanics of Viscous Fluids (3 credits) Prerequisite: ME 611 and ME 616. (May be taken concurrently.) Properties and

behavior of real fluids in laminar and turbulent motion. Review of tensor analysis; current mathematical and empirical laws and methods; flows in ducts; exact solutions of Navier-Stokes equations; boundary layers over surfaces and flow past bodies.

ME 713 - Non-Newtonian Fluid Dynamics (3 credits) Prerequisite: ME611, ME616. Review of Newtonian fluid mechanics. Time dependent response and transport properties of non-Newtonian fluids in simple shear and extensional flows. Experimental techniques for measuring dynamic response and transport properties. Continuum and micromechanical constitutive models; solutions of constitutive equations.

ME 714 - Principles of Particulate Multiphase Flows (3 credits) Prerequisite: Courses in fluid mechanics or approval of the instructor. This course provides an introduction to the fundamental principles of mass, momentum and heat transfer in particulate multiphase flows. Theories and governing equations for distinctive responses and motions of each phase and the dynamic interactions among phases are formulated. Typical industrial applications will be illustrated.

ME 717 - Selected Topics in Mechanical Engineering (13 credits) Prerequisite: department approval. Given when interest develops. Topics may include advanced mechanisms, aerodynamics, analysis of ME systems, design optimization, and case studies in design.

ME 721 - Thermal Stresses (3 credits) Prerequisites: vector analysis or ME 616 or equivalent and theory of elasticity or ME 785. Thermoelasticity; reduction of thermoelastic problems to constant temperature equivalents; fundamentals of heat transfer; and elastic and inelastic stress analysis.

ME 725, ME 726, ME 727 - Independent Study I, II, III (3 credits) Prerequisites: written permission from department chairperson plus prerequisite courses prescribed by a supervising faculty member. Areas of study in which one or more students may be interested but which is not of sufficiently broad interest to warrant a regular course offering. A maximum of two independent studies courses may be applied to a degree.

ME 734 - Analysis and Synthesis for Design (3 credits) Prerequisites: ME 616 and ME 620 or ME 610. Fundamental concepts of advanced mathematics and their application to analysis and synthesis of mechanics, electricity, thermodynamics, fluid mechanics, and heat transfer systems and their components.

ME 735 - Advanced Topics in Robotics (3 credits) Prerequisite: ME 625. Introduction to advanced topics and techniques in robotics. Subjects covered include differential kinematics, calibration and accuracy, trajectory control, and compliant motion control as well as an in-depth treatment of topics discussed in ME 625.

ME 736 - Advanced Mechanism Design (3 credits) Prerequisite: ME 636 and ME 616. Advanced methods for the synthesis of mechanisms. Topics include synthesis of planar mechanisms for three, four and five positions, multiloop linkages, change of branch and order problems, and optimal synthesis of mechanisms. Synthesis of linkages for special types of motion including straight line motion, cusp points on coupler curves and adjustable mechanisms.

ME 752 - Design of Plates and Shells (3 credits) Prerequisites: ME 616 or equivalent and ME 620. A study of plates and shells. Mechanical engineering design solutions for typical loading and boundary conditions through analytical and numerical methods. Plate and shell interfaces and vibration are also considered.

ME 754 - Pressure Vessel Design (3 credits) Prerequisites: ME 616 or equivalent and ME 620. Theories in designing pressure vessels; analysis of circular plates; cylindrical and spherical shells; pressure vessel heads; pipe bends; and attachments. Consideration is also given to pressure vessel materials in fatigue and creep designs.

ME 755 - Adaptive Control Systems (3 credits) Prerequisite: ME 655. Theory and application of self-tuning and model reference adaptive control for continuous and discrete-time deterministic systems. Topics include model-based methods for estimation and control, stability of nonlinear systems and adaptive laws. Applications of adaptive control in mechanical systems and manufacturing processes.

ME 776 - Dynamics of Polymeric Liquids (3 credits) Prerequisites: ME 610 and ME 611. An advanced course in fluid dynamics which concentrates on the behavior of polymeric liquids. Topics include constitutive equations of polymeric liquids, fluid dynamics of rheometry and kinetic theory of polymeric fluid dynamics.

ME 785 - Theory of Deformable Solids in Mechanical Engineering I (3 credits) Prerequisites: ME 616 or equivalent and ME 620. Measure of strain; strain tensor; stress tensor; equilibrium equations; constitutive relations; compatibility conditions; conditions for and formulation of three-dimensional problems; and the relationship of engineering theories for beams, plates, and shells to the equations

of elasticity.

ME 786 - Theory of Deformable Solids in Mechanical Engineering II (3 credits) Prerequisite: ME 785. Solutions for problems formulated in ME 785: eigenfunction solutions; operational methods; complex variables theory; three-dimensional problems; contact problems; wave propagation; and non-linear problems.

ME 790 - Doctoral Dissertation (Credits as designated) Required of all students working toward the Doctor of Philosophy in Mechanical Engineering. A minimum of 36 credits is required. The student must register for at least 6 credits of dissertation per semester until 36 credits are reached and for 3 credits each semester thereafter.

ME 791 - Graduate Seminar and Professional Presentations (0 credits) Regular attendance required of all students in the Mechanical Engineering PhD program. Each PhD student is required to make a 15 minute presentation on a topic related to the student's research with an additional 10 minutes to address audience questions. The seminar participants evaluate each speaker.

Effective From: Fall 2006

ME 792 - Pre-Doctoral Research (3 credits) Prerequisite: permission of department chairperson. For students admitted to the doctor of philosophy program in mechanical engineering who have not yet passed the qualifying examination. Research is carried out under the supervision of designated mechanical engineering faculty. If the student's research activity culminates in doctoral research in the same area, up to a maximum of 6 credits may be applied toward the 36 credits required under ME 790.

ME 794 - Mechanical Engineering Colloquium (Non-credit) Prerequisite: graduate standing and major in mechanical engineering. National and international experts in mechanical engineering discuss their recent research. Required of all students enrolled in mechanical engineering graduate degree programs. Students must register in this course for at least two semesters and attend at least four lectures in each semester. All doctoral students and students with assistantships must register in this course each semester and attend regularly.

Mechanics: Offered by the Department of Civil and Environmental Engineering. See [Civil Engineering](#) course list for faculty

UNDERGRADUATE COURSES:

Mech 234 - Engineering Mechanics (2-0-2) Prerequisites: Phys 111, Math 112. A course for industrial and mechanical engineering students in which the equilibrium of particles and rigid bodies subject to concentrated and distributed forces is studied.

Mech 235 - Statics (3-0-3) Prerequisites: Phys 111, Math 112. Provides an understanding of equilibrium of particles and rigid bodies subject to concentrated and distributed forces.

Mech 236 - Dynamics (2-0-2) Prerequisites: Mech 235 (or Mech 234 for IE, ME majors). Provides an understanding of the mathematics of the motion of particles and rigid bodies, and of the relation of forces and motion of particles.

Mech 236H* - Honors Dynamics (2-0-2)** Prerequisites: Mech 234 or Mech 235 and enrolled in the Honors College. Course material similar to Mech 236 except in addition, the student will be involved in a research project.

Mech 237 - Strength of Materials (3-1-3) Prerequisites: Mech 235 (or Mech 234 for IE, ME majors) and a working knowledge of statics with emphasis on force equilibrium and free body diagrams. Provides an understanding of the kinds of stress and deformation and how to determine them in a wide range of simple, practical structural problems, and an understanding of the mechanical behavior of materials under various load conditions. Lab should be taken concurrently

Mech 320 - Statics and Strength of Materials (3-0-3) Prerequisites: Phys 111, Math 112. For chemical engineering and electrical engineering majors. Statics provides an understanding of the equilibrium of particles and rigid bodies, including simple machines, trusses, and frictional forces. Mechanics of materials covers pressure vessels, thermal stresses, torsion of shafts, stresses and deflection in beams, and column action.

Mech 320H - Honors Statics and Strength of Materials (3-0-3)** Prerequisites: Phys 111, Math 112, and enrolled in the Honors College. For chemical engineering, electrical engineering, and biomedical engineering majors. Course material similar to Mech 320 except in addition, the student will design and perform several laboratory tests.

GRADUATE COURSES:

Mech 540 - Advanced Strength of Materials (3 credits) Prerequisite: mechanics of deformable bodies. Topics beyond the scope of elementary mechanics of deformable bodies are studied with particular emphasis on the assumptions, limitations, and applications to actual problems.

Mech 630 - Theory of Elasticity (3 credits) Prerequisite: differential equations. Theory of elasticity as basis for both advanced stress analysis and for a critical examination of elementary stress analysis.

Nursing : Offered by the College of Nursing at Rutgers-Newark

UNDERGRADUATE COURSES:

NURS 301 - Theory and Practice of Professional Nursing (3-0-3) Building on the historical and theoretical foundations of the profession, students explore the theme of health, the continuum of health illness, the sociocultural variations that influence health and response to illness, and the many dimensions of health. Nursing interventions are explored in relation to ethical, social, legal, political, and personal issues as students clarify their own professional identity, responsibility and power.

NURS 302 - Comprehensive Health Assessment (3-0-3) Focuses on total health assessment with differentiation between normal and abnormal findings. The total health assessment content focuses on individuals across the life span. Emphasis is placed on data collection and analysis through history and physical examination.

NURS 304 - Nursing Informatics (4-0-4) Computer applications for nursing. Exposes students to PC-based and mainframe computer systems through computer laboratory and field experiences.

NURS 305 - Adaptations and Alterations in Body Functions (3-0-3) Reviews and extends fundamental concepts of physiology and changes that produce signs and symptoms and the body's remarkable ability to compensate for these illness-related changes. Findings will establish the database for formulating appropriate nursing strategies.

NURS 306 - Pharmacology (2-0-2) Prerequisite or corequisite: NURS 305. Reviews and extends students' previous knowledge of pharmacological science. Explores mechanisms of actions of drugs used to treat various health conditions at the cellular level.

NURS 307 - Epidemiology in Nursing Practice (2-0-2) An introduction to population-based approach to health care. Incorporate information on the etiology and predictors of events in order to design health promotion and disease prevention strategies.

NURS 401 - Patterns of Community Health (3-6-6) Prerequisites: completion of all NURS 300-level courses. Focuses on nursing knowledge and interventions directed to enhance community health for diverse populations. Clinical practicum focusing on clients with diverse needs and in a variety of settings enhances classroom learning.

NURS 402 - Environmental and Occupational Health (4-0-4) Prerequisites: completion of all NURS 300-level courses. Prepares students to assess changes in health status related to the environment or the workplace. Students are provided with the skills needed to evaluate, and recommend control strategies for the phenomena.

NURS 403 - Nursing Care Delivery Systems (3-6-6) Prerequisites: completion of all NURS 300-level courses. Focuses on the professional nurse's leadership and management role within health care systems. The multi-faceted aspects of the role of the nurse as a leader and manager are explored in depth, with emphasis on the role of the nurse as change agent. Includes organizational behavior, decision-making, the change process, the management of health care delivery, and nursing care within health care organizations.

NURS 404 - Research Applications in Nursing Practice (3-0-3) Prerequisites: Completion of all NURS 300-level courses. Prepares students to critically analyze nursing issues from an applied research perspective.

GRADUATE COURSES:

R705:504 - Human Diversity and Social Issues in the Community (3 credits) For more details go to [Rutgers Catalog](#).

R705:534 - Community Health Nursing Theory II (3 credits) For more details go to [Rutgers Catalog](#).

Operations Managment : Offered by the School of Management. See [Management](#) course list for faculty.

UNDERGRADUATE COURSES:

OM 375 - Management Science (3-0-3) Prerequisite: Mgmt 216. Introduction to statistical and mathematical techniques used in management decision making. Develop the concepts of management science and use its techniques with unrestricted focus. Operations management applications are made in factory settings, health-care and other service industries, education and government agencies.

OM 475 - Production Planning and Control (3-0-3) Prerequisites: OM 375, junior or senior standing. The components and functioning of in-production, planning, and control systems. Material, equipment, and labor requirements for optimizing continuous and intermittent manufacturing operations. The use of a computer to simulate such models.

OM 476 - Quality Control (3-0-3) Prerequisites: OM 375, junior or senior standing. Deals with measuring, and improving the performance of the service and/or production processes being managed. Performance assessment is an important component of any management system's excellence. In managing a service-oriented or a manufacturing-based company, performance measurement and analysis should be built into the management processes of identifying and overcoming problems that are central to continuous improvement. The topics include cost analysis, control and improvement, continuous quality improvement, and the other assessment methods for planning and controlling production and service company-wide.

GRADUATE COURSES:

R711:585 - Control Models (3 credits) For more details go to [Rutgers Catalog](#).

Optical Science and Engineering Courses: Offered by the Physics Departments of NJIT and Rutgers-Newark

UNDERGRADUATE COURSES:

OPSE 301 - Introduction to Optical Science and Engineering (3-0-3) Prerequisites: Phys 121. Laboratory and lecture introduces optics and photonics principles with their elementary applications for applied physics, engineering, computer science, or biology majors. Topics include speed of light, reflection, refraction, geometric optics, interference and interferometry, polarization, dispersion, birefringence, fiber-optics, diffraction, introduction to spectroscopy and ray tracing.

OPSE 310 - Virtual Instrumentation (3-3-3) Prerequisites: A 3-credit 100-level CIS programming course (preferably C or C++). Intended for all engineering, computer science, and science majors. Covers the basics of virtual instrumentation including use of IEEE GPIB, RS232 interfaces, and data acquisition boards. Interface a computer to various instruments for data acquisition and instrument control using a state-of-the-art software platform such as National Instrument's LABVIEW. Emphasis is on the practical aspects of interfacing a computer to various instruments including timing issues, real-time data acquisition and instrument control, instrument status, and acquisition speed.

OPSE 402 - High Power Laser and Photonics Applications (3-0-3) Prerequisite: Phys 121. Open to all engineering, computer science, and science majors with junior or senior standing. Advanced combined laboratory and lecture course emphasizing photonics and high power laser applications. Topics include Maxwell's equations, principles of lasers, electro-optics, non-linear optics, absorption and transmission of light, bio-optics, fiber-optic communications, chemiluminescence, scattering from periodic surfaces and colloids, sensors. Topics and experiments change on a semester basis depending on interests of enrolled students.

OPSE 410 - Biophotonics (3-0-3) Prerequisite: Phys 121. An introduction to the interaction of light with biological tissues. Biophotonics for diagnostic and therapeutic applications will be discussed. Topics include propagation of light in turbid tissues, absorption, scattering, laser surgery, and optical rotation.

GRADUATE COURSES:

OPSE 601 - Advanced Topics in Optical Science and Engineering (3 credits) In small groups or as an individual, students conduct three complete research experiments in the available topics of interest, from preliminary background research through data analysis. Use of modern optical research tools under close guidance of faculty and associated research team members in the faculty member's lab.

Philosophy: Offered by the Department of Humanities. See Humanities course list for faculty.

UNDERGRADUATE COURSES:

Phil 300 - Philosophy of Law and Social Justice (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Introduction to philosophical issues concerning law, using lectures and case studies. Topics covered will include: the interpretation of legal texts; the foundation of moral obligation to obey the law; the nature of rights; and the function of punishment

Phil 331 - Problems in Philosophy (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. An examination of problems of a social, ethical, esthetic, religious, and scientific nature, and a study of the related principles and methods of philosophy. Readings are chosen from a wide range of periods and schools from the Greeks to the present, with some application of philosophical analysis to individual and societal problems.

Phil 333 - Moral Philosophy (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. A critical discussion of the history and fundamental elements of ethical thought. Examines topics such as the basic ethical theories, the nature of right and wrong, the significance of moral choice, the structure of the moral life, and the place of reason in ethics. Readings from both classical and modern philosophers.

Phil 334 - Engineering Ethics and Technological Practice: Philosophical Perspectives on Engineering (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents.. A philosophical examination of the nature of engineering practice and applied technology. Considers such questions as: How do the societal functions of engineers and the practical application of technologies relate to basic moral and intellectual values? What moral obligations are implied by the uses of technology? What are the ethical duties of engineers in the practice of their careers? How are technological practice and engineering related to questions about knowledge and reality?

Phil 337 - World Religions (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. An introduction to five world religions which make strong claims to be in some sense universal: Hinduism, Judaism, Buddhism, Christianity, and Islam, with special attention to their impact on contemporary politics, gender, economics, and culture. Study of selected scriptures, major customs, representative figures, and one or two works of art from each religious tradition.

Phil 340 - Ethical Issues in Public Policy (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Course premise is the inevitability of ethical issues in public policy decision making. Societal forces such as government, industry, economics, public interest, and science can play various roles in shaping public policy and are related to ethical concerns. Focuses on both historic and current public policy case studies.

Phil 350 - Representative Philosophies (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. The ideas of a few great thinkers, from a variety of historical periods. Shows at first hand how these philosophers accelerated intellectual progress and how their work may contribute to the solution of modern problems.

Phil 351 - Biomedical Ethics (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. An examination of the ethical problems and moral foundations of medicine. Among the issues explored are the changing nature of the doctor/patient relationship, increased patient autonomy, advance directives, the rationing of care, doctor-assisted suicide, and "the right to die." Honors Note: See HSS 101.

Phil 355 - The Philosophy of Science (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. An investigation into the foundations and implications of modern science, with special emphasis on the influence of philosophy on scientific thought, and on philosophic questions.

Phil 380 - Philosophy of Language (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist

213 or their equivalents. Examines tradition, formation and change in the ways that language shapes thought. Special attention is paid to the relationships between language and religion, as well as language and science.

Physical Education: Offered by the Division of Physical Education and Athletics

UNDERGRADUATE COURSES:

PE 103 - Swim Instruction (0-1-1) Students develop aquatic skills, including various swimming strokes and rescue techniques, according to skill level. Limited to 10 students.

PE 104 - Survival Swimming (0-1-1) Designed for the average, weak or non-swimmer and will emphasize survival swimming, basic rescue and water safety techniques, and swimming instruction.

PE 105 - Lifesaving/Lifeguard Training (0-1-1) An American Red Cross certification course. The purchase of textbooks is required. Laboratory hours are established at first lecture.

PE 106 - Water Safety Instructor (0-1-1) Prerequisite: Valid Advanced Lifesaving certificate. An American Red Cross certification course. The purchase of textbooks is required. Laboratory hours are established at first lecture. Upon successful completion of this course, an individual will be able to teach swimming at all levels as well as emergency water safety.

PE 115 - Strength Training and Conditioning (0-1-1) Covers strength and conditioning techniques and programs, goal setting, and record keeping.

PE 118 - Walking (0-1-1) An approach to cardiovascular fitness and weight reduction. Walking tours may be offered.

PE 119 - Bicycling (0-1-1) Emphasis on preparation for touring and recreational biking. May include some short tours. Students must have their own bikes.

PE 128 - Hydrofitness (0-1-1) Water fitness designed to tone major muscle groups, and strengthen the cardiovascular system. Includes exercises for all parts of the body, recipes for staying in shape, and the aerobic way to a strong heart.

PE 129 - Individualized Fitness (0-1-1) Specific training to meet the individual student's interest. Areas include techniques of strength training, goal setting and record keeping.

PE 131 - Step Aerobics (0-1-1) A high-intensity aerobic workout designed for the moderate to advanced participant using the "Reebok Step" to increase cardiovascular strength and endurance with emphasis on target heart rates, safety, fat reduction, and achieving overall fitness and good health.

PE 132 - Aerobics (0-1-1) Designed for cardiovascular conditioning, weight loss, and muscle toning.

PE 133 - Swim for Health (0-1-1) Prerequisite: must be able to swim. Designed for those who want to use swimming to improve their health and fitness. Swim for Health is a concentrated program which teaches the techniques and methods used in the development of individualized training programs.

PE 135 - Beginning Swimming (0-1-1) Designed for the non-swimmer. Includes survival techniques and basic rescue.

PE 136 - Beginning Karate (0-1-1) An introduction to shotokan karate. Includes basic self-defense. Gi (martial arts uniform) optional.

PE 137 - Intermediate Karate (0-1-1) Prerequisite: PE 136 or permission of the instructor. A continuation of PE 136. Includes an introduction to katas, Japanese terms and complex self-defense. Gi (martial arts uniform) required.

PE 139 - Individual Fitness II (0-1-1) Prerequisite: PE 129 or permission of the instructor. Designed to increase cardiovascular

efficiency, muscular strength, and endurance through specific training that meets a student's continuing goals.

PE 140 - Circuit Training (0-1-1)Designed as a low-impact aerobic program utilizing weights to increase flexibility, coordination, muscle tone, and cardiovascular endurance.

PE 141 - Introduction to Dance (0-1-1)An introduction to several styles of dance, including ballet, modern, jazz, tap, folk, ethnic, and social.

PE 145 - Aerobic Instructor Certification (0-1-1)Prerequisite: approval of the instructor. Preparation for passing the certification test to become an aerobic instructor. Includes aerobic dance and stretching techniques, class format, music, and anatomy and physiology.

PE 146 - Air Force Physical Training I (0-1-1)This is the first of two U.S. Air Force-sponsored physical training courses and is open to AFROTC-enrolled students only. Course activities include conditioning, exercises, calisthenics, a 1.5 mile run, Air Force sports, Warrior Runs, a Physical Fitness Diagnostic, and a Physical Fitness Assessment. **Effective From: Fall 2005**

PE 201 - Introduction to Lifetime Sports I (0-1-1)Offered only in the fall semester, introduces a variety of the individual, dual, and team sports available at NJIT.

PE 202 - Lifetime Sports II (0-1-1)A continuation of PE 101. Participate in a variety of activities or develop an area(s) of concentration.

PE 208 - Sports for Women (0-1-1)Designed specifically for women interested in learning and competing in individual, dual and team sports.

PE 210 - Skiing (0-1-1)Instruction and practical experience in recreational skiing designed for the novice and intermediate skier. Includes lectures on safety, equipment and clothing, first aid and injuries, tuning and repair; six sessions at Hidden Valley, and possibly one weekend trip to Vermont. Students are responsible for costs of lift tickets and any equipment rentals. Transportation may be provided.

PE 211 - Introduction to Bowling and Archery (0-1-1)The rules, techniques and scoring of each sport. Archery equipment is provided. For bowling, students must pay a \$1 per class alley fee.

PE 213 - Volleyball (0-1-1)Learn current techniques and skills while playing triples (3 on 3) and leading up to competitive team (6 on 6) volleyball.

PE 214 - Advanced Volleyball (0-1-1)Prerequisite: PE 113 or approval of the instructor. Advanced methods and techniques of spikes, serves, blocks, sets, team transition, strategy, tournament play, statistics, and videotape analysis.

PE 220 - Introduction to Racquet Sports (0-1-1)An introduction to the racquet sports of badminton, paddleball, tennis, and racquetball. Includes rules of play, service, strokes, and playing strategy for singles and doubles.

PE 221 - Badminton (0-1-1)Includes the rules, skills, strokes, and strategies of badminton, and provides an opportunity for competition.

PE 223 - Tennis for Beginners (0-1-1)Introduces students to the rules and basic techniques and strategies of tennis.

PE 224 - Intermediate Tennis (0-1-1)Prerequisite: PE 223 or permission of the instructor. Emphasizes correcting problem strokes, strategies, drills, and tournament play.

PE 225 - Golf (0-1-1)Designed for the beginner. Areas covered are grip, stance, swing, strokes, and use of clubs, progressing towards actual course play. Students pay green and range fees.

PE 226 - Intermediate Golf (0-1-1)Prerequisite:PE 225 or permission of the instructor. Designed to strengthen and advance the skills and theory learned in PE 125.

PE 227 - Sailing and Windsurfing (0-1-1)Learn the basics of small boat sailing and windsurfing. Includes principles of sailing, rules of the road and boat maintenance with practical experience at Spruce Run Reservoir. Transportation may be provided.

PE 234 - Beginning Fencing (0-1-1)Introduces fencing as both a lifetime and intercollegiate sport. Basic equipment is provided.

PE 242 - Introduction to Racquetball (0-1-1)An introduction to rules, skill development, strategies and tournament play.

PE 243 - Introduction to Volleyball (0-1-1)An introduction to rules, skill development, strategies, and tournament play.

PE 244 - Advanced Racquetball (0-1-1)Prerequisite: PE 242 or permission of the instructor. Advanced methods and techniques of various serves; passing, and kill shots; advanced strategy; tournament play focusing on singles and doubles play.

PE 246 - Air Force Physical Training II (0-1-1)This is the second of two U.S. Air Force-sponsored physical training courses and is open to AFROTC-enrolled students only. Course activities include conditioning, exercises, calisthenics, a 1.5 mile run, Air Force sports, Warrior Runs, a Physical Fitness Diagnostic, and a Physical Fitness Assessment. **Effective From: Fall 2005**

Phys 106W - Physics B Workshop (0-1-0)Workshop for Phys 106 B.

Pharmaceutical Engineering: Offered by the Department of Chemical Engineering.

GRADUATE COURSES:

PhEn 500 - Pharmaceutical Engineering Fundamentals I (3 credits) Prerequisite: undergraduate calculus. This is a required bridge course for those students who are admitted to the Pharmaceutical Engineering MS program without an undergraduate engineering degree. This course is not counted toward degree credit related to the Pharmaceutical Engineering MS program. The course covers the fundamentals of calculus, differential equations, probability and statistics, and finance business mathematics applied to pharmaceutical engineering problems and illustrated through pharmaceutical engineering examples.

PhEn 501 - Pharmaceutical Engineering Fundamentals II (3 credits) Prerequisite: If needed, PhEn 500 (which can also be taken concurrently with this course), as well as an undergraduate course in physical chemistry. This course is a required bridge course for those students who are admitted to the Pharmaceutical Engineering MS program without an undergraduate engineering degree or with an engineering background that did not include the topics covered in this course. The course is not counted toward degree credit related to the Pharmaceutical Engineering MS program. The course covers the fundamentals of pharmaceutical engineering calculations related to material and energy balances applied to pharmaceutical facilities and systems; estimation of thermophysical properties, phase and reaction equilibrium; and chemical kinetics and basic reactor design.

PhEn 502 - Pharmaceutical Engineering Fundamentals III (3 credits) Prerequisite: If needed, PhEn 500 and PhEn 501, as well as undergraduate course in physical chemistry. This is a required bridge course for those students who are admitted to the Pharmaceutical Engineering MS program without an undergraduate engineering degree or with an engineering background that did not include the topics covered in this course. The course is not counted toward degree credit related to the Pharmaceutical Engineering MS program. The course covers the fundamentals of fluid mechanics, heat transfer, mass transfer and the design of unit operations involving these principles.

PhEn 590 - Graduate Co-op Work Experience I (3 additive credits) Prerequisite: permission from Pharmaceutical Engineering Program Advisor and Division of Career Development Services. Cooperative education internship provides on-the-job reinforcement of the academic program by placement in major-related work situations at pharmaceutical companies or companies serving the pharmaceutical industry. Work assignment developed or approved by the co-op office and evaluated by the department. Cannot be used for degree credit.

PhEn 591 - Graduate Co-op Work Experience II (3 additive credits) Prerequisite: permission from Pharmaceutical Engineering Program Advisor and Division of Career Development Services. Same range of activities as in PhEn 590.

PhEn 592 - Graduate Co-op Work Experience III (3 additive credits) Prerequisite: permission from Pharmaceutical Engineering Program Advisor and Division of Career Development Services. Same range of activities as in PhEn 590 and PhEn 591.

PhEn 593 - Graduate Co-op Work Experience IV (0 credits) Prerequisites: One immediately prior 3-credit registration for graduate co-op work experience with the same employer. Requires approval of departmental co-op advisor and the Division of Career Development Services. Must have accompanying registration in a minimum of 3 credits of course work. **Effective From: Fall 2006**

PhEn 601 - Principles of Pharmaceutical Engineering (3 credits) This course provides an overview of the pharmaceutical industry, including basic information about drug discovery and development, FDA requirements and approval processes, drug dosage forms, and the role of key operational units in drug manufacturing processes. This course enables the students to: understand the role of the pharmaceutical industry in the global market and its implications; learn the fundamentals of the drug development cycle and the investment required to bring a drug to market; learn the most important drug manufacturing processes and the key elements of dosage formulation.

PhEn 602 - Pharmaceutical Facility Design (3 credits) Prerequisite: PhEn 601, PhEn 603; undergraduate courses in differential equations and fluid flow or completion of bridge program for students who are required to take it. This course provides instruction in design of state-of-the art pharmaceutical facilities for both manufacturing and R&D, by identifying key functional requirements and

design concepts necessary to pharmaceutical processes. Interdisciplinary training will be provided in appropriate areas of facility design.

PhEn 603 - Pharmaceutical Unit Operations: Processing of Liquid and Dispersed Phase Systems (3 credits) This course examines methodologies, both applied and fundamental, to analyze and scale up manufacturing pharmaceutical processes involving liquid and dispersed-phase systems, such as liquid and multiphase mixing, sterilization and sanitation, lyophilization, filtration, centrifugation and others. The emphasis is primarily on the engineering aspects of the pharmaceutical processes examined in the course. **Effective From: Fall 2006**

PhEn 604 - Validation and Regulatory Issues in the Pharmaceutical Industry (3 credits) This course is focused on the development of a working knowledge of the Federal Code of Regulations and its impact on the pharmaceutical and allied industries. The history of the Federal Government's regulation of the pharmaceutical industry is studied. Also covered is the industry's response and the methodologies it uses to comply with these regulations.

PhEn 605 - Pharmaceutical Packaging Technology (3 credits) Prerequisite: PhEn 601, PhEn 603, and completion of the bridge program for students who are required to take it. This course focuses on developing a working knowledge of the machinery and unit operations used in transferring a drug substance in the bulk final form to a finished product ready for sale to the consuming public. Packaging of both liquid and solid forms in various types of delivery containers such as vials/ampoules, blister packs, individual packets, bottles, pouches and syringes is examined. The cleaning, sterilization and scaling/capping required for each dosage form is discussed, as well as freeze-drying, tableting capsule filling, and form/fill/seal, and proper labeling of final drug forms.

PhEn 606 - Pharmaceutical Unit Operations: Solids Processing (3 credits) This course examines methodologies, both applied and fundamental, to analyze and scale up manufacturing pharmaceutical processes involving solids processing, such as solids characterization, blending, milling, granulation, tableting, coating, and others. The emphasis is primarily on the engineering aspects of the pharmaceutical processes examined in the course.

PhEn 612 - Pharmaceutical Reaction Engineering (3 credits) Prerequisite: PhEn 601, PhEn 603; undergraduate courses in differential equations and chemical engineering kinetics, or completion of bridge program for students who are required to take it. This course examines a variety of reactions and reactors typically encountered in the pharmaceutical industry, including single/multiphase systems (e.g., crystallization), chemical synthesis, enzymatic, bio-reactions (fermentation), and others. The course then focuses on quantitative pharmaceutical reactor design and scale-up issues.

PhEn 614 - Pharmaceutical Separation Processes (3 credits) This course covers separation processes in general and pharmaceutical separations in particular. Specific processes to be studied include distillation, extraction, crystallization, adsorption, ion exchange, chromatography, moving bed processes, electrophoresis, freeze drying, microfiltration/ultrafiltration, reverse osmosis, and pervaporation.

PhEn 618 - Principles of Pharmacokinetics and Drug Delivery (3 credits) The course covers the basic principles of pharmacokinetics, including drug transport, parenteral and enteral routes of drug administration, and factors affecting drug absorption, distribution, metabolism, and excretion. Mathematical pharmacokinetic models and drug delivery processes are also presented and quantitatively studied.

PhEn 698 - Special Topics in Pharmaceutical Engineering I (3 credits) Prerequisite: graduate standing and permission of the instructor. Topics of current interest in pharmaceutical engineering.

PhEn 699 - Special Topics in Pharmaceutical Engineering II (3 credits) Prerequisite: graduate standing and permission of the instructor. Topics of current interest in pharmaceutical engineering.

PhEn 700 - Master's Thesis (3 credits) Prerequisite: matriculation for the Master's degree in pharmaceutical engineering. Approval of thesis advisor is necessary for registration. Original research under the guidance of a departmental advisor. The final product must be a written thesis approved by at least three faculty members: the primary advisor, another from the pharmaceutical engineering faculty, and one other faculty member. A student must continue to register for at least 3 credits per semester until at least 6 credits have been completed and a written thesis is approved. Only a total of 6 credits will count toward the degree.

PhEn 701 - Master's Thesis (6 credits) Prerequisite: matriculation for the Master's degree in pharmaceutical engineering. Approval of thesis advisor is necessary for registration. Original research under the guidance of a departmental advisor. The final product must be a written thesis approved by at least three faculty members: the primary advisor, another from the pharmaceutical engineering faculty, and one other faculty member. A student must continue to register for at least 3 credits per semester until at least 6 credits have been completed and a written thesis is approved. Only a total of 6 credits will count toward the degree.

PhEn 702 - Selected Topics in Pharmaceutical Engineering (3 credits) Prerequisite: graduate standing and permission of the instructor. Topics of current interest in pharmaceutical engineering.

PhEn 725 - Independent Study (3 credits) Prerequisites: permission from the graduate advisor (not the thesis advisor) in pharmaceutical engineering, as well as courses prescribed by a supervising faculty member (who is not the student's thesis advisor). This special course covers areas of study in which one or more students may be interested, but which is not of sufficiently broad interest to warrant a regular course offering. Students may not register for this course more than once with the same supervising faculty member.

PhEn 791 - Graduate Seminar (non-credit) Required, when offered, of all pharmaceutical engineering graduate students receiving departmental or research-based awards. The student must register each semester until completion of the degree, if the Graduate Seminar is offered. Outside speakers and department members present their research for general discussion.

Physics: Offered by the Physics Departments of NJIT and Rutgers-Newark

UNDERGRADUATE COURSES:

Phys 102 - General Physics (3-0-3) Prerequisite: satisfactory completion of two high school mathematics courses and two high school science courses. Intended for students in architecture, computer science (B.A. only), STS and other disciplines requiring laboratory science electives. Elementary statics and dynamics. Subjects discussed are kinematics, Newton's laws of motion, energy, momentum, conservation principles, and mechanical properties of matter. Lab must be taken concurrently.

Phys 102A - General Physics Laboratory (0-2-1) Prerequisite: same as Phys 102. This course is the laboratory component of Phys 102 and must be taken concurrently.

Phys 103 - General Physics (3-0-3) Prerequisite: Phys 102. A continuation of Phys 102 for students in architecture, computer science (B.A. only), STS and other disciplines requiring laboratory science electives. Topics discussed are heat, thermodynamics, sound, wave motion, illumination, geometric and physical optics, and color. Lab must be taken concurrently.

Phys 103A - General Physics Laboratory (0-2-1) Prerequisite: same as Phys 103. This course is the laboratory component of Phys 103 and must be taken concurrently.

Phys 105 - Physics A (3-0-3) Corequisite: Math 103. First semester of a two-semester sequence with Phys 106. The sequence is equivalent to Phys 111. Placement is determined by performance on standardized entrance examinations. A study of elementary mechanics with emphasis on the fundamental laws of mechanics and conservation laws. Topics include scalar and vector quantities, rectilinear motion, equilibrium and Newton's laws of motion, friction, work and energy, impulse, and momentum. Lab must be taken concurrently.

Phys 105A - Physics A Laboratory (0-2-1) Placement in this course is determined by performance on standardized entrance examinations. This course is the laboratory component of Phys 105 and must be taken concurrently.

Phys 105W - Physics A Workshop (0-1-0) Workshop for Physics 105A.

Phys 106 - Physics B (3-0-3) Prerequisite: Phys 105. Corequisite: Math 104. Second semester of a two-semester sequence with Phys 105. An extension of Phys 105 in the area of mechanics. Topics include rotational motion, torque, inertia and angular momentum, static equilibrium, gravity, and a full review of mechanics at the level equivalent to Phys 111. Lab must be taken concurrently.

Phys 106A - Physics B Laboratory (0-2-1) Prerequisite: same as Phys 106. This course is the laboratory component of Phys 106 and must be taken concurrently.

Phys 111 - Physics I (3-0-3) Corequisite: Math 111. Elementary mechanics with an emphasis on the fundamental concepts and laws of mechanics, especially the conservation laws. Topics are scalar and vector quantities of mechanics; rectilinear and circular motion; equilibrium and Newton's laws of motion; work, energy, momentum; the conservation laws. Lab must be taken concurrently. See Phys 111A.

Phys 111A - Physics I Laboratory (0-2-1) Prerequisite: same as Phys 111. Laboratory component of Phys 111 and Phys 111H. Lab must be taken concurrently with Phys 111 or Phys 111H.

Phys 111H - Honors Physics I (3-0-3) Corequisite: Math 111. Admission to this course is by invitation, based on class standing and standardized entrance exams. First semester of a three-semester program in Honors Physics. Covers the material in Phys 111, but topics are treated more comprehensively and in greater depth. More extensive use of mathematics. Lab must be taken concurrently. See Phys 111A.

Phys 111W - Physics I Workshop (0-1-0) Workshop for Phys 111.

Phys 121 - Physics II (3-0-3) Prerequisites: Phys 111 or Phys 111H; Math 111. This course deals with an introduction to electricity and magnetism. Topics include simple dc circuits, the electric field, the magnetic field, electric potential, capacitance relationships between electric and magnetic fields, inductance, and simple ac circuits. Lab must be taken concurrently. See Phys 121A.

Phys 121A - Physics II Laboratory (0-2-1) Prerequisite: same as Phys 121. Laboratory component of Phys 121 and Phys 121H. Lab must be taken concurrently with Phys 121 or Phys 121H.

Phys 121H - Honors Physics II (3-0-3) Prerequisites: Phys 111 or Phys 111H; Math 111. This is the second semester of a three-semester program in Honors Physics. The course covers the material given in Phys 121. Greater use is made of vector analysis. In addition, an introduction to Maxwell's equations for the electromagnetic field and their application to physical problems is given. Lab must be taken concurrently. See Phys 121A.

Phys 202 - Introductory Astronomy and Cosmology (3-0-3) A non-mathematical presentation of contemporary views of the origin, evolution, and structure of the solar system, stars, galaxies, and the universe. Special topics include neutron stars, black holes, gravitationally strange objects, and the "big bang."

Phys 202A - Astronomy and Cosmology Laboratory (0-2-1) Corequisite: Phys 202. Includes demonstration of physical principles applicable to astronomy. Use of telescope for lunar, solar and planetary observations.

Phys 203 - The Earth in Space (3-0-3) Introduces fundamental phenomena, such as plate tectonics, erosion, volcanism, and glaciation. Studies the interaction between the Earth's four major reservoirs—atmosphere, hydrosphere, biosphere and solid earth; investigates the dependence of the Earth on the Sun; the effect of the Moon on the Earth. Extends knowledge gained from studying the Earth to other planets in this solar system.

Phys 203A - The Earth in Space Laboratory (0-2-1) Corequisite: Phys 203. Optional laboratory course associated with Phys 203.

Phys 204 - Concepts in Physics (3-0-3) This course is intended for B.S. in Management students. BSET students may take this course with permission of advisor. A survey course in physics emphasizing fundamentals in mechanics, heat, sound, light, electricity, and modern physics. Special emphasis given to the nature of scientific analysis and the physics underlying modern technologies. Lab must be taken concurrently.

Phys 231A - Physics III Laboratory (0-2-1) Prerequisite: same as Phys 234. Laboratory component of Phys 234 and Phys 231H.

Phys 231H - Honors Physics III (4-0-4) Prerequisites: Phys 121 or Phys 121H; Math 111. Third semester of a three-semester program in Honors Physics. Physical optics is treated in greater detail. Modern physics includes a greater number of topics, with special emphasis on the wave-particle duality in nature. Lab must be taken concurrently. See Phys 231A.

Phys 233 - Physics III (3-0-3) Prerequisite: Phys 121. Intended for students in chemical engineering only. Topics include elements of simple harmonic motion, wave motion, interference and diffraction, quantum mechanics, semiconductor models, carrier distribution, Fermi functions, and selected topics. **Effective From: Spring 2002**

Phys 234 - Physics III (3-0-3) Prerequisite: Phys 121 or Phys 121H. Elements of simple harmonic motion, wave motion, geometric and physical optics are considered. The wave and particle duality of nature is emphasized and made plausible by an examination of the important experiments and theories which lead to the modern concepts of matter and radiation. The conservation laws are broadened to include the equivalence of mass and energy.

Phys 235 - Physics III (4-0-4) Prerequisites: Phys 121 and 121A. Intended for students in computer engineering. Topics include simple harmonic motion, wave motion, interference and diffraction, photons, electrons, and the wave particle duality. Thermodynamics and heat transfer are introduced.

Phys 310 - Introduction to Atomic and Nuclear Physics (3-0-3) Prerequisites: Physics III; Math 222. Selected topics in atomic physics including the Pauli Exclusion Principle and the Atomic Shell Model. In nuclear physics, the two-body problem, nuclear models, alpha, beta, and gamma radiation, accelerators, and nuclear detectors are studied. 21&62:750:403 may be substituted for this course.

Phys 311 - Co-op Work Experience I (3 credits) Prerequisite: acceptance into the co-op program. Students gain major-related

experience and reinforcement of the academic program. Work assignments are facilitated and approved by the Office of Cooperative Education and Internships. Participation in seminars and a final report/project is mandatory.

Phys 320 - Astronomy and Astrophysics I (3-0-3) Prerequisites: Phys 103 or Phys 121 or Phys 121H. A quantitative introduction to the astronomy of the sun, earth, and solar system, with an emphasis on the physical principles involved. Includes celestial mechanics, planetary atmospheres and the physics of comets, asteroids and meteorites.

Phys 321 - Astronomy and Astrophysics II (3-0-3) Prerequisite: Phys 320 or by permission of the instructor. A quantitative introduction to the astronomy of the stars, the galaxy, and cosmology, with an emphasis on the physical principles involved. Includes stellar interiors, stellar evolution, galactic dynamics, large-scale structure and early history of the universe.

Phys 322 - Observational Astronomy (3-0-3) Prerequisite: Phys 320 or by permission of the instructor. Most class time is spent in an observatory performing observations of celestial objects such as the Sun, Moon, planets, stars, stellar clusters, and galaxies. Experimental projects include charting the skies, astrophotography (film and CCD), measuring masses of planets, rotational period of the Sun, topography of the Moon, H-R diagrams of stellar clusters, etc.

Phys 335 - Introductory Thermodynamics (3-0-3) Prerequisite: Physics III. Introductory thermodynamics, kinetic theory, statistical physics. Topics include equations of state, the three laws of thermodynamics, reversible and irreversible processes. 21&62:750:315 may be substituted for this course.

Phys 390 - Selected Topics of Current Interest in Physics (1-0-1) Prerequisite: Physics III. Seminar covering topics that are currently in the forefront of physics. The lecture series offers exposure to such topics as nuclear physics, solid state physics, plasma physics, the special and general theories of relativity, and the history and philosophy of science.

Phys 411 - Co-op Work Experience II (3 credits) Prerequisites: Phys 311 and acceptance into the co-op program. Provides for co-op work assignments which must be approved by the Office of Cooperative Education and Internships. Participation in seminars and a final -report/project are mandatory.

Phys 418 - Fundamentals of Optical Imaging (2-2-3) This is a course with both lectures and experiments and the emphasis is on the hands-on experiences. Upon completion of the course, students should not only grasp the basic concepts involved in imaging science, but also be able to work on simple real world imaging systems. The main content of the lecture part of this course can be summarized as the following: Optical sources, detectors and their working mechanism; Image formation and transmission; Optical imaging system and their characteristics; Imaging processing and algorithms. This course is developed in close collaboration with Edmund Optics Inc. **Effective From: Fall 2006**

Phys 420 - Special Relativity (3-0-3) Prerequisites: Phys 234 or by permission of the instructor. An introduction to Einstein's Special Theory of Relativity at the advanced undergraduate level. Topics include invariance of the speed of light, relativity of time and space, the Lorentz transformations, space-time diagrams, the twin paradox and time travel, relativistic mechanics, rotating reference frames, laser gyroscopes, superluminal motion, phase and group velocities, and applications in high-energy physics, relativistic engineering, nuclear physics, astrophysics, and cosmology.

Phys 421 - General Relativity (3-0-3) Prerequisites: Phys 234 or by permission of the instructor. An introduction to Einstein's General Theory of Relativity at the advanced undergraduate level. Topics include review of Newton's Theory of Gravitation, review of Einstein's Special Theory of Relativity, tensor calculus on both flat and curved manifolds, the covariant derivative, curvature, Einstein's Gravitational Field Equations, the weak-field limit, gravitational radiation, the black hole solution, Hawking radiation, the No-Hair Theorem, cosmology, and a history of the Universe.

Phys 430 - Classical Mechanics I (3-0-3) Prerequisites: Phys 233 or Phys 234 or Phys 235 or 231H; Math 222. Newtonian mechanics of particles and systems. Lagrange's and Hamilton's approaches. Continuous systems. 21&62:750:361 may be substituted for this course.

Phys 431 - Classical Mechanics II (3-0-3) Prerequisite: Phys 430. Continuation of Phys 430. Theory of small oscillations and mechanical waves. Rigid bodies. Topics include stability, linearization methods, forced vibrators and perturbation theory, fluids and mechanics of continuous media. 21&62:750:362 may be substituted for this course.

Phys 432 - Electromagnetism I (3-0-3) Prerequisites: Physics III; Math 222. Electrostatics and magnetostatics, Maxwell's equations with applications, and electrodynamics.

Phys 433 - Electromagnetism II (3-0-3) Prerequisite: Phys 432. Continuation of Phys 432. Maxwell's equations with applications and

electrodynamics.

Phys 441 - Modern Physics (3-0-3) Prerequisites: Physics III; Math 222.. Topics include wave-particle duality, wave mechanics, two-state quantum systems, the motion of an electron in a periodic lattice, band theory of solids, electrical, thermal and magnetic properties of solids, and plasmas and super fluid systems. 21&62:750:316 may be substituted for this course.

Phys 442 - Introduction to Quantum Mechanics (3-0-3) Prerequisites: Physics III; Math 222. Wave-particle duality, the Schrodinger and Heisenberg formulations of quantum mechanics. The hydrogen atom, perturbation theory, and concepts of degeneracy, composite states and general properties of eigenfunctions. 21&62:750:404 may be substituted for this course.

Phys 443 - Modern Optics (3-0-3) Prerequisites: Physics III; Math 222.. Electromagnetic theory of light, interference, diffraction, polarization, absorption, double refraction, scattering, dispersion, aberration, and an introduction to quantum optics. Other topics include holography, lasers, information retrieval, spatial filtering, and character recognition. **Effective Until: Spring 2006**

Phys 444 - Fluid and Plasma Dynamics (3-0-3) Prerequisites: Physics III; Math 222. Introduces the basics of plasma physics. Covers the following plasma parameters, single particle motions, plasma as fluid, waves, diffusion and resistivity, equilibrium and instability, kinetic theory, nonlinear effects. Applications in three areas: controlled fusion, astrophysics, and interaction between light and plasma.

Phys 446 - Solid State Physics (3-0-3) Corequisite: Phys 441 or Phys 442. An introduction to modern concepts of the solid state. Topics include crystal structure and diffraction, crystal binding and elastic properties, thermal properties, dielectric phenomena, band theory of solids and Fermi surfaces, electrical conductors, semiconductors, magnetism, and super-conductivity. 21&62:750:406 may be substituted for this course.

Phys 448 - Semiconductor Physics (3-0-3) Prerequisite: Physics III. The physics of semiconductors is examined and applied to problems of interest to the engineer. The course includes the following topics: the band theory of solids, conduction in solids, hole and electron statistics, and P-N junction theory with emphasis placed upon low-level and high-level injection. Metal semiconductor contacts and P-N-P transistor theory are also discussed.

Phys 450 - Advanced Physics Laboratory (1-4-3) Prerequisites: permission of the instructor. Introduction to electrical measurements; instrumentation; theoretical and applied electronics, solid state electronic devices, digital circuitry; computer design; experiments in modern physics.

Phys 452 - Atomic and Nuclear Physics (3-0-3) Prerequisites: Physics III; Math 222. Topics include atomic spectra, atomic structure, and nuclear physics.

Phys 456 - Introduction to Solid State Physics (3-0-3) Prerequisites: Physics III; Math 222. Treats the same topics as Phys 446 while introducing the necessary modern physics. Designed for students choosing a minor in applied physics. Students majoring in applied physics are ineligible.

Phys 461 - Mathematical Methods of Theoretical Physics (3-0-3) Prerequisites: Phys 430, Phys 432, Phys 433. Topics include vector and tensor analysis, matrix methods, complex variables, Sturm-Liouville theory, special functions, Fourier series and integrals, integral equations, and numerical solutions of differential equations.

Phys 481 - Applied Solid State Physics: Microelectronics I (3-0-3) Prerequisite: Phys 446 or Phys 456. Not to be taken if EE 463 has been taken. Topics include physics of bipolar and field effect devices, Phonon and optical spectra, unipolar devices, and thermal and high field properties of semiconductor devices.

Phys 482 - Applied Solid State Physics: Microelectronics II (3-0-3) Prerequisite: Phys 446 or Phys 456. Not to be taken if EE 463 has been taken. Topics include large-scale integrated circuits, device characteristics, charge-coupled devices, LED and semiconductor lasers, photodetectors, and electrical and optical properties of materials.

Phys 483 - Applied Solid State Physics (0-6-3) Prerequisite: Phys 446 or Phys 456. Introduction to digital concepts; binary circuits and microprocessor architecture. Applications of discrete solid-state devices and integrated circuits are explored both in theory and practice. The laboratory also serves as an introduction to hardware and software components of a typical microcomputer.

Phys 485 - Computer Modeling of Applied Physics Problems (3-0-3) Prerequisites: Physics III; Math 222. General computer programming modeling methods and techniques. Numerical solutions to integro-differential equations. Eigenvalues problems. Application of computer-aided-design and other packages. 21&62:750:461 may be substituted for this course.

Phys 490 - Independent Study (3-0-3) Prerequisite: departmental approval. Undertake individual research or a project under the supervision of a member of the physics department. 21&62:750:485, 486 may be substituted for this course.

Phys 490H - Honors Independent Study (3-0-3) By arrangement with a physics faculty member. Fulfills Honors College capstone course requirement.

R750:315 - Introductory Thermodynamics (3) For more details go to [Rutgers Catalog](#).

R750:316 - Introduction to Modern Physics (3) For more details go to [Rutgers Catalog](#).

R750:333 - Applications of Mathematics to Physics (3) For more details go to [Rutgers Catalog](#).

R750:493 - Readings in Physics (BA,BA) For more details go to [Rutgers Catalog](#).

GRADUATE COURSES:

Phys 555 - Physics Laboratory Techniques (3 credits) Prerequisite: B.S. or B.A. with course emphasis in a pure science or major engineering discipline. A training workshop in principles in mechanics, electricity and magnetism, wave motion, geometric and physical optics, and modern physics; experiments involving hands-on use of laboratory apparatus to solve numerous practical physics problems.

Phys 593 - Graduate Co-op Work Experience IV (0 credits) Prerequisites: One immediately prior 3-credit registration for graduate co-op work experience with the same employer. Requires approval of departmental co-op advisor and the Division of Career Development Services. Must have accompanying registration in a minimum of 3 credits of course work. **Effective From: Fall 2006**

Phys 601 - Mechanics I (3 credits) Concepts and basic methods for the treatment of equilibrium and accelerated motion; Newton's Laws and the Free Body Diagram applied to problems in statics and dynamics; vectors, vector quantities, and their application in mechanics.

Phys 602 - Mechanics II (3 credits) Prerequisite: Phys 601 or equivalent. Laws of conservation of energy and conservation of momentum in work and energy, power, impulse and momentum, collisions, recoil, and rocket propulsion. Angular motion, torque, moment of inertia, work and energy in rotational motion, and the application of Newton's laws and the law of conservation of angular momentum to problems in rotational dynamics are studied.

Phys 603 - Electricity and Magnetism I (3 credits) Prerequisite: Phys 602 or equivalent. Electric charge, electric field, Gauss's law, electric potential, potential energy difference, current, resistance, and emf are studied. Also considers the law of conservation of charge and Kirchoff's laws, direct current circuits and instrumentation. Class includes demonstration lectures, related supervised computation problems, and recitations.

Phys 604 - Electricity and Magnetism II (3 credits) Prerequisite: Phys 603 or equivalent. Magnetic field, force on moving charges, force on current-carrying conductor, and torque on a current-carrying coil; the Hall effect, magnetic field due to moving charges, induced emf, Faraday's and Lenz's laws, mutual and self-inductance, R-L, L-C, and R-L-C circuits, ferromagnetism and permanent

magnets. Also considers alternating currents, circuits with resistance, inductance, and capacitance, average and RMS values, phasors, power, resonance, and transformers. Class includes demonstration lectures, supervised computation problems, and recitation.

Phys 607 - Topics in Astronomy and Cosmology (3 credits) Prerequisites: college-level physics and mathematics. A survey of recent progress in astronomy, the physical principles involved, and the impact these new discoveries have on our understanding of the universe. Includes results from recent and ongoing planetary probes of our solar system, discovery of planetary systems around other stars, the evolution of stars, exotic objects such as neutron stars and black holes, the formation of galaxies, and current understanding of the birth and final fate of the universe. Observing sessions familiarize students with the sun, moon, and night sky.

Phys 687 - Physics of Materials (3 credits) Prerequisite: Phys 441 or equivalent (see undergraduate catalog for description). Fundamentals of quantum mechanics; energy bands in crystals; electrical conduction in metals and alloys, semiconductors; optical properties of materials; quantum mechanical treatment of optical properties; magnetic properties of materials; thermal properties, heat capacity, and thermal expansion in solids.

Phys 688 - Mathematical and Statistical Methods in Materials Science (3 credits) More emphasis on analytical methods and statistics. Course will be required for Ph.D. students in Materials Science. **Effective From: Fall 2006**

Phys 700 - Master's Project (3 credits) Prerequisite: Written approval from graduate advisor. For students admitted to the Master of Science program in applied physics who do not take Phys 701 Master's Thesis. An extensive paper involving experimental or theoretical investigation of a topic in microelectronics or other applied physics area is required. Cooperative projects with industry or government agencies may be acceptable. The project is carried out under the supervision of a designated physics graduate faculty member.

Phys 701 - Master's Thesis (3 credits) Prerequisite: Written approval from graduate advisor. For students admitted to the Master of Science program in applied physics. Experimental or theoretical investigation of a topic in microelectronics or other applied physics area. Cooperative projects with industry or government agencies may be acceptable. The thesis is written under the supervision of a designated physics graduate faculty member. The completed written thesis should be of sufficient merit to warrant publication in a scientific or technical journal. The student must register for a minimum of 3 credits per semester. Degree credit is limited to 6 credits indicated for the thesis.

Phys 725 - Radio Astronomy (3 credits) Prerequisites: Phys 621 and 641 or the equivalent, or approval of the instructor. An introduction to radio emission processes, radiative transfer, radio diagnostics, and radio instrumentation. Topics include radio flux measurements with single antenna, radio imaging with interferometer arrays (Fourier Transform imaging), and image reconstruction techniques (CLEAN, MEM). Application is to astronomical objects with special emphasis on the Sun.

Phys 790 - Doctoral Dissertation and Research (Credits as designated, 1st and 2nd sem.) Prerequisites: passing grade on departmental qualifying examination and approval of doctoral candidacy. Corequisite: Phys 791. A minimum of 36 credits is required. The student must register for at least 6 credits of dissertation per semester. Registration for additional credits, up to 12 per semester, is permitted with the approval of the department graduate advisor. Experimental or theoretical investigation of a topic in applied physics, including microelectronics, materials science, and laser physics. Cooperative projects with industry or government agencies may be acceptable. Research and writing are carried out under the supervision of a designated graduate faculty member. The completed written dissertation should be a substantial contribution to the knowledge of the topic under research, and should be of sufficient merit to warrant publication in a leading scientific or technical journal.

Professional and Technical Communication:

GRADUATE COURSES:

PTC 599 - University Teaching Methods/Communication Skills (3 credits) Provides ideas, strategies, and techniques to help teaching assistants with their teaching assignments and to enhance their professional communication and interpersonal skills. Includes practical information on classroom management, the culture of the American classroom, diversity issues, and leadership skills. **Effective From: Spring 2006**

PTC 601 - Advanced Professional and Technical Communication (3 credits) Provides the foundation and direction for all Professional and Technical Communication coursework. This course introduces students to the profession and the academic discipline of technical/professional communication. Modules include bibliographic research; usability analysis; working in teams; report writing; visual thinking; communicating with new technologies; and technical writing style. **Effective From: Spring 2006**

PTC 603 - Cultural and Technological Change (3 credits) Prerequisite or corequisite: PTC 601. Examines the complex ways in which technology constructs and is constructed by society, with emphasis on interrelationships between technology and communication. Discussions focus on how technological change is expressed in social and political movements, literature, art, architecture, and philosophy and how they, in turn, influence the future direction of technology. **Effective From: Spring 2006**

PTC 604 - Communication Theory and Research (3 credits) Prerequisite or corequisite: PTC 601. Reviews the major theories of communication and provides strategies for research in the field of Professional and Technical Communication. The course focuses on these research methods: problem statement and hypothesis formulation derived from theory; research design and data generation; existing information sources and their acquisition; and analytic techniques. Students develop analytic methods necessary to create a well-considered thesis proposal. **Effective From: Spring 2006**

PTC 605 - Elements of Visual Design (3 credits) Prerequisite or corequisite: PTC 601. Provides an understanding of and competency in the visual presentation of information. Course integrates theories of design, techniques of composition, and technologies of electronic and print publishing. Modules include both design principles and hands-on practice in visual literacy, layout and design, and graphic tools. **Effective From: Spring 2006**

PTC 606 - Advanced Online Design (3 credits) Prerequisites: PTC 605 Elements of Visual Design. This course will focus on online visual communication strategies and community building. The course will cover: multimedia, usability heuristics, navigation theory, contemporary design practices and online community building. Students will be required to create a multidimensional online community and to participate in team-building by collaborating on the MSPTC newsletter. **Effective From: Spring 2006**

PTC 610 - Evaluating Hypertext: User and Task Analysis (3 credits) Prerequisite: PTC 605 or equivalent. Covers the complex tasks needed to create nonlinear material: audience assessment, task analysis, scenario development, and evaluation. Students complete the life cycle of planning, implementing, testing and revising a nonlinear writing project. This is a writing intensive course that focuses on creating effective goal-oriented online products. **Effective From: Spring 2006**

PTC 612 - Theory and Practice of Text Encoding (3 credits) Prerequisite: PTC 605 or equivalent. In the beginning, IBM created "Script," a series of low-level commands that formatted text on a page. Then came Generalized Markup Language (GML) a series of macros for Script. Today we have Standard Generalized Markup Language (SGML) Hypertext Markup Language (HTML) and Extensible Markup Language (XML), all of which rely on the same basic concepts. Students will learn XHTML in order to gain a solid understanding of the theory of text encoding, while looking into the past (when technical writers wrote the code behind the text) and into the future (when VoiceXML enables unified messaging in a single interface). Each student will also create a website. **Effective From: Spring 2006**

PTC 620 - Proposal Writing (3 credits) Prerequisite or corequisite: PTC 601. Provides an understanding of and practice in proposal writing for corporations, foundations, and government agencies. Students build skills to create a range of persuasive documents including proposals for research grants, responses to requests for proposal, and government proposals. **Effective From: Spring**

PTC 622 - Working in Teams: Collaborative and Interpersonal Communications (3 credits) Prerequisite or corequisite: PTC 601 . Uses case studies and simulations to provide both the theoretical foundations and the hands-on practice needed to work effectively in and among heterogeneous corporate groups. Includes collaborative writing, interviewing, and conflict resolution, and computer-mediated group work. **Effective From: Spring 2006**

PTC 624 - Professional and Technical Editing (3 credits) Prerequisite or corequisite: PTC 601 . Presents the theory and practice of editing professional and technical writing. Topics include correctness and conciseness, hard copy and on-line editing, editing graphics, document management, editor-author relationships, and ethical considerations in editing. Students edit writing samples from a variety of technical fields. **Effective From: Spring 2006**

PTC 626 - Hypertext Design Studio (3 credits) Prerequisite: PTC 605 or equivalent. Integrates language, image, linking and thinking in a studio approach to advanced HTML projects. Students work in computer laboratory with instructor on designing individual projects using current audio and video design applications. **Effective From: Spring 2006**

PTC 631 - Communication and Environmental Problem Solving (3 credits) Prerequisite or corequisite: PTC 601. Develops critical thinking on ecological issues for problem solving by integrating technical information, human values, and communication with environmental change. Students combine theory, research and models, case studies, visual thinking, and scientific inquiry for application in individual decision-making course project. **Effective From: Spring 2006**

PTC 632 - Content Management, Manuals and On-Line Help (3 credits) Prerequisite or Corequisite: PTC 601. The three skills that technical writers most often need are an ability to elicit information from recalcitrant SMEs (Subject Matter Experts), the ability to put this information on paper (user manuals) and the ability to put it online in a Help system. This class will focus on the development of skills and abilities that will enable Help system developers to gather, translate and manage information for end users. Students will use theory and practical applications such as RoboHelp and Forehelp to develop an on-line Help module in this course. **Effective From: Spring 2006**

PTC 640 - Health Communications (3 credits) This course will focus on the use of communication strategies to inform and influence individual and community decisions regarding health. The course will cover: the multidimensional nature of health communication, research in health communication, behavioral theories in health communication, rhetorical theories in health communication, legal and ethical concerns in health communication, the communication of risk and uncertainty, and the design of health campaigns. Students will be required to (a) research and prepare a health communication strategy for use in a specific context and (b) to design an accompanying print or hypertext document to be used in that context. **Effective From: Spring 2006**

PTC 642 - Corporate Communication (3 credits) Prerequisite or corequisite: PTC 601 . Develops communication skills for modern global corporate and business markets. Business documents may include mission/vision statements, business plans, financial statements/plans, marketing plans, and corporate policies and procedures. **Effective From: Spring 2006**

PTC 650 - Web Based Training Design (3 credits) Prerequisite or corequisite: PTC 601 and PTC 605 . Web-based Training (WBT) is at the forefront of the recent 'e-learning' boom. However, while WBT use is on the rise, specific skills and tools are required to ensure a successful WBT implementation. Based on proven instructional design concepts, this course provides the student with the skills necessary to create effective web-based training programs. **Effective From: Spring 2006**

PTC 698 - Selected Topics in Professional and Technical Communication (3 credits) Prerequisite or corequisite: PTC 601 **Effective From: Spring 2006**

PTC 700 - Master's Project (3 credits) Prerequisites: approval of graduate advisor, and completion of core courses. Demonstrates ability to conceive and execute an extended writing project with professional graphics and to make an oral and visual presentation of the work. Based on experiential research (internship, co-op, work experience) student submits a proposal, develops a project (e.g., guidebook, manual, online documentation, website, video, CD-ROM) and completes a paper describing the theory and methodology supporting the project application. With graduate advisor, student selects a faculty advisor, faculty reviewer, and external reviewer. **Effective From: Spring 2006**

PTC 701 - Master's Thesis (6 credits) Prerequisites: approval of graduate advisor; completion of core courses. Demonstrates ability to conceive and execute an extended writing project with professional graphics and to make an oral and visual presentation of the work. The completed written thesis should warrant publication in a technical journal. Thesis Committee consists of program-approved faculty advisor, one other faculty member, and external reviewer. A student must register continuously for a minimum of 3 credits per semester until thesis is completed. Total will be limited to 6 credits. **Effective From: Spring 2006**

2007-2008

PTC 725 - Independent Study in Professional and Technical Communication (3 credits) Prerequisite: approval of graduate advisor and supervising faculty. Allows development of areas of specialization for Master's Project or for areas of study in communication in which one or more students may be interested but which are not of sufficiently broad interest to warrant a regular course offering. **Effective From: Spring 2006**

2007-2008

Public Health: Offered by the Department of Humanities and Social Sciences

GRADUATE COURSES:

MPH 601 - Introduction to Epidemiology (3 credits) Epidemiology and its uses. Occurrence, distribution and dynamic behavior of disease and public health problem in human population. Descriptive epidemiology, observation cross-sectional study, longitudinal study and analytic epidemiologic study. Principles and methods of epidemiologic investigation. Evaluate the efficacy of preventive and therapeutic modalities and of new pattern of health care delivery. Measurement and interpretation of the morbidity and mortality indices. Application of findings to public policy. Evaluating public policy.

MPH 602* - Introduction to Biostatistics (3 credits) Introduction to biostatistical concepts and methods utilizing a lecture format followed by computer laboratory sessions to apply statistical methods to problems commonly encountered by public health professionals.

MPH 603 - Principles of Environmental Health (3 credits) Examines the environmental, occupational, residential factors and agents that have an impact on the health of people and the community. Structural and non-structural intervention to prevent, mitigate and minimize the impact as well as intervention benefits and limitations such as the role of biodiversity; ecological influences and impact; community perceptions; behavior impact; the role of culture, tradition and education; legal and regulatory remedies; government agencies; monitoring and technological interventions.

MPH 604 - Introduction to Health Care Systems and Policy (3 credits) History, organization, financing and regulation of U.S. medical and public health services, particularly among under-served and urban populations. Social and behavioral factors that shape health and health services.

MPH 605* - Health Education and Public Health Issues (3 credits) Consists of five sessions on health education; one each on public health, history, ethics, nutrition and Newark health problems; and ten half sessions devoted to emerging infections, health promotion, aging, tuberculosis, malaria, sexually transmitted diseases, HIV/AIDS, alcohol and drugs, the genetic revolution, and violence.

MPH 632 - Behavioral Research Design and Analysis (3 credits) Provides an understanding of human behavior through research tools. Students learn how to make meaning of structured inquiry through observation, modeling, sampling plan design, and surveys. Emphasis is on document or website users. **Effective From: Spring 2000**

MPH 644 - Social Foundations of Urban Health (3 credits) Theory used to explain and predict individual and aggregate behavior from the operationalization standpoint. Theories from economics, psychology, sociology, social psychology and geography. Theories of rational and habitual behavior under certain and uncertain outcomes. Statistical models in the estimation of structural models. Simulations using Resampling Stats.

MPH 645 - Society, Chronic Illness, and Disability: An Urban Perspective (3 credits) Extend and intensity of chronic illness and disability with emphasis on urban populations. Conduct functional status assessments. Prepare sickness impact profiles. Perform physical performance tests. Depression and costs of several forms of long term care.

MPH 646 - Urban Child in a Global Perspective (3 credits) Protective, rehabilitative and preventive strategies addressing the failure to meet the survival, nurturing and participatory rights of children as specified in the U.N. Convention on the Rights of the Child, the UNICEF programs for children in especially difficult circumstances, and the human capability approach of Amartya Sen. Covers the social and economic conditions that affect the care taking arrangements for infants, young children and adolescents at one or more epochs of their physical and psychosocial development.

MPH 647 - Perinatal Health and Family Planning (3 credits) Extent of perinatal health problems in the United States particularly inner city populations. Etiology including chemical and behavioral factors. Clinical specialists discuss current issues. Covers clinical solutions and public policy initiatives. Team project includes preparation and presentation of a major project.

MPH 648 - Community and Environmental Approaches to Health Behavior Change in Urban Disadvantaged Populations (3 credits)Socio-environmental factors influencing health-related behavior, role of groups, institutions and social structures in encouraging healthy or unhealthy behavior. Intervention designed to improve health behavior through changes in the social environment; economic, social and political structures and practices creating barriers to effective interventions. Examples include environmental characteristics affecting alcohol and tobacco use, diet, and injury control.

MPH 650 - Medical Geography (3 credits)Organization of society and the elaboration of disease; spatial vocabulary; geographic concepts related to disease distribution and adaptability; disease as an initiator of social and economic change in geographic constructs, economic development and population; contemporary health policy in the United States and its geographic influences and determinants.

MPH 660 - Health Economics (3 credits)Explores questions of policy with regard to quality, cost and distribution of personal health care services and the proper role of government. Involves microeconomic and macroeconomic issues, theories and analysis tools.

MPH 698/699 - Special Topics in Public Health I, II (3 credits each)Special area course given when suitable interest develops. Topics are announced in advance.

MPH 725 - Independent Study (3 credits)Prerequisite: approval of track coordinator. Covers a topic that is either not offered in the master of public health degree program curriculum or is offered but the student wishes to study the topic in greater depth and or breadth. Work is supervised by a public health faculty member.

* pending approval

KNOWLEDGE**
[CATALOG HOME](#) | [UNDERGRADUATE](#) | [GRADUATE](#) | [DISTANCE LEARNING](#) | [ADMISSIONS](#) | [REGISTRAR](#) | [NJIT](#) | [CATALOG\(PDF\)](#) | [CATALOG ARCHIVE](#)
Quantitative Method: Offered by the UMDNJ-New Jersey Medical School
GRADUATE COURSES:

QM 611 - Design of Epidemiological Studies and Clinical Trials (3 credits) Prerequisites: biostatistics and epidemiology core courses, or equivalent. Principles of experimental design; recognize a well-designed study in the literature; identify and explain inadequacies in study designs and suggest improvements; prepare and submit a protocol for a well-designed study.

QM 612 - Linear Models: Regression and Analysis of Variance (3 credits) Prerequisites: biostatistics core course or equivalent. Practical introduction to the linear statistical methods that are so commonly used in public health research. A statistical computer package such as SAS, STATA or SPSS is used for exercises. Apply regression, correlation and analysis of variance to data. Apply principles of study design and sample size planning. Provide statistically valid interpretation of output from data analysis.

Science, Technology and Society : Offered by the Department of Humanities. See Humanities course list for faculty.

UNDERGRADUATE COURSES:

STS 257 - Technology, Society and Culture: An American View (3-0-3) Prerequisites: HSS 101 or equivalent; 3 credits of basic social science. Examines the nature, functioning, and evolution of manufacturing, communications and other technologies in a socio-ecological world. The first semester uses case studies and visits to engineering laboratories and other plant sites to focus on scientific and technological forces that are reshaping our domestic economy.

STS 258 - Technology, Society and Culture: A Global View (3-0-3) Prerequisites: HSS101 or equivalent; 3 credits of basic social science. Examines the nature, functioning, and evolution of manufacturing, communications, and other technologies in a global environment. The second semester uses case studies and engineering site visits to focus on scientific and technological forces that are transforming our global political economy.

STS 300 - Legal Reasoning, Writing, and Technology (3-0-3) Prerequisite: HSS 101. Integrates the process of legal research and fundamentals of legal writing with analysis of law. Focuses upon legal reasoning through analysis of fact and upon the logic of law in judicial opinions, statutory construction, and constitutional interpretation as contemporary issues are analyzed.

STS 301 - Independent Study (1 credit) Prerequisites: junior standing in the STS program and written approval of the program director. Consists of self-paced study on an individual or small group basis in a specific area integral to a student's STS concentration but not available on a regular course basis.

STS 302 - Independent Study (2 credits) See STS 301.

STS 303 - Independent Study (3 credits) See STS 301

STS 304 - Writing about Science, Technology and Society (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Develop abilities to write lucidly and speak forcefully about the interrelationship of science, technology and society. Learn to articulate a sense of purpose in order to choose the appropriate methods for reporting issues in a technological society. Effective development and transfer of technical knowledge in a complex world.

STS 305 - Engineers in Society (2-1-2) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Corequisite: CoE 394. For students majoring in computer engineering. The professional aspects of an engineering career. Topics include ethics and responsibility, the role of the professional society, the importance of communication, and the realities of the workplace. Certain writing projects are correlated with the linked lab CoE 394. Field studies of working engineers are conducted by student teams. Co-listed as CoE 301.

STS 306 - American Mosaic: Understanding Cultural Diversity (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. An examination of multiculturalism in the United States. The course provides students with a methodological framework for understanding cultural diversity in the United States and around the world.

STS 307 - Fundamentals of Research in STS (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Focuses on research methods in the field of science, technology and society. Focuses on the following methods: problem statement and hypothesis formulation; research design in science, technology and society; data sources; and data acquisition and analysis.

STS 308** - Technology and Global Development: Introduction to STS (3-0-3)** Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Introduces the important public issues that technology brings to the modern world, such as energy development and environmental pollution. Emphasizes the close connections between science and technology, social institutions, and cultural values. Also analyzes today's "global village", the changing relations between East

and West and the Third World, and worldwide development and environmental issues. Honors Note: See HSS 101.

STS 309 - Advocacy and the Law (3-0-3) Prerequisite: Eng 300, SS 300. Offers opportunities to explore the retrieval and use of legal and law-related materials while developing skills in oral advocacy and in writing persuasive legal documents, such as motion memoranda and briefs. Includes learning to listen to participants in the legal process as well as developing effective styles and forms of speech in the classroom. **Effective From: Spring 2005**

STS 310** - Technology and Human Values (3-0-3)** Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Examines the interactions between science, technology and human values. Specifically, explores psychological, moral, and philosophical consequences of, and humanistic responses to, technological change. Readings, essays, fiction, and research articles treat such topics as the philosophical foundations of modern science, scientism, technicism; the impact of technology on images of man found in modern literature; and the moral implications of various kinds of recent technology. Honors Note: See HSS 101.

STS 311 - Co-op Work Experience I (3 credits) Prerequisites: completion of the sophomore year, approval of the department, and permission of the Office of Cooperative Education and Internships. Students gain major-related work experience and reinforcement of their academic program. Work assignments facilitated and approved by the Co-op Office. Mandatory participation in seminars and completion of a report.

STS 312** - Technology and Policy in Contemporary America (3-0-3)** Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. A study of technology and politics in recent America. Focuses on the role of the federal government in shaping technology, especially through funding technological innovations and applications. Topics will include the origins of technology policy in World War II, the influence of the Cold War, the science and technology policy advisory system, and political and cultural influences on technology policy. Honors Note: See HSS 101.

STS 313** - Environmental History and Policy (3-0-3)** Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Covers the rise of the modern environmental debate, and examines its current priorities and values, politics and economics, and impacts on industry and society. Students review the role of regulatory agencies, private industry, public interest groups, and the media. Current major issues in New Jersey are considered, as well as environmental debate on a national and global level. Honors Note: See HSS 101.

STS 316 - Mass Communications, Technology and Culture (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Uses the tools of the humanities and social sciences to study the interplay between technology and mass culture. Focuses on motion pictures, electronic music, and television as both technologies and as forms of art. Devotes special attention to the portrayal of science and technology in the media.

STS 320 - Global Evolution of Scientific Thought I: Case Studies from Antiquity through the 19th Century (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Traces the global development of scientific ways of thinking and demonstrates how scientific ideas, methods, and theories both reflect and influence thought in other areas. Special emphasis is on the biographical approach to scientific innovation through analysis of key figures in relation to the societies in which they lived. Attention is paid to the roles of class and gender in scientific practice. Begins with the study of science in the ancient nations of Babylonia, China, and India and ends with an examination of the rise of scientific approaches to social problems in the nineteenth century.

STS 321 - Global Evolution of Scientific Thought II: 20th-Century Case Studies (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. A continuation of STS 320, traces the global development of scientific ways of thinking and demonstrates how scientific ideas, methods, and theories both reflect and influence thought in other areas. Begins with the study of Einstein, continues with an analysis of United States and Soviet relations during the Cold War, and concludes with an examination of trends in today's global scientific community.

STS 325-329 - Special Topics in Science, Technology and Society (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. An in-depth examination of a current STS issue. A new topic is addressed each time the course is offered. Honors Note: See HSS 101.

STS 330 - The Professional Engineer: History and Context (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. An examination of the origins of modern engineering and the context in which engineering has developed. The course includes an analysis of the contemporary engineering culture?its structure and the values which drive it. The student will be expected to confront both the constraints and opportunities presented by the professional world of engineering.

STS 340 - Multiculturalism in a Technological Society (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Explores the roles of culture and ethnicity in our increasingly technological and global society. The interplay between scientific developments and the specific sociocultural contexts is addressed. Specific case studies from various countries are explored, covering differing levels of technological achievement. Upon completion of the course, students will be able to competently analyze the interaction between a country's scientific development and its political and sociological climate. Special topics are negotiated with students at the start of each class, with the goal of covering all continents and a variety of scientific fields. At least one case study each semester carefully reviews multiculturalism in the American technological culture. Emphasis also is given to the particular roles and responsibilities of the United States as a technological and political leader.

STS 342 - Women in Technological Culture (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Takes an interdisciplinary and multicultural approach to issues of gender in science and technology. The issues include the current status and problems of women in non-traditional professions; the historical contributions of women in science and technology; images of women in Western and non-Western cultures; theories of gender difference, past and present; the impact of cultural gender coding on the epistemologies of science and technology; women and Third World development. Course materials include case studies and autobiographical narratives, films, and science fiction as well as historical and sociological analyses. Expressive student writing and group projects are encouraged.

STS 344 - Communications Policy (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Study of communication environments and developing communications technologies as central elements of evolving political and social systems. Analysis of philosophical, military, economic, and technical premises for communications policy and the process of regulation.

STS 346 - Pragmatism and Technology (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Examines the relationship between the American philosophy of pragmatism and the role of technology in the contemporary world. How do philosophical ideas affect the development of technology and science? How has pragmatism shaped the current view of the meaning and value of technological progress? Readings from both the traditional authors of American pragmatism?Peirce, James, and Dewey?and contemporary texts.

STS 347 - Music and Technology ((3-0-3))This course examines the ways music has been affected by technology from the nineteenth to twenty-first centuries. How has recording technology changed the way we listen to, create, and experience music? How does electronic and computer music relate to the rest of music? Is a recording the record of an event or a whole new art form in itself? Do machines encourage a kind of music-making radically different from previous live music? Now that nearly every recording is done digitally, does that make all recorded music computer music? This course has both a theoretical and a practical component: in addition to the history of technology's transformation of music, the course examines the basics of digital sampling, recording, sequencing, and mastering software. **Effective From: Spring 2002**

STS 348 - Esthetics and Modern Technology (3-0-3)Prerequisites:HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. The central focus of this course is on the changing conception of beauty as influenced by technological development, especially in twentieth-century United States society. The course examines how technology is echoed in art and philosophy, and how they, in turn, influence future technological considerations.

STS 349 - Advanced Music Technology (3-0-3)Students will learn the basics of notebook computer-based music composition and production. Emphasis will be on composition and making of music, learning the aesthetics necessary to get the most out of your machine. Course will require extensive work on your own home computer. Computer requirements: A PC or Macintosh system running Ableton Live. **Effective From: Spring 2006**

STS 350 - Computers and Society (3-0-3)Prerequisites: HSS 101, one SS course, completion of a 100-level GUR course in CIS. Examines the historical evolution of computer and information systems and explores their implications in the home, business, government, medicine, and education. Topics include auto-mation and job impact, privacy, and legal and ethical issues.

STS 360** - Ethics and the Environment (3-0-3)**Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. An examination of contemporary environmental problems from the perspective of ethics or moral philosophy. An analysis of the ethical presuppositions and value principles underlying environmental policy. The study of ethical theories and their application to the environmental crisis. Honors Note: See HSS 101.

STS 362** - Environmental Economics (3-0-3)**Prerequisites: HSS 101, HSS 202, SS 201 or their equivalents. Presents a detailed overview of the relationship between political economy and the environment. Draws on diverse case studies including global warming, harvesting of minerals on the ocean's floor, destruction of old growth forests, and contamination of the -nation's water, air, and soils. Explores the economic remedies to the fast-changing relationship between society and nature. Honors Note: See HSS

STS 378 - Literature and Nature (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Literature reveals and interprets the natural world. Students examine the ways that nature has been used in non-fiction and fiction. Students also learn the challenge of describing the natural world in their own words. Representative writers include Percy Shelley, Henry David Thoreau, Octavio Paz, Denise Levertov, Gary Snyder, Joyce Carol Oates, and Annie Dillard. Co-listed as Lit 378.

STS 380 - Policy Issues in the Coastal Environment (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. An examination of coastal environments from the standpoint of the scientist, the engineer, and the resource manager. Topics include beach and shoreline characteristics, technological innovations to address coastal erosion problems, and current debates in coastal policy and resource management. Case studies are used to illustrate coastal management practices and the scientific, technical, and social constraint to policy formulation.

STS 381 - Field Techniques and Research Methods (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents.; STS 307. An introduction to research methods. The objectives of the course are to provide opportunity to pursue specialized, in-depth research in a subfield of science, technology and society of the student's choice; to develop skills in problem identification, research design and problem solving; to increase familiarity with methods of data analysis; to strengthen library research skills; to provide an opportunity to gather original field data in a team-oriented environment; and to improve oral and written communication skills.

STS 382 - Geographical Perspectives on the Environment (3-0-3)Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Designed to introduce students to the field of geography. Focuses on the natural processes that sculpt the physical and biological terrain, and the environmental interrelationships between human societies and nature. Combining physical, human and environmental perspectives on the earth's surface, explores, in depth, topics such as famine, societal response to natural and technological hazards, and water issues in the United States.

STS 411 - Co-op Work Experience II (3 credits)Prerequisites: STS 311 or its equivalent; approval of the department, and permission of the Office of ve Education and Internships. Provides major-related work experience. Mandatory participation in seminars and completion of requirements that include a report and/or project.

STS 490** - Project and Seminar I (3 credits)**Prerequisite: senior standing in the STS program. Each student undertakes a comprehensive study of an issue in science technology and human affairs. The solution requires application of knowledge and skills acquired in course work, self-study, and library research as well as consultation with persons in the academic community, industry, and government. The completed study is submitted as a detailed written report. The seminar meets weekly. Speakers from education, government, and industry address themselves in topics of current interest to STS students. Honors Note: See HSS 101.

STS 491** - Project and Seminar II (3 credits)**A continuation of STS 490.

**** Special Honors sections are available; permission of Honors College or Humanities Department required.

Social Science and Policy Studies: Offered by the Department of Chemistry and Environmental Science. See [Humanities and Social Sciences](#) course list for faculty

UNDERGRADUATE COURSES:

SS 201 - Economics (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents. The nature of a market economy. Microeconomics?demand theory, production possibilities, cost and price, equilibrium analysis, and applications to decision making in the firm. Macroeconomics?national income accounts, consumption, investment, government monetary and fiscal policy, and problems of employment and price levels. Economic analysis leading to an understanding of current developments in the United States economy and international trade and currency problems. Students who have received credit for Econ 265 or Econ 266 may not subsequently receive credit for SS 201.

SS 201H - Honors Economics (3-0-3) Prerequisite: enrolled in the Honors College or permission of the instructor. Covers the material in SS 201, but topics are treated more comprehensively and in greater depth.

SS 300 - Basic Principles of Law and the Judicial System (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents, two from HSS 211, HSS 212, HSS 213 or their equivalents. Explores controversial legal issues focusing upon fundamental principles of law that have evolved in such bodies of law as contract, tort, criminal real and intellectual property, and in specialized areas such as environmental and labor/business law. Covers implementation of law in the judicial system, which includes examination of administrative regulations and due process.

SS 318 - International Economic Policy (3-0-3) Prerequisites: HSS 101, HSS 202, SS 201 or their equivalents. Examines the increasing effects international economic affairs have on our lives; the choices economic policy analysts must make; the economic policies that promote or restrain trade; and causes of economic growth or decline.

SS 338 - Issues in Public Policy (3-0-3) Prerequisites: HSS 101, HSS 202, SS 201 or equivalents. A survey of key social and political issues within a public policy perspective. Topics covered include policy problems with an emphasis on economics, urban and regional planning, sociology-psychology, natural science or engineering, and problems with a political science emphasis.

SS 343 - Rise of Modern Diplomacy (3-0-3) Examines the origins and mechanisms of modern diplomacy and their historic connection with the state. Topics include resident embassies, the development of diplomatic procedures and conventions, international law, diplomatic theory, and the relationship between diplomacy and war.

SS 351 - International Relations (3-0-3) Prerequisites: HSS 101, HSS 202, SS 201 or equivalents. Analysis of the factors affecting relations among nations. Emphasis on the growing interdependence of the world system. Examination of international agencies, such as the United Nations, the World Bank, and the International Monetary Fund. International political and economic conflict. Patterns of power, and the roles of diplomacy, war, and international terror. Attempts to ameliorate conflicts among nations.

SS 352 - Race and Ethnicity: Contemporary Issues (3-0-3) Prerequisites: HSS 101, HSS 202, SS 201 or their equivalents. Explores the concepts of race and ethnicity in both national and international arenas. Scientific, sociological, political, and global implications are addressed. Upon completion of this course, students will be able to competently address the impact of race on micro and macro levels, from both individual and policy perspectives. Special topics are negotiated with students at the start of each class. Such topics can include immigration, affirmative action, educational curricula, institutional racism, or the impact of multiculturalism on families. Emphasis is on the interaction between race and technology.

SS 362 - Environmental Economics (3-0-3) Prerequisites: HSS 101, HSS 202, SS 201 or their equivalents. Presents a detailed overview of the relationship between political economy and the environment. Draws on diverse case studies including global warming, harvesting of minerals on the ocean's floor, destruction of old growth forests, and contamination of the nation's water, air, and soils. Explores the economic remedies to the fast changing relationship between society and nature. Co-listed as STS 362.

SS 362H - Honors Environmental Economics (3-0-3) Prerequisites: admission to the Honors College or permission of the

2007-2008

instructor. An honors course parallel to SS 362. Co-listed as STS 362H.

SS 363 - Natural Resources Economics (3-0-3) Prerequisites: HSS 101, HSS 202, SS 201 or equivalents. Natural resource economics is concerned with supply and demand, theory, pricing under various market conditions, the commodity aspects of exchange and the effects of government intervention on depletion and profits. Case studies and examples of natural resource usage will be demonstrated; also substitution and recycling strategies will be examined

Sociology: Offered by the Department of Sociology and Anthropology at Rutgers-Newark. See Anthropology course list for faculty.

UNDERGRADUATE COURSES:

R920:201 - Sociology I: Contemporary Society (3) For more details go to [Rutgers Catalog](#).

R920:208 - Social Problems (3) For more details go to [Rutgers Catalog](#).

R920:301 - Introduction to Social Research I, II (4,4) For more details go to [Rutgers Catalog](#).

R920:306 - Marriage and the Family (3) For more details go to [Rutgers Catalog](#).

R920:308 - Social Movements (3) For more details go to [Rutgers Catalog](#).

R920:314 - Sociology of Organizations (3) For more details go to [Rutgers Catalog](#).

R920:315 - Self and Society (3) For more details go to [Rutgers Catalog](#).

R920:332 - Social Stratification (3) For more details go to [Rutgers Catalog](#).

R920:337 - Sociology of Sex and Roles (3) For more details go to [Rutgers Catalog](#).

R920:345 - Sociology of Education (3) For more details go to [Rutgers Catalog](#).

R920:375 - Sociology of Development (3) For more details go to [Rutgers Catalog](#).

R920:386 - Sociology of Science (3) For more details go to [Rutgers Catalog](#).

R920:409 - Classical Sociological Theory (3) For more details go to [Rutgers Catalog](#).

R920:415 - Contemporary Sociological Theory (3) For more details go to [Rutgers Catalog](#).

Tutr 089 - Freshman Tutorial I (1-0-0) Prerequisite: special permission. For first-semester freshmen. Develop appropriate study skills that will lead to success at NJIT. Pays particular attention to problem solving, study skills, abstract and cognitive skills development, using a collaborative learning approach.

Tutr 090 - Freshman Tutorial II (1-0-0) Prerequisite: Tutr 089. A continuation of Tutr 089. Further enhances student's skills through evaluation of current study habits and reinforcement of collaborative learning techniques that prepare students for successful completion of coursework.

Theatre Arts: Offered by the Department of Visual and Performing Arts at Rutgers-Newark and the Department of Humanities. See [Art](#) course list for Rutgers-Newark faculty. See Humanities course list for Rutgers-Newark faculty.

UNDERGRADUATE COURSES:

R950:271 - Voice and Articulation (3,3) For more details go to [Rutgers Catalog](#).

R950:289 - Principles of Oral Interpretation (3,3) For more details go to [Rutgers Catalog](#).

R965:202 - Journalism and Communications Media (3) For more details go to [Rutgers Catalog](#).

R965:261 - Dramatic Invention (3,3) For more details go to [Rutgers Catalog](#).

R965:271 - Acting Fundamentals (3) For more details go to [Rutgers Catalog](#).

R965:313 - Theater Technology I (3) For more details go to [Rutgers Catalog](#).

R965:314 - Scenic Art for Theater and Television (3) For more details go to [Rutgers Catalog](#).

R965:315 - Intermediate Acting (3) For more details go to [Rutgers Catalog](#).

R965:394 - Internship?Television (3) For more details go to [Rutgers Catalog](#).

R965:395 - Internship: Radio (3) For more details go to [Rutgers Catalog](#).

theatre: Offered by the Department of Humanities and the Department of Visual and Performing Arts at Rutgers-Newark. See Humanities course list for NJIT faculty. See [Art](#) course list for Rutgers-Newark faculty.

UNDERGRADUATE COURSES:

Thtr 311 - Living Theater (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Elements of stage presentation: acting, design, theater history, and lighting and other technologies using the resources of the NJIT and Rutgers-Newark theaters.

Thtr 344 - American Musical Theater (3-0-3) Prerequisites: HSS 101, HSS 202 or their equivalents; two from HSS 211, HSS 212, Hist 213 or their equivalents. Course covers the development of American Musical Theatre decade by decade, starting with the turn of the 20th century until the present day. Examples of music and lyrics are demonstrated in class and students attend contemporary and revival Broadway musicals.

Transportation: Offered by the Interdisciplinary Program in Transportation

GRADUATE COURSES:

Tran 552 - Geometric Design of Transportation Facilities (3 credits) Prerequisite: CE 350 or equivalent. Design principles and criteria related to highways and railroads resulting from requirements of safety, vehicle performance, driver behavior, topography, traffic, design, speed, and levels of service. Elements of the horizontal and vertical alignments and facility cross-section, and their coordination in the design. Computer-aided design procedures including COGO, CADAM, Digital Terrain Modeling. Same as CE 552.

Tran 553 - Design and Construction of Asphalt Pavements (3 credits) Importance of designing asphalt pavements. Topics include the origin of crude, refining crude, types of asphalts, desired properties of asphalt cement, specification and tests for asphalt cement, aggregates for asphalt mixtures, aggregate analysis, gradation and blending, hot-mix asphalt (HMA) mix design, manufacture of HMA and HMA-paving, hot and cold recycling. Same as CE 553.

Tran 592 - Graduate Co-op Work Experience (3 additive credits) Prerequisites: permission from Transportation Program and Division of Career Development Services. Work assignments and projects are developed by the co-op office in consultation with the transportation program. Work assignments are related to student's major and are evaluated by Transportation Program faculty coordinators. Credits for this course may not be used to fulfill any transportation degree requirements.

Tran 602 - Geographic Information Systems (3 credits) Prerequisite: course or working knowledge of CADD or permission of instructor. Geographical/Land Information System (GIS/LIS) is a computerized system capable of storing, manipulating and using spatial data describing location and significant properties of the earth's surface. GIS is an interdisciplinary technology used for studying and managing land uses, land resource assessment, environmental monitoring and hazard/toxic waste control, etc. Introduces emerging technology and its applications. Same as CE 602.

Tran 603 - Introduction to Urban Transportation Planning (3 credits) Urban travel patterns and trends; community and land activity related to transportation study techniques including survey methods, network analysis, assignment and distribution techniques. Case studies of statewide and urban areas are examined. Same as CE 603.

Tran 604 - Public and Private Financing of Urban Areas (3 credits) Ties government's budget, tax, policy, allocation of resources between public and private sectors, with the structure, development, and growth needs of urban metropolitan areas. Focuses on problems of poverty, transportation, land-use, economic base, relation between central cities and suburban areas, and alternative engineering and economic solutions. Same as Fin 618 and MIP 618.

Tran 608 - Behavioral Issues in Transportation Studies (3 credits) Behavioral science concepts and principles such as perception, learning, motivation, and information processing as they relate to: transportation, consumer use of mass transit, automobiles, ridesharing and intelligent transportation systems. Same as HRM 608.

Tran 610 - Transportation Economics (3 credits) Prerequisite: undergraduate course in economics. Principles of engineering economy. Cost of highway and public transportation facilities. Economic comparisons and evaluations. Financing approaches, tax allocation theory. Programming highway and public transit improvements. Same as IE 610.

Tran 615 - Traffic Studies and Capacity (3 credits) Prerequisite: elementary probability and statistics. Presentation of the characteristics of the traffic stream, road users, and of vehicles, and a review of traffic flow relationships. Students are exposed to the principal methodologies followed by transportation practices to perform volume, speed, travel time, delay, accident, parking, pedestrian, transit and goods movement studies. Presentation of the principal methodologies used to perform transportation facility capacity analyses for: basic freeway sections, weaving areas, ramps and ramp junctions, multi-lane and two lane roadways, signalized and unsignalized intersections. Students get hands on experience using highway capacity software (HCS) and SIDRA. Same as CE 660.

Tran 625 - Public Transportation Operations and Technology (3 credits) Prerequisite: graduate standing in civil or industrial

engineering or instructor approval. Presentation of the technological and engineering aspects of public transportation systems. Historical development of public transportation technologies. Vehicle and right-of-way characteristics, capacity and operating strategies. Public transportation system performance. Advanced public transportation systems. Same as CE 625.

Tran 640 - Distribution Logistics (3 credits)Prerequisite: EM 602 or Tran 650 or equivalent. Distribution logistics emphasizing systems engineering techniques used to optimize corporate profit and customer service: transportation modes; inventory policies; warehousing and order processing; and the best logistics gross margin. Same as EM 640.

Tran 643 - Transportation Finance (3 credits)Prerequisite: undergraduate course in economics. Balance sheets and income statements. Asset and liability management, sources and costs of debt and equity financing. Financial performance measures in the private sector (airlines, railroads, trucking and bus companies). Financing issues associated with the public sector (highways and mass transit). Equity and efficiency in pricing. Subsidy allocation formulae. Innovative financing schemes in the public sector. Same as IE 643.

Tran 650 - Urban Systems Engineering (3 credits)Prerequisite: computer programming background. Identifies the various urban problems subject to engineering analysis, and modern techniques for their solution, including inductive and deductive mathematical methods, mathematical modeling and simulation, and decision making under uncertainty. Same as CE 650.

Tran 653 - Traffic Safety (3 credits)Prerequisite: Tran 615 or equivalent. System behavioral principles are applied to safety aspects of highway operation and design, and improvements of existing facilities. Solutions are evaluated on the basis of cost effectiveness. Same as CE 653.

Tran 655 - Land Use Planning (3 credits)Spatial relations of human behavior patterns to land use; methods of employment and population studies are evaluated; location and spatial requirements as related to land use plans; and concepts of urban renewal and recreational planning are investigated by case studies. Same as CE 655 and MIP 655.

Tran 659 - Flexible and Rigid Pavements (3 credits)Prerequisite: CE 341 or equivalent. Types of rigid (Portland cement) and flexible (bituminous pavements). Properties of materials, including mineral aggregates. Design methods as functions of traffic load and expected life. Importance and consequences of construction methods. Maintenance and rehabilitation of deteriorated pavements. Same as CE 659.

Tran 700 - Master's Project (3 credits)Prerequisite: written approval of project advisor. An independent project demonstrating the student's professional competence in an area of specialization. Oral examination and written report required.

Tran 701 - Master's Thesis (6 credits)Prerequisite: written approval of thesis advisor. A comprehensive project, usually in the form of substantial study and analysis, a functional design project or control-operations systems study.

Tran 702 - Selected Topics in Transportation (3 credits)Prerequisite: advisor's approval. Topics of special or current interest.

Tran 705 - Mass Transportation Systems (3 credits)Prerequisite: Tran 610 or IE 610. Investigation of bus, rapid transit, commuter railroad, and airplane transportation systems. Existing equipment, economics, capacity, and terminal characteristics are discussed, as well as new systems and concepts. Long- and short-range transportation systems are compared. Same as CE 705.

Tran 720 - Discrete Choice Modeling for Travel Demand Forecasting (3 credits)Prerequisite: Tran 610 or equivalent. Discrete choice modeling describes a class of theoretical and analytical models essential for most advanced planning and forecasting efforts in transportation analysis. Includes logit, multi-nominal, and probit models. Develops theoretical and analytical skills needed to design, estimate and apply both revealed and stated preference models to appropriate travel demand forecasting problems.

Tran 740 - Management of Transportation Carriers (3 credits)Prerequisites: Tran 610 or equivalent and Tran 650 or EM 602 or equivalent. Presents theory and practice of managing transportation carriers, including the concepts of costing, pricing, designing and marketing transportation service; the concepts of financial efficiency and resource productivity with application to the selected freight carriers in each mode of transportation. Selected case studies of carriers' operations management practices in various modes. Comparative studies of service characteristics, market share, cost structures both within a particular transportation mode and between modes. Same as EM 740.

Tran 751 - Transportation Design (3 credits)Prerequisite: Tran 603. Design problems for airports, terminals, and highway intersections and interchanges are undertaken. Same as CE 751.

Tran 752 - Traffic Control (3 credits)Traffic laws and ordinances; regulatory measures; traffic control devices; markings, signs and

signals; timing of isolated signals; timing and coordination of arterial signal systems; operational controls; flow, speed, parking; principles of transportation system management/ administration; highway lighting; and state-of-the-art surveillance and detection devices and techniques. Hands-on experience with TRAF/NETSIM and FREESIM. Same as CE 752.

Tran 753 - Airport Design and Planning (3 credits) Prerequisites or corequisites: Tran 610 or EM 693 and Tran 615. Planning of individual airports and statewide airport systems. Functional design of air and landside facilities. Orientation, number and length of runways. Concepts of airport capacity. Passenger and freight terminal facility requirements. Airport access systems. FAA operating requirements. Financial, safety and security issues. Same as CE 753 and IE 753.

Tran 754 - Port Design and Planning (3 credits) Prerequisites: Tran 610 or EM 693 and Tran 615. Functional design of the water and landsides for general cargo, liquid and dry bulk, and container operations. Yard and storage systems. Port capacity in an intermodal network. Economic, regulatory, and environmental issues. Same as CE 754 and IE 754.

Tran 755 - Intelligent Transportation Systems (3 credits) Prerequisite: Tran 752. Techniques used to improve the safety, efficiency and control of surface transportation systems. Emphasis on technological and operational issues of these systems and using them for incident detection and for traffic management through route and mode diversion.

Tran 760 - Urban Transportation Networks (3 credits) Prerequisites: elementary probability and statistics and Tran 650 or equivalent. Provides analytical techniques for the analysis of transportation problems in an urban environment. Principal components include applications of models for the analysis of transportation problems, advanced static, dynamic, and stochastic traffic assignment procedures and transportation network design exact and heuristic solution algorithms. Offers hands-on experience with existing software in traffic assignment and transportation network design.

Tran 765 - Multi-modal Freight Transportation Systems Analysis (3 credits) Prerequisites: Tran 610 or equivalent and Tran 650 or EM 602 or equivalent. Quantitative methods for the analysis and planning of freight transportation services. The supply-performance-demand paradigm for freight transportation systems. Cost and performance as determined by system design and operations. Relationship of traffic and revenue to service levels and pricing. Optimal service design and redesign for transportation enterprises and operations planning. Fleet and facility investment planning. Applications to various modes. Same as EM 765 and CE 765.

Tran 790 - Doctoral Dissertation and Research (Credits as designated) Corequisite: Tran 791. Required of all candidates for the Doctor of Philosophy in Transportation. A minimum of 36 credits is required. Students may register for 6 to 15 credits of dissertation per semester. If 36 credits are achieved prior to completion of the doctoral dissertation and research, students must register for 3 credits per semester thereafter.

Tran 791 - Doctoral Seminar (Non-credit) Corequisite: Tran 790. A seminar in which faculty, students, and invited speakers will present summaries of advanced topics in transportation. Students and faculty will discuss research procedures, dissertation organization, and content. Students engaged in research will present their own problems and research progress for discussion and criticism.

Tran 792 - Seminar (Non-credit) Students periodically present the results of their research activities to faculty, research staff and other students. Outside speakers may be invited. Required each semester for those students who receive departmental or research-based awards.

Adjunct Faculty

(Partial Listing)

Addabbo, Raymond Adjunct Professor, Mathematical Sciences (2001). Fairleigh Dickinson University, B.S., 1992. New Jersey Institute of Technology, M.S., 1998. New Jersey Institute of Technology, Ph.D., 2001.

Alexander, Elena Adjunct Professor, Hum (2003). Long Island University, B.A., 1966. Goddard College, M.F.A., 2002.

Ambrosio, Christina Adjunct Professor, Math (2004). College of New Jersey, B.S., 1999. New Jersey Institute of Technology, M.S., 2001.

Anwar, Tariq Adjunct Professor, Engineering Technology (2004). City University of New York, M.S.E., 1992.

Assadipour, Fatiha Adjunct Professor (2004).

Bales, Ervin Research Professor (1984). University of South Carolina, B.S., 1957. Bradley University, M.S., 1962. University of Illinois, Ph.D., 1967.

Batour, Amado Adjunct Professor

Bernier, Craig Adjunct Professor (2000).

Biolsi, William Adjunct Faculty

Biswal, Bharat Adjunct Professor, Biomedical Engineering (2002). Utkal University, B.S., 1989. Michigan Technological University, M.S., 1996. Medical College of Wisconsin, Ph.D., 1996.

Blinder, Alexander Adjunct Professor, Engineering Technology (2003). New Jersey Institute of Technology, B.S., 2001. Stevens Institute of Technology, M.S. Cert., 2002.

Bokhari, Syed Adjunct Professor, Engineering Technology (2002). New Jersey Institute of Technology, B.S., 2000.

Bong, Joohee Adjunct Faculty

Brodowski, Thomas Adjunct Professor (2003).

Brown, James Adjunct Professor, Civil and Environmental Engineering (2004). Southern Polytechnic St. Univ., B.S., 1977. New Jersey Institute of Technology, M.S., 2004.

Burgess, Peter Adjunct Professor, Engineering Technology (2004). Rutgers University, B.S., 1979. Rutgers University, M.S., 1985.

Albano, Mark Adjunct Professor, Computer Science

Alvi, Jamal Adjunct Professor, Computer Science (2003).

Ammicht, Egbert Adjunct Professor, Mathematical Sciences (2001).

Ariyan, Zaven Adjunct Faculty

Assadipour, Hossein Adjunct Professor, Engineering Technology (1997). Abadan Institute of Technology, B.Sc., 1972. Michigan Technological University, M.Sc., 1977. Michigan Technological University, Ph.D., 1980.

Bartle, Andrew Adjunct Professor, Arch (1991). Bennington College, B.A. Princeton University, M.Arch., 1980.

Bergen, Michael Adjunct Professor, Biomedical Engineering (2001). New Jersey Institute of Technology, B.S., 1990. New Jersey Institute of Technology, M.S., 1999.

Bhoraniya, Chandula Adjunct Faculty

Bishof, Edward Associate Vice President Adjunct Professor

Blanchard, Harry Adjunct Professor (2001).

Bobenhausen, William Adjunct Faculty

Bonchonsky, Michael Adjunct Professor (1995).

Booth, Victoria Associate Research Professor (2003). Smith College, B.A., 1986. Northwestern University, M.S., 1990. Northwestern University, Ph.D., 1993.

Brown, Eleanor Adjunct Professor, Hum (1999). Boston University, B.S. Kean College, M.A.

Browne, Charles Adjunct Professor, Engineering Technology (2004). Yale University, B.A., 1965.

Burris, Douglas Adjunct Professor (2000).

Canter, Jeffrey Adjunct Professor, Electrical & Computer Engineering (2001). New Jersey Institute of Technology, B.S.E.E., 1995.

Carlson, Richard Adjunct Professor, Engineering Technology (2000). New Jersey Institute of Technology, B.S., 1993. Purdue University, M.S., 1994.

Cebula, Charles Adjunct Professor, Electrical & Computer Engineering (1996). Newark College of Engineering, B.S.E.E., 1971. New Jersey Institute of Technology, M.S.E.E., 1977.

Chaudhry, Hans Research Professor, Biomedical Engineering (1991). Punjab University, B.A., 1952. Agra University, M.A., 1954. Indian Institute of Technology, Kharagpur, Ph.D., 1967.

Clifton, Trony Adjunct Professor

Curcuru, Joanne Adjunct Professor (2003).

Dao, Fu-Tak Adjunct Professor

Defranco-tommarello, Joanna Adjunct Professor (2001).

Dobi, John Adjunct Professor, Chem (1995). Rutgers University, B.S., 1970. Rutgers University, M.S., 1972. University of Massachusetts, Ph.D., 1979.

Duran, Sergio Adjunct Professor, Arch (1996). Southern California Institute of Architecture, B.Arch., 1985. University of Tokyo, M.Arch., 1989.

Eichner, Ludwig Adjunct Professor, Engineering Technology (1995). New Jersey Institute of Technology, B.S., 1989.

Evans, Deane Research Professor, Architecture (2001). Executive Director, Center for Architecture and Building Science Research Yale University, B.A., 1972. Columbia University, M.Arch., 1977.

Garcia, Andrew Adjunct Professor, Hum (2004). Seton Hall University, B.A., 1990. Seton Hall School of Law, J.D., 1994.

Georgiou, George Adjunct Professor, Electrical & Computer Engineering (1997). Columbia University, B.S., 1974. Columbia University, M.S., 1975. Columbia University, Ph.D., 1979.

Grandrino, Richard Adjunct Professor (1996).

Hammer, Joachim Adjunct Professor

Hayes, Jimmy Adjunct Professor (1988).

Hoarle, Richard Adjunct Professor, Engineering Technology (1987). Newark College of Engineering, B.S., 1971.

Captain, Emile Adjunct Professor, Engineering Technology (2001). New Jersey Institute of Technology, B.S., 2001.

Catalano, Kevin Adjunct Professor, Hum (2003). University of North Carolina, Greensboro, B.A., 2000. Rutgers University, M.A.

Chappell, Stephen Adjunct Professor

Choi, Wooyoung Associate Research Professor, Mathematical Sciences (2005).

Cox, Timothy Adjunct Professor

Daken, Richard Adjunct Professor, Engineering Technology (1993). New Jersey Institute of Technology, B.S.E.E., 1975. New Jersey Institute of Technology, M.S.E.E., 1982. William Paterson College, M.B.A., 1992.

Davie, George Adjunct Professor, Industrial and Manufacturing Engineering (1994). Polytechnic Institute of Brooklyn, B.S., 1967. Fairleigh Dickinson University, M.B.A., 1976.

DiGerolamo, Lisa Adjunct Professor, Engineering Technology (2004). Stevens Institute of Technology, B.S.C.E., 1987. Montclair State University, M.B.A., 1993.

Droughton, John Adjunct Professor, Mechanical Engineering (2001). Rutgers University, B.S.M.E., 1959. Newark College of Engineering, M.S.M.E., 1962. Rutgers University, Ph.D., 1969.

Eckman, Bruce Adjunct Professor, ChE (2003). Rutgers University, B.S., 1974. University of Massachusetts, M.S., 1977. University of Massachusetts, Ph.D., 1979.

Erneux, Thomas Research Professor (2000). Free University Brussels, B.S., 1972. Free University Brussels, M.S., 1974. Free University Brussels, Ph.D.

Filippone, Ginger Adjunct Professor, Hum (2004). Rutgers University, B.A., 1996. Rutgers University, Ed.M., 2004.

Georgieva, Anna Associate Research Professor (2000). Duke University, Ph.D.

Gottko, Edward Adjunct Professor, Engineering Technology (1999). Newark College of Engineering, B.S., 1972. Newark College of Engineering, M.S., 1975. Kean College, M.S., 1983.

Gulati, Chandar Adjunct Professor, Math (1988). Punjab University, M.A., 1964. University of South Florida, M.A., 1972. Virginia Polytechnic Institute, M.A., 1980.

Harrison, David Adjunct Professor, Electrical & Computer Engineering (2001). New Jersey Institute of Technology, B.S., 2000. New Jersey Institute of Technology, M.S., 2001.

Himelstein, Nathan Adjunct Professor, Mgmt (1981). Rutgers University, B.A., 1959. Seton Hall University, M.B.A., 1968. Temple University, Ed.D., 1984.

Homs, Emile Adjunct Professor, Mechanical Engineering (2003). University of Louisiana, B.S.M.E., 1992. Louisiana State University, M.S.M.E., 1984. Stevens Institute of Technology, M.S., 2001. New Jersey Institute of Technology, Ph.D., 2003.

Hornsby, Michael L.Adjunct Professor, Civil and Environmental Engineering (1986).New Jersey Institute of Technology, B.S., 1985.New Jersey Institute of Technology, M.S., 1987.

Hunt, TheresaAdjunct Professor, Hum (2002).Rutgers University, B.A., 2000.Rutgers University, M.A., 2002.

Ivanov, DentchoResearch Professor, Biomedical Engineering (2004).Executive Director, Center for MicrofabricationUniversity of Paris, B.S., 1970.University of Paris, M.S., 1973.University of Sofia, Ph.D., 1982.

Jamedar, FariborzAdjunct Professor (1998).

Jones, LonnieAdjunct Professor, Physical Education (1990).Los Angeles College of the Philippines, B.A.

Katz, AlexanderAdjunct Professor (2004).

Kinkela, DavidAdjunct Professor, Hist (2004).Johnson State College, B.A., 1988.Northeastern University, M.A.

Kirova, VassilkaAdjunct Professor, Computer Science (1998).Electrotechnical University of St. Petersburg, B.S., 1980. Electrotechnical University of St. Petersburg, M.S., 1980.New Jersey Institute of Technology, Ph.D., 1999.

Klentzeris, nicholasAdjunct Professor

Kreutzer, AndrewAdjunct Professor, Computer Science (2000).Polytechnic Institute of Brooklyn, B.S., 1961.City College of New York, M.A., 1971.Lehigh University, Ph.D., 1987.

Liu, QingmingVisiting Researcher, Mechanical Engineering (2003).

Luglio, LouisAdjunct Professor (2000).

Lyssikatos, JohnAdjunct Professor, Civil and Environmental Engineering (1999).New Jersey Institute of Technology, B.S., 1992.New Jersey Institute of Technology, M.S., 1996.

Mansour, FaridAdjunct Professor (1999).

May, EdwinAdjunct Professor, Engineering Technology (2003).Stevens Institute of Technology, B.S., 1972.Harvard University, M.B.A., 1976.

McCoy, JamesAdjunct Professor, Physical Education (1979).City College of New York, B.A., 1979.

Meidling, JosephAdjunct Professor, Engineering Technology (2004).New Jersey Institute of Technology, B.S., 2004.

Moore, ThomasAdjunct Professor, Computer and Information Science (2003).Coordinator for Advisement and Outreach Activities, College of Computing Sciences (2003).St. Joseph's University (Pennsylvania), B.S., 1983.Mount Saint Mary Seminary, M.S., 1987.Hood College, M.S., 1988.

Morrey, CharlesAdjunct Professor

Hubertus, JamesAdjunct Professor, Electrical & Computer Engineering (2002).Lafayette College, B.S., 1990.

Iqbal, ZafarResearch Professor (2001).University of Dacca, B.S., 1960.University of Dacca, M.S., 1962.Cambridge University, Ph.D., 1967.

Jaffe, MichaelResearch Professor, Biomedical Engineering (2000).Executive Director, Center for Medical Device LaboratoryCornell University, B.A., 1963.Rensselaer Polytechnic Institute, Ph.D., 1967.

Johnson, KennethAdjunct Professor (2001).

Kats, YefimAdjunct Professor, Hum (2004).City University of New York, M.A., 1992.City University of New York, Ph.D., 1997.

Kenny, CharlesAdjunct Professor, Engineering Technology (2003).Georgetown University, B.A., 1970.Fordham University, J.D., 1976.

Kipple, CherieAdjunct Professor, Hum (2003).University of Nebraska, B.S., 1973.Montclair State University, M.A., 1994.

Klee, MartinAdjunct Professor, Engineering Technology (2002).Rutgers University, B.S., 1983.Drexel University, M.S., 1988.

Kontsov, BorisAdjunct Professor

Lipton, MartinAdjunct Professor, Mechanical Engineering (1995).Syracuse University, B.S.M.E., 1950.Stevens Institute of Technology, M.S.M.E., 1958.

Lopes, RobertAdjunct Professor, Electrical & Computer Engineering (1983).New Jersey Institute of Technology, B.S., 1979.New Jersey Institute of Technology, M.S., 1983.

Lyczko, JohnAdjunct Professor, Hum (2003).University of Pittsburgh, B.A., 1991.Carnegie Mellon University, M.A., 1994.

Rush, Seymour Adjunct Professor, Engineering Technology (2004). Fairleigh Dickinson University, B.A., 1965. Fairleigh Dickinson University, M.S., 1969.

Sabb, Jenice Adjunct Professor (1997).

Sakellarides, Lee Adjunct Professor, Hum (2003). Indiana University, B.S.

Sarno, Michael Adjunct Professor (1998).

Schoenitz, Mirko Assistant Research Professor (2003). RWTH Aachen, Diploma, 1995. Princeton University, M.A., 1997. Princeton University, Ph.D., 2001.

Seested, Charles Adjunct Professor

Senator, Miriam Adjunct Professor, Hum (1999). Brooklyn College, B.A., 1949. Columbia University, M.A., 1983.

Shu, Wen-Pin Adjunct Professor, Civil and Environmental Engineering (2004). Tunghai University, B.S., 1994. New Jersey Institute of Technology, M.S., 1999. New Jersey Institute of Technology, Ph.D., 2004.

Sielski, Brian Adjunct Professor, Civil and Environmental Engineering (2000). Pennsylvania State University, B.S., 1988. New Jersey Institute of Technology, M.S., 1994. New Jersey Institute of Technology, Ph.D., 1999.

Snyder, Harris Adjunct Professor (2004).

Sparta, William Adjunct Professor, Industrial and Manufacturing Engineering (1988). Newark College of Engineering, N.S., 1971. New Jersey Institute of Technology, M.S., 1975.

Spencer, Kevin Adjunct Professor, Engineering Technology (2003). New Jersey Institute of Technology, B.S., 2002.

Stanley, John Robert Adjunct Professor, Hist (2004). Moravian College, B.A., 1994. University of London, M.A., 1997. University of London, Ph.D., 2003.

Teklinski, Peter Director, Telecommunications and Networks, Information Services and Technology Adjunct Professor

Theodore, Georgeen Adjunct Professor, Architecture (2005). Harvard University, MArch, 2002. Rice University, BArch, 1994. Rice University, BA, 1992.

Todd, David Research Professor (1999). Northwestern University, B.S., 1946. Northwestern University, M.S., 1948. Princeton University, Ph.D., 1952.

TyIs, Robert Adjunct Professor, Engineering Technology (2003). New York University, B.S., 1973. Polytechnic Institute of New York, M.S., 1980.

Ullman, David Adjunct Professor Associate Provost for Information Services and Technology and Chief Information Officer

Vanden-Broeck, Jean-Marc Research Professor (2001). University of Liege, M.S., 1975. University of Adelaide, Ph.D., 1978.

Vijayan, Anil Visiting Assistant Professor, Management (2003). Regional Engineering College, Calicut, B.S., 1981. University of Columbia, M.B.A., 1987. Rutgers University, Ph.D., 1992.

Walker, William Adjunct Professor, Hum (2002). Hunter College, B.A., 1996. Hunter College, M.A., 2002.

Weiss, Julian Special Lecturer (1982). Visiting Scholar (1982). Pennsylvania State University, B.Arch., 1963. Columbia University, M.Arch., 1980. Columbia University, M.U.D., 1980.

Whalen, Michael Adjunct Professor, Hum (2003). University of Evansville, B.A., 1999. Miami University (Ohio), M.A., 2002.

Whittaker, Steve Research Professor, Information Systems Cambridge University, B.A., 1979. St. Andrew's University, Ph.D., 1983.

Selitto, Christopher Adjunct Professor, Physical Education (2000). New Jersey Institute of Technology, B.Arch., 1983.

Shen, Jia Adjunct Professor

Siegel, Joy Adjunct Professor, Arch (1992). Syracuse University, B.Arch., 1982. Harvard University, M.Arch., 1985.

Slaughter, Alan Adjunct Professor, Civil and Environmental Engineering (2003). New Jersey Institute of Technology, B.S., 1984.

Soldan, Scott Adjunct Professor, Biomedical Engineering (2003). New Jersey Institute of Technology, B.S., 1995.

Spencer, David Adjunct Professor

Spivak, Damien Adjunct Professor

Taylor, Christine Adjunct Professor, Mathematical Sciences (1996).

Tereshkovich, William Adjunct Professor, Engineering Technology (2000). New Jersey Institute of Technology, B.S., 1994. New Jersey Institute of Technology, M.S., 1995. New Jersey Institute of Technology, Ph.D., 2000.

Thompson, Joseph University Registrar (1979). Adjunct Professor, Chemistry and Environmental Science (1979). Loyola University, B.A., 1971. Middlebury College, M.A., 1972.

Tuttle, Marion Adjunct Professor, Industrial and Manufacturing Engineering (1972). Ladycliff College, B.A., 1964. St. John's University School of Law, J.D., 1967.

Ugural, Ansel Research Professor, Mechanical Engineering (2001). Ankara Technical College, Diploma, 1956. University of Wisconsin, M.S., 1962.

Van De Walle, Bartel Albrecht Assistant Research Professor (2000). University of Ghent, M.S., 1990. University of Ghent, Ph.D., 1996.

Varsik, John R. Assistant Research Professor (1999). Stanford University, B.S., 1979. University of Hawaii, M.S., 1981. University of Hawaii, Ph.D., 1987.

Vogt, William Adjunct Professor, Engineering Technology (1981). Newark College of Engineering, B.S., 1968. Stevens Institute of Technology, M.S., 1977.

Wang, Chengwen Adjunct Professor (2001).

West, Sandra Adjunct Professor, Hum (2003). Rutgers University, B.A., 1988. Goucher College, M.F.A., 2000.

Whitebook, David Adjunct Professor (1995).

Wolf, Frances Adjunct Professor (2002).

Wunner, Nicholas Adjunct Professor, Engineering Technology (1989). New Jersey Institute of Technology, B.S., 1976. New Jersey Institute of Technology, M.S., 1979.

Xie, Dong Qing Visiting Scholar, Electrical & Computer Engineering (2004).

Yee, Donald Adjunct Professor (1996).

Zeiner, Christopher Adjunct Professor, Engineering Technology (1994). New Jersey Institute of Technology, B.S., 1983. New Jersey Institute of Technology, M.S., 1989.

Zimmerman, Abraham Adjunct Professor, Chem (1995). City College of New York, B.S., 1951. Brooklyn College, M.S., 1957. New York University, Ph.D., 1962.

Xiao, Zhixiong Research Professor (2000). Southeast University of China, B.S., 1992. Southeast University of China, Ph.D., 1996.

Yang, Wenping Adjunct Professor Systems Manager, Information Services and Technology

Yurchyshyn, Vasyl Assistant Research Professor (2000). L'viv Ivan Franko State University, M.A. Main Astronomical Observatory (Kiev, Ukraine), Ph.D., 1998.

Zeugin, Michael Adjunct Professor, Hum (2004). Upsala College, B.A., 1985. Rutgers University, M.A., 2001.

Zoppi, Philip Adjunct Professor (2001).

Emeritus Faculty

Badenhausen, Otto Assistant Professor Emeritus, Federated History (1967). Hamilton College, B.A., 1954. Berlin Free University, M.A., 1959.

Bertsch, Carl V. Emeritus Professor University of Michigan, B.S., 1928. University of Michigan, Ph.D., 1937. University of Michigan, M.S., 1931.

Camp, James E. Professor Emeritus (1963). Louisiana State University, B.A., 1949. University of Michigan, Ph.D., 1965. Columbia University, M.A., 1952.

DiMatteo, John Associate Professor Emeritus, Mechanical Engineering (1966). Cooper Union, B.S., 1931. Stevens Institute of Technology, M.S., 1950.

Engler, Peter Associate Professor Emeritus, Biomedical Engineering (1984). McGill University, B.Eng., 1957. Cornell University, M.S.E.E., 1961. State University of New York at Buffalo, Ph.D., 1974.

Flatow, Paul Emeritus Associate Professor, Mathematical Sciences (1963). Columbia University, B.S.E.E., 1947. Columbia University, M.S., 1951.

Gage, Howard Associate Professor Emeritus, Industrial and Manufacturing Engineering (1972). City College of New York, B.M.E., 1960. New York University, M.M.E., 1965. New York University, Ph.D., 1972.

Goldberg, Hayden Emeritus Associate Professor, Humanities (1961). Bowdoin College, A.B., 1949. Columbia University, M.A., 1952.

Granik, Gerald Professor Emeritus, Mathematical Sciences (1952). Newark College of Engineering, B.S., 1950. Newark College of Engineering, M.S., 1954. Stevens Institute of Technology, M.S., 1958. Stevens Institute of Technology, Sc.D., 1965.

Helfgott, Roy Distinguished Professor Emeritus, Management (1968). City College of New York, B.S., 1948. Columbia University, M.A., 1949. New School for Social Research, Ph.D., 1957.

Hsieh, Jui S. Professor Emeritus, Mechanical Engineering (1960). Wuhan University, B.E., 1943. University of Kentucky, M.S., 1950. Ohio State University, Ph.D., 1955.

Jaffe, William J. Distinguished Professor Emeritus (1946). Columbia University, M.S., 1941. Columbia University, M.A., 1931. New York University, Engr.Sc.D., 1953. New York University, B.S., 1930.

Kebbekus, Barbara Professor Emeritus, Chemistry and Environmental Science (1974). Rosemont College, B.S., 1960. Pennsylvania State University, Ph.D., 1964.

Barkan, Herbert Professor Emeritus, Mathematical Sciences, Mathematical Sciences (1946). Brooklyn College, B.A., 1944. Columbia University, M.A., 1945.

Brower, William D. Professor Emeritus (1960). St. Peter's College, B.S., 1951. Columbia University, M.A., 1956.

Carluccio, Joseph Associate Professor Emeritus, Electrical & Computer Engineering (1957). Newark College of Engineering, B.S., 1946. Newark College of Engineering, M.S., 1952.

Duursema, Charles H. Associate Professor Emeritus Newark College of Engineering, B.S., 1933. Montclair State College, M.S., 1936.

Fenster, Saul President and Professor Emeritus, Mechanical Engineering (1978). City College of New York, B.M.E., 1953. Columbia University, M.S., 1955. University of Michigan, Ph.D., 1959.

Frank, Joseph Associate Professor Emeritus, Electrical & Computer Engineering (1968). City College of New York, B.E.E., 1952. Columbia University, M.S.E.E., 1960. Polytechnic Institute of New York, Ph.D., 1975.

Getzin, Donald Associate Professor Emeritus, Chemistry and Environmental Science (1965). Master Teacher (2001). State University of New York, B.A., 1960. Columbia University, M.A., 1961. Columbia University, Ph.D., 1967.

Goldberg, Vladislav Distinguished Professor Emeritus, Mathematical Sciences (1982). Moscow State University, M.S., 1958. Moscow State University, Ph.D., 1961.

Greenfield, Sanford Professor Emeritus, Architecture (1981). Massachusetts Institute of Technology, B.Arch., 1952. Massachusetts Institute of Technology, M.Arch., 1954. Harvard University, Ed.M., 1975.

Herman, Harry Professor Emeritus, Mechanical Engineering (1964). Cooper Union, B.M.E., 1948. Columbia University, M.S., 1956. Polytechnic Institute of Brooklyn, Ph.D., 1964.

Huang, Ching-Rong Professor Emeritus, Chemical Engineering (1966). National Taiwan University, B.S., 1954. Massachusetts Institute of Technology, M.S., 1958. University of Michigan, M.S., 1965. University of Michigan, Ph.D., 1966.

Johnson, Clarence S. Associate Professor Emeritus (1956). Montclair State College, M.A., 1951. Montclair State College, B.A., 1949.

Kiehl, Robert E. Professor Emeritus (1946). Columbia University, B.A., 1932. Rutgers University, Ed.D., 1957.

Kingery, Bernard Associate Professor Emeritus, Physics (1952). Georgia Southern University, B.S., 1948. Columbia University's, M.S., 1949.

Konove, Carl Professor Emeritus, Mathematical Sciences (1937). Newark College of Engineering, B.S.Ch.E., 1937. Montclair State College, M.A., 1941.

Krantz, Charles Associate Professor Emeritus, Federated History (1968). City College of New York, B.A., 1956. University of Connecticut, M.A., 1958. University of Rochester, Ph.D., 1964.

Laverda, Michael Associate Professor Emeritus, Management (1956). Upsala College, B.B.A., 1952. Rutgers University, M.B.A., 1954.

Liskowitz, John W. Distinguished Professor Emeritus, Civil and Environmental Engineering (1970). Rutgers University, B.S., 1952. Rutgers University, Ph.D., 1962.

Mangasarian, Richard Professor Emeritus, Civil and Environmental Engineering (1946). City College of New York, B.S.E., 1935. City College of New York, M.C.E., 1937.

Meola, Robert Professor Emeritus, Electrical & Computer Engineering (1947). Newark College of Engineering, B.S., 1946. Stevens Institute of Technology, M.S., 1949.

Mihalasky, John Professor Emeritus, Industrial and Manufacturing Engineering (1956). Newark College of Engineering, B.S.M.E., 1951. Newark College of Engineering, M.S., 1954. Rutgers University, M.B.A., 1956. New York University, M.I.E., 1960. Columbia University, Ed.D., 1973.

Misra, Raj Professor Emeritus, Electrical & Computer Engineering (1962). Massachusetts Institute of Technology, B.S., 1941. Cornell University, M.S., 1945. Cornell University, Ph.D., 1955.

Monahan, Edward Professor Emeritus, Civil and Environmental Engineering (1958). Newark College of Engineering, B.S.C.E., 1958. Newark College of Engineering, M.S.C.E., 1961. Oklahoma State University, Ph.D., 1968.

Napier, James Professor Emeritus, Humanities (1955). University of Pennsylvania, A.B., 1949. University of Pennsylvania, A.M., 1950. University of Pennsylvania, Ph.D., 1959.

Opie, John Distinguished Professor Emeritus, Federated History (1987). DePauw University, B.A., 1956. Union Theological Seminary, B.D., 1959. University of Chicago, M.A., 1961. University of Chicago, Ph.D., 1963.

Pattinson, John P. Professor Emeritus, Humanities (1965). Cambridge University, B.A., 1947. Cambridge University, M.A., 1949. New York University, Ph.D., 1968.

Peck, Jr., Charles F. Emeritus Professor (1970).

Kirchner, Robert Professor Emeritus, Mechanical Engineering (1962). Newark College of Engineering, B.S., 1962. Newark College of Engineering, M.S., 1964. Rutgers University, Ph.D., 1968.

Kopf, Joseph Associate Professor Emeritus, Engineering Technology (1975). Newark College of Engineering, B.S., 1957. Newark College of Engineering, M.S., 1962.

Kuharetz, Boris Professor Emeritus, Physics (1959). Columbia University, B.S., 1951. Columbia University, M.S., 1961. Stevens Institute of Technology, Ph.D., 1980.

Lehman, Frederick Distinguished Professor Emeritus, Civil and Environmental Engineering (1947). City College of New York, B.C.E., 1938. Massachusetts Institute of Technology, S.M., 1939. Massachusetts Institute of Technology, Sc.D., 1960.

Lyngstad, Sverre Distinguished Professor Emeritus, Humanities (1962). University of Oslo, B.A.Eng., 1943. University of Oslo, B.A.Hist., 1946. University of Washington, M.A., 1949. New York University, Ph.D., 1960.

McMillan, Robert Associate Professor Emeritus, Electrical & Computer Engineering (1964). Louisiana State University, B.S., 1942. California Institute of Technology, M.S., 1950. Newark College of Engineering, Ph.D., 1970.

Meyer, Andrew Professor Emeritus, Electrical & Computer Engineering (1965). Northwestern University, M.S., 1958. Northwestern University, Ph.D., 1961.

Miller, Edward Professor Emeritus, Mechanical Engineering (1948). Newark College of Engineering, B.S., 1948. University of Delaware, M.M.E., 1949. Columbia University, M.A., 1951. Stevens Institute of Technology, M.S., 1952. New York University, M.Aero.E., 1959.

Monack, Albert J. Professor Emeritus (1954).

Moshos, George Professor Emeritus, Computer Science (1968). University of Michigan, B.S., 1949. University of Michigan, M.S., 1949. Case Institute of Technology, Ph.D., 1965.

Natapoff, Marshall Associate Professor Emeritus, Physics (1956). Cornell University, B.S., 1948. New York University, M.S., 1954. Stevens Institute of Technology, Ph.D., 1968.

Padalino, Joseph Professor Emeritus, Electrical & Computer Engineering (1947). Newark College of Engineering, B.S., 1944. University of Pennsylvania, M.S., 1947. Polytechnic Institute of Brooklyn, Ph.D., 1963.

Pawel, Hans Professor Emeritus, Mechanical Engineering (1964). Newark College of Engineering, B.S., 1956. Newark College of Engineering, M.S., 1966. Rutgers University, Ph.D., 1974.

Pfeffer, Robert Distinguished Professor Emeritus, Chemistry and Environmental Science (2000). Associate Director, Center for Engineered Particulates, Chemistry and Environmental Science (2000). New York University, B.S., 1956. New York University, M.S., 1958. New York University, Ph.D., 1962.

Rausen, John Associate Professor Emeritus, Mathematical Sciences (1966). City College of New York, B.Ch.E., 1944. Columbia University, M.A., 1948. Columbia University, Ph.D., 1966.

Reiziss, Daniel Associate Professor Emeritus, Physics (1955). City College of New York, B.M.E., 1944. Newark College of Engineering, M.S.E.E., 1960.

Rigassio, James L. Professor Emeritus, Industrial and Manufacturing Engineering (1958). Newark College of Engineering, B.S., 1944.

Rose II, Robert H Emeritus Associate Professor (1947).

Savin, William Professor Emeritus, Physics (1960). Newark College of Engineering, B.S., 1960. Newark College of Engineering, M.S., 1962. Rutgers University, Ph.D., 1969.

Shilman, Avner Professor Emeritus, Chemistry and Environmental Science (1963). American University of Beirut, Ph.D., 1945. Columbia University, M.S., 1953. Columbia University, M.A., 1957. Polytechnic Institute of Brooklyn, Ph.D., 1961.

Simon, Malcolm Professor Emeritus, Physical Education (1955). Panzer College, B.S., 1950. Columbia University, M.A., 1956.

Smithberg, Eugene Professor Emeritus, Mechanical Engineering (1950). City College of New York, B.M.E., 1943. Polytechnic Institute of Brooklyn, M.M.E., 1949. New York University, D.Eng.Sc., 1961.

Steinberg, Abraham Professor Emeritus, Humanities (1955). Brooklyn College, B.A., 1937. Columbia University, Ph.D., 1955.

Stochaj, John Professor Emeritus, School of Management (1993). New York University, Ph.D., 1963. Rutgers University, M.A., 1956. Boston University, B.A., 1951.

Swanson, Robert Professor Emeritus, Physical Education (1948). Panzer College, B.S., 1947. Rutgers University, M.Ed., 1962.

Trattner, Richard Professor Emeritus, Chemistry and Environmental Science (1967). City College of New York, B.S., 1959. Brooklyn College, M.A., 1961. City University of New York, Ph.D., 1967.

Voronka, Roman Professor Emeritus, Mathematical Sciences (1962). Newark College of Engineering, B.S.E.E., 1962. Newark College of Engineering, M.S.E.E., 1964. New York University, M.S., 1967. New York University, Ph.D., 1974.

Weisman, Leslie Professor Emeritus, Architecture (1975). Wayne State University, B.F.A., 1967. University of Detroit, M.A., 1973.

West, Troy Associate Professor Emeritus, Architecture (1975). Carnegie Institute of Technology, B.Arch., 1958. Carnegie Institute of Technology, M.Arch., 1965.

Reff, Israel Professor Emeritus, Physics (1954). Cooper Union, B.S.Ch.E., 1938. Indiana University, A.M., 1951. Indiana University, Ph.D., 1953.

Rich Jr., Joseph A. Professor Emeritus, Industrial and Manufacturing Engineering (1941). Rutgers University, B.S., 1941. Rutgers University, M.S., 1948. Rutgers University, D.Jur., 1952.

Roche, Jr., Edward C. Professor Emeritus, Chemical Engineering (1967). Stevens Institute of Technology, M.E., 1954. Harvard University, M.S., 1958. Stevens Institute of Technology, Sc.D., 1967.

Russell, Frederick Arthur Distinguished Professor Emeritus, Electrical & Computer Engineering (1937). Newark College of Engineering, B.S., 1937. Stevens Institute of Technology, M.S., 1947. Columbia University, D.Eng.Sc., 1953.

Schmerzler, Lawrence Associate Professor Emeritus, Mechanical Engineering (1953). University of Texas, B.S., 1948. Newark College of Engineering, M.S., 1956.

Shukar, Arthur Associate Professor Emeritus, Physics (1958). Newark College of Engineering, B.S., 1958. Newark College of Engineering, M.S., 1959.

Smith, Hunter Professor Emeritus, Physics (1956). Davidson College, B.S., 1926. North Carolina State College, M.S., 1930.

Stamper, Eugene Professor Emeritus, Mechanical Engineering (1952). City College of New York, B.M.E., 1948. New York University, M.M.E., 1952.

Stephans, Clarence H. Emeritus Professor (1932).

Suchow, Lawrence Professor Emeritus, Chemistry and Environmental Science (1964). City College of New York, B.S., 1943. Polytechnic Institute of Brooklyn, Ph.D., 1951.

Thomas, Stan Associate Professor Emeritus, Industrial and Manufacturing Engineering (1971). University of Akron, B.S.M.E., 1950. Cornell University, M.S., 1955. Purdue University, Ph.D., 1967.

Tremaine, Marilyn Professor Emeritus, Information Systems (2001). Director, Human-Computer Interaction Program, Human-Computer Interaction (2002). University of Wisconsin, B.S., 1969. University of Southern California, M.S., 1978. University of Southern California, Ph.D., 1982.

Wacker, Robert Associate Professor Emeritus, Humanities (1954). Northwestern University, B.A., 1947. Columbia University, M.A., 1948.

Wenisch, Werner Associate Professor Emeritus, Chemistry and Environmental Science (1963). Massachusetts Institute of Technology, B.S., 1943. New York University, M.S., 1949. New York University, Ph.D., 1955.

Winters, Stanley Distinguished Professor Emeritus, Federated History (1957). New York University, A.B., 1948. Columbia University, A.M., 1950. Rutgers University, Ph.D., 1966.

2007-2008

Wittes, Leo Emeritus Assistant Professor (1953).

Zames, Frieda Associate Professor Emeritus, Mathematical Sciences (1972). Brooklyn College, B.S., 1954. New York University, M.S., 1966. New York University, Ph.D., 1972.

Zambuto, Mauro Distinguished Professor Emeritus, Electrical & Computer Engineering (1962). University of Rome and Padua, Ph.D., 1944.

Zatzkis, Henry Distinguished Professor Emeritus, Mathematical Sciences (1953). Ohio State University, B.S., 1942. Indiana University, M.S., 1944. Syracuse University, Ph.D., 1950.

2007-2008

Faculty

Abdel-Malek, Layek Professor, Industrial and Manufacturing Engineering (1986). Associate Dean, Newark College of Engineering Cairo University, B.S., 1969. National Planning Institute (Cairo), Diploma, 1970. Polytechnic Institute of New York, Ph.D., 1980.

Abdou, George Associate Professor, Industrial and Manufacturing Engineering (1986). Director, Graduate Programs in Industrial & Manufacturing Systems Engineering, Industrial and Manufacturing Engineering Associate Chairperson, Industrial and Manufacturing Engineering (1998). Helwan University (Cairo), B.S., 1977. Iowa State University, M.C.S., 1983. Iowa State University, Ph.D., 1987.

Ahluwalia, Daljit Chairperson, Mathematical Sciences (2006). Professor, Mathematical Sciences Director, Center for Applied Mathematics and Statistics, Mathematical Sciences (1986). Punjab University, B.A., 1952. Punjab University, M.A., 1955. Indiana University, M.S., 1965. Indiana University, Ph.D., 1965.

Altenkirch, Robert Distinguished Professor, Mechanical Engineering (2002). President Purdue University, B.S., 1970. University of California, Berkeley, M.S., 1975. Purdue University, Ph.D., 1975.

Anandarajan, Asokan Professor, Management (1996). Master Teacher, Management (2003). University of Colombia, B.B.A., 1982. Cranfield University, M.B.A., 1984. Cranfield University, M. Phil., 1986. Drexel University, Ph.D., 1994.

Ansari, Nirwan Professor, Electrical & Computer Engineering (1988). Associate Chairperson, Graduate Studies, Electrical & Computer Engineering (2004). New Jersey Institute of Technology, B.S.E.E., 1982. University of Michigan, M.S.E.E., 1983. Purdue University, Ph.D., 1988.

Arinzeh, Treena Livingston Associate Professor, Biomedical Engineering (2001). Rutgers University, B.S., 1992. Johns Hopkins University, M.S.E., 1994. University of Pennsylvania, Ph.D., 1999.

Axe, Lisa Professor, Civil and Environmental Engineering (1995). Purdue University, B.S., 1984. Illinois Institute of Technology, M.S., 1992. Illinois Institute of Technology, Ph.D., 1995.

Baltrush, Michael Associate Professor, Computer Science (1975). Acting Chairperson, Computer Science, College of Computing Sciences (2006). University of Connecticut, B.S.E.E., 1968. University of Connecticut, M.S., 1973. University of Connecticut, Ph.D., 1976.

Abdi, Ali Assistant Professor, Electrical & Computer Engineering (2001). University of Science and Technology, B.S., 1991. University of Teheran, M.S., 1996. University of Minnesota, Ph.D., 2001.

Adamovich, Sergei Assistant Professor, Biomedical Engineering (2004). Moscow Institute of Physics and Technology, B.Sc., 1983. Moscow Institute of Physics and Technology, M.Sc., 1983. Moscow Institute of Physics and Technology, Ph.D., 1988.

Akansu, Ali Professor, Electrical & Computer Engineering (1987). Technical University of Istanbul, B.S.E.E., 1980. Polytechnic University, M.S.E.E., 1987. Polytechnic University, Ph.D., 1987.

Alvarez, Tara Associate Professor, Biomedical Engineering (2001). Rutgers University, B.S., 1994. Rutgers University, M.S., 1996. Rutgers University, Ph.D., 1998.

Andrushkiw, Roman Professor, Mathematical Sciences (1964). Stevens Institute of Technology, B.S.E.E., 1959. Newark College of Engineering, M.S.E.E., 1964. University of Chicago, M.S., 1967. Stevens Institute of Technology, Ph.D., 1973.

Antes, Billie Jean Professor, Aerospace Studies (2003). Chairperson, Aerospace Studies West Chester University, B.S., 1978. Rider University, M.A., 1986.

Armenante, Piero Distinguished Professor, Chemistry and Environmental Science (1984). Director, Pharmaceutical Engineering Program (2002). University of Rome, Laurea in Ingegneria Chimica, 1977. University of Virginia, Ph.D., 1984.

Bagheri, Sima Professor, Civil and Environmental Engineering (1984). Teheran University, B.S., 1965. Illinois State University, M.S., 1968. University of Wisconsin, Ph.D., 1984.

Baltzis, Basil Master Teacher, Chemical Engineering, Chemical Engineering (1983). Professor, Chemical Engineering and Chemistry & Environmental Science, Chemical Engineering (1983). Chairperson, Chemical Engineering National Technical University of Athens, Diploma, 1978. University of Illinois at Urbana-Champaign, M.S., 1980. University of Minnesota, Ph.D., 1983.

Bar-Ness, Yeshekel Foundation Professor of Communications & Signal Processing Distinguished Professor, Engineering Technology (1990). Executive Director, Center for Communications and Signal Processing Research Technion, Israel Institute of Technology, B.Sc., 1958. Technion, Israel Institute of Technology, M.S., 1963. Brown University, Ph.D., 1969.

Barnes, William Associate Professor, Engineering Technology (1990). Program Coordinator, Electrical and Computer Engineering Technology, Engineering Technology Northeastern University, B.S., 1967. Fairleigh Dickinson University, M.S., 1982.

Beaton, Patrick Professor, Humanities (1992). Seattle University, B.S., 1962. University of Pittsburgh, M.S., 1965. Rutgers University, M.C.R.P., 1971. Rutgers University, Ph.D., 1974.

Bengu, Golgen Associate Professor, Industrial and Manufacturing Engineering (1988). Bosphorus University, B.S., 1981. North Carolina A&T State University, M.S., 1985. Clemson University, Ph.D., 1987.

Bieber, Michael Professor, Information Systems, Information Systems Acting Chairperson, Information Systems (1992). PhD Program Coordinator, Information Systems (2004). University of Pennsylvania, B.A.S./B.S.E., 1980. University of Pennsylvania, M.S., 1990. University of Pennsylvania, Ph.D., 1990.

Bladikas, Athanassios Associate Professor, Industrial and Manufacturing Engineering (1988). Chairperson, Industrial and Manufacturing Engineering Director, Interdisciplinary Program in Transportation, Transportation City College of New York, B.S., 1971. Columbia University, M.B.A., 1975. Polytechnic Institute of New York, M.S., 1976. Polytechnic Institute of New York, Ph.D., 1983.

Booty, Michael Associate Professor, Mathematical Sciences (1993). Trinity College, Cambridge University, B.A., 1979. Imperial College, University of London, Ph.D., 1983.

Bose, Amitabha Professor, Mathematical Sciences (1996). Director Undergraduate Program, Mathematical Sciences (2004). Columbia University, B.S., 1989. Brown University, M.S., 1991. Brown University, Ph.D., 1993.

Bukiet, Bruce Associate Professor, Mathematical Sciences (1989). Brown University, B.A., 1980. Courant Institute of Mathematical Sciences, New York University, M.S., 1983. Courant Institute of Mathematical Sciences, New York University, Ph.D., 1986.

Calvin, James Associate Professor, Computer Science (1996). University of California, Berkeley, B.A., 1978. University of California, Berkeley, M.S., 1979. Stanford University, Ph.D., 1990.

Carr, William Professor, Electrical & Computer Engineering (1986). Carnegie Institute of Technology, B.S., 1959. Carnegie Institute of Technology, M.S., 1959. Carnegie Institute of Technology, Ph.D., 1962. Southern Methodist University, M.S., 1966.

Barat, Robert Acting Chairperson, Chemical Engineering Professor, Chemical Engineering (1990). New Jersey Institute of Technology, B.S., 1980. New Jersey Institute of Technology, M.S., 1983. Massachusetts Institute of Technology, Ph.D., 1990.

Bart, Ernest Assistant Professor, Chemical Engineering (1968). New York University, B.Ch.E., 1957. New York University, M.Ch.E., 1960. New York University, Ph.D., 1971.

Bechtold, John Associate Professor, Mathematical Sciences (1994). Siena College, B.S., 1982. Northwestern University, Ph.D., 1987.

Bhattacharjee, Manish Professor, Mathematical Sciences (1987). Director of Statistics Program, Mathematical Sciences (2003). Calcutta University, B.S., 1958. Calcutta University, M.S., 1960. University of California at Berkeley, Ph.D., 1967.

Blackmore, Denis Professor, Mathematical Sciences (1971). Polytechnic Institute of Brooklyn, B.S., 1965. Polytechnic Institute of Brooklyn, M.S., 1966. Polytechnic Institute of Brooklyn, Ph.D., 1971.

Bonitsis, Theologos Associate Professor, Management (1984). Bernard M. Baruch College, B.A., 1976. City University of New York, Ph.D., 1984.

Borcea, Cristian Assistant Professor, Computer Science (2004). Polytechnic University (Bucharest), B.S., 1996. Polytechnic University (Bucharest), M.S., 1997. Rutgers University, M.S., 2002. Rutgers University, Ph.D., 2004.

Bozzelli, Joseph Distinguished Professor, Chemistry and Environmental Science (1975). Distinguished Professor, Chemical Engineering Ada C. Fritts Professorship (2006). Marietta College, B.S., 1964. University of Dayton, M.S., 1968. Princeton University, Ph.D., 1972.

Buteau, Leon Professor, Physics (1959). Newark College of Engineering, B.S.M.E., 1958. Stanford University, M.S., 1959. University of Florida, Ph.D., 1963.

Carpinelli, John Associate Professor, Electrical Engineering (1995). Master Teacher, Electrical & Computer Engineering (2004). Stevens Institute of Technology, B.E., 1983. Rensselaer Polytechnic Institute, M.E., 1984. Rensselaer Polytechnic Institute, Ph.D., 1987.

Caudill, Reggie Professor, Industrial and Manufacturing Engineering (1990). University of Alabama, B.S., 1971. University of Alabama, M.S., 1973. University of Minnesota, Ph.D., 1976.

Celik, ZeynepDistinguished Professor, Architecture (1991). Istanbul Technical University, B.Arch., 1975.Rice University, M. Arch., 1978.

Chang, TimothyAssociate Professor, Electrical & Computer Engineering (1991).Master Teacher, Electrical & Computer Engineering (2003).McGill University, B. Eng., 1980.University of Toronto, M.A.Sc., 1982.University of Toronto, Ph.D., 1989.

Chen, Rong-YawProfessor, Mechanical Engineering (1966). National Taiwan University, B.S., 1957.University of Toledo, M. S., 1963.North Carolina State University, Ph.D., 1966.

Chin, Ken K.Professor, Physics (1987).Director, GraduateDirector, Graduate Programs, Applied Physics Programs, PhysicsPeking Institute of Aeronautics, B.S., 1959. University of Georgia, M.S., 1982.Stanford University, Ph.D., 1986.

Cohen, MaurieAssociate Professor, Chemistry and Environmental Science (2001).New York University, B.S., 1984. Columbia University, M.S., 1987.University of Pennsylvania, Ph.D., 1993.

Cordero, ReneAssociate Professor, Management (1990). Catholic University of America, B.M.E., 1966.University of Delaware, M.M.A.E., 1968.Fairleigh Dickinson University, M.B. A., 1978.Rutgers University, Ph.D., 1985.

Daniel, JaniceAssociate Professor, Civil and Environmental Engineering (1999).Princeton University, B.S., 1985. Polytechnic University, M.S., 1989.Texas A&M University, Ph. D., 1995.

Dauerman, LeonardAssociate Professor, Chemistry and Environmental Science (1969).City College of New York, B.S., 1953.Purdue University, M.S., 1955.Rutgers University, Ph.D., 1962.Rutgers Law School, J.D., 1973.

De Sousa Santos, AntonioProfessor (1993).Master Teacher, Architecture (2004).Program Director, Infrastructure Planning (1993).University of Cape Town, B.Arch., 1966.University of Pennsylvania, M.Arch., 1968.University of Pennsylvania, M.C. P., 1968.

Deek, FadiProfessor, Information Systems (1986).Master Teacher, Information Systems, Information SystemsDean, College of Science and Liberal ArtsDirector, Information Technology ProgramNew Jersey Institute of Technology, B.S., 1985.New Jersey Institute of Technology, M.S., 1986.New Jersey Institute of Technology, Ph.D., 1997.

Deutschman, HaroldProfessor, Civil and Environmental Engineering (1968).Master Teacher, Civil and Environmental Engineering (1968).City College of New York, B.S.C.E., 1961. University of Missouri, M.S., 1962.Northwestern University, Ph. D., 1969.

Dhawan, AtamProfessor, Biomedical Engineering (2000). Chairperson, Electrical & Computer Engineering (2000). Director, NJ Center for Wireless Internet and Networking Security (2002).Electrical & Computer Engineering Advisory Board Member, Electrical & Computer Engineering (2002). University of Roorkee, B.S., 1977.University of Roorkee, M.S., 1979.University of Manitoba, Ph.D., 1985.

Chakrabarti, AlokDistinguished Professor, Industrial and Manufacturing Engineering (1989).Foundation Chair, Management of TechnologyJadavpur University, B.Ch.E., 1963.Indian Institute of Technology, M.B.A., 1966. Northwestern University, Ph.D., 1972.

Chase, HamiltonAssociate Professor, Mathematical Sciences (1968).City College of New York, B.E.E., 1947.New York University, M.S., 1950.Case Institute of Technology, Ph.D., 1964.

Chien, I. StevenProfessor, Civil and Environmental Engineering (1996).Tamkang University, B.S., 1983.University of Maryland, M.S., 1991.University of Maryland, Ph.D., 1995.

Cohen, BarryAssociate Dean, College of Computing Sciences (2006).Assistant Professor, Computer Science (2001).City University of New York, B.A., 1993.State University of New York at Stony Brook, Ph.D., 2001.

Coppola, Nancy WaltersAssociate Professor, Humanities (1991).Program Director, MS in Professional and Technical Communication, Humanities (1995).Simmons College, B.A., 1977.Syracuse University, M.A., 1980.Syracuse University, Dr. Arts, 1983.

Cornely, RoyProfessor, Electrical & Computer Engineering (1971).Drexel Institute of Technology, B.S.E.E., 1960. University of Pennsylvania, M.S.E.E., 1962.Rutgers University, Ph.D., 1972.

Das, SanchoyProfessor, Industrial and Manufacturing Engineering (1989).University of Science and Technology (Ghana), B.S., 1982.Virginia Polytechnic Institute and State University, M.S., 1985.Virginia Polytechnic Institute and State University, Ph.D., 1989.

Dave, RajeshDistinguished Professor, Chemical Engineering (1985).Director, Center for Engineered Particulates (2002). Indian Institute of Technology, B.Tech., 1978.Utah State University, M.S., 1981.Utah State University, Ph.D., 1983.

De, SwadesAssistant Professor, Electrical & Computer Engineering (2004).Calcutta University, B.Sc., 1989.Calcutta University, B.Tech., 1993.Indian Institute of Technology, Delhi, M.Tech., 1998.State University of New York at Buffalo, Ph.D., 2004.

Denker, CarstenAssistant Professor, Physics (2001).Georg-August Universitat (Gottingen, Germany), M.S., 1991.

Dhar, SunilAssociate Professor, Mathematical Sciences (1991).University of Poona, B.Sc., 1979.University of Poona, M. Sc., 1981.Michigan State University, M.S., 1983.Michigan State University, Ph.D., 1988.

Ding, YuanAssociate Professor, Civil and Environmental Engineering (1996).Tsinghua University, B.S., 1984.Tsinghua University, M.S., 1987.Massachusetts Institute of Technology, M.S., 1992.New Jersey Institute of Technology, Ph.D., 1995.

Dios, Rose Associate Professor, Mathematical Sciences (1996). Master Teacher, Mathematical Sciences (2000). New Jersey Institute of Technology, B.S.E.S., 1977. New York University, M.S., 1979. New York University, Ph.D., 1984.

Dreyzin, Edward Professor, Mechanical Engineering (1999). Odessa College of Measurements, B.S., 1980. Odessa University, M.S., 1985. Odessa University, Ph.D., 1992.

Elliot, Norbert Professor, Humanities (1988). University of New Orleans, B.A., 1973. University of New Orleans, M.A., 1975. University of Tennessee, Ph.D., 1981.

English, Robert Professor, Engineering Technology (1990). Chairperson, Engineering Technology Purdue University, B.S. Met. Eng., 1970. Purdue University, M.S. Met. Eng., 1976. Purdue University, M.S.I.E., 1979.

Fabiano, Lucian Associate Professor, Engineering Technology (1990). Newark College of Engineering, B.S.E.E., 1966. Newark College of Engineering, M.S.E.E., 1967.

Federici, John Professor, Physics (1992). University of Notre Dame, B.Sc., 1983. Princeton University, Ph.D., 1989.

Fjermestad, Jerry Associate Professor, Management (1993). Pacific Lutheran University, B.A., 1971. State University of New York, M.S., 1977. Polytechnic Institute of New York, M.S., 1982. Iona College, M.B.A., 1987. Rutgers University, Ph.D., 1994.

Foulds, Richard Associate Professor, Biomedical Engineering (1999). Tufts University, B.S., 1972. Tufts University, M.S., 1972. Tufts University, Ph.D., 1985.

Friedland, Bernard Distinguished Professor, Electrical & Computer Engineering (1990). Columbia University, A.B., 1952. Columbia University, B.S., 1953. Columbia University, M.S., 1954. Columbia University, Ph.D., 1957.

Funkhouser, Christopher Associate Professor, Humanities (1997). University of Virginia, B.A., 1986. University of Virginia, M.A., 1988. University of Albany, Ph.D., 1997.

Gary, Dale Chairperson, Physics (2006). Professor, Physics (1997). Director, Owens Valley Radio Observatory University of Michigan, B.S., 1976. University of Colorado, Ph.D., 1982.

Ge, Hongya Associate Professor, Electrical & Computer Engineering (1995). University of Electronic Science and Technology of China, B.S., 1982. Nanjing Aeronautical Institute, M.S., 1985. University of Rhode Island, Ph.D., 1994.

Geller, James Professor, Computer and Information Science (1998). Associate Chairperson for Undergraduate Studies, Computer Science (2004). Technical University of Vienna, Diploma Ing., 1979. State University of New York at Buffalo, M.S., 1984. State University of New York at Buffalo, Ph.D., 1988.

Geskin, Ernest Professor, Mechanical Engineering (1984). Dnepropetrovsk Institute of Metallurgy, M.S., 1957. Moscow Institute of Steels and Alloys, Ph.D., 1967.

Ghosh, Kaushik Assistant Professor, Mathematical Sciences (2006). University of California, Santa Barbara, PhD, 1997. Indian Statistical Institute, MStat, 1992. Indian Statistical Institute, BStat, 1990.

Dresnack, Robert Professor, Civil and Environmental Engineering (1966). Master Teacher, Civil and Environmental Engineering (2001). City College of New York, B.S.C.E., 1961. New York University, M.S.C.E., 1963. New York University, Ph.D., 1966.

Eisenberg, Lawrence Assistant Professor, Management (2006). University of Pennsylvania, PhD, 1987.

Elwell Jr., David Associate Professor, Architecture (1975). Yale University, B.S., 1957. Cambridge University, B.A., 1963. Princeton University, M.F.A., 1965.

Esperdy, Gabrielle Assistant Professor, Architecture (2001). Smith College, B.A., 1987. City College of New York, M.S., 1999. City College of New York, Ph.D., 1999.

Farinas, Edgardo Assistant Professor, Chemistry and Environmental Science (2004). Loyola University of Chicago, B.S., 1990. University of California, Santa Cruz, Ph.D., 1997.

Fischer, Ian Associate Chairperson, Mechanical Engineering, Mechanical Engineering (2000). Professor, Mechanical Engineering (1988). Columbia University, B.S., 1970. Princeton University, M.S.E., 1973. Columbia University, Eng.Sc.D., 1985.

Florio, Jr., Pasquale Associate Professor, Mechanical Engineering (1966). Newark College of Engineering, B.S., 1959. New York University, M.M.E., 1960. New York University, Ph.D., 1967.

Franck, Karen Professor, Architecture (1981). Bennington College, B.A., 1970. City University of New York, Ph.D., 1978.

Friedman, Robert Associate Professor, Humanities (1993). Associate Chairperson, Humanities, Humanities (2004). City University of New York, B.A., 1984. Brooklyn College, M.F.A., 1987. City University of New York, Ph.D., 1993. New Jersey Institute of Technology, M.S., 2002.

Garber, Richard Assistant Professor, Architecture (2005).

Gauchat, Urs Professor, Architecture (1991). Dean University of Sydney, B.Arch., 1966. Harvard University, M.Arch., 1967.

Gehani, Narain Professor, Computer and Information Science (2003). Dean, College of Computing Sciences (2006). Indian Institute of Technology, B.Tech., 1969. Stevens Institute of Technology, B.S., 1971. Cornell University, M.S., 1975. Cornell University, Ph.D., 1975.

Gerbessiotis, Alexandros Associate Professor, Computer Science (1998). National Technical University of Athens, Diploma, 1987. Harvard University, M.S., 1988. Harvard University, Ph.D., 1993.

Getzin, Donald Associate Professor Emeritus, Chemistry and Environmental Science (1965). Master Teacher (2001). State University of New York, B.A., 1960. Columbia University, M.A., 1961. Columbia University, Ph.D., 1967.

Goldman, Daniel Assistant Professor, Mathematical Sciences (2000). Cornell University, B.S., 1987. Brown University, Ph.D., 1993.

Goldman, Glenn Professor, Architecture (1982). Columbia University, B.A., 1974. Harvard University, M.Arch., 1978.

Golub, Eugene Professor, Civil and Environmental Engineering (1968). Cooper Union, B.C.E., 1962. Columbia University, M.S., 1964. Polytechnic Institute of Brooklyn, Ph.D., 1969.

Goodman, Roy Assistant Professor, Mathematical Sciences (2002). University of Michigan, B.S., 1994. New York University, Ph.D., 1999.

Gordon, Peter Assistant Professor, Mathematical Sciences (2005). Saint Petersburg State Marine Technical University, M.Sc., 1996. University of Saint Petersburg, Ph.D., 1999.

Grebel, Haim Professor, Electrical & Computer Engineering (1987). Director, Electronic Imaging Center Tel Aviv University, B.S., 1977. The Weizmann Institute of Science, M.S., 1980. The Weizmann Institute of Science, Ph.D., 1985.

Greenstein, Teddy Professor, Chemical Engineering (1967). City College of New York, B.Ch.E., 1960. New York University, M.Ch.E., 1962. New York University, Ph.D., 1967.

Gund, Tamara Professor, Chemistry and Environmental Science (1981). Rutgers University, A.B., 1966. University of Massachusetts, M.S., 1968. Princeton University, Ph.D., 1974.

Haimovich, Alexander Professor, Electrical & Computer Engineering (1987). Technion, Israel Institute of Technology, B.S., 1977. Drexel University, M.S., 1983. University of Pennsylvania, Ph.D., 1989.

Harnoy, Avraham Professor, Mechanical Engineering (1985). Technion, Israel Institute of Technology, B.S., 1961. Technion, Israel Institute of Technology, M.S., 1966. Technion, Israel Institute of Technology, D.Sc., 1972.

Hiltz, Starr Roxanne Distinguished Professor, Information Systems (1985). Vassar College, A.B., 1963. Columbia University, M.A., 1964. Columbia University, Ph.D., 1969.

Hornthrop, David Assistant Professor, Mathematical Sciences (2001). Washington University, B.S., 1990. Princeton University, M.A., 1992. Princeton University, Ph.D., 1995.

Hsieh, Hsin-Neng Professor, Civil and Environmental Engineering (1983). Associate Chairperson, Civil and Environmental Engineering (1998). Cheng-Kung University, B.S., 1970. University of Iowa, M.S., 1973. University of Pittsburgh, Ph.D., 1983.

Hu, Jie Assistant Professor, Electrical & Computer Engineering (2004). Beijing University of Aeronautics and Astronautics, B.E., 1997. Peking University, M.E., 2000. Pennsylvania State University, Ph.D., 2004.

Hubbi, Walid Associate Professor, Electrical & Computer Engineering (1983). Aleppo University, B.S., 1971. University of London, M.S., 1974. The Queens University of Belfast, Ph.D., 1977.

Hunter, William Professor, Biomedical Engineering (2002). Chairperson, Biomedical Engineering Lehigh University, B.S., 1968. University of Pennsylvania, Ph.D., 1977.

Golowasch, Jorge Associate Professor, Mathematical Sciences (2002). Universidad de Chile, B.A., 1984. Brandeis University, Ph.D., 1991.

Goode, Philip Distinguished Professor, Physics (1984). Director, Center for Solar-Terrestrial Research University of California, Berkeley, A.B., 1964. Rutgers University, Ph.D., 1969.

Gopalakrishnan, Shanthi Associate Professor, Management (1999). Women's Christian College, B.A., 1981. Jamanalal Bajaj Institute, M.B.A., 1983. Rutgers University, M.B.A., 1991. Rutgers University, Ph.D., 1995.

Gorun, Sergiu Associate Professor, Chemistry and Environmental Science (2004). Columbia University, M.A., 1983. Massachusetts Institute of Technology, Ph.D., 1986.

Greenfeld, Joshua Professor, Civil and Environmental Engineering Ohio State University, PhD Ohio State University, MSc Tel Aviv University, BA

Grow, James Professor, Chem (1977). University of Illinois at Urbana-Champaign, B.S., 1968. University of Wisconsin, M.S., 1972. Oregon State University, Ph.D., 1974.

Haddad, Richard Professor, Electrical & Computer Engineering (1996). Polytechnic Institute of Brooklyn, B.E.E., 1956. Polytechnic Institute of Brooklyn, M.S.E.E., 1958. Polytechnic Institute of Brooklyn, Ph.D., 1962.

Hanesian, Deran Professor, Chemical Engineering (1963). Master Teacher, Chemical Engineering (2000). Cornell University, B.Ch.E., 1952. Cornell University, Ph.D., 1961.

Hawk, David Professor, Architecture (1981). Master Teacher, Architecture (2001). Dean, School of Management Iowa State University, B.Arch., 1971. University of Pennsylvania, M.Arch., 1974. University of Pennsylvania, M.C.P., 1974. University of Pennsylvania, Ph.D., 1979.

Hodge, Elizabeth Assistant Professor, Humanities (1969). New York University, B.A., 1958. New York University, M.A., 1960. New York University, Ph.D., 1975.

Hou, Sui-Hoi Edwin Associate Professor, ECE/CS (1989). Associate Chairperson, Electrical & Computer Engineering (2000). University of Michigan, B.S., 1982. Stanford University, M.S., 1984. Purdue University, Ph.D., 1988.

Hsu, C.T. Thomas Professor, Civil and Environmental Engineering (1978). Cheng-Kung University, B.S.E., 1964. College of Chinese Culture, M.S., 1967. McGill University, M.E., 1969. Yale University, M.S., 1972. McGill University, Ph.D., 1974.

Huang, Michael Chien-Yueh Assistant Professor, Chemical Engineering (2000). National Taiwan University, B.S., 1987. National Taiwan University, M.S., 1991. University of Massachusetts, Amherst, Ph.D., 1997.

Hung, Daochuan Associate Professor, Computer Science (1988). Chung Yuan University, B.S.E.E., 1977. National Tsing Hua University, M.S.E.E., 1981. Purdue University, Ph.D., 1988.

Im, Il Assistant Professor, Information Systems (2001). Seoul National University, B.A., 1988. Seoul National University, M.B.A., 1990. University of Southern California, Ph.D., 2001.

Jabi, Wassim Assistant Professor, Architecture (2001). University of Michigan, M.Arch., 1989. University of Michigan, Ph.D., 2003.

Jermakian, Armen Assistant Professor, Physics (1966). Stevens Institute of Technology, B.S.E., 1959. Stevens Institute of Technology, M.E., 1960.

Jiang, Shidong Assistant Professor, Mathematical Sciences (2004). Shanghai Jiaotong University, B.Sc., 1994. New York University, M.S., 1998. Courant Institute of Mathematical Sciences, New York University, Ph.D., 2001.

Jonakait, G. Miller Distinguished Professor, Mathematical Sciences (2001). Wellesley College, A.B., 1968. University of Chicago, M.A., 1969. Cornell University Medical College, Ph.D., 1978.

Juliano, Thomas Associate Professor, Engineering Technology (1979). Newark College of Engineering, B.S., 1967. Newark College of Engineering, M.S., 1970. New Jersey Institute of Technology, D.Eng.Sc., 1979.

Karaa, Fadi Associate Professor, Civil and Environmental Engineering (2006). Massachusetts Institute of Technology, PhD, 1984. Massachusetts Institute of Technology, MS, 1982. Massachusetts Institute of Technology, MBA, 1983. Ecole Polytechnique, Dipl., 1980.

Katzen, Martin Associate Professor, Mathematical Sciences (1963). Master Teacher, Mathematical Sciences (2002). City College of New York, B.S., 1960. New York University, M.S., 1963. City University of New York, Ph.D., 1968.

Khera, Raj Professor, Civil and Environmental Engineering (1966). Ohio State University, M.S., 1962. Northwestern University, Ph.D., 1967.

Kimmel, Howard Professor, Chemical Engineering (1966). Assistant Vice President, Pre-College Programs Assistant Vice President, Academic Affairs, Chemical Engineering Brooklyn College, B.S., 1959. West Virginia University, M.S., 1961. City University of New York, Ph.D., 1967.

Kirchhoff, Bruce Distinguished Professor, Management (1992). Case Institute of Technology, B.S.C.E., 1959. University of Utah, M.B.A., 1969. University of Utah, Ph.D., 1971.

Klashner, Robert Assistant Professor, Information Systems (2002). California State Polytechnic University, B.S., 1993. University of Southern California, M.A., 1994. University of California, Irvine, M.S., 1998. University of California, Irvine, Ph.D., 2002.

Kondic, Lou Associate Professor, Mathematical Sciences (1999). University of Zagreb, M.Phil., 1989. City University of New York, Ph.D., 1995.

Koplik, Bernard Professor, Mechanical Engineering (1981). City College of New York, B.M.E., 1955. Columbia University, M.S., 1957. Polytechnic Institute of Brooklyn, Ph.D., 1966.

Jackson, Nancy Professor, Geology (1992). Graduate Coordinator, Environmental Policy Studies, Environmental Policy Studies Clark University, B.A., 1978. Antioch New England Graduate School, M.S., 1986. Rutgers University, Ph.D., 1992.

Ji, Zhiming Associate Professor, Mechanical Engineering (1991). Northeast Institute of Technology, B.M.E., 1979. Nanjing Institute of Technology, M.S., 1981. Stanford University, Ph.D., 1987.

Johnson, Carol Siri Assistant Professor, Humanities (2004). Mount Holyoke College, B.A., 1980. City University of New York, Ph.D., 1994.

Jones, Quentin Assistant Professor, Information Systems (2002). University of Sydney, B.A., 1989. University of Sydney, M.P.H., 1994. University of Haifa, Ph.D., 2001.

Kappraff, Jay Associate Professor, Mathematical Sciences (1974). Polytechnic University, B.Ch.E., 1958. Iowa State University, M.S., 1960. Courant Institute of Mathematical Sciences, New York University, M.A., 1968. Courant Institute of Mathematical Sciences, New York University, Ph.D., 1974.

Katz, Eric Professor, Humanities (1989). Program Director, BS in Science, Technology and Society, Humanities (1992). Yale University, B.A., 1974. Boston University, M.A., 1977. Boston University, Ph.D., 1983.

Khader, Michael Associate Professor, Engineering Technology (1993). Program Coordinator, Telecommunications Management Technology Cairo University, B.S., 1979. Polytechnic Institute of New York, B.S., 1983. Stevens Institute of Technology, M.S., 1990.

Khusid, Boris Professor, Mechanical Engineering (1998). Byelorussian State University, M.S., 1972. Heat and Transfer Institute, Ph.D., 1975.

Kimmelman, Burt Professor, Humanities (1992). Program Director, BA/BS in Professional and Technical Communication, Humanities (1997). SUNY College at Cortland, B.A., 1983. Hunter College, M.A., 1987. City University of New York, Ph.D., 1991.

Klapper, Jacob Professor, Electrical & Computer Engineering (1967). City College of New York, B.E.E., 1956. Columbia University, M.S.E.E., 1958. New York University, Eng.Sc.D., 1965.

Knox, Dana Professor, Chemical Engineering (1983). Master Teacher, Chemical Engineering (1983). Associate Provost for Undergraduate Programs (2005). Rensselaer Polytechnic Institute, B.S., 1977. Rensselaer Polytechnic Institute, M.E., 1978. Rensselaer Polytechnic Institute, Ph.D., 1982.

Konon, Walter Chairperson, Civil and Environmental Engineering (2006). Professor, Civil and Environmental Engineering (1974). City University of New York, B.S.C.E., 1966. City University of New York, M.S.C.E., 1970.

Krasnoperov, Lev Professor, Management (1986). Novosibirsk University, M.Sc., 1972. Novosibirsk University, Ph.D., 1979. Institute of Chemical Physics (Moscow), D.Sci., 1991.

Kriegsmann, GregoryDistinguished Professor, Electrical & Computer Engineering (1986).Foundation Chair in Applied MathematicsMarquette University, B.S.E.E., 1969.University of California, Los Angeles, M.S.E.E., 1970.University of California, Los Angeles, M.A., 1972.University of California, Los Angeles, Ph.D., 1974.

Kudyba, StephanAssistant Professor, Management (2003).Siena College, B.S., 1985.Lehigh University, M.B.A., 1993.Rensselaer Polytechnic Institute, Ph.D., 1999.

Lawrence, KennethProfessor, Management (1992).University of Delaware, B.S., 1969.West Virginia University, M.S., 1970.Pennsylvania State University, M.B.A., 1972.Rutgers University, M.S., 1974.West Virginia University, Ed.D., 1979.Rochester Institute of Technology, M.S., 1978.Manhattan College, M.B.A., 1982.

Levy, DorothyProfessor, Mathematical Sciences (1983).New York University, B.A., 1952.Harvard University, M.A., 1953.New York University, Ph.D., 1958.

Lieb, MurrayAssociate Professor, Management (1989).Master Teacher, Mathematical Sciences (2001).Newark College of Engineering, B.S.E.E., 1961.Newark College of Engineering, M.S.E.E., 1963.New York University, M.S., 1965.Polytechnic Institute of Brooklyn, Ph.D., 1970.

Liu, RongfangAssociate Professor, Civil and Environmental Engineering (2001).Beijing University, B.S., 1984.Beijing University, M.S., 1987.Florida State University, M.S., 1991.University of Southern Florida, Ph.D., 1996.

Loney, NormanAssociate Professor, Chemical Engineering (1991).New Jersey Institute of Technology, B.S.Ch.E., 1977.New Jersey Institute of Technology, M.S., 1985.New Jersey Institute of Technology, Ph.D., 1991.

Lynch, RobertProfessor, Humanities (2000).Master Teacher, Humanities (2003).Chairperson, HumanitiesJim Wise Professorship (2006).St. Francis College, B.A., 1962.New York University, M.A., 1963.New York University, Ph.D., 1971.

Maher, NeilAssociate Professor, Federated History (2000).Dartmouth College, B.A., 1986.New York University, M.A., 1994.New York University, Ph.D., 2001.

Manikopoulos, ConstantineAssociate Professor, Electrical & Computer Engineering (1988).Hamline University, B.S.E.E., 1967.Princeton University, Ph.D., 1973.

Matveev, VictorAssistant Professor, Mathematical Sciences (2003).State University of New York at Stony Brook, M.A., 1993.State University of New York at Stony Brook, Ph.D., 1996.

McHugh, JamesProfessor, Computer Science (1977).Fordham University, B.A., 1965.Courant Institute of Mathematical Sciences, New York University, Ph.D., 1970.

Mehta, RajivAssociate Professor (1999).St. Xavier's College, B.Com., 1979.University of Scranton, M.B.A., 1985.Drexel University, Ph.D., 1994.

Kristol, DavidProfessor, Biomedical Engineering (1990).Associate Chairperson, Biomedical Engineering, Biomedical Engineering (2002).Brooklyn College, B.S., 1958.New York University, M.S., 1966.New York University, Ph.D., 1969.

Lacker, MichaelProfessor, Biomedical Engineering (2000).McGill University, B.Sc., 1970.New York University, M.D., 1977.New York University, Ph.D., 1977.

Leung, JosephDistinguished Professor, Computer Science (1999).Southern Illinois University at Carbondale, B.S., 1972.Pennsylvania State University, Ph.D., 1977.

Levy, RolandDistinguished Professor, Physics (1989).Queens College, B.A., 1967.Columbia University, M.S., 1969.Queens College, Ph.D., 1973.

Liu, Cheng-JunAssociate Professor, Computer Science (2003).Harbin Institute of Technology, B.S., 1990.Harbin Institute of Technology, M.S., 1993.George Mason University, Ph.D., 1999.

Liu, VanessaAssistant Professor, Management (2006).City University of Hong Kong, PhD, 2005.City University of Hong Kong, MPhil, 2002.City University of Hong Kong, BA, 1997.

Luke, JonathanProfessor, Mathematical Sciences (1989).Rice University, B.A., 1982.New York University, M.S., 1984.New York University, Ph.D., 1986.

Ma, QunAssistant Professor, Computer Science (2003).Shanghai Jiaotong University, B.S., 1994.University of Shanghai for Science and Technology, M.S., 1997.University of Notre Dame, M.S., 2000.University of Notre Dame, Ph.D., 2003.

Malhotra, SanjayAssistant Professor, Chemistry and Environmental Science (1999).Gujarat University, B.S., 1984.Seton Hall University, M.S., 1993.Seton Hall University, Ph.D., 1995.

Marhaba, TahaAssociate Professor, Civil and Environmental Engineering (1995).Rutgers University, B.S., 1989.Rutgers University, M.S., 1990.Rutgers University, Ph.D., 1993.

McDermott, KevinAssociate Professor, Industrial and Manufacturing Engineering (1982).Newark College of Engineering, B.S.E.E., 1965.Columbia University, B.S.I.E., 1970.Fairleigh Dickinson University, Ed.D., 1975.

Meegoda, Namunu JayProfessor, Civil and Environmental Engineering (1996).University of Sri Lanka, B.S., 1980.University of California, M.S., 1983.University of California, Ph.D., 1985.

Mendonca, DavidAssociate Professor, Chemistry and Environmental Science (1982).University of Massachusetts at Amherst, B.A., 1990.Carnegie Mellon University, M.S., 1994.Rensselaer Polytechnic Institute, Ph.D., 2001.

Michalopoulou, Zoi-Heleni Associate Professor (1994). National Technical University of Athens, Diploma, 1988. Duke University, M.S., 1990. Duke University, Ph.D., 1993.

Milojevic, Petronije Professor, Mathematical Sciences (1984). University of Belgrade, B.S., 1965. University of Belgrade, M.S., 1968. Rutgers University, Ph.D., 1975.

Mitra, Somenath Acting Chairperson, Chemistry and Environmental Science (2006). Professor, Chemistry and Environmental Science (1991). Indian Institute of Technology, B.S.Ch.E., 1981. Southern Illinois University, M.S., 1984. Southern Illinois University, Ph.D., 1988.

Moore, Richard Assistant Professor, Mathematical Sciences (2004). University of British Columbia, B.Sc., 1996. Northwestern University, M.S., 1998. Northwestern University, Ph.D., 2003.

Mostoller, G. Michael Distinguished Professor, Architecture (1983). Rensselaer Polytechnic Institute, B.S., 1960. Rensselaer Polytechnic Institute, B.Arch., 1964. Harvard University, M.Arch., 1969.

Nadim, Farzan Professor, Biology (1998). Northeastern University, B.A., 1987. Boston University, M.A., 1989. Boston University, Ph.D., 1994.

Narh, Kwabena Assistant Professor, Information Systems (2001). Associate Professor, Mechanical Engineering (1994). University of Ghana, B.S., 1974. University of Bristol, M.S., 1979. University of Bristol, Ph.D., 1981.

Nelson, Priscilla Provost and Senior Vice President for Academic Affairs (2005). Professor, Civil and Environmental Engineering University of Rochester, BS in Geological Sciences University of Oklahoma, MS in Structural Engineering Indiana University, MS in Geology Cornell University, PhD, 1983.

O'Connor, John Professor, Federated History (1969). St. John's University, B.A., 1965. Queens College, M.A., 1967. City University of New York, Ph.D., 1974.

Oria, Vincent Associate Professor, Computer Science (2004). Institute National Polytechnique, B.S., 1986. Institute National Polytechnique, M.S., 1989. Universit Pierre et Marie Curie, D.E. A., 1990. Ecole Nationale Supérieure des T I communications, Ph.D., 1994.

Papageorgiou, Demetrius Professor, Mathematical Sciences (1990). Director, Graduate Program, Mathematical Sciences (2002). University College, University of London, B.Sc., 1982. Imperial College, University of London, Ph.D., 1985.

Passerini, Katia Hurlburt Professor of Management Information Systems (2006). Assistant Professor, Management (2003). LUISS University, B.A., 1993. George Washington University, M.B.A., 1996. University of Rome II, M.A., 1997. George Washington University, Ph.D., 2000.

Perez, Manuel Professor, Mathematical Sciences (1971). City College of New York, B.M.E., 1961. New York University, M.M.E., 1963. City University of New York, Ph.D., 1968.

Mili, Ali Professor, Computer Science (2001). Scientific and Medical University of Grenoble (France), B.S., 1976. University Joseph Fourier de Grenoble, M.S., 1977. University of Illinois, Ph.D., 1981.

Misra, Durgamadhab Professor, Electrical & Computer Engineering (1991). Utkal University, B.S., 1978. Utkal University, M.Sc., 1981. Indian Institute of Technology, New Delhi, M.Tech., 1983. University of Waterloo, M.Appl.Sc., 1985. University of Waterloo, Ph.D., 1988.

Miura, Robert Professor, Mathematical Sciences (1982). Director, Division of Biological Sciences, Biology (2001). University of California, Berkeley, B.S., 1960. University of California, Berkeley, M.S., 1962. Princeton University, M.A., 1964. Princeton University, Ph.D., 1966.

Moore, Sandra Associate Professor, Architecture (1983). Tuskegee Institute, B.A., 1967. Yale University, M'EDD, 1973. Harvard University, Ed.D., 1982.

Muratov, Cyril Associate Professor, Mathematical Sciences (2001). Moscow Institute of Physics and Technology, M.S., 1993. Boston University, Ph.D., 1997.

Nakayama, Marvin Associate Professor, Computer Science (1994). University of California, San Diego, B.A., 1986. Stanford University, M.S., 1988. Stanford University, Ph.D., 1991.

Nassimi, David Professor, Computer Science (1995). Program Coordinator, Computer Science University of Minnesota, PhD, 1979. University of Minnesota, MSEE, 1978. University of Minnesota, MSCS, 1975. University of Minnesota, BS, 1968.

Niver, Edip Associate Professor, Electrical & Computer Engineering (1983). Middle East Technical University, B.Sc., 1970. Middle East Technical University, M.Sc., 1973. Middle East Technical University, Ph.D., 1979.

Olenik, Thomas Associate Professor, Civil and Environmental Engineering (1970). Newark College of Engineering, B.S., 1968. Newark College of Engineering, M.S., 1970. Rutgers University, Ph.D., 1974.

Papademetriou, Peter Professor, Architecture (1974). Director, Graduate Program, Architecture (1988). Princeton University, A.B., 1965. Yale University, M.Arch., 1968.

Papavassiliou, Symeon Associate Professor, Electrical & Computer Engineering (1999). National Technical University of Athens, Diploma, 1990. Polytechnic University, M.Sc., 1992. Polytechnic University, Ph.D., 1995.

Pemberton, Stephen Assistant Professor, Federated History (2004). Trinity University, B.A., 1990. University of Memphis, M.A., 1992. University of North Carolina at Chapel Hill, M.A., 1997. University of North Carolina at Chapel Hill, Ph.D., 2001.

Perl, Yehoshua Professor, Computer Science (1985). Bar-Ilan University, B.S., 1969. The Weizmann Institute of Science, M.S., 1971. The Weizmann Institute of Science, Ph.D., 1975.

Perna, Angelo J. Professor, Chemical Engineering (1967). Master Teacher, Chemical Engineering, Chemical Engineering (2000). Clemson University, B.S.Ch.E., 1957. Clemson University, M.S.Ch.E., 1962. University of Connecticut, Ph.D., 1967.

Pfister, Bryan Assistant Professor, Biomedical Engineering (2006). Johns Hopkins University, MS, 1998. Clarkson University, BS, 1991.

Potts, Laramie Assistant Professor, Engineering Technology (2006). Ohio State University, PhD, 2000. Ohio State University, MSc, 1993. University of Cape Town, BSc, 1984.

Qiu, Zeyuan Assistant Professor, Chemistry and Environmental Science (2002). Central China Agricultural University, B.S. People's University of China, M.S., 1989. University of Missouri, Ph.D., 1996.

Ranky, Paul Professor, Industrial and Manufacturing Engineering (1995). Technical University of Budapest, B.S., 1974. Technical University of Budapest, M.S., 1974. Technical University of Budapest, M.S.Edu., 1974. Technical University of Budapest, D.Tech., 1979.

Recce, Michael L. Associate Professor, Industrial Engineering (1997). Director, Center for Computational Biology and Bioengineering, Biomedical Engineering (1999). University of California, Santa Cruz, B.S., 1982. University College, London, Ph.D., 1994.

Rojas-Cessa, Roberto Assistant Professor, Electrical & Computer Engineering (2002). University of Veracruz, B.S., 1991. Center for Research and Advanced Studies, Mexico, M. Sc., 1995. Polytechnic University, M.Sc., 2000. Polytechnic University, Ph.D., 2001.

Rosenstark, Solomon Professor, Electrical & Computer Engineering (1968). City College of New York, B.E.E., 1958. New York University, M.E.E., 1961. New York University, Ph. D., 1966.

Rothenberg, David B. Professor, Humanities (1992). Harvard College, B.A., 1984. Boston University, Ph.D., 1991.

Rotter, Naomi G. Professor, Management (1977). Skidmore College, B.A., 1963. New York University, Ph.D., 1974.

Russo, Onofrio L. Associate Professor, Physics (1963). Clarkson Institute of Technology, B.S.E.E., 1952. Stevens Institute of Technology, M.S.E.E., 1963. New Jersey Institute of Technology, D.Eng.Sc., 1975.

Saadeghvaziri, Mohamad A. Professor, Civil and Environmental Engineering (1988). University of Illinois at Urbana-Champaign, B.S., 1982. University of Illinois at Urbana-Champaign, M.S., 1983. University of Illinois at Urbana-Champaign, Ph.D., 1988.

Sarian, Edward Associate Professor, Computer Science (1977). Niagara University, B.S., 1964. University of Michigan, M.S., 1967. Stevens Institute of Technology, Ph.D., 1977.

Petropoulos, Peter G. Associate Professor, Mathematical Sciences (1998). Rutgers University, B.Sc., 1986. Northwestern University, M.S., 1988. Northwestern University, Ph.D., 1991.

Plastock, Roy Associate Professor, Mathematical Sciences (1975). Brooklyn College, B.S., 1966. Yeshiva University, M.S., 1969. Yeshiva University, Ph.D., 1972.

Prodan, Camelia Assistant Professor, Physics (2005).

Raghu, Dorairaja Professor, Civil and Environmental Engineering (1977). Annamalai University, B.E., 1961. Madras University, M.Sc.Eng., 1962. Texas Tech University, Ph.D., 1975.

Rao, I. Joga Associate Professor, Mechanical Engineering (2000). Indian Institute of Technology, B.Tech., 1990. University of California, Berkeley, M.S., 1992. Texas A&M University, Ph. D., 1999.

Rockland, Ronald Associate Professor, Engineering Technology (1995). Master Teacher, Engineering Technology (2004). Associate Dean New York University, B.E., 1967. New York University, M.S., 1969. New York University, Ph.D., 1972. University of St. Thomas, M.B.A., 1977.

Rosato, Anthony Professor, Mechanical Engineering (1987). Pratt Institute, B.E., 1975. Northwestern University, M.S., 1979. Carnegie Mellon University, M.S., 1981. Carnegie Mellon University, Ph.D., 1985.

Roshan, Usman Assistant Professor, Computer Science (2004). University of Texas at Austin, B.S.C.S., 1998. University of Texas at Austin, M.S.C.S., 2002. University of Texas at Austin, Ph.D., 2004.

Rotstein, Horacio Assistant Professor, Mathematical Sciences (2006). Technion, Israel Institute of Technology, PhD, 1998. Technion, Israel Institute of Technology, MSc, 1994. Universidad del Sor, Lic. Chem, 1989.

Russell, Gareth Assistant Professor, Biology (2005).

Ryon III, John W. Associate Professor, Computer Science (1974). Massachusetts Institute of Technology, B.S., 1962. Stevens Institute of Technology, M.S., 1968. Stevens Institute of Technology, Ph.D., 1970.

Sahin, Mesut Assistant Professor, Biomedical Engineering (2005). Case Western Reserve University, PhD, 1998. Case Western Reserve University, MS, 1993. Istanbul Technical University, BSc, 1986.

Savir, Jacob Distinguished Professor, Electrical & Computer Engineering (1996). Technion, Israel Institute of Technology, B. Sc., 1968. Technion, Israel Institute of Technology, M.Sc., 1973. Stanford University, M.S., 1976. Stanford University, Ph.D., 1977.

Schachter, Hindy L. Professor, Management (1979). Brooklyn College, B.A., 1966. New York University, M.A., 1968. Columbia University, Ph.D., 1978.

Schneider, Marguerite Associate Professor, Management (2001). New York University, B.S., 1978. New York University, M.B.A., 1988. Rutgers University, Ph.D., 1998.

Schuring, John Professor, Civil and Environmental Engineering (1982). Interim Dean, Newark College of Engineering (2006). Stevens Institute of Technology, B.E., 1974. University of Alaska, M.C.E., 1977. Stevens Institute of Technology, Ph.D., 1987.

Sebastian, Donald Professor, Industrial and Manufacturing Engineering (1995). Senior Vice President for Research and Development Stevens Institute of Technology, B.E., 1974. Stevens Institute of Technology, M.E., 1975. Stevens Institute of Technology, Ph.D., 1977.

Sher, Doris Assistant Professor, Federated History (1970). Master Teacher, Federated History (2002). City College of New York, B.A., 1965. Columbia University, M.A., 1967.

Shi, Yun-Qing Professor, Electrical & Computer Engineering (1987). Jiao Tong University, B.S.E.E., 1980. Jiao Tong University, M.S.E.E., 1980. University of Pittsburgh, M.S.E.E., 1983. University of Pittsburgh, Ph.D., 1987.

Siegel, Michael Professor, Mathematical Sciences (1995). Associate Director, CAMS, Mathematical Sciences (2003). Duke University, B.S., 1984. New York University, Ph.D., 1989.

Singh, Pushpendra Associate Professor, Mechanical Engineering (1996). Indian Institute of Technology, B.Tech., 1985. University of Minnesota, M.S., 1989. University of Minnesota, Ph.D., 1991.

Sirkar, Kamalesh Distinguished Professor, Chemical Engineering (1992). Foundation Chair of Membrane Separations Director, Center for Membrane Technologies Indian Institute of Technology at Kharagpur, B.Tech., 1963. University of Illinois at Urbana-Champaign, M.S., 1966. University of Illinois at Urbana-Champaign, Ph.D., 1969.

Sohn, Andrew Associate Professor, Computer Science (1991). University of Southern California, B.S., 1985. University of Southern California, M.S., 1986. University of Southern California, Ph.D., 1991.

Sollohub, Darius Associate Professor, Architecture (2001). Assistant Director, Infrastructure Planning, Architecture Columbia University, B.A., 1983. Columbia University, M.Arch., 1988.

Song, Min Assistant Professor, Information Systems (2006). Drexel University, PhD, 2005. Indiana University, MS, 1996. Yonsei University, BA, 1992.

Spasovic, Lazar Professor, Civil and Environmental Engineering (1990). Director, International Intermodal Transportation Center Director, National Center for Transportation and Industrial Productivity University of Belgrade, Dipl. Ing., 1985. University of Maryland, M.S., 1986. University of Pennsylvania, Ph.D., 1989.

Scher, Julian Associate Professor, Information Systems (1971). Associate Chairperson for Undergraduate Studies, Information Systems, Information Systems (1987). Brooklyn College, B.A., 1965. New York University, M.S., 1967. New York University, Ph.D., 1971.

Schuman, Anthony Associate Professor, Architecture (1979). Wesleyan University, B.A., 1965. Columbia University, M.A., 1966. Columbia University, M.Arch., 1970.

Schweizer, Karl Professor, Humanities (1988). Wilfrid Laurier University, B.A., 1969. University of Waterloo, M.A., 1970. Cambridge University, Ph.D., 1976.

Sengupta, Arijit Associate Professor, Engineering Technology (1995). University of Burdwan, B.E., 1976. University of Burdwan, M.Tech., 1983. Technical University of Nova Scotia, Ph.D., 1995.

Sher, Richard Distinguished Professor, Federated History Chairperson, Federated History (1999). George Washington University, B.A., 1970. University of Chicago, M.A., 1971. University of Chicago, Ph.D., 1979.

Shih, Frank Professor, Computer Science (1988). Associate Chairperson for Graduate Studies, College of Computing Sciences National Cheng Kung University, B.S.E.E., 1980. State University of New York at Stony Brook, M.S.E.E., 1984. Purdue University, Ph.D., 1987.

Simon, Laurent Assistant Professor, Chemical Engineering (2001). New Jersey Institute of Technology, B.S., 1996. Colorado State University, M.S., 1998. Colorado State University, Ph.D., 2001.

Sirenko, Andrei Assistant Professor, Physics (2003). A.I. Ioffe Physical Technical Institute, M.S., 1987. A.I. Ioffe Physical Technical Institute, Ph.D., 1993.

Sodhi, Rajpal Professor, Mechanical Engineering (1986). Associate Chairperson, Mechanical Engineering, Mechanical Engineering (2003). Thapar College of Engineering, B.S., 1971. Union College, M.S., 1976. University of Houston, Ph.D., 1980.

Sohn, Kenneth Professor, Electrical & Computer Engineering (1966). Upsala College, B.S., 1957. Stevens Institute of Technology, M.S., 1959. Stevens Institute of Technology, Ph.D., 1967.

Somers, Mark Professor, Management (1986). Tulane University, B.S., 1977. Bernard M. Baruch College, M.B.A., 1982. City University of New York, Ph.D., 1987.

Sosnowski, Marek Professor, Electrical & Computer Engineering (1986). University of Warsaw, M.S., 1964. University of Warsaw, Ph.D., 1973.

Spencer, Aron Assistant Professor, Management (2003). Claremont McKenna College, B.A., 1993. University of California, Irvine, Ph.D., 2002.

Spillers, WilliamDistinguished Professor, Civil and Environmental Engineering (1990).University of California, Berkeley, B.S., 1955.University of California, Berkeley, M.S., 1956.Columbia University, Ph.D., 1961.

Steffen-Fluhr, NancyAssociate Professor, Humanities (1971). Director, Murray Center for Women in TechnologyStanford University, B.A., 1965.Brandeis University, M.A., 1969. Brandeis University, Ph.D., 1977.

Stiller, NikkiAssociate Professor, Humanities (1981).Hunter College, B.A., 1968.City University of New York, Ph.D., 1973.

Tao, LouisAssistant Professor, Mathematical Sciences (2003). Harvard College, B.A., 1990.University of Chicago, Ph.D., 1995.

Tekinay, SirinAssociate Professor, Electrical & Computer Engineering (1997).Bogazici University, B.S., 1989.Bogazici University, M.S., 1991.George Mason University, Ph.D., 1994.

Thomas, GordonProfessor, Physics (2000).Brown University, Sc.B., 1965.University of Rochester, Ph.D., 1972.

Tobias, NormanAssociate Professor, Humanities (1965). Rutgers University, B.A., 1959.Rutgers University, M.A., 1965. Rutgers University, Ph.D., 1969.

Towfik, NissamAssociate Professor, Physics (1955).Bombay University, B.S., 1949.Columbia University, A.M., 1953.

Tsybeskov, LeonidAssociate Professor, Electrical & Computer Engineering (2001).Odessa University, B.S., 1978. Odessa University, M.S., 1978.Odessa University, Ph.D., 1999.

Tyson, TrevorProfessor, Physics (1996).Andrews University, B.S., 1983.Stanford University, Ph.D., 1991.

Venanzi, CarolDistinguished Professor, Chemistry and Environmental Science (1982).Catholic University of America, B.A., 1969.Johns Hopkins University, M.A., 1970.University of California at Santa Barbara, Ph.D., 1978.

Wall, DonaldAssociate Professor, Architecture (1974). Director, Undergraduate Program, Architecture (2000). University of Manitoba, B. Arch., 1958.Cornell University, M. Arch., 1959.Catholic University, D.Arch., 1970.

Wang, HaiminDistinguished Professor, Physics (1995). Associate Director of Center for Solar-Terrestrial Research and Big Bear Solar Observatory, PhysicsNanjing University, B.S., 1982.California Institute of Technology, Ph.D., 1988.

Wang, SheldonAssociate Professor, Mathematical Sciences (2005).Shanghai Jiao Tong University, B.S., 1988. Massachusetts, M.S., 1993.Massachusetts Institute of Technology, Ph.D., 1995.

Sran, KewalAssociate Professor, Mathematical Sciences (1982).Punjab University, B.A., 1946.Punjab University, M.A., 1953.Oregon State University, Ph.D., 1967.

Stickler, DavidProfessor, Mathematical Sciences (1987).Ohio State University, B.S., 1956.Ohio State University, M.S., 1959. Ohio State University, Ph.D., 1964.

Sylla, CheicknaAssociate Professor, Management (1989). Ecole Nationale D'Ingenieurs, B.S., 1975.State University of New York at Buffalo, M.S., 1980.State University of New York at Buffalo, Ph.D., 1983.

Tavantzis, JohnProfessor, Mathematical Sciences (1976). Columbia University, B.A., 1962.Columbia University, M.S., 1966.New York University, Ph.D., 1976.

Theodoratos, DimitriAssociate Professor, Computer Science (2002).National Technical University of Athens, Diploma, 1985. Ecole National Sup rieur des T I communications, M.S., 1986. University of Paris XI, Ph.D., 1991.

Thomasian, AlexanderProfessor, Computer Science (2000). University of Tehran, B.S., 1968.University of California, Los Angeles, M.S., 1972.University of California, Los Angeles, Ph. D., 1977.

Tomkins, ReginaldProfessor, Chemical Engineering (1977). Associate Chairperson, Chemical Engineering, Chemical EngineeringOxford University, B.Sc., 1963.University of London, Ph.D., 1966.

Tricamo, StephenProfessor, Industrial and Manufacturing Engineering (1995).City College of New York, B.S., 1966.City College of New York, M.S., 1969.City College of New York, Ph. D., 1980.

Turoff, MurrayDistinguished Professor, Information Systems (1973).University of California, B.A., 1958.Brandeis University, Ph.D., 1965.

Van Buskirk, WilliamActing Chairperson, Mechanical Engineering, Mechanical Engineering (2006).Foundation Professor of Biomechanical EngineeringDistinguished Professor, Biomedical Engineering (1998).United States Military Academy, B.S., 1964.Stanford University, M.S., 1966. Stanford University, Ph.D., 1970.

Verkhovsky, BorisProfessor, Computer Science (1985). Odessa State University, M.S., 1957.Latvia State University, Ph.D., 1964.

Wang, GuilingAssistant Professor, Computer Science (2006). Pennsylvania State University, PhD, 2006.Nankai University, BS, 1999.

Wang, JasonProfessor, Computer Science (1991).National Taiwan University, B.S., 1980.University of Memphis, M.S., 1985.Courant Institute of Mathematical Sciences, New York University, M.S., 1988.Courant Institute of Mathematical Sciences, New York University, Ph.D., 1991.

Washington, DavidAssociate Professor, Engineering Technology (1997).Columbia University, B.S., 1984.Manhattan College, M.S., 1988.New Jersey Institute of Technology, Ph. D., 1996.

Wecharatana, Mehti Professor, Civil and Environmental Engineering (1982). Chulalongkorn University, B.E., 1976. Asian Institute of Technology, M.E., 1978. University of Illinois, Ph.D., 1982.

Whitman, Gerald Professor, Electrical & Computer Engineering (1970). City University of New York, B.S., 1963. Columbia University, B.S.E.E., 1963. Polytechnic Institute of Brooklyn, M.S., 1967. Polytechnic Institute of Brooklyn, Ph.D., 1969.

Wolf, Carl Professor, Industrial and Manufacturing Engineering (1961). Program Director, Industrial and Manufacturing Engineering (1961). City College of New York, B.B.A., 1951. Columbia University, M.S., 1954. New York University, Ph.D., 1971.

Wu, Yi-Fang (Brook) Assistant Professor, Information Systems (2001). Tamkang University, B.B.A., 1993. Syracuse University, M.S., 1996. State University of New York at Albany, Ph.D., 2001.

Yang, Jian Associate Professor, Industrial and Manufacturing Engineering (2000). The University of Science and Technology of China, B.Eng., 1994. Texas A&M University, M.S., 1996. University of Texas at Austin, Ph.D., 2000.

Young, Yuan-Nan Assistant Professor, Mathematical Sciences (2004). National Taiwan University, B.Sc., 1993. University of Chicago, M.Sc., 1996. University of Chicago, Ph.D., 2000.

Zhang, Yanchao Assistant Professor, Electrical & Computer Engineering (2006). University of Florida, PhD, 2006. Beijing University of Posts and Telecommunications, ME, 2002. Nanjing University of Posts and Telecommunications, BE, 1999.

Zhou, Tao Assistant Professor, Physics (2004).

Ziavras, Sotirios Professor, Computer and Information Science (1995). Associate Chairperson, Electrical & Computer Engineering (2001). National Technical University of Athens, Diploma, 1984. Ohio University, M.S., 1985. George Washington University, D.Sc., 1990.

Wei, Liping Assistant Professor, Chemistry and Environmental Science (2006). Cornell University, PhD, 2004. Nanjing University, MSc, 1998. Nanjing University, BSc, 1995.

Widmeyer, George Associate Professor, Information Systems (2004). Associate Chairperson for MS Graduate Program, Information Systems, Information Systems University of Texas at Austin, B.E.S., 1973. University of Texas at Austin, M.S., 1975. University of Texas at Austin, Ph.D., 1986.

Wu, Jing Assistant Professor, Chemistry and Environmental Science (2001). Tsinghua University, B.S., 1995. University of Delaware, M.S., 2001. University of Delaware, Ph.D., 2001.

Xanthos, Marinos Professor, Chemical Engineering (1995). University of Thessaloniki, B.Sc., 1968. University of Toronto, M.S., 1970. University of Toronto, Ph.D., 1974.

Yoo, Wonsuk Assistant Professor, Mathematical Sciences (2004). Yonsei University, B.A., 1992. University of Florida, M.S., 1999. Medical University of South Carolina, Ph.D., 2004.

Zdepski, Stephen Michael Associate Professor, Architecture (1974). Syracuse University, B.Arch., 1969. University of Pennsylvania, M.Arch., 1970.

Zhou, Mengchu Professor, Electrical & Computer Engineering (1990). East China Institute of Technology, B.S., 1983. Beijing Institute of Technology, M.S., 1986. Rensselaer Polytechnic Institute, Ph.D., 1990.

Zhu, Chao Associate Professor, Mechanical Engineering (1998). Tsinghua University, B.S., 1984. University of Illinois at Urbana-Champaign, M.S., 1989. University of Illinois at Urbana-Champaign, Ph.D., 1991.

Professional/Instructional Staff

Abdeljabar, Soha Special Lecturer (2001). New Jersey City University, B.S., 1999. New Jersey Institute of Technology, M.S., 2001.

Baboulis, Phil Head Coach, Men's and Women's Tennis (2002). New Jersey Institute of Technology, B.S., 1984.

Bodner, Janet Associate Director, English as a Second Language Program, Humanities (1988). Rutgers University, B.A., 1959. American University, M.A., 1976. Kean College, M.A., 1983.

Bowen Lusk, Kim Head Coach, Women's Basketball (2001). Southern Connecticut State University, B.A., 2000. University of New Haven, M.B.A., 2001.

Brooks, Charles Special Lecturer (2000). United States Military Academy, B.S., 1968. University of Hawaii, M.A., 1976. University of Hawaii, Ph.D., 1986.

Casal, Jose Special Lecturer (2000). Tulane University, B.S., 1977. City University of New York, M.B.S., 1985. City University of New York, Ph.D., 1992. New York University, M.S., 2001.

Castronova, Louise Special Lecturer (1983). Upsala College, B.A., 1973. Seton Hall University, M.A., 1975.

Coakley, John Director, Freshman Composition and Intensive Studies Program, Humanities Iona College, A.B., 1967. Hunter College, M.A., 1972. Brown University, A.M., 1978. Brown University, Ph.D., 1982.

Coppola, Nancy Walters Associate Professor, Humanities (1991). Program Director, MS in Professional and Technical Communication, Humanities (1995). Simmons College, B.A., 1977. Syracuse University, M.A., 1980. Syracuse University, Dr. Arts, 1983.

Dart, James Special Lecturer (1985). Rhodes College, B.A., 1976. University of Pennsylvania, M.Arch., 1981.

Donahue, Dennis Special Lecturer (1979). New York University, B.A., 1964. New York University, M.A., 1966. New York University, Ph.D., 1976.

Egan, Richard Special Lecturer, Information Systems (2002). City College of New York, B.S., 1974. Stevens Institute of Technology, M.S., 1978. St. Peter's College, M.S., 1995.

Ellis, Frank Special Lecturer (2004). University of Utah, B.A., 1975. Harvard University, A.M., 1977. Harvard University, Ph.D., 1983.

Alonso, Al Head Coach, Cross Country (2003). Stevens Institute of Technology, B.S., 1983. Stevens Institute of Technology, M.S., 1985. Fairleigh Dickinson University, M.B.A., 1988.

Blank, George Special Lecturer, Computer Science (2000). Eastern College, B.A., 1972. Princeton Theological Seminary, M.S., 1975. New Jersey Institute of Technology, M.S., 1989. Seton Hall University, M.B.A., 1992.

Bogui, Frederic Special Lecturer (2002). Oakwood College, B.S., 1989. Rutgers University, Newark, M.S., 1994. Rutgers University, Newark, Ph.D., 2001.

Bromberg, Dale Special Lecturer, Computer Science (2000). College of Staten Island, B.S., 1975. New Jersey Institute of Technology, M.S., 1988.

Callahan, Brian Head Coach, Men's Baseball (2000). St. Peter's College, B.S., 1996. St. Peter's College, M.S., 1998.

Casciano, Jim Assistant Director of Athletics

Chumer, Michael Director, Freshman Composition and Intensive Studies Program, Information Systems (2002). Special Lecturer, Information Systems (2002). United States Naval Academy, B.S., 1964. Georgia Institute of Technology, M.S., 1970. Rutgers University, Ph.D., 2002.

Conley, Robert Director of Freshman Chemistry, Chemistry and Environmental Science (1981). Marist College, B.A., 1963. Brown University, M.A.T., 1968. Brown University, Ph.D., 1971.

Curley, Jonathan Special Lecturer (2003). Brown University, B.A., 1995. New York University, M.A., 1998. New York University, Ph.D., 2003.

Deek, Maura Ann Special Lecturer, Information Technology (1986). Rutgers University, B.S., 1982. New Jersey Institute of Technology, M.S.C.S., 1986.

Egan, John Special Lecturer (2001). St. Peter's College, B.A., 1971. University of Hawaii, M.A., 1979.

Eljabiri, Osama Special Lecturer, Computer Science (2001). Kuwait University, B.S., 1986. Arab Academy for Banking and Financial Services, M.S., 1999. New Jersey Institute of Technology, M.S., 2001.

Esche, John Special Lecturer (2001). Southwestern College, B.A., 1969. Georgetown Law School, J.D., 1972.

Fayngold, Moses Special Lecturer (1999). State University of Samar Island, B.S., 1969. State University of Samar Island, M.S., 1971. Institute of Nuclear Research and Institute of Technical Physics, Ph.D., 1977.

Fleischer, Doris Special Lecturer (1988). Brooklyn College, B.A., 1958. New York University, M.A., 1961. New York University, Ph.D., 1979.

Giorgioni, Andrea Special Lecturer, Mechanical Engineering (2001). Bologna University, Laurea in Ingegneria Chimica, 1994.

Gokce, Oktay Special Lecturer (2001). Ort Dogu Technical, B.S., 1981. Ort Dogu Technical, M.S., 1985. Montana State University, Ph.D., 1991.

Gumienny, Kevin Special Lecturer (2001). Texas A&M University, M.A., 1993. State University of New York at Stony Brook, Ph.D., 2003.

Hernandez, Roger Special Lecturer (1997). Rutgers University, B.A., 1977.

Hrechak, Andrew Coordinator for Scheduling and Administration, Computer and Information Science (2000).

Jain, Aridaman Special Lecturer (2003). Delhi University, B.Sc., 1957. Indian Statistical Institute, M.S., 1960. Purdue University, Ph.D., 1968.

Kaplan, Lenny Senior Administrator of Athletics. St. John's University, B.S., 1988.

Karvelas, Dionissios Special Lecturer, Computer Science (1989). National Technical University of Athens, B.S.E.E., 1982. University of Toronto, M.S., 1984. University of Toronto, Ph.D., 1990.

Kountouras, Harry Special Lecturer, Mechanical Engineering (1987). City College of New York, B.S.M.E., 1971. City College of New York, M.S.M.E., 1973.

Lipuma, James Special Lecturer (1996). Stanford University, B.S., 1992. New Jersey Institute of Technology, M.S., 1996. New Jersey Institute of Technology, Ph.D., 2001.

Lublimer, David Special Lecturer, Engineering Technology

Mantilla, Bruno Special Lecturer, Biomedical Engineering (2002). University of Bogota, B.S., 1980. New Jersey Institute of Technology, M.S., 2002.

Milano, Geraldine Special Lecturer, Civil and Environmental Engineering (1999). Newark College of Engineering, B.S.M.E., 1972. New Jersey Institute of Technology, M.S.M.E., 1978.

Mlynek, Janusz Head Coach, Men's and Women's Fencing. Krakow Academy, M.A., 1991.

Moore, Thomas Adjunct Professor, Computer and Information Science (2003). Coordinator for Advisement and Outreach Activities, College of Computing Sciences (2003). St. Joseph's University (Pennsylvania), B.S., 1983. Mount Saint Mary Seminary, M.S., 1987. Hood College, M.S., 1988.

Navin, Thomas Special Lecturer (1987). Rhode Island School of Design, B.F.A., 1975. University of Virginia, M.Arch., 1979.

Felczak, Duane Director, Physical Education Coordinator, Physical Education. Seton Hall University, B.S., 1974. Kean College, M.A., 1981.

Gile, William Associate Producer & Creative Director, Theatre (1970). Boston University, B.A., 1964. Cornell University, M.F.A., 1970.

Glaser, Arthur Special Lecturer, Electrical & Computer Engineering (2002). City College of New York, B.E., 1960. Columbia University, Ph.D., 1968.

Gu, Pin Chemistry Lab Instructor / Supervisor, Chemical Engineering (2004).

Henry, Rolanne Special Lecturer (1999). Rutgers University, A.B., 1964. Columbia University, Ph.D., 1972. Rutgers Law School, J.D., 1978. New York University School of Law, L.L.M., 1980.

Hetherington, Eric Special Lecturer (2002). New York University, B.A., 1992. New York University, M.A., 1995. City University of New York, Ph.D., 2002.

Hunter, John Special Lecturer (1997). Michigan State University, B.F.A., 1984. Michigan State University, M.S., 1986.

Janow, Richard Special Lecturer (2001). Columbia College, A.B., 1964. City College of New York, M.A., 1967. City University of New York, Ph.D., 1977.

Kapleau, Jonathan Special Lecturer, Computer Science (2002). Adelphi University, B.A., 1992. New Jersey Institute of Technology, M.S., 2003.

Klimova, Pavlina Head Coach, Women's Volleyball (2003). Co-Director, Intramurals. American University (Washington), B.S., 2000. Wagner College, M.B.A., 2003.

Kwestel, Morty Special Lecturer, Computer Science (1999). Yeshiva University, B.A., 1956. New Jersey Institute of Technology, M.S., 1999.

Lopes, Pedro Head Coach, Men's Soccer (2003). Rutgers University, B.A., 1995.

Maljian, Libarid Special Lecturer (2002). Rutgers University, B.S., 1995. Rutgers University, M.S., 2002.

McNeil, Ryan Head Coach, Men's Volleyball (2004). Lewis College, B.A., 1999. Lewis College, M.A., 2001.

Miller, James Special Lecturer, Engineering Technology (1996). Rutgers University, B.S.M.E., 1972. Rutgers University, M.S.M.E., 1975.

Mohebbi, Soroosh Special Lecturer (1993). Arak University, B.S., 1979. Jersey City State College, M.S., 1994.

Naatus, Mary Kate Manager, Undergraduate Programs, Management. The College of New Jersey, B.A., 1999. New Jersey Institute of Technology, M.B.A., 2004.

Nicholson, Theodore Special Lecturer, Computer Science (1998). New York University, B.A., 1987. Syracuse University College of Law, J.D., 1990.

Niroomand, KurbanSpecial Lecturer, Computer Science (2000).University of Tehran, B.S., 1970.Rutgers University, M.S., 1985.New Jersey Institute of Technology, M.S., 1996.

Ogorzalek, ThomasSpecial Lecturer (2000).

Opyrchal, JanInstructional Laboratory Supervisor, Physics (1993).Polytechnic University (Poland), M.S., 1969.Institute of Low Temperature and Structure Research, Polish Academy of Sciences, Ph.D., 1978.

Paris, JeromeDirector, English as a Second Language Program, Humanities (1982).Reed College, B.A., 1964.Johns Hopkins University, M.A., 1965.Cornell University, Ph.D., 1972. Columbia University, M.A., 1979.

Petrova, RoumaniaAssistant Undergraduate Program Director (1994).Special Lecturer, ChemistryChemical Technical Institute - Bulgaria, M.S., 1976.Bulgarian Academy of Sciences, Ph.D., 1993.

Quinn, Richard E.Special Lecturer (1996).Massachusetts Institute of Technology, B.S.E.E., 1956.Ohio State University, M.S.E.E., 1959.Southern Illinois University, M.B.A., 1978.

Rappaport, KarenSpecial Lecturer (2003).University of Pennsylvania, B.A., 1966.New York University, M.S., 1968. New York University, Ph.D., 1975.

Redling, JudithSpecial Lecturer, Biomedical Engineering (2000).Stevens Institute of Technology, B.E., 1989.Rutgers University, M.S., 1992.Rutgers University, Ph.D., 1995.

Rutkowski, WallaceSpecial Lecturer, Computer Science (2000).Stevens Institute of Technology, B.S., 1974.Stevens Institute of Technology, M.S., 1974.University of Maryland, Ph.D., 1981.

Senesy, StanleySpecial Lecturer, Information Technology (2001).McKendree College, B.A., 1994.New Jersey Institute of Technology, M.S., 2000.

Serico, BenjaminSpecial Lecturer, Mechanical Engineering (1994).Newark College of Engineering, B.S., 1973.New Jersey Institute of Technology, M.S., 1975.Central Michigan University, M.A., 1978.

Skawinski, WilliamSpecial Lecturer (1996).Stevens Institute of Technology, B.S., 1970.New Jersey Institute of Technology, M.S., 1980.Rutgers University, Ph.D., 1991.

Spottswood, RichardAssistant Coach, Men's BasketballUniversity of Mobile, B.S., 1999.

Surjanhata, HerliSpecial Lecturer, Mechanical Engineering (1984).Triskati University, B.S., 1976.New Jersey Institute of Technology, M.S., 1984.

Tedesco, BarbaraAssociate DeanMontclair State University, B.S., 1985.

Walsh, DianaSpecial Lecturer (1998).Visiting Scholar (1989). William Paterson University, M.A., 1987.Seton Hall University, J.D., 1996.

O'Sullivan, WilliamSpecial Lecturer (1997).Brooklyn College, B.A., 1967.City College of New York, M.A., 1995.

Opyrchal, HalinaSpecial Lecturer (1996).Polytechnic University (Poland), M.S., 1969.Institute of Low Temperature and Structure Research, Polish Academy of Sciences, Ph.D., 1976.

Pardi, NinaSpecial Lecturer (1989).Bucknell University, A.B., 1961.Kean College, M.A., 1986.

Patten, KarenSpecial Lecturer (1997).Purdue University, B.S., 1969.University of Minnesota, M.S., 1973.National Technological University, M.S., 1994.

Pfeffer, RobertDistinguished Professor Emeritus, Chemistry and Environmental Science (2000).Associate Director, Center for Engineered Particulates, Chemistry and Environmental Science (2000).New York University, B.S., 1956.New York University, M.S., 1958.New York University, Ph.D., 1962.

Radu, AlyssaHead Coach, Women's Soccer (2004).Rutgers University, B.A., 2001.

Ratnaswamy, JeyakumaSpecial Lecturer (2001).University of Peradeniya, B.S., 1980.Sussex College of Technology, M.S., 1986.Brunel University, Ph.D., 1993.

Rittenhouse, MicheleAssistant Director of TheatreUniversity of Mississippi, B.A., 1973.Rutgers University, M.F.A., 1995.

Schesser, JoelSpecial Lecturer, Biomedical Engineering (2003).City University of New York, B.E., 1968.City University of New York, M.E., 1971.City University of New York, Ph.D., 1976.

Sequeira, MarcSpecial Lecturer, Information Technology (2003).New Jersey Institute of Technology, B.S., 2002.

Shneidman, VitalySpecial Lecturer (1999).Kharkov State University, B.S., 1977.Kharkov State University, M.S., 1979. Physico-Technological Institute of Metals and Alloys, Ph.D., 1987.

Sonnema, JeffreyPhysical Education Specialist (1999). Assistant Coach, Men's Basketball (1999).New Jersey Institute of Technology, B.S., 1999.

Statica, RobertProgram Administrator, Information Technology (1997).New Jersey Institute of Technology, B.S., 1996.New Jersey Institute of Technology, M.S., 2000.Kennedy Western University, Ph.D., 2003.

Taher, RimaSpecial Lecturer, Architecture (1989).Institut National des Sciences Appliquees de Lyon, B.C.E., 1982. Ecole Nationale des Ponts et Chaussees, M.S., 1983.Ecole Nationale des Ponts et Chaussees, Ph.D., 1986.

Tress, MichaelAcademic Coordinator, College of Computing SciencesJersey City State College, B.A., 1973.Jersey City State College, M.A., 1981.

Wang, HaiminDistinguished Professor, Physics (1995). Associate Director of Center for Solar-Terrestrial Research and Big Bear Solar Observatory, PhysicsNanjing University, B.S., 1982.California Institute of Technology, Ph.D., 1988.

Wiggins, John Special Lecturer, Engineering Technology (1993). Newark College of Engineering, B.S.C.E., 1973. Seton Hall School of Law, J.D., 1980. New Jersey Institute of Technology, M.S.C.E., 1981.

Wood, Timothy Special Lecturer, Architecture Assistant Director of Graduate Program for Architecture, Arch (1987). Cornell University, B.Arch., 1966. Princeton University, M.F.A., 1969.

Zaleski, Joseph Special Lecturer (1990). Rutgers University, B.S., 1982. New Jersey Institute of Technology, M.S., 1990.

Wolf, Carl Professor, Industrial and Manufacturing Engineering (1961). Program Director, Industrial and Manufacturing Engineering (1961). City College of New York, B.B.A., 1951. Columbia University, M.S., 1954. New York University, Ph.D., 1971.

2007-2008

Visiting and Research Professors and Others

Abramenko, Valentyna Research Scientist, Physics

Atluri, Vijay Visiting Associate Professor, Computer and Information Science (2004). Jawaharlal Nehru Technological University, B.Tech., 1977. Indian Institute of Technology, M. Tech., 1979. George Mason University, Ph.D., 1994.

Banerjee, Amit Research Associate, Electrical & Computer Engineering (2004).

Catalani, Luiz Visiting Scientist, Biomedical Engineering (2004). University of Sao Paulo, B.S., 1979. University of Sao Paulo, Ph.D., 1984.

Chen, Jiann-Liang Visiting Research Professor, Computer and Information Science (2004). National Taiwan University, B.S., 1986. National Taiwan University, M.S., 1987. National Taiwan University, Ph.D., 1989.

Chou, Porchiung Visiting Assistant Professor, Chemistry and Environmental Science (2003). National Taiwan University, B.S., 1988. Yale University, M.F.S., 1993. Yale University, M.A., 1994. Johns Hopkins University, M.A., 1996. George Washington University, Ph.D., 2003.

Dobre, Octavia Research Associate, Electrical & Computer Engineering (2002). University of Bucharest, M.S. University of Bucharest, Ph.D., 1998.

Feknous, Mohammed Assistant to the Chair for Electrical & Computer Engineering (1998). Ecole Nationale Polytechnique d'Alger, B.S., 1976. University of Missouri - Rolla, M.S., 1979.

Gogos, Costas Distinguished Research Professor, Chemical Engineering (1999). Princeton University, B.S., 1961. Princeton University, M.S.E., 1962. Princeton University, M.A., 1964. Princeton University, Ph.D., 1965.

Hensel, John Distinguished Research Professor, Physics (1990). University of Michigan, B.S.E., 1952. University of Michigan, M.S., 1953. University of Michigan, Ph.D., 1958.

Jones, Steven Research Engineer, Mechanical Engineering (2004). New Jersey Institute of Technology, B.S., 2001. New Jersey Institute of Technology, M.S., 2002.

Katz, David Research Associate, Electrical & Computer Engineering (2004). Hebrew University of Jerusalem, B.Sc., 1997. Hebrew University of Jerusalem, M.Sc., 1999. Hebrew University of Jerusalem, Ph.D., 2004.

Lanzerotti, Louis Distinguished Research Professor, Physics (2002). University of Illinois, B.S., 1960. Harvard University, A.M., 1963. Harvard University, Ph.D., 1965.

Asar, Azzam Visiting Professor, Electrical & Computer Engineering (2004). N-W.F.P. University of Engineering & Technology, B.Sc., 1979. University of Strathclyde, M.Sc., 1994. University of Strathclyde, Ph.D., 1994.

Bago, Enric Palle Research Scientist, Physics

Cao, Wenda Research Associate (2002)., B.S. Chinese Academy, M.S., 1992. National Astronomical Observatory, Chinese Academy, Ph.D., 2001.

Chen, Chiung-Chu Research Scientist (2002). Tunghai University, B.S., 1991. New Jersey Institute of Technology, M.S., 1995. New Jersey Institute of Technology, Ph.D., 1999.

Chen, Wenliang Research Engineer, Mechanical Engineering (2002). East China University of Science, B.S., 1989. East China University of Science, M.S., 1992. New Jersey Institute of Technology, Ph.D., 2002.

Coulter, Roy Project Director, New Solar Telescope, Physics (2004). University of Idaho, B.S., 1983.

Fear, Randy Senior Solar Observer

Fiory, Anthony Research Professor (2001). Massachusetts Institute of Technology, B.S.

Hartkorn, Klaus Research Associate, Physics (2003).

Johnson, Charles Research Scientist, Mechanical Engineering (2004). United States Naval Academy, B.S. Duke University, Ph.D.

Kamenev, Boris Visiting Scholar, Electrical & Computer Engineering (2002). Moscow State University, M.S., 1991. Moscow State University, Ph.D., 2000.

Korikov, Alexander Fellow, Chemical Engineering (2001). Moscow State University, M.S., 1997. Russian Academy of Science, Ph.D., 2001.

Lee, Jeongwoo Associate Research Professor (2000). Seoul National University, B.S., 1985. Seoul National University, M.S., 1987. California Institute of Technology, Ph.D., 1994.

Lee, Sang Gu Visiting Professor

Marquette, William Site Director/Chief Observer, Physics

Nassimi, David Professor, Computer Science (1995). Program Coordinator, Computer Science University of Minnesota, PhD, 1979. University of Minnesota, MSEE, 1978. University of Minnesota, MSCS, 1975. University of Minnesota, BS, 1968.

Nita, Gelu Research Associate (2003). University of Bucharest, B.S., 1987. New Jersey Institute of Technology, Ph.D., 2004.

Ren, Deqing Research Scientist, Physics (2004).

Romano, Paul Senior Research Architect, Architecture (2004). Pratt Institute, B.Arch., 1992.

Simmens, Herbert Urban Fellow, Architecture (2004). University of Pennsylvania, B.A., 1969. Princeton University, M.P.A.U.P., 1971.

Walsh, Diana Special Lecturer (1998). Visiting Scholar (1989). William Paterson University, M.A., 1987. Seton Hall University, J.D., 1996.

Yamauchi, Yohei Research Scientist, Physics

Yetim, Fahri Research Scholar, Information Systems (2004).

Levkov, Serhiy Research Professor, Electrical & Computer Engineering (1995). Ukrainian Academy, Diploma, 1976. Kyiv Polytechnic Institute, Ph.D., 1992.

Moyal, Pascal Fellow, Mathematical Sciences (2004). Universite de Versailles - St. Quentin, B.Sc. Universite Paris VI, M.S., 2000. Universite Paris VI, M.S., 2001. Ecole Nationale Supérieure, Ph.D., 2004.

Nie, Xiliang Research Associate (2004). Wuhan University, B.S., 1983. Wuhan University, M.S., 1991. Wuhan University, Ph.D., 1994.

Pang, Edward Research Architect, Architecture (2004). University of British Columbia, B.A., 1989. University of Oregon, M.Arch., 1995.

Rodriguez, M. Pilar Montanes Research Scientist, Physics (2004).

Salinas Weber, Carlos Visiting Assistant Professor, Architecture (2003). University of San Juan (Argentina), M.A., 1993. University of Illinois at Chicago, M.A., 2000.

Tritschler, Alexandra Research Associate, Physics

Weiss, Julian Special Lecturer (1982). Visiting Scholar (1982). Pennsylvania State University, B.Arch., 1963. Columbia University, M.Arch., 1980. Columbia University, M.U.D., 1980.

Yang, Guo Research Associate (2004). Nanjing University, B.S., 1995. Nanjing University, M.S., 1998. New Jersey Institute of Technology, Ph.D., 2004.
